Finally, all Detroit's Big Three are in the fray with both feet

Small-car big guns poised for battle

By Richard A. Wright
Assistant Managing Editor

Ford Motor Co. and Chrysler Corp. are pinning high hopes on their new Escort/Lynx and K-car series. But they are playing a difficult game of catchup with General Motors.

Early sales of both cars have been strong. The K-cars in particular seem to be just what Chrysler Corp. needed to get back into the sales race and the Escort/Lynx gives Ford a small car with good mileage figures, something it has been lacking.

GM has had the biggest - selling subcompact in the Chevette and has been all alone in the compact front-drive field with its X-bodies.

Now Chrysler Corp. has a front-drive compact to augment its subcompact front - drive Omni/Horizon and Ford has a strong entry in the subcompact arena to replace its sagging and aging Pinto.

But the catching up may be temporary. GM will introduce its next generation of front - drive cars, the subcompact J-cars, next May. These cars will replace the sporty subcompact Chevrolet Monza and Pontiac Firebird and will give Cadillac its first entry into the small-car market. Chevrolet will call its entry the Cavalier and Pontiac the J-2000. Cadillac's first subcompact will be the Cimarron.

Buick and Oldsmobile will get versions of the J car in mid-1982 and Pontiac will introduce a new mid - engine fiberglass - body sports car in 1983.

• While GM is frosting its small-car cake, Ford and Chrysler are playing a more serious game called "Survival." Ford's only entry in the hot subcompact market has been the Pinto (and its companion Mercury Bobcat). The Pinto was introduced 10 years ago and has suffered perhaps more than its share of the slings and arrows of this existence.

With the Escort and Lynx, however, Ford has a state - of - the - art subcompact to go against imports, Omni - Horizon and, mainly, Chevette.

Much of how well the new Ford and Chrysler small cars do, of course, depends on the economy as a whole. They were introduced at a time when new - car sales are low, joblessness is high and the nation is at some stage of a recession.

But on the basis of the cars themselves, the outlook seems positive, particularly for the K-cars.

When Detroit first got into the small-car business with introduction of the compacts in the 1960 model lineup — they don't look so small any more—one astute observer predicted that the Ford Falcon would be the most successful because it looked the most like an American car.

The Chevrolet Corvair had the most interesting technology — aluminum-block air-cooled rear engine — which later got it into trouble, but also made it an effective seller against imports and something of a cult car.

The Plymouth Valiant was perhaps one of Chrysler's better efforts and time proved its six-cylinder engine reliable and durable. But its styling was unusual and this probably limited its sales appeal.

The Falcon, however, looked like and in fact was simply a little Ford. It had simple, functional styling in the tradition of another great Ford model, the 1949 series, and it was an immediate sales success.

Using that theorum, Chrysler's K-cars should make it. They look more like American cars than either Ford's or GM's. The Omni/Horizon did well for a while, but it could be that their very definite European styling limited their appeal.

GM's X-bodies were the hottest cars on the market until the slump got under way. Their styling is clearly American, but more influenced by European design than the K-cars'.

The Escort/Lynx, under this reasoning, could run into some difficulties because they have a somewhat Japanese look to them. Obviously, the Japanese cars are doing very well, but it puts Escort/Lynx in a tough ballgame.

• Does this theory hold up? When the Vega and Pinto were introduced, the very American-looking Pinto was an immediate sales success, while the Vega 2300, with a slightly European look (and even name) was not. It is true the car had other problems which finally killed it, but it never was the big seller Chevrolet anticipated.

The Mustang had no European influence, it looked like an all-American sports car and it was an instant and continuing success.

Even going back to the '50s, the Corvette looked like a real European sports car, while the first Thunderbird was clearly an American car with no foreign influence even though a two-seater.

In later years, these cars grew apart as the T-Bird became a four-seater and continued on its personal-luxury course, while the Corvette became one of the world's leading sports cars. But in those early years, Corvette appealed to the sports-car crowd, while the Thunderbird was widely admired as a beautiful car. And the old two-seater Thunderbird outsold Corvette by an enormous margin.

It appears likely that Ford's Escort/Lynx, Chrysler's K - cars and GM's upcoming J-cars will all be successful. But unless the rules of the marketing game have changed too much, past form indicates the K-cars will be the biggest success.

Styling still sells.

Ford Escort and sister car Mercury Lynx give Ford subcompact strength.

Chrysler pins hopes on K-car, shown here in Dodge Aires wagon form.

Pontiac J-2000, one of three J-cars GM will unveil in spring of 1981.

Restyled Rabbit

Bigger engines for U. S.-built VW

The 1981 Volkswagen Rabbit was given new front-end styling and a different interior to give it a more American look. Engines were also increased in size. The 1.6-liter gasoline engine was boosted to 1.7 liters and the diesel was increased from 1.5 to 1.6 liters.

'80 V-8 output cut in half; sixes lead, but fours gain

By Joseph Bohn
Marketing Editor

The domestic car industry continued to shift dramatically away from V-8 engines in the '80 model year toward 6 and 4-cylinder powerplants.

Volume and penetration of the V-8s dropped in half, while the six-cylinder engine temporarily emerged as the most popular powerplant.

That is changing, however, as new and higher-volume four-cylinder cars like Escort and Lynx and Aries and Reliant—not to mention next spring's GM J-cars — promise to establish four-cylinder engines as the leader among '81 domestic models.

As it was, four-cylinder engines ran a close second behind six - cylinder powerplants last year.

Diesels continued increasing in popularity. But GM's decision to gamble on large V-8 diesels, like the 350 V-8, slowed what could have been a real diesel explosion.

Volkswagen, in contrast to GM, equipped half of its '80 Rabbits with the highly fuel efficient, highly popular four-cylinder diesel powerplant.

Turbochargers continued gaining ground at GM, but fell flat at Ford Motor where they ran into certification problems. Ford canceled them on early '81 models, but was hopeful of offering them later in the model year after clearing up emissions problems.

- Here is a rundown on '80-model engine demand:

Industrywide, V-8s accounted for 2,121,560 cars, equal to 29.69 percent of production. That was less than half the '79 total of 5,457,038, or 58.39 percent of production.

American Motors didn't offer any V-8 engine cars. In '79, AMC had installed the V-8 in 9,538 cars, equal to 5.63 percent of its production.

Chrysler Corp. installed V-8s in 169,412 cars, equal to 22.14 percent of production. That was down from 444,228, or 39.11 percent in '79.

Ford Motor installed V-8s in 479,142 cars, equal to 34.88 percent of its production. That was down from 1,414,959, or 51.40 percent, in '79.

General Motors equipped 1,473,006 cars, or 32.12 percent of its production, with V-8s. That was off from 3,588,313, or 69.62 percent, in '79.

Volkswagen doesn't offer a V-8 engine, and didn't in '79.

Six-cylinder engines accounted for 37.13 percent of domestic car production in '80, up from 24.01 percent in '79. A total of 2,652,644 U. S.-built models carried them, up from 2,243,736 in '79.

General Motors installed six-cylinder powerplants in 1,790,428 U. S.-built cars, equal to 39.05 percent of its production. That was up from 996,560, or 19.33 percent in '79.

Ford Motor installed the en-

Chrysler pays full tab to floor most models

By Joseph Bohn
Marketing Editor

Chrysler Corp. has launched a new floor-plan assistance program in which it pays the full shot on eligible vehicles for 45 days' or 115 days' floor-plan time.

Chrysler's program is fully factory funded unlike earlier General Motors and Ford programs which pass part of the costs on to dealers and consumers.

Under Chrysler's program, a dealer can elect to receive 30 days' free floor-planning on eligible vehicles invoiced during November. That is in addition to the normal 15 free days and in-transit time. Or, he can elect to receive 75 days' extra free floor-planning on eligible vehicles.

A dealer qualifies for the 30 days by submitting his November allocations by Nov. 7. He gets the extra 75 days by submitting November/December allocation orders by Nov. 19.

(Chrysler normally has a little flexibility in these cutoff dates).

Eligible units are all cars and trucks, except the K-cars, Imperial and imports. The dealer must still order the latter lines as part of his overall allocation to qualify, but they don't get covered with extra free time.

Vehicles must be invoiced in November, for example, to quality for the 30 days' extra floor-planning, or invoiced in November/December to qualify for the extra 75 days.

For its purposes, Chrysler is waiting 15 days after invoice date to begin ticking off the time. Thus, if a vehicle were invoiced Nov. 1, for example, it would be covered by free factory floor-planning from Nov. 16 through mid-December.

A dealer whose vehicles were invoiced in late December and who qualified for 75 days' floor-planning time could be covered on his eligible vehicles all the way through March (75 days plus the normal 15 days).

Chrysler came up with the program to encourage orders during the current uncertain market and to protect dealers against relatively high interest rates.

breaking news

Datsun picks Tennessee for truck plant

DETROIT. — Datsun has chosen Smyrna, Tenn., as the site of its U. S. truck plant. Smyrna is 20 miles southeast of Nashville. The $300 million facility will be Nissan's largest investment outside Japan. Production of Datsun pickup trucks is scheduled to begin at Smyrna late in 1983 at an estimated rate of 120,000 vehicles a year. Construction is slated to begin early in 1981. The plant will be on an 850-acre site, will employ about 2,200 and have an estimated annual payroll of $40 million. The company had narrowed its site selection to Tennessee and Georgia before choosing Tennessee.

EPA orders recall of 140,000 VWs

WASHINGTON. — The EPA has ordered the recall of 140,000 1977 Volkswagen Rabbits and Sciroccos for failure to meet the 1977 NOx standard. EPA says the exhaust gas recirculation system on the cars appears to be the cause of the problem. California versions of the cars are not included.

'79 auto trade deficit with Japan is $6.4 billion

WASHINGTON. — The International Trade Commission reported that the U. S. auto trade deficit with Japan widened to $6.4 billion in 1979 from $6.3 billion in 1978 although the overall trade deficit in autos declined to $10.2 billion from $10.5 billion in 1978. After Japan, Canada was the largest auto exporter to the U. S. with $3.9 billion, and West Germany was third with $3.2 billion. Japanese cars accounted for 53.8 percent of the autos imported in 1979; West Germany for 16.5 percent.

CARP caught in net of congressional concerns, and GM sees too many hooks

Government-industry auto research plan runs into trouble

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The Carter Administration's Cooperative Automotive Research Program — rather unfortunately known as CARP—is floundering.

It has been caught in a net of congressional concerns and General Motors' reluctance — GM will probably approve it but may add caveats. CARP even awaits election results.

It all started with former Transportation Secretary Brock Adams telling Detroit to "reinvent the car" —a catch phrase that boomeranged almost immediately. In the rush to smooth over the differences, the White House decided to start its very own model of the new look of brotherly love.

Washington Analysis

Instead of the companies digging in to "reinvent," the White House Office of Science and Technology Policy, working mostly wth the Research and Special Projects Administration of DOT, concocted a much more palatable program of basic research.

This was the first step taken by the Carter Administration to work with the auto industry instead of—in the eyes of industry—against it. In fact, the May, 1979, meeting at the White House with auto company officials was friendly and hopeful.

It was to be a 10-year program of as much as $800 million to come from windfall profits of the oil companies, starting slowly and then building up, using the best brains and dealing only with the purest science and letting the auto companies pick their fields and doing all the development work.

Since those days when the auto industry's problems were only becoming apparent but were not yet catastrophic, the Carter Administration has taken more and bigger steps—the successful push for loan guarantees for Chrysler, the massive auto industry study now underway, the tripartite auto committee (whose first meeting will come after the election), the proposals for next year for refundable tax credits and accelerated write-offs, depreciation reform, and some current easing of regulations mostly in the air pollution field.

Even the case for import restraint is under consideration—not at the behest of the Carter Administration but at Ford's and the UAW's—just in case the International Trade Commission finds imports are the substantial cause of injury.

- CARP not only survived the departure of Adams (and the man who is said to have created the "reinvent the car" phrase) but thrived.

In February, 1979, scores of scientists (including company men) assembled in Boston to hammer out a rough agenda. Visits were made to universities and private laboratories to gather expertise. In general, the auto companies cooperated, whether because they were genuinely enthusiastic or merely because they wanted other concessions from the Administration and were merely going along to get ahead is not totally clear.

But the White House OSTP got heavily involved in negotiations. When the companies raised antitrust questions about their cooperating considering the "smog conspiracy" consent decree they still operate under, the Justice Department and the Federal Trade Commission rendered their views saying essentially that "basic" research was fine.

When the companies wondered whether DOT is appropriate for the job as lead agency, an

Continued on Page 50, Col. 1

Six is most popular engine, but fours are gaining

U.S. makers cut V-8 output in half

Continued from Page 1

gines in 416,907 cars, equal to 30.35 percent of production. That was down volumewise from 722,390 in '79—but up from the 26.24 percent penetration of a year earlier.

Chrysler Corp.'s six-cylinder-engine installations climbed to 295,208, or 38.57 percent, of output. Again, volume was off from 387,497, but penetration increased from 34.11 percent in '79.

American Motors installed six-cylinder powerplants in 150,101 cars equal to 75.86 percent of production. That was up from 137,289 in '79, but penetration slipped from 81.02 percent.

Volkswagen offers only four cylinder engines.

The number of four-cylinder powerplants on domestic cars jumped to 2,371,152, or 33.18 percent of production, up from 1,644,731, or 17.60 percent in '79.

All 223,267 VW Rabbits built in the U. S. carried this powerplant, an increase over 132,821 in '79.

American Motors installed four-cylinder engines in 47,766 domestic cars, equal to 24.14 percent of production. That was up from 22,612, or 13.35 percent in '79.

Chrysler installed 300,633 four-cylinder engines in its Omni and Horizon models, equal to 39.29 percent of its domestic production. That compared to 304,240 units, or 26.78 percent of production, in '79.

Ford Motor installed the small engines in 477,533 cars, equal to 34.77 percent of production. That was down from 615,629 in '79, mainly because of declining Pinto/Bobcat sales. But penetration was up from 22.36 percent.

General Motors installed the 4-cylinder in 1,321,953 cars, or 28.83 percent of production. That was up sharply from 569,429, or 11.05 percent, in '79.

- Diesels continued to catch on, accounting for 316,377 domestic models, or 4.43 percent of production. That was up sharply from 203,338, or 2.18 percent in '79.

General Motors' diesel engine car production totaled 196,661, equal to 4.29 percent of its production. That was down from 203,338 in '79, but penetration was up from 3.95 percent.

The decline in volume is partly attributable to a slowdown in GM's big-car sales, particularly at Cadillac, but also due to the company's decision to build V-8, rather than four-cylinder or six-cylinder diesels. GM already has plans to discontinue the 350 V-8 diesel in two years; it will be replaced by a new family of V-6 diesels in 1982-83.

VW diesel Rabbit production by contrast jumped to 109,401, or 49.00 percent of its production. A year earlier VW hadn't yet started building diesel Rabbits in the U. S.

Turbochargers have been slower to catch on, mainly because of emission certification problems at Ford. Last year, Ford planned to offer them on Mustang, Capri, Fairmont and Zephyr—but ran into production problems which thwarted their sales.

Industrywide, GM installed turbos on 50,371 cars, equal to 1.10 percent of its production. That was up from 36,938, or 0.72 percent, in '79.

At Ford Motor, turbos ended up in 18,901 cars, equal to 1.38 percent of production. That was down from 38,832, or 1.41 percent, in '79.

NOTE: Installation numbers are based on U. S. car production only, with the exception of Chrysler's Cordoba and Mirada which were sourced in Canada only. The '80 production was 7,145,356. This included 4,585,387 for General Motors; 1,373,582 for Ford Motor; 765,253 for Chrysler Corp.; 197,867 for American Motors and 223,267 for Volkswagen.

The Chrysler total includes 34,214 Miradas and 57,479 Cordobas. It excludes 7,846 Caravelles, sourced in the U. S. but sold only in Canada.

Similarly, the GM total excludes 19,651 Acadians, sourced in the U. S. but sold only in Canada.

The Plymouth Voyager, Dodge Sportsman, Ford Club Wagon and Chevrolet Sportvan are no longer included in domestic production, since manufacturers began counting them as trucks in '80.

$200,000 UAW ad campaign promotes U.S. cars, jobs

Continued from Page 2

unemployed auto workers. That is my explicit concern."

The radio ads, which offer both the country-western and disco beats, will be aired in markets like Detroit, where union membership is strong, and in areas like San Francisco and Washington where import buyers are concentrated, Fraser said.

The ads emphasize the need for solidarity between the American buyers and workers and say "When people stand together solidly they're strong. That's why each and every one of us belong to a union that will share a future that is fair. We're all working people trying to get along."

The recurring theme in the four spots is "We make it better in the U.S.A." with several union members talking about quality and pride in American cars. The ad declares "We're the UAW people who care about the jobs we do in shops and plants and offices from New York to L.A."

The print ads also take a punch at the imports blaming them and their buyers for the unemployment in the auto industry. One says "If you think U. S. trade policy is working ask someone who isn't . . . Bill lost his job recently because someone somewhere in the U. S. bought a foreign car. Each time that happens a worker like Bill is laid off."

A second ad gives the score: "It's 27 to 1 and America is losing," it declares. "Twenty-seven countries that produce cars insure their workers' jobs through fair trade. One doesn't (the U.S.)."

The third ad says: "7 out of 10 Americans agree: Paying for imports with our jobs is a price we can't afford."

According to a UAW spokesman, much of the work was done in-house. With Gens, Vallely & Associates, Boston, doing the print buying and Waggener & Associates, Kansas City, doing the radio buying.

$567 million loss by GM in 3rd quarter its biggest

Continued from Page 2

fidence, the index of leading indicators, and virtually all the principal indicators of current economic performance are recovering from their recession lows."

Reflecting the massive outlays for new products, including the J-car which will replace H-special models in the spring, GM listed third-quarter depreciation at $370.3 million compared with $320.8 million last year. The nine-month total was $1.074 billion compared with $918 million in 1979.

Amortization of special tools was $545.9 million in the July-September period compared with $452 million last year. The nine-month total was $2.0 billion compared with $1.3 billion.

Working capital at Sept. 30 was $3.974 billion compared with $6.688 billion at Dec. 31, 1979, and $7.459 billion Sept. 30, 1979.

Worldwide factory sales of cars and trucks in the third quarter fell 19 percent to 1,418,000. For the first nine months of the year, factory sales were off 24 percent to 5,223,000.

Average worldwide employment in the third quarter was 691,000 compared with 813,000 last year, although the two GM executives said some 38,000 workers had recently been recalled from indefinite layoff.

Average U. S. hourly wage cost, including benefits, in the July-September period was $18.00 compared with $14.95 last year.

Dealers to hear Smith at Los Angeles meeting

LOS ANGELES. — Roger B. Smith, General Motors executive vice president and chairman-elect, will be the speaker at the annual meeting of the Motor Car Dealers Assn. of Southern California Dec. 4 at the Century Plaza Hotel.

Smith's topic will be "Issues the Auto Industry faces in the '80s," with emphasis on the role of the franchise system.

Irvin at large

By ROBERT W. IRVIN

It's still fun, says Estes

Is the auto business still fun? Sure it is, says General Motors President Pete Estes.

Estes still has unbridled enthusiasm for the auto business despite the industry's many troubles, as witnessed by GM's record $567 million quarterly loss reported last week.

His predecessor as GM president, Edward N. Cole, also was noted for his enthusiasm. But by the time he retired in 1974, Cole was saying that the auto business was no longer fun and, in fact, if he had it to do over again he would find some other line of work.

Not so in the case of Estes who says he would do it all again. "I never had a job I disliked, and I wish I was starting all over again," Estes said.

"In the next five years you guys are going to see more exciting things than in all of the last 20 years," he added.

Estes retires in January after reaching the age of 65, winding up a GM career which began in 1934 when he was a student at the General Motors Institute in Flint.

As for his six years as GM president, he said "I've had a lot of fun in that job. You get frustrated sometimes, but not much."

Estes, an engineer by training, as was Cole, doesn't have much time to spend on engineering. "If you do this job right you spend only about 20 percent of your time on the product," he said.

And when he talks about getting involved in the product, this often means going to the various assembly and manufacturing plants.

"I have a pattern," he said. "At the start of the model year, I visit all the assembly plants building new cars," he said. "This year it was all the intermediate car plants and the home plants (of Buick, Olds and Pontiac). And if there is some new manufacturing product, I go to those plants.

• "This time it's been Delco Electronics and Rochester Products because of the new engine controls," he said.

"Anybody who has this job has to get out and get first-hand information, and you have to motivate the people right on the spot, especially when the going is tough like it is now," he said.

His successor, F. James McDonald, can be expected to do just that. He is a manufacturing engineer by training and is obviously right at home in GM plants.

Another part of the business Estes always tried to be close to was the dealer body.

"Whenever I travel to a city for any reason, I have a dealer meeting," he said. "You give them a chance to ask questions.

"Those are the kinds of things

Several auto dealers running for Congress

The auto industry, an important part of the economic policy discussions in this year's Presidential campaign, also is playing an important role in a number of Congressional races.

There are the obvious cases where constituents, because they are part of an "auto area," have been hurt economically by the downturn, and the less obvious cases where constituents may be influenced at the polls by the performance of their Congressmen in the Chrysler Corp. loan guarantee quest.

There are also some districts where the auto industry is truly involved on a grass roots level because a local auto dealer has decided to run for Congress.

In fact, there are two incumbents from the 96th Congress who are seeking re-election tomorrow (Nov. 4). The incumbents are William Lehman, a Democrat from the 13th District in Florida, and Gene Taylor, a Republican from the 7th District in Missouri.

Taylor is a former Ford dealer; Lehman has a North Dade county Buick franchise.

Also in Missouri in the 8th Congressional District, Wendell Bailey is running for an open seat as a Republican. Bailey owns Wendell Bailey Auto Co., Willow Springs, with Pontiac, GMC Truck, AMC and Jeep franchises.

In the 3rd Congressional District in Michigan, Chevrolet-Pontiac - Cadillac - Datsun dealer and local businessman Jim Gilmore is running as a Republican against incumbent Howard Wolpe. Gilmore has a number of business ventures, including a racing partnership with A. J. Foyt.

In the 3rd Congressional District of Wisconsin, Steve Gunderson, whose father is the Chevrolet dealer in Osseo, is running for election as a Republican against the incumbent Alvin Baldus.

Despite import record for August

U. S. new-car registrations dive

By Richard A. Wright
Assistant Managing Editor

U. S. new-car registrations in August were lowest for that month since 1970, but they included a record total of imports, according to figures compiled by R. L. Polk & Co.

New-car registrations in August totaled 703,923, down 20.08 percent from 880,753 a year earlier.

It was the lowest August count since 1970, when 683,151 new cars were registered. Record for August is 1,060,588, set in 1978.

After several months of running just below last year's levels, import registrations resumed their record-shattering ways in August. The import total was 214,742, up 10.21 percent from 194,849 a year earlier.

Registrations of new U. S.-built cars totaled 489,181 in August, down 28.68 percent from 685,904 a year earlier.

Import penetration of the new-car market in August was a record 30.51 percent, topping the former any-month high mark of 30.12 percent in July. A year earlier, imports accounted for 22.12 percent of August registrations.

For the first eight months of 1980, new-car registrations totaled 5,871,206, down 16.67 percent from 7,046,025 last year.

Of the U. S. corporate makers, only American Motors was able to increase its share of the market compared with August last year against the import onslaught. AMC accounted for 1.32 percent of August registrations, up 0.07 of a percentage point from a year earlier.

Biggest loser was Ford Motor Co., which saw its share drop 5.52 points to 13.50 percent of August registrations. General Motors dipped 1.79 percent to 47.47 percent and Chrysler Corp.

Four new-car outlets take on franchises

U. C. brokers invade dealers' lots

By Jenny L. King
Staff Writer

The American obsession with consumerism — with getting top quality at bargain prices and in quietly insisting manufacturers and business people are out to defraud the public—is changing the face of today's new-car dealership, to the delight of National Autofinders, Inc.

This Wichita - based franchise company, which sets up used-car broker operations around the country, recently crashed the gates of dealership tradition, establishing broker franchises in four Dallas dealerships this fall, with others in Houston, Atlanta and Austin, Tex., in the offing.

National Autofinders claims 30 franchises and a number of private investments in "territories" around the country and in Canada, all gained in less than three years' time.

Convincing the four Dallas dealers to overcome old doubts about brokers took months.

"We began talking with them last March," said Ray Graham, National Autofinders director of franchise sales. "Broker used to mean a new-car broker who would locate specific vehicles for the dealer, drop them off and not be seen again. That is not the way this operation works. Our brokers put buyers and sellers in touch with each other."

The current recession provided a stimulus. Dealers are looking for new sources of profit, and National Autofinders methods hold out that promise to them, in commissions on sales brokered and increased dealership traffic.

"Yes, I was a bit apprehensive at first," said Bobby Delmart, used-car sales manager at Rick Middlekauff Ford in North Dallas. "But I'm convinced this can be developed into a good money-maker for the dealership and I'm going to give it my best effort."

"This could become the Century 21 of the used - car business," said another used-car sales manager.

"We think this service will increase revenue in all departments of a dealership," said Graham. "For example, if a seller who lists his car with National Autofinders needs to have some work done on it to improve his chances of selling it for the price he wants, he can put it into the dealer's service area or body shop.

"Getting people in to list their used cars exposes them to both the other used cars on the lot plus the new cars at the dealership, and may result in a sale for the dealer as well as his prearranged commission if he brokers the sale of the original used vehicle," said Graham.

• Under the Autofinders plan, the seller lists his vehicle for 30 days with a franchised broker for $25. The broker fee is most often determined at the time of listing — usually between $100 and $300 but sometimes up to $1,000 depending on the price tag of the car for sale and the contract arrangements.

The broker advertises his list of used cars and puts potential buyers in touch with title holders. Buyer and seller determine the actual sale price and exchange money for title.

The broker is trained by National Autofinders to appraise the car, to inspect the title and see that the buyer's check clears or that he presents a cashier's check in payment. He is also trained in promotion techniques. Dealers seemed a natural market to the Autofinders staff.

Bob Paine, used - car sales manager at Larry Lange Pontiac - Cadillac, McKinney, Tex.,

$595 million loss at Ford a record for auto industry

Continued from Page 2

from 1,176,390 last year. For the January-September period, factory sales were off 30.2 percent at 3,267,406 from 4,683,601 in 1979.

In the U. S. and Canada, third-quarter factory sales fell 68.5 percent to 483,158 from 704,732 last year. The nine-month tally dropped 40.5 percent to 1,741,586 from 2,927,782.

Although Ford's third-quarter loss was the largest three-month loss ever incurred by an auto company and the second largest in U. S. industrial history, behind U. S. Steel Corp.'s October-December, 1979, loss of $668.9 million, it was still about $100 million less than some Wall Street analysts had forecasted.

These analysts generally agree Ford's fourth quarter will improve over the July-September period, traditionally the weakest financial quarter for auto makers because of change-over schedules. They expect Ford to report losses in excess of $350 million, however.

Chrysler loses $490 million in 3rd quarter

Continued from Page 2

working capital of $110.9 million. For the first nine months last year, Chrysler's working capital decreased by $720.4 million.

Chrysler's current assets to current liabilities ratio at Sept. 30 was 1.07 to one, compared with 1.22 to one at June 30 and 0.97 to one on Dec. 31.

For the third quarter, Chrysler listed depreciation at $73.7 million compared with $40.7 million last year. For the first nine months, depreciation was $199.1 million compared with $125.1 million.

Amortization of special tools was $70.6 million in the July-September period compared with $50.7 million in the comparable 1979 period. For the three quarters, amortization was $200 million compared with $151.9 million in 1979.

Worldwide vehicle sales for the third quarter fell 28.3 percent to 253,000 from 353,000 in 1979. For the nine-month period, unit sales were off 34.3 percent at 881,000 compared with worldwide sales of 1,340,000 in 1979.

Despite import record for August

U. S. new-car registrations dive

Continued from Page 3

was off 1.44 points to 7.25 percent.

Miscellaneous domestic lines accounted for 0.05 percent, off 0.01 of a percentage point.

Big winner was, of course, the imports, which took 30.51 percent of August registrations, up 8.39 points from a year earlier.

Excluding imports, domestic-only registrations in August were divided this way: GM, 68.16 percent; Ford Motor Co., 19.43 percent; Chrysler Corp., 10.44 percent; AMC, 1.90 percent, and miscellaneous, 0.07 percent.

A year earlier, domestic only registrations were divided as follows: GM, 63.13 percent; Ford Motor Co., 24.04 percent; Chrysler Corp., 11.16 percent; AMC, 1.60 percent, and miscellaneous, 0.07 percent.

By size segments, only subcompacts managed to improve their market share among domestic cars. Subcompacts accounted for 13.28 percent of August registrations, up 2.63 points.

Standards suffered the biggest loss, down 5.59 points to 10.77 percent of the market. Also down were intermediates, off 1.88 points to 21.51 percent; compacts, down 2.28 points to 19.68 percent, and luxury cars, off 0.39 of a point to 4.25 percent.

Registrations by size class in August were: Subcompact, 93,483; compact, 138,546; intermediate, 151,385; standard, 75,810; luxury, 29,957, and imports, 214,742.

The top 20 domestic nameplates in registrations during August were:

1—Chevrolet Citation	31,415
2—Chevrolet Chevette	28,385
3—Olds Cutlass Supreme	22,910
4—Chevrolet Malibu	21,596
5—Standard Chevrolet	18,456
6—Buick Regal	17,233
7—Standard Oldsmobile	17,086
8—Oldsmobile Cutlass	16,448
9—Ford Fairmont	16,170
10—Ford Mustang	16,160
11—Buick Skylark	14,791
12—Chevrolet Monza	13,488
13—Chevrolet Monte Carlo	12,677
14—Standard Buick	12,645
15—Buick Century	12,235
16—Plymouth Horizon	12,049
17—Ford Pinto	11,788
18—Pontiac Sunbird	11,690
19—Standard Ford	10,425
20—Chevrolet Camaro	9,801

BODY SIDE MOULDING TAPE

Valley Industrial Products is pleased to announce the introduction of Gorilla Tape™.

Gorilla Tape is a double coated waterproof foam tape, with a super high tack acrylic adhesive.

Highly resistant to high and low temperatures with excellent solvent resistance, Gorilla Tape acts as a rust inhibitor and, of course, makes moulding application faster and easier by using fewer or no rivets.

Customer response to Gorilla Tape has been sensational! Our attractive pricing is as follows:

½" x 1/32" x 72 yds. (24 rolls per case) — $6.90 per roll: Full case quantities; $9.50 per roll: Less than one case
1" x 1/32" x 72 yds. (12 rolls per case) — $13.80 per roll: Full case quantitites; $19.00 per roll: Less than one case

7,085,480 cars built during model year

'80-model build off 25 pct. from '79

By Barbara Beeler
Staff Writer

Hopes for increased U. S. car production in the 1981 model year are riding heavily on the newer, more fuel-efficient front-wheel drives, in addition to a slight comeback for the luxury and standard models.

Auto output for the 1980 model year fell to 7,085,480 units — 25.61 percent below the 1979 level of 9,526,024.

As the 1981 models were unveiled, price stickers dampened somewhat the public's original enthusiasm for Chrysler Corp.'s K-cars, Plymouth Reliant and Dodge Aries, and for Ford Motor Co.'s entries, Ford Escort and Mercury Lynx.

Ford and Chrysler are both having financial problems. Ford will be introducing sporty versions of the Escort and Lynx in the '81 model year, and Chrysler has introduced a stripped-down version of its K-car.

When the economic reality of car costs replaces the shock experienced by a segment of the buying public that has been absent from dealer showrooms for as much as six years, sales may experience an upturn.

The need for transportation remains in spite of gasoline prices and a prime interest rate of 14 percent, which means that banks must charge a higher rate in order to do business at all. Buyers who have stayed out of the market for several years will be forced to make some decisions soon, as their older cars simply wear out.

Meanwhile, there will be a ready market for as many of the small, fuel-efficient cars as U.S. auto makers can produce.

General Motors continued to enjoy the lion's share of model year production with 64.99 percent, compared with 57.14 percent in '79, due to the success of their compact X-cars (Buick Skylark, Chevrolet Citation, Oldsmobile Omega, and Pontiac Phoenix).

GM built 4,605,038 '80 models, compared with 5,443,240 '79s. Every division produced fewer cars than a year earlier, but all except Cadillac showed an increase in share of industry production.

Chevrolet was GM's division leader with a 3.46 percentage point increase over its '79 production share. During the 1980 model year, Chevrolet nearly doubled production of its X-car entry, as 624,220 Citations rolled off the assembly lines, compared with the 1979 totals of 315,126.

Chevrolet's subcompact Chevette also continued to do well in production, with an increase of 2.79 percentage points over the '79 model year.

Buick showed an increase of 3.26 percentage points in the '80 model year share of production. The compact Skylark was responsible for the biggest gain, while the subcompact Skyhawk was being phased out.

Oldsmobile was next with a 1.07 percentage point increase in share of production. Omega was the big gainer, with rises both in total production and share of build.

Pontiac's X-car Phoenix also did well, increasing its share of production 1.96 percentage points over the '79 model year.

The X-cars were introduced in the spring of 1979, so 1980 was their full production year.

Although Cadillac was down, both in total output and share of production, the luxury Eldorado showed a slight gain in share of output.

Chrysler Corp. production plunged to 681,406 for the '80 model year, down from 1,027,545 a year earlier, and its share of the industry total dipped 1.17 percentage points to 9.62 percent. Chrysler, Dodge and Plymouth all built fewer cars in 1980.

Plymouth, however, increased its share of production by 0.13 points to 4.22 percent. Horizon showed a gain of 0.58 points in output share.

In share of production, Chrysler was down 0.94 points and Dodge was off 0.36.

Production at Chrysler's Lynch Road plant, which assembles the big cars, will be "iffy" in the 1981 model year. The facility started up late and had some downtime, and since operations are heavily dependent on fleet orders, scattered shifts may be likely.

Ford Motor Co. slipped 9.52 percentage points in production share to 19.38 percent. In 1979, in had 28.90 percent of industry production. The company built 1,373,582 cars, down from 2,752,978 in '79.

Ford division, with 13.84 percent of industry production, suffered the greatest loss, 5.99 percentage points off from its '79 share of 19.83 percent. The division built 981,098 cars in the '80 model year, compared with

Grubb heads fund drive

PHOENIX.—Lou Grubb, president of Lou Grubb Chevrolet, has been named general chairman for the annual fund drive of Gompers Rehabilitation Center here.

1980-model auto production falls 25 percent short of '79

Continued from Page 16

1,888,814 units in '79.

Lincoln-Mercury Division was down 3.53 percentage points from its share of production a year earlier. L-M assembled 392,484 units in the '80 model year, for 5.54 percent of the industry output, compared with 864,164 cars built a year earlier for 9.07 percent of industry production.

American Motors showed a healthy gain in the 1980 model year with 2.81 percent of industry production, an increase of 1.03 percentage points over its 1979 share of 1.78 percent. Total production was also up to 199,613 units from 169,439 in 1979.

AMC introduced its four-wheel drive Eagle and built 46,379 of them in the '80 model year.

Although production of AMC's compact Concord was 80,456 units, compared with the 102,853 assembled in the previous year, the car nevertheless gained in its share of the '80 industry output with 1.13 percent, vs. 1.08 percent in '79.

While AMC was phasing out its compact Pacer, it increased production of its subcompact, the Spirit, from 56,371 cars in the previous model year to 71,032 in the '80 model year, for 1.00 percent of the industry production output, up 0.41 percentage points from its '79 share of 0.59 percent.

Volkswagen of America, which builds the Rabbit, nearly doubled its production of the popular subcompact, in its second year as a U. S. producer, with a production share of 3.16 percent compared with the 1.39 percent it had in 1979, for a percentage point increase of 1.77. Total production was also up to 223,267 from 132,822 Rabbits built in the '79 model year.

Lou Fusz adds Dodge

Lou Fusz, seated, president of Pontiac, Datsun, Toyota, Mazda/Subaru and Volvo dealerships in St. Louis, all bearing his name, signs a Dodge agreement for a dealership in Kirkwood, Mo. Flanking him are Lou Fusz Jr., left, and Rameau Johnson who will operate the new dealership with him. At far left is Herb Lugger, regional marketing manager for Chrysler, and at far right is Ted Cunningham, St. Louis zone manager.

High sticker prices for '81 models worry dealers

Continued from Page E-16

lic is going around, visiting a number of dealerships, comparing products.

"Aspens are our best buys," said Brinkman. He indicated that the multiple price hikes by Chrysler this fall have made it difficult to be competitive with the '81 models.

"The carryover '80 models are my best sellers," said Rigazio in Boston. "I only have a few left — fewer than I'd like — and there's no hope of getting any more."

Rigazio said he doesn't mind having carryovers on his lot into December. They are good back-ups if new-car customers for some reason decide against a current model, he said.

The marketing groundwork was laid well this year for the new front-wheel-drive cars at Ford and Chrysler. Dealers unanimously report interest, curiosity and enthusiasm among prospective customers. The perennial problem of getting enough new products to tantalize buyers is back again.

Brinkman said he had only one Dodge Aries on his lot on introduction day, Oct. 2. "I got a four-door and a station wagon shortly after, but it would have helped to have them for the first rush. Even with only the one model, customers liked it and bought (other models, sight unseen)," he said.

Jim North had some thoughts on new-model introductions and the appearance of the new products. "They should include models of the cars that look good stripped down; they should include radio, automatic transmission, whitewall tires, maybe a vinyl roof—but they shouldn't be so loaded that the price is just out of sight. That frightens people off.

"Let the customer add on his own options, if he wishes. The introduction models should have a low price tag."

"Ford made a mistake in the introduction of the Mustang II. We had only loaded Ghia-type models to show. They were too expensive. People came in expecting this smaller Mustang to be affordable and found a very expensive car.

"It took a couple of months to order cheaper models, change the promotion, change its image," said North. "In the meantime, the Mustang II just floated."

One nameplate that wasn't able to make the turnaround from a slow start was the downsized 1980 Thunderbird. "That's a deac car," he said.

Looking at the current state of Ford's Lincoln-Mercury Division, North said he couldn't predict with any certainty what would happen to a division that was enjoying record sales two years ago and is floundering so badly now.

"We compete with them. That's what keeps them going. But now it seems they are soaking up the profits generated by the rest of the corporation. Maybe the division will have to be consolidated with Ford to make a single car division," North said.

He speculated the same streamlining might have to take place at Chrysler to help cut down the current costs of duplicating.

But none of the dealers offered a solution to the 1981 price barrier, the No. One concern of new-car buyers.

New '81 models by market class

Following are the Automotive News market class categories for the 1981 model year and the U. S.-built car lines in each segment:

Subcompact

AMC Spirit, Eagle SX/4 and Eagle Kammback; Dodge Omni; Plymouth Horizon; Ford Escort; Mercury Lynx; Chevrolet Chevette and Monza; Pontiac Sunbird, and Volkswagen Rabbit. (Monza and Sunbird are '80 models which will continue in production until the end of the 1980 calendar year.)

Compact

AMC Concord and Eagle; Dodge Aries; Plymouth Reliant; Ford Fairmont and Mustang; Mercury Capri and Zephyr; Chevrolet Camaro and Citation; Pontiac Firebird and Phoenix; Buick Skylark, and Oldsmobile Omega.

Intermediates

Chrysler Cordoba and LeBaron; Dodge Diplomat and Mirada; Ford Granada and Thunderbird; Mercury Cougar and Cougar XR-7; Buick Century and Regal; Chevrolet Malibu and Monte Carlo; Oldsmobile Cutlass and Cutlass Supreme, and Pontiac Grand Prix and LeMans.

Standard-size

Buick, Chevrolet, Chrysler, Dodge, Ford, Mercury, Oldsmobile, Plymouth and Pontiac.

Luxury

Imperial; Lincoln Town Car and Lincoln Continental Mark VI; Cadillac, Cadillac Eldorado and Cadillac Seville; Chevrolet Corvette; Buick Riviera, and Oldsmobile Toronado.

Allstate rewards new Ford "World Cars" with lower insurance rates.

Repairability and serviceability features are expected to make Escort and Lynx cost less to insure.

Ford Motor Company's much-heralded Ford Escort and Mercury Lynx are the first of a new generation of American-made "World Cars" which combine design and engineering by Ford teams from all over the world.

While the power-efficient engine, front-wheel drive, independent suspension and minimum maintenance capabilities dominate Ford's announcements, some less-publicized features will bring far-reaching benefits to consumers. These are repairability and serviceability improvements that should help lessen the cost of service and repair.

Less costly repairs mean less costly insurance.

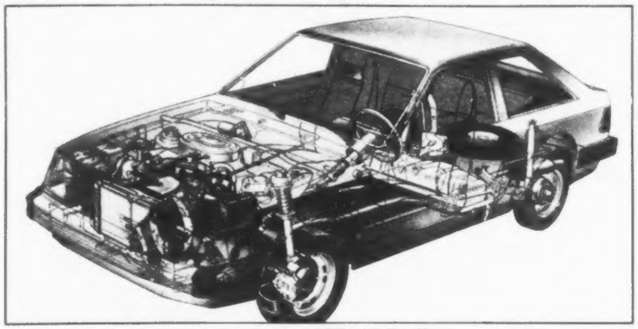
In Escort and Lynx, Ford Motor Company (like GM with its X-Cars) is addressing the issues that lead to reduced repair and service costs and, therefore, lower insurance costs.

Since Allstate believes that the improvements made in the Escort and Lynx should lower insurance costs, the premiums for all these models will be reduced. In fact, most of the models will be in the lowest insurance rating group of any 1981 domestic cars.

Premiums for Allstate policyholders who purchase the Escort or Lynx are expected to be reduced about 15% for Collision and about 35% for Comprehensive coverages.

"Make and Model" rating.

The lower rates awarded Ford Escort and Mercury Lynx are the latest examples of Allstate's Make and Model Experience Rating.* This program factors each car model's damageability, together with its repair cost and theft prevention features, into its insurance premium. Results are reviewed periodically to determine rates. We believe, as experience develops, it will support our judgment and permit continuing these rate reductions for the new Escort and Lynx models.



Ford's 1981 "World Car."

In the past, Allstate has made similar price reductions when auto manufacturers have considered the overall cost of car ownership—particularly Collision and Comprehensive insurance costs—in the planning stage. We pioneered reduced rates for cars equipped with damage-resistant bumpers, air bags, and more recently, lower rates for the GM X-Cars (Omega, Citation, Skylark and Phoenix).

Tech-Cor Automotive Research and Ford engineers collaborate.

Tech-Cor is a wholly owned subsidiary of the Allstate Insurance Company. Tech-Cor Automotive Research Division has become the country's leading independent auto repair research center. Here, a continuing scientific study of auto repair, as well as insurance experience, develops ways to lower crash repair costs, and thus make insurance more affordable.

Tech-Cor's staff works with all major domestic and import auto manufacturers, the auto repair industry, the Equipment and Tool Institute, and the Inter-Industry Conference on Auto Collision Repair.

As early as June, 1979, Tech-Cor engineers began sharing their repair and service experience with the Escort and Lynx designers. Ford incorporated a number of Tech-Cor suggestions into these new cars.

Our ultimate goal: to help make a car cost less to own, by holding down escalating repair and insurance costs.

Consumers benefit from inter-industry cooperation.

Allstate is not in the auto repair business. Our aim is to provide insurance at an affordable price. Since the cost of repairing cars greatly affects insurance costs, the more closely our industries can work together, the more the consumer will ultimately benefit.

The earlier that Tech-Cor can work with manufacturers to help effect repair and service improvements, the greater our contribution can become.

Allstate welcomes this growing relationship, and the opportunity it gives us to help the motorist we both serve.

*Allstate's Make and Model Experience Rating Program is in effect in every state except *Mass., Okla., N.J., No. and So. Carolina, and Texas.* The Escort and Lynx rate is in effect or is filed in all remaining states.

Allstate Insurance Company, Northbrook, Ill.

Domestic count down in '81

GM drops nine models, AMC adds one

By John K. Teahen Jr.
Managing Editor

As the 1981 season began, domestic auto makers were offerng 244 models to attract buyers o their dealers' showrooms. The total is down slightly from 252 at the close of the '80 campaign.

For the new year, General Motors has 115 models; Ford Moor, 59; Chrysler Corp., 42; merican Motors, 23, and Volksagen of America, 5. The VW otal includes only U. S.-built odels.

The final 1980 figures were: M, 124; Ford Motor, 59; Chrysr Corp., 42; AMC, 22, and WoA, 5.

Thus, GM is down for '81; AMC shows a minor increase, and Chrysler, Ford and VW are unchanged.

GM's total dipped as it dropped a pair of Chevrolet Citations and the two-door models in the Buick Century and Oldsmobile Cutlass lines. Also gone are a Buick LeSabre, a Chevrolet Camaro and the Pontiac LeMans Grand Am.

Chevrolet Monza and Pontiac Sunbird are counted in the '81 tabulation. They are '80 models, but production will continue until the end of the current calendar year.

Chrysler added the Imperial, a basic Omni and Horizon and 14 K-car selections—seven each for Plymouth Reliant and Dodge Aries. This balanced the dumping of Plymouth Volare and Dodge Aspen and cuts in five other lines.

Ford was also active, adding 16 models and getting rid of the same number. Principal newcomers are Ford Escort, Mercury Lynx and a Ford Fairmont Futura wagon, while Ford Pinto, Mercury Bobcat and Lincoln Versailles have departed.

At AMC, a quartet of Spirit-sized Eagle four-wheel-drive choices joined the lineup, while the Spirit Limited and the AMX (now an option) are no longer counted as separate models.

In all, the domestic makers added 38 models for '81, while dropping 46 of their '80 selections.

New nameplates

There is a goodly collection of new nameplates for '81. The AMC Eagle SX/4 and Kammback join the subcompact class, as do Escort and Lynx. Reliant and Aries are new compacts, and Imperial competes in the luxury class.

A name change involves the Mercury intermediate—Monarch has become Cougar.

And there have been defections. No more AMX: no more Aspen and Volare; no more Pinto and Bobcat. Also out of the picture is Lincoln's luxury-class Versailles.

From a nameplate standpoint, the additions balanced out the deletions. The domestic makers are offering 58 lines of cars for '81, the same as in '80. (As noted, the current '81 total includes Monza and Sunbird.)

The present model count of 244 will change as the year progresses. Monza and Sunbird will fade away, but GM's J-cars will make the scene at Chevrolet (Cavalier), Pontiac (J-2000), and Cadillac (Cimarron). Also upcoming are the sporty versions of Escort and Lynx, called the Ford EXP and Mercury LN-7. There probably will be others.

Escort and Lynx, incidentally, present an interesting comparison of how car divisions count their models. Ford lists 10 Escorts—the two base models and the four fancier trim levels with two choices each. Mercury, on the other hand, prefers to count just two Lynx models, listing seven others as options.

Also, Chevrolet tallies three-seat station wagons separately in its big-car lineup. Other makes that offer three-seaters call them options.

58 car lines

The Automotive News new-model analysis includes all models the manufacturers are pricing and/or merchandising individually. It does not include engine options. For example, a Pontiac Catalina four-door sedan is counted as one model even though it is available with a V-6, a V-8 or a diesel engine.

The 58 lines of cars offered for '81 consist of 27 from GM, 14 from Ford, 12 from Chrysler, four from AMC and one from Volkswagen.

By body styles, the 244 models for '81 show 76 four-door sedans, 124 two-doors, and 44 four-door station wagons.

1981 Totals	76	124	44	0	244	
1980 Totals (End of model year)	79	133	35	5		(252)**

*—1980 Monza and Sunbird are still in production. **—Revised.

The final rundown for '80 was 79 four-door sedans, 133 two-doors, 35 four-door wagons and five two-door wagons, a total of 252.

The drop in two-door models resulted from trims at GM, while the four-door wagon rise stemmed chiefly from the introduction of Escort and Lynx at Ford Motor. A Ford Fairmont wagon also joined the lineup.

Two-door wagons passed from the scene with the death of the Ford Pinto and the Mercury Bobcat.

Market classes

For 1981, as in 1980, Automotive News divides the domestic cars into five market classes — subcompact, compact, intermediate, standard-size and luxury.

As the '81 season got under way, the breakdown found 41 subcompacts, 68 compacts, 62 intermediates, 56 standard-size cars and 17 luxury models.

The final totals for the '80 model year were 35 subcompacts, 66 compacts, 73 intermediates. 59 standard-size models and 19 luxury cars.

Subcompacts are up because of the arrival of the 10 Escort selections. All other classes are down except compacts, which are up two. Compacts now have more models than any other market segment, replacing intermediates which were tops last year.

Ford Division has the most models for 1981 with 37, followed by Chevrolet with 30 and Pontiac with 29. Totals for other domestic makes are: Buick, 25; AMC, 23; Oldsmobile, 23; Dodge, 19; Mercury, 18; Chrysler, 11; Plymouth, 11; Cadillac, 8; Volkswagen, 5; Lincoln, 4, and Imperial, 1.

Final totals for the 1980 model year were: Chevrolet, 33; Ford, 32; Pontiac, 30; Buick, 28; Oldsmobile, 25; AMC, 22: Mercury, 20; Dodge, 19; Chrysler, 14; Plymouth, 9; Cadillac, 8; Lincoln, 7, and Volkswagen, 5.

Air conditioning rate slipping

By Joseph Bohn
Marketing Editor

Auto air conditioning installations dropped in the '80 model year, reflecting greater frugality among car buyers and an increasing trend toward smaller models.

Unit installations dropped both in terms of absolute volume and as a percent of production.

Altogether, domestic car producers installed 5,181,365 air conditioning units in domestic cars, down sharply from the 7,449,352 units installed in '79 domestic models.

Penetration also dropped off. Air conditioners were installed in 72.52 percent of cars, down from a 79.71 percent the year earlier.

Penetration figures were off for all car makers, except Volkswagen.

VW's penetration, still lowest among domestic producers, climbed to 41.00 percent from 36.50 percent a year earlier.

Altogether, VW installed air conditioners in 91,539 U. S.-built Rabbits compared with 48,496 a year earlier

American Motors installed air conditioning in 103,848 cars, or 52.02 percent of its production. Volume was up from 93,414 units, but below the 55.13 percent penetration of '79.

Chrysler Corp. installed air conditioners in 489,092 cars, equal to 63.91 percent of production. That was down from 814,958, or 71.74 percent of output in '79.

Chrysler-Plymouth accounted for 302,825 units, equal to 66.97 percent of output. This was down from 520,905, or 84.11 percent in '79.

Dodge accounted for 186,267 units, equal to 59.49 percent of output. Dodge's installations were off from 294,053, or 67.04 percent in '79.

Ford Motor installed 964,613 air conditioners, equal to 70.23 percent of its output. This was down from 2,127,902 units, or 77.29 percent, in '79.

Ford Division contributed 649,675 to that total, equal to 66.22 percent of its production. That was down from 1,399,810, or 74.11 percent in '79.

Lincoln-Mercury installed 314,938 units, equal to 80.24 percent of output. That was off from 728,092, or 84.25 percent.

General Motors installed 3,532,273 air conditioners, equal to 77.03 percent of production. That was off from 4,364,582, or 84.51 percent in '79.

Among GM divisions, Buick installed 718,745 units, equal to 89.82 percent of output. This showed an increase from 675,678 units in '79, mainly because of higher Buick production. Penetration was off from 92.91 percent in '79.

Cadillac, which has air conditioning as standard equipment on its cars, installed 231,028 units, down from 381,113 in '79.

Chevrolet installed 1,287,210 units, equal to 63.46 percent. This was down from 1,691,064, or 74.53 percent in '79.

Oldsmobile installed 781,398 units, equal to 92.20 percent of production. That was off from 963,536, or 94.28 percent in '79.

Pontiac installed 513,892 units, equal to 75.73 percent of output. This was off from 653,191, or 85.36 percent in '79.

Of the total air conditioners installed, GM's share was 68.17 percent, up from 58.59 percent in '79; Ford Motor's share was 18.62 percent, down from 28.56 percent in '79; Chrysler Corp.'s share was 9.44 percent, down from 10.95 percent; American Motors' share was 2.00 percent, up from 1.25 percent in '79. Volkswagen's share was 1.77 percent, up from 0.65 percent on '79 models.

The Plymouth Voyager, Dodge Sportsman, Ford Club Wagon and Chevrolet Sportvan were excluded from the '80 count after manufacturers began counting them as trucks rather than cars.

*—Voyager, Sportsman, Club Wagon and Sportvan are still in production. However, they began being counted by their respective manufacturers as trucks in '80, and so are excluded from the tally of '80-model car output.

Installation numbers are based on U.S. production only, with the exception of Chrysler's Cordoba and Mirada which were sourced only in Canada. The '80 model-year production total was 7,144,528 cars. This included 4,585,387 for General Motors, 1,373,582 for Ford Motor, 765,258 for Chrysler Corp., 199,613 for American Motors and 223,267 for Volkswagen.

Chrysler total includes 57,479 Cordobas and 34,214 Miradas built in Canada. It excludes 7,846 Caravelles, sourced in the U.S. but sold only in Canada.

Pontiac's production of 678,586 was used in computing GM's total. This excludes 19,651 Pontiac Acadian models, built in the U.S. but sold only in Canada.

"Our business is up 40% . . ."

We have Supra Key Boxes (including 100 of **the new** SUPRA **MAX**) installed in over 800 units in our 5 lots. As one of the largest Chevrolet dealers on the East Coast, it was imperative that we have a system that gave our sales staff the ability to efficiently demonstrate our cars and trucks. Supra gave us that system! Even in this economy, our business is up 40% over last year and our demonstration capability has increased to 97%. Part of this success I attribute to Supra Key Boxes!

Good news for pick-up and van dealers.

Deutz conversions add satisfied customers and extra profits, too.
The AirDiesel delivers economical performance nearly twice that of gasoline engines (depending, of course, on driving conditions, vehicle axle ratio, and tire sizes). With our approved pre-engineered conversions your customers can get the Deutz warranty of 24 months or 100,000 miles.
Eliminates 40% of engine maintenance problems caused by liquid-cooled engines.
With no radiator, water pump, hoses, or other troublesome liquid-cooling equipment, our F5L 912 is engineered to deliver up to 300,000 miles of dependable performance before an overhaul is necessary.
EPA-certified to meet established U.S. federal emissions standards, AirDiesels require 35% less air flow for cooling than comparably-sized liquid-cooled engines.
Easy to install and service.
Deutz unit cylinder design permits easy installation. And since AirDiesels have no water jackets, each cylinder may be serviced individually. Most important, AirDiesels are backed by a service support system including seven depots, ninety engine distributors, and an ever-expanding dealer network.

Its 'obscure' data is now important to public

Auto industry a prime interest

By Edward Lapham
Financial Editor

Until recently, there wasn't much interest in some of the more obscure facets of the auto industry. About the only people who cared about terminology such as dealer discount, carryover, holdback and floor-planning were dealers, their bankers, the factories and, of course, AUTOMOTIVE NEWS editors.

Now, however, with high inflation, rising car prices, periods of astronomical interest rates and the precarious financial situation of some U.S. manufacturers, there has a been a revival of interest in the auto industry.

The wire services—Reuter's, AP, UPI, Dow-Jones—have started taking an interest, as have daily newspapers. Reporters have learned that there is a growing public interest in the formerly "obscure" data because it has an impact on sales, production, pricing and, ultimately, the entire economy.

Since the '81 model year began, that interest has intensified, as consumer excitement about the new models combines with what has been described as "shock" at prices to generate a great deal of consumer and industry attention.

Reactions vary

While the public has been suffering its varying reactions to the new offerings from Detroit, some pertinent questions about the economy, interest rates and their relationship to wholesale and retail financing have been asked in financial institutions from Wall Street to San Francisco.

The reactions seemed to break down this way: Wall Street analysts are nervous, factory finance people are optimistic and the banks are cautious.

Maryann Keller, Paine Webber Mitchell Hutchins vice president and auto analyst, considered the subject of automobile financing so important she wrote a special status report on the subject in mid-October, shortly after the auto companies announced their '81 prices.

Keller said the situation is "potentially difficult enough to limit car volume and sales growth in the future," although she said she expects creative lenders to help solve the problems.

"The affordability of new cars has been a function of the willingness of credit sources to extend the terms of auto loans," she said. "Without the shift from 36-month to 48-month financing as the norm, price boosts during the last few years could have depressed car sales."

Keller compiled General Motors Acceptance Corp. data since 1969 to show that, due to longer-term contracts, monthly car payments as a percent of disposable income actually declined from 1974 to 1979.

"The favorable trends will probably reverse in the future as prices of new cars rise and are not moderated by longer financing terms," she said.

"Another adverse factor which could force the average size of a contract up faster than car prices is the trend in the underlying value of used cars.

"We have assumed that longer financing will result in an older, less valuable tradein when the motorist returns to the market. In the past, the average tradein accounted for the necessary downpayment plus a bit extra.

"In the future, buyers may have to draw down the maximum the banks will finance and still have to contribute additional cash because they will be trading in older and perhaps inefficient vehicles."

60-month loans

Keller said that to date "there has been little evidence" that banks will be willing to lend for 60 months.

"Banks have endured high repossessions recently, and lower recovery in proportion to unpaid balances has brought about more selective lending practices," she said.

The Federal Reserve Board reported that in August, 1980, 63.5 percent of all bank loans for new-car purchases were for more than 36 months, compared with 54.1 percent in May and 63.1 percent last August.

For indirect loans, 71.2 percent were for more than 36 months in August, compared with 63.2 percent in May and 71.7 percent in August, 1979. For direct bank loans, 51.0 percent were for more than 36 months in August, compared with 38.2 percent in May and 45.6 percent last August.

When the interest rates rose, the banks required larger downpayments and better terms to qualify car buyers.

One large San Francisco-based bank told AUTOMOTIVE NEWS it already has moved easily to 60-month financing.

"Right now," the banker said, "I don't think you can get a bank car loan for more than 5 years—bankers just don't want to get stuck with a fixed-interest rate for longer than that."

"Cautious optimism"

He said that, in general, his bank is "cautiously optimistic" about the retail and wholesale financing markets through the '81 model year.

New Car Loan Characteristics General Motors Acceptance Corporation

	Average Retail Contract	Percent Change	Average Monthly Payment	Percent Change	Average Term of Loan (Months)	Percent Change

"Dealers are more aware of the effect interest rates have on their profits now," he said. "The dealers who are left seem to be more careful about their inventories and the factories seem to be pressuring them less, while they are offering some assistance on high-rate plans. It all will help."

James W. Ford

James W. Ford, Ford Motor Credit Co. chairman, said he too is moderately optimistic about the financing market through the '81 model year.

Ford said he believes interest rates will peak near 14 percent, but will begin easing and reach about 11 percent by the spring selling season, although he said he does expect them to begin rising again next autumn.

He also said he doesn't think the higher prices will restrict sales. "More people are back in the market who haven't bought a car for a while and they are talking about the prices because they haven't seen the gradual increases the way they have in the supermarket," Ford said.

Ford said the average car price was just 10.1 percent of average disposable income in 1979 and shouldn't climb to much more than 10.2 or 10.3 percent in 1980 compared with 10.5 percent in 1975 and 10.6 percent in 1977.

Ford Credit's optimism about the '81 model year is based on the assumption that car prices will not rise faster than inflation and that there will be good availability of funds for car loans.

"The banks are back in and are going to be more aggressive," he said.

The one questionable area, he said, is interest rates. "If our assumptions are wrong and rates go up instead of down, then that changes things," Ford said.

Ford Credit's retail penetration was up about 25 percent earlier in the year, but is down to a more normal 20 to 25-percent now. Ford said Ford Credit's wholesale penetration stayed right around the normal 64 percent.

Ford said he too expects the dealers to be in better shape for floorplanning because of stock adjustments.

"If there is no extreme volatility in the market the dealers should be OK," he said.

OK,
we admit it.
We're
a success.

Want to join us?

In just over 15 years, Genway Corporation has established over 400 car rental locations in General Motors dealerships nationwide.

That's right, *rental* locations.

With the tremendous success in this segment of our marketing operations, we're looking for still more locations, particularly in major metropolitan areas.

To the qualified candidate we offer:

TRAINING • FINANCING • INSURANCE
MANAGEMENT CONTROLS • FIELD ASSISTANCE
MARKETING & MERCHANDISING PROGRAMS

In other words, our experience goes to work for *you* when you join the successful Genway Rental Network. If you believe you have the necessary components for a substantial car rental operation, **contact Bud DeRosse.**

Fleet operators downsizing, buying more small cars in '81

By Francis J. Gawronski

The nation's fleet operators will downsize their fleets during the 1981 model year by purchasing a larger percentage of smaller cars.

In assisting fleet owners in planning for their needs and determining the best ways to meet them, leasing companies are advising—by publishing 1981 vehicle recommendations in booklet form—that up to 30 percent of vehicle replacements be selected from cars one size smaller than those selected in 1980.

The reason given for the downsizing is that the fuel efficiency gained in such a move pays for itself.

According to the National Assn. of Fleet Administrators' (NAFA) annual new-car acquisition survey, six out of 10 new cars to be ordered by NAFA members will be compacts and subcompacts.

The actual breakdown of new-car orders for the 1981 model year will be subcompacts, 10 percent; compacts, 50 percent; mid-size cars, 35 percent, and large cars, 5 percent.

A total of 100 commercial fleets operating 79,433 cars participated in NAFA's annual new-car study. These fleets indicated they plan to acquire 31,000 new cars during the 1981 model year.

Survey highlights

Highlights of the survey, according to NAFA, include:

1. Along with smaller cars, fleet managers are specifying smaller engines. Nearly every fleet reported that it was making major changes in its engine specifications—four-cylinder engines in compacts and subcompacts; six-cylinder engines in mid-size and large cars. Three fleets said they were switching to diesels for their large cars.

2. Thirteen fleets are planning to order at least some of their new vehicles with standard transmissions. In previous surveys, practically every new fleet car was ordered with automatic transmission.

3. The four-door sedan remains the most popular body style—it will account for 57 percent of the new-car orders. When combined with the five-door hatchback, the two models will account for three out of four new-car orders, according to the NAFA survey.

Two-door sedans and three-door hatchbacks will garner 17 percent of the new-car orders; station wagons will account for their normal 5 percent of the new-car orders, and sport models for one percent.

4. Seventeen fleets said they plan to order some "specialty" cars and 11 fleets said they will order some imported cars during the 1981 model year.

Canadian segment

The Canadian segment of NAFA's new-car acquisition survey consists of 12 fleets operating 3,120 cars—2,119 leased and 1,001 owned.

For the 1981 model year, there also will be some major shifts in the Canadian fleet mix.

Two percent of the new-car orders will be for subcompacts; 31 percent for compacts; 61 percent for mid-size units, and only 6 percent for large cars.

At the present time, according to NAFA, none of the Canadian fleets have any subcompact units; 10 percent of their cars are compacts 67 percent are mid-size cars, and 23 percent are large cars.

For 1981, Peterson, Howell & Heather (PHH), Baltimore, is recommending to lessees that 30 percent of their replacements be selected from cars one size smaller than those they selected in 1980.

In its newsletter to lessees, PHH said, "The criterion for choosing which cars should be smaller is the monthly mileage rate — those cars traveling the least miles per month should be the smallest."

This gradual conversion to smaller cars, according to PHH, will:

1. Continue to improve the average fuel economy of the fleet.

2. Serve as a hedge against any possible (but unanticipated) decline in the value of six-cylinder, mid-size cars.

3. Begin an orderly transition to cars that will be sized right for the resale market of the mid-eighties.

4. Assure timely availability of product throughout the model year.

PHH's model selection guide for 1981 includes three lists. List A includes recommended mid-size cars, List B contains compacts, and List C carries smaller cars.

According to PHH, if a lessee normally would pick replacement cars from those on List A, he should begin by listing all cars scheduled for replacement during 1981 model year by monthly mileage rate.

Once the lessee has the cars ranked by monthly mileage, he should replace the 30 percent with the lowest monthly mileage with cars from List B, and the remaining 70 percent with cars selected from List A.

1981 new car orders by size and line

U. S. FLEETS
(percentage of new cars being ordered)

Car Size	Line Top	Middle	Bottom	Total
Subcompact	*	7	3	10
Compact	11	32	7	50
Mid-Size	18	16	1	35
Large	2	2	1	5

Comparison of 1981 new-car orders by car size

(Percentage of orders by U. S. commercial fleets)

Car Category	Model Year 1978	1979	1980	1981
Subcompact	*	*	1	10
Compact	4	6	52	50
Mid-Size	81	71	39	35
Large	15	23	7	5

Source: National Assn. of Fleet Administrators

If the fleet is currently made up of cars from List B, all cars traveling less than 1,500 miles per month should be replaced by cars from List C. Of the remaining cars, again ranked by monthly mileage, 30 percent with the lowest monthly mileage rates should be replaced with cars from List C, while the rest should be replaced with List B cars.

Those downsizing PHH selections exclude manager's cars, station wagons and those cars needed to carry bulky, heavy samples in a secure storage space.

PHH's approach to cars for managers is the same as that recommended for all other fleet vehicles. Lessees should target 30 percent for replacement with one size smaller than they would normally buy.

For those fleets with large-car, large-load requirements, PHH suggests that 20 percent of 1981 full-size cars be equipped with diesel engines and that the highest-mileage cars be chosen for dieselization. For the remaining 80 percent, PHH recommends the four-door Chevrolet Impala equipped with a 229-CID, V-6 gasoline engine, or the four-door Ford LTD with the 255-CID gas engine.

For station wagons, PHH suggests the highest 40 percent monthly average rate be replaced with the Chevrolet Impala three-seat wagon with the 350-CID diesel. The remaining wagons should be replaced with the Chevrolet three-seat unit with 305-CID gas engine or the Ford LTD four-seat unit equipped with the 302-CID gas power plant.

Choosing right car

This year, PHH said, choosing the right car has been further compounded by concerns about future fuel costs and product availability.

"For this reason, we are departing from our traditional practice of recommending a single type of car for basic fleet use," PHH said. "Instead, we are recommending that clients select a mix of cars for their fleet.

"This mix has as its goal delivering the best blend of fuel economy, availability and resale potential," PHH said. "In addition, it will permit you to job-rate your cars so that they match your operating needs."

By adopting this mix approach, PHH said, lessees will also have adopted a strategy for improving fleet fuel economy each year.

"You will have achieved your own CAFE (Corporate Average Fuel Economy) program," PHH said. "Each year between now and 1985, you will be in a position to change your mix by merging into your fleet an increasing number of smaller cars and four-cylinder power plants as production allows.

"By gradually phasing in small cars and four-cylinder engines, you will not have to be concerned about mid-year changes on fleet composition due to sudden availability problems," PHH said. "You have all the tools and mechanisms in

Continued on Page 48, Col. 1

Fleets buying small cars

Continued from Page E-46

place to improve your company's CAFE."

Hertz Corp., New York, also indicated it will emphasize smaller four and six-cylinder vehicles and will offer fuel-efficient manual transmissions for the first time since the late 1950s.

A Hertz spokesman said the company will "sharply increase the purchase of 1981 compacts and subcompacts, drastically reduce the number of standard cars and reduce somewhat the number of intermediates."

Hertz' 1979 fleet of approximately 250,000 vehicles consisted of 40 percent intermediates, 24 percent standards, 3 percent large, 18 percent compact, 7 percent subcompact and 8 percent imports.

Front-wheel-drive

In its 1981 Make and Model Recommendations booklet, United States Fleet Leasing, Inc. (USFL), San Mateo, Calif., urged that, wherever possible, lessees change "low and medium miles-per-month vehicles to front - wheel - drive, high - EPA models."

"High consideration should be given to vehicles such as Omni, Horizon,' Escort, Lynx and the rear-wheel-drive Chevette," USFL said. "You will save three ways—fuel economy will lower operating expenses, high resale value is almost guaranteed and original investment will probably be lower, thus causing lower interest expenses embedded in your lease or ownership cost."

For medium and higher-mileage - per - month vehicles, USFL said it believes Chysler Corp.'s "K-cars deserve equivalent consideration as General Motors' X-bodies. Because of availability and price, Ford's Fairmont deserves close second consideration."

For intermediate and standard-size vehicles, where needed and especially where monthly mileage is extremely high, USFL said GM's 350 V-8 diesel is a definite option.

In making its fleet suggestions in its Fleet Manager's Newsletter, Avis Car Leasing, Garden City, N.Y., lists four basic groupings of business personnel and typical fleet vehicles for 1981.

1. Sales and service representatives: Cars—Citation, Skylark, Omega, Phoenix, Fairmont, Zephyr, Concord, Toyota Corolla. Optional equipment—four or six-cylinder engines, automatic transmission, power steering, power brakes, radio, air conditioning (where deemed necessary), tinted glass (on air cars only), body side moldings, vinyl interior, wheel covers.

2. Managerial personnel: Cars—Malibu Classic, Century Regal, Cutlass Supreme, Grand LeMans, Cougar, Thunderbird, LeBaron, Diplomat, Monte Carlo, Grand Prix, Riviera. Optional Equipment—six-cylinder engine, automatic transmission, power steering, power brakes, radio, air conditioning, tinted glass, upholstered interior, whitewall tires, wheel covers.

3. Executive cars—group one: Cars—Caprice Classic, LeSabre Limited, Delta 88 Royale, Bonneville Brougham, LTD Crown Victoria, Marquis Brougham, St. Regis, Newport. Optional equipment—six-cylinder engine (where available), automatic transmission, power steering, power brakes, AM/FM stereo radio, air conditioning, tinted glass, whitewall tires, body side moldings (where applicable), cruise control, remote control left side mirror, vinyl roof, upholstered interior.

Group two—Cadiliac Seville, Eldorado and deVille, Buick Park Avenue, Olds 98, Olds Regency and Toronado, Mark VI, Lincoln, Chrysler, Imperial, New Yorker, Toyota Supra. Optional equipment — six - cylinder and diesel engines (where available). (Note—standard equipment on these luxury cars includes most requested items.)

4. General purpose/economy-type cars for unclassified personnel: Cars—General Motors' J-car (April, 1981 introduction), Chevette, Fiesta, Escort, Lynx, Omni, Horizon, Chrysler's K-cars, Toyota Tercel. Optional equipment — four-cylinder engines, four-speed transmissions, radio, body side moldings, vinyl interior.

According to Avis, the 1981 model year will be characterized by continuing accelerated change.

"While EPA mileage requirements will be higher (than 1980's), fuel availability is questionable and fuel costs will most certainly reach new highs of $2 and $2.50 per gallon," Avis told its clients.

"As inflation exacts its toll in the automotive environment, vehicle prices will spiral in bursts rather than uniform low-level increments as in the past," Avis said.

"All of these reasons make it vitally important for the business fleet administrator to select those vehicle models and optional equipment items that make the best combinations of economy, utility and resale value," Avis cautioned in a statement that could serve as a guideline for the leasing industry.

Abramson honored

Herbert A. Abramson, Silver Lake Dodge, Wellesley, Mass., has been named president of the President's Conference of Dodge Dealer Advertising Assns., headquartered in Detroit. He's congratulated here by Chrysler Chairman Lee Iacocca.

Fast, fair claim settlement is, after all, the reason you buy business insurance in the first place. So when you have a loss, you'll really appreciate your Unicover® protection from The Specialist.

All claims are handled promptly and efficiently. But when you have a major loss—fire, vandalism, etc.—that's when Universal really goes into action.

We have major loss teams on constant standby, ready to travel anywhere. So you'll be getting service from The Specialist within hours of your loss.

And because we've specialized in automobile dealers and their insurance problems since 1922, we can help with many loss-related details. Like disposing of hail-battered or fire-damaged automobiles. Or shortcuts in restoring your building. That's why we call ourselves The Specialist.

If this is the kind of dependability you want from your insurance coverage, then you want The Specialist.

Dip follows early-month gain

Mid-October auto sales down 24 pct. from '79

By Jenny L. King
Staff Writer

The upswing was short. Early October domestic-car sales were up a promising 13.94 percent, then mid-month sales plunged 24.14 percent, and the 19-month domestic automotive recession continued.

Sales for the Oct. 11-20 period totaled 204,466, down 24.14 percent from 269,547 a year ago and off 9.21 percent from the 225,202 new cars sold Oct. 1-10, 1980.

There were eight selling days this year compared with nine the previous year. The latest selling rate of 25,558 was down 14.66 percent from 29,950 in 1979.

Mid-October sales last year were buoyed by new-model introductions which occurred during the period. This year the new cars were brought out the end of September and the first week in October.

All the domestic auto makers were down substantially on a year-to-year basis, in spite of their new models. General Motors sales dropped 15.13 percent to 135,700 from 159,898.

Ford Motor Co. reported a 45.37-percent sales plunge, although the Ford insisted showroom traffic was up significantly and that its new Escort and Lynx were in short supply. Ford sales numbered 40,249, compared with 73,679 for the period in 1979.

Chrysler Corp. sales dropped 17.82 percent, to 20,091 from 24,449 last year. The company said it has already received 85,000 orders for K-cars which bowed Oct. 2. Volkswagen of America reported sales of 2,926 new Rabbits, down 46.02 percent from 5,421 a year ago. Estimated sales of American Motors passenger cars was 5,500, down 9.84 percent from 6,100.

- GM increased its share of the market seven percentage points, to 66.37 percent from 59.32 percent last year. Ford sales accounted for 19.68 percent, down from 27.34 percent. Chrysler earned 9.83 percent of the market, up slightly from 9.07 percent. VWoA cornered 1.43 percent, down from 2.01 percent and AMC had an estimated 2.69 percent, up from 2.26 percent.

All U. S. makes, save the new Imperial, suffered sales declines during the period, ranging from 0.31 percent at Chrysler to 62.55 percent for Lincoln.

Dodge sales dropped 12.67 percent from last year, while Plymouth was off 32.58 percent. Ford sales skidded 44.47 percent and Mercury was down 43.30 percent.

Buick came closest of the GM divisions to breaking even. Its sales were down 8.06 percent on a year-to-year basis. Chevrolet sales were down 13.17 percent, Oldsmobile was down 13.45 percent, Pontiac was down 14.65 percent and Cadillac slipped 44.83 percent.

Top-selling nameplates for Oct. 11-20 were: Chevrolet Chevette, 12,817; Chevrolet Citation, 11,198; Chevrolet Malibu, 9,043; Oldsmobile Cutlass Supreme, 8,769, and Ford Fairmont, 8,034. One year ago the top five were: Standard Chevrolet, Fairmont, Cutlass Supreme, Malibu and Ford Thunderbird.

Year-to-date sales totaled 5,343,403, down 22.64 percent from 6,907,365 last year.

DeLorean Motor spins off research, engineering unit

NEW YORK.—DeLorean Motor Co. has divested its research and engineering division into an independent. Four employes of the Troy (Mich.) company acquired it from DMC. It will be called Autosafety Engineering Corp.

Mal Harvey, one of the four employes who purchased the operation, said the move was made to facilitate doing engineering and design studies for the federal government and other auto companies.

"We want to keep working on lightweight cars," he said. "We think, for example, that we can get the weight of a car the size of a full-size Chevy down to about 2,200 pounds using ERM."

ERM is elastic reservoir molding, a process to which Composite Technology Corp., a DMC subsidiary, owns most North American transportation rights.

Harvey said the company plans to increase its staff to about 30, including "20 professionals and about 10 support people."

The company currently shares quarters in Troy with CTC but will soon be moving to a new facility, Harvey said.

U. S. makers schedule 577,138 cars

November target lowest in decade

U. S. auto makers have posted an assembly target of 577,138 cars for November, down 8 percent from the 627,346 built during November last year and the lowest tally for that month in a decade.

The November production total has not dropped to such a low level since 1970 when the makers built 372,561 during the month, when output was cut by a strike against General Motors.

Of this month's target, GM's planned output of 330,000 units is a drop of 19.02 percent from the 407,510 the company built during November, 1979. American Motors recorded the largest drop for the month, scheduling 12,452 units, down 26.89 percent from 17,032 built during November, 1979, Checker's forecast of 306 units is down 10.79 percent from 343 built during November, 1979.

Chrysler, Ford and Volkswagen all expect gains. Chrysler plans to build 82,000 cars during November, up 20.04 percent from 68,309 last year; Ford has scheduled 136,000, up 13.73 percent from 119,586, and VW has projected 16,380, up 12.45 percent from 14,566.

U. S. production remained steady last week. The makers scheduled weekly output of 155,279 autos, up 1.06 percent from the 153,638 cars built during the previous week, but down 5.8 percent from the 164,844 built during the comparable 1979 week.

Ford's Lorain (O.) plant returned to work last week following a one-week shutdown for inventory adjustment; however, the company closed its San Jose plant last week for the same reason. It will reopen today (Nov. 3).

General Motors scheduled Saturday overtime last week at its Oklahoma and Tarrytown plants, which build Chevrolet Citation, Pontiac Phoenix, Oldsmobile Omega and Buick Skylark models, and Detroit Cadillac.

Chrysler has closed its Lynch Rd. plant for one week, beginning today (Nov. 3), to balance car stocks. The closing idles 1,900 workers. Meanwhile, the company has instituted nine-hour overtime shifts at its Newark and Jefferson plants (K-cars) beginning today (Nov. 3).

Year-to-date, the makers have built 5,385,510 cars, down 27.16 percent from the 7,394,059 assembled during the equivalent period last year.

Truck forecast for November is lowest since '70

The November truck forecast is the lowest for that month since 1970, a strike-ridden year, as the sales slump continues despite optimistic projections by some makers.

This month, the industry will assembly about 160,520 units, off 12.88 percent from the 184,255 completed in November, 1979. In November, 1970, the makers assembled 92,449 trucks, kept low because of a contract strike at General Motors.

In addition, the October estimate of 177,750 is also the lowest for that month since 1970. It is a drop of 21.99 percent from the 227,853 completed in October, 1979.

In November, GM will build about 72,000 trucks, off 18.09 percent from 87,905; Ford Motor Co., 57,000, off 4.27 percent from 59,542, and Chrysler, 16,000, down 10.14 percent from 17,805.

At the other companies, decreases in production are also prominent. American Motors Jeep will assemble 6,570 units, off 33.90 percent from 9,939; miscellaneous, 1,980, down 44.27 percent from 3,553; Mack, 1,640, down 39.90 percent from 2,729, and AM General, 310, a fall of 86.05 percent from 2,223.

International Harvester plans to build about 2,680 units this month but a comparison cannot be made because of a strike last year.

Volkswagen of America will assemble 2,340 trucks in November, but again a comparison cannot be made because production was not in full swing last year.

Planned output last week was 42,971, up 23.51 percent from the 34,792 completed in the previous week due to GMC overtime. It was off 14.51 percent from the 50,266 assembled in the year-ago week.

GM scheduled Saturday overtime at three plants last week: Fremont, Janesville and St. Louis.

IH closes its Springfield (O.) plant and will also cut some production at its Ford Wayne (Ind.) facility today (Nov. 3) to balance inventories. The slowdown is scheduled to last two weeks.

So far this year, through Nov. 1, the truck makers have completed 1,309,293 units, a drop of 51.36 percent from the 2,691,904 assembled in the comparable 1979 period.

ITC hears final arguments before import quota ruling

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — With a decision by the International Trade Commission on whether to impose import quotas on Japanese-made cars now only a week away, the principals in the dispute last week made final arguments for or against any such action.

For the Japanese makers, that meant a reiteration of their earlier claims that Detroit's current dilemma has considerably more to do with gas prices, recession and a failure to anticipate changing consumer demand than the influx of Japanese made, small, fuel-efficient cars.

For Ford Motor Co. and the UAW, it meant a reiteration of their position that the "why" of the industry's current condition is secondary to the fact that it is hurting and that Japanese imports are substantially responsible.

Meanwhile, the Carter Administration was reported last week to be readying contingency plans for whatever the ITC decides. It is an unusual effort, since the decision-making machinery normally gets rolling only after the ITC decides import relief is necessary.

The Administration has underway nine separate studies on the impacts of a 1.7-million-unit import quota, including an employment study by the Labor Department, a study of consumer prices by the Council of Economic Advisors and a study on the impact on small businesses by the Commerce Department.

DOT and the Council of Economic Advisers are studying the ability of the U.S. makers to compete.

According to Robert D. Hormats, deputy U.S. Trade Representative, the Administration is taking the action so it can be ready immediately regardless of what the ITC recommends, to avoid market uncertainties.

Canada posts October hikes in car, truck output

Canadian car and truck output both increased in October when compared with a year ago, partially due to increases in the General Motors line speeds.

Estimated October car output was 89,440, up 13.99 percent from the 78,465 built in October, 1979. Estimated October truck production was 55,853, up 7.46 percent from 51,976.

GM increased its line speeds at the Scarborough van plant beginning Oct. 6 and the Oshawa car assembly plant, beginning Oct. 10.

Planned car output last week was 20,845, down 0.52 percent from the 20,954 completed the previous week and down 4.17 percent from the 21,753 built in the year-ago week.

Scheduled truck production last week was 13,405, up 3.54 percent from the 12,947 assembled the previous week; and up 28.96 percent from the 10,395 built in the year-ago week.

Year-to-date, the auto makers have built 707,210 cars, down 15.81 percent from the 840,038 completed through Nov. 3, 1979. During the same period, the truck makers assembled 451,410, down 19.10 percent from the 558,008 completed in the equivalent 1979 period.

Chrysler taps Naughton for sales; Laux to vice chairman

Chrysler Corp. last week named John B. Naughton Sr. executive vice-president — sales and marketing, to succeed Gar Laux, and realigned a number of top-level corporate activities.

Chrysler directors also established a Marketing Institute. a Dealer Review Board, elected two new vice-presidents and reassigned a third to head two merged divisions.

Naughton, 58, is a veteran executive of both Chrysler and Ford Motor Co. He retired from Ford in 1977 and thus, while he might be considered part of the "Ford movement" of executives that have moved to Chrysler, the move is not a direct one.

Laux was elected to the new position of vice chairman of Chrysler.

Along with naming Laux vice chairman, Chrysler directors established the Office of Vice Chairman to direct activities under the reshuffled setup.

That reorganization, said Chrysler Chairman Lee Iacocca, will "focus increased top management attention on the vital areas of management development, corporate communications, product quality and productivity, forward strategic planning and dealer - corporate relations."

Reporting to Laux will be G. F. Butts, vice president—quality and productivity; W. W. Larsen, group vice president—public affairs; G. E. White, vice president, personnel and administration, and T. G. Denomme, director — corporate strategic planning.

In addition, Laux will chair the Chrysler Dealer Review Board, which is being formed to strengthen dealer - company relations.

Iacocca also announced establishment of a Chrysler Marketing Institute under direction of Laux. The Marketing Institute will provide training and development for Chrysler sales people and dealership personnel.

Commenting on the appoint-

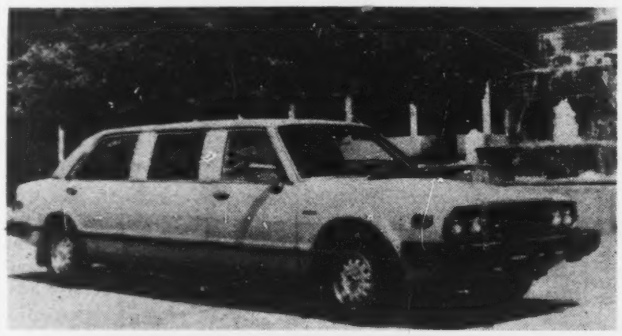
Grander Honda



It's a limousine

Jim Ellena, of Jim Ellena Honda, St. Charles, Mo., has created the Honda Limo. Ellena stretched the 28-MPG four-door Accord by some 42 inches and added expected amenities like mouton carpeting, glass and velour driver compartment dividers, electric sunroof, rear facing jump seats, electronic bar. Price is set at $29,500 each for the 25 he will produce.

U. S. dealer total declines by 1,643 in '80 model year

By John K. Teahen Jr.
Managing Editor

The 1980 model year will be long remembered—but not fondly—by the domestic auto dealers who survived it.

It was a period of low sales, high expenses and an alarming decline in the number of dealerships handling U. S. makes of passenger cars.

The latest AUTOMOTIVE NEWS census found 21,945 establishments in operation on Oct. 1, the beginning of the '81 model year. This was a drop of 1,643 from the 23,588 counted a year earlier when the '80 season began.

It was the largest loss in the 18 years AUTOMOTIVE NEWS has been compiling census figures on a model-year basis.

By comparison, the domestic industry lost 468 dealerships in the '79 model year and only 89 in '78.

Each of the Big Three had heavy losses for the '80 model year. Chrysler Corp. was down 674 outlets; Ford Motor Co. lost 544, and General Motors had a decline of 340. American Motors, by contrast, was off only 25.

That's a total of 1,583. A change in the number of intercorporate duals raised the industry's aggregate loss of 1,643.

Intercorporate duals are dealerships that handle the products of two or more of the four U. S. manufacturers. Virtually all of them are outlets that carry AMC and a Big Three line, although the number of Chrysler Corp. links with Ford Motor deals is increasing.

All figures in this article and the accompanying tables reflect the net change in the dealership population, both for the individual corporations and car lines and for the domestic industry as a whole.

From a census standpoint, the

Looking ahead in wake of Republican landslide

Industry appears a winner, along with Reagan

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Detroit was going to be "saved" no matter who won the presidential election.

That is the case simply because it is necessary -- not only because of the national defense capabilities the auto industry alone can provide but also because of the industry's size and importance to the economy.

But the short assessment is that the Detroit companies will be more "saved" and better served by the Reagan victory.

Making it even more positive is the fact that it was a landslide, bringing with it a much more conservative Congress inherently closer to the needs of business. As history has shown, even the most popular of presidents (Kennedy) or the most skillful (Johnson) or the inept (Carter) can be thwarted by an increasingly free - wheeling Congress.

Now, from industry's viewpoint, there is almost the best of worlds—a sympathetic ear in the White House and lots of them on the Hill.

"Almost," we say, because although the Senate is clearly controlled by the Republicans, the House remains in slim Democratic control—a guarantee of some conflict in Congress for the next two years.

What makes Detroit "more saved" by Reagan than by Carter lies in deregulation or "unfed-ering" the auto industry. Whoever succeeds NHTSA head Joan Claybrook or EPA head Douglas Costle is bound to be less dedicated to regulation—although both recently have made concessions and shown restraint as the Carter Administration started its turn from consumerism and environmental protection to "revitalization" and at least some modest deregulation.

OSHA will be curbed and even the independent Federal Trade Commission, headed by consumer activist Michael Pertschuk, may be in for a showdown with a Republican boss.

- But it is the new Congress itself that will do a major part of the deregulation.

The Clean Air Act is up for renewal next year and while it would have been a rough battle in any case, the chances of easing environmental demands now are much greater. Senator Gary Hart, Colorado Democrat, was heir apparent to the departed Mr. Clean when Senator Edmund Muskie left to become secretary of state, but Hart is now a minority member and the full committee is expected to be headed by Vermont Senator Robert Stafford.

This does not bring utter joy to the auto companies, but the overall cast of the Senate may prevent any strong environmental thrust and is likely to guarantee moderation and some easing of restrictions.

The same is true on the House side where the House Commerce Committee will have a

breaking news

Honda plans V-4 commuter car

TOKYO.—Honda Motor Co. is rumored to be developing a high-mileage commuter car that may be powered by a unique V-4 engine with a single cylinder head. The non-CVCC engine, which is said to feature a 15-degree V, may be mounted longitudinally in the planned front-drive minicompact. Believed to be a two-door hatchback design—somewhat like a scaled-down Civic in appearance—the new Honda commuter could debut as early as 1984, according to sources here.

Horizon replacement from Peugeot?

PARIS. — Insiders here say Peugeot is developing a new small car which will be built in American Chrysler plants, replacing the Horizon and Omni in 1983. It is believed to share the mechanical elements partly from the Peugeot 104 and partly from the 305. Both diesel and gasoline versions will be

Domestic-car outlet total falls to 21,945

1,643 dealers lost in model year

Continued from Page 1

'80 model year was a loser all the way.

It started with a dip of 209 outlets in the October-December period of last year, which is an unusually large drop for the beginning of a new-model season.

Things got steadily worse. Another 258 outlets faded away in the January-March quarter and then came the astounding decline of 672 stores in the April-June span.

The final quarter of the model year (July-September) showed some moderation with a loss of 504 establishments. It was a bright spot, but a very dim bright spot.

For hard-hit Chrysler Corp., the July-September period was definitely encouraging. The corporation lost 135 dealers, compared with 261 for April-July. Chrysler's dip was lighter than Ford's 181.

As noted, the domestic dealership total has fallen to 21,945. This is the lowest total since the infant days of the auto industry when the manufacturers were beginning to build their dealer organizations.

FRANCHISE TOTALS

	Oct. 1, 1980	Oct. 1, 1979
AMERICAN MOTORS	1,652	1,677
CHRYSLER CORP.		
Chrysler	2,689	3,171
Dodge	2,352	2,697
Imperial	355	0
Plymouth	2,482	2,867
FORD MOTOR CO.		
Ford	5,099	5,504
Lincoln	1,479	1,623
Mercury	2,723	2,952
GENERAL MOTORS		
Buick	2,985	3,045
Cadillac	1,600	1,635
Chevrolet	5,710	5,910
Oldsmobile	3,255	3,320
Pontiac	3,135	3,225

Copyright, 1980, Automotive News

Franchise totals plunged during the 1980 model year—losses of 200 or more for individual makes were not uncommon. The Chrysler car line suffered most with a dip of 482 franchises. Ford Division was down 405, and there were declines of 385 for Plymouth, 345 for Dodge, 229 for Mercury and 200 for Chevrolet. Lincoln lost 144.

The other GM makes also were down—90 for Pontiac, 65 for Oldsmobile, 60 for Buick and 35 for Cadillac.

There's an addition to the franchise family for the 1981 model year. Imperial, Chrysler Corp.'s new luxury car, is a separate franchise. As the current season opened, 355 Chrysler-Plymouth dealers were handling Imperial.

• By corporations, AMC fared best during the '80 model year. It had 1,652 dealers on Oct. 1, down 25 from 1,677 a year earlier. Dualing with Big Three lines helped keep the AMC total stable. It has 685 such duals, up from 642 a year ago.

AMC also is heavily dualed with its financial angel, Renault. The French car is handled by 1,015 AMC outlets. Some AMC stores, of course, have both Renault and a Big Three line.

Although it was the best of the domestics, AMC's performance was not as good as during the '79 model year when it showed a gain of 39 dealers.

Chrysler Corp. had 3,871 car dealers at the beginning of October, down 674 from the 4,545 in business at the start of '80 campaign. The loss compared with a dip of 247 in the '79 model year.

Franchise totals on Oct. 1 were: Chrysler, 2,689; Plymouth, 2,482; Dodge car, 2,352, and Imperial, 355.

In addition to its 3,871 car dealerships, Chrysler Corp. also has 11 that handle only Dodge trucks. They are not included in the corporation's car dealership total or the Dodge car franchise total.

Ford Motor Co. counted 6,002 car dealerships on Oct. 1, a drop of 544 from 6,546 a year earlier. Ford showed a decline of 95 outlets for the '79 model year.

The Oct. 1 franchise totals were: Ford, 5,099; Mercury, 2,723, and Lincoln, 1,479.

There are 90 dealerships that handle only Ford heavy-duty trucks. They are not included in the car dealer total for the company or the car franchise total for Ford Division.

• At GM, the latest car dealer figure is 11,135, compared with 11,475 at the opening of the '80 model year. The total is down 340. For the '79 model year, GM had a loss of 100 outlets.

Franchise totals on Oct. 1 were: Chevrolet, 5,710; Oldsmobile, 3,255; Pontiac, 3,135; Buick, 2,985, and Cadillac, 1,600. Chevrolet has the most franchises of any domestic make of car.

Looking only at the 1980 calendar year, the domestic car dealership total is down 1,434 for the nine-month period. Today's 21,945 compares with 23,379 on Jan. 1.

Since the first of the year, there have been declines of 548 for Chrysler Corp., 512 for Ford Motor, 290 for GM and 49 for AMC. A change in the number of intercorporate duals hiked the industry's loss of 1,434. The drop was 463 for the first nine months of 1979.

Keep eye out for dumping, Vanik tells Commerce Dept.

WASHINGTON.—Retiring House Trade Subcommittee Chairman Charles Vanik, Ohio Democrat, is telling the Commerce Department to keep an eye out for Japanese auto makers dumping cars here.

In a letter to Commerce Secretary Philip Klutznick, Vanik says he has no information at present to suggest there is any dumping going on but warns that "a situation is developing which may result in some dumping."

Vanik's reference is to the appreciating value of the Japanese yen. He says in his letter the Japanese have made tremendous windfall profits exporting cars to the U. S. because of the fluctuating exchange rate for the yen over the past year and that this has acted as an incentive for them to not build here. Now that the yen has appreciated they stand to lose profits or market share because of the exchange rate, he said.

Vanik urged the department to begin to collect data in order to begin monitoring the auto situation.

The Japanese "have enjoyed the profitable side of the exchange rate cycle," he said. "The department should make certain they do not attempt to maintain market share through dumping during the downside of the cycle."

The U. S. has conducted only one dumping investigation regarding automobiles. This occurred in 1975. It found the Japanese innocent but ruled Ford, Saab and Volvo guilty of dumping.

Vanik's caution to the Commerce Department came as the International Trade Commission is expected to announce today (Nov. 10) its decision on the case brought by Ford and the United Auto Workers regarding the alleged injury to the U. S. auto industry by Japanese imports.

Proposed import exemption draws fire from all sides

Continued from Page 2

does not meet the standards set by law — period," McElwaine said.

While the proposed regulation would appear to primarily affect imported auto dealers and those who import cars for resale, domestic makers also object to the regulation. One of their complaints is that it would considerably hurt their dealers, particularly those near the Canadian border.

General Motors, for one, believes the proposed rule might well result in many Americans buying Canadian versions of U. S. models which would be cheaper, run on leaded regular gas and in some instances provide better fuel economy.

Canadian emission regulations are less stringent than U. S. laws. This year's Canadian GM cars, for example, are not fitted with a computerized emission control system which adds $400 to $450 to the price of U. S. models.

The company also markets certain high-mileage cars in Canada in response to a Canadian government request to auto makers to boost fuel economy.

• VWoA said it is concerned that southwestern U. S. residents for similar reasons might bring back its popular Beetle, which it sells in Mexico.

Those who import cars for resale, modifying them and running them through emissions tests, were obviously against the plan, saying it would put them out of business.

Albert Mardikian, Trend Imports, Los Angeles, which modifies Ferraris, Lamborghinis and the like, told the agency he hasn't converted a single Ferrari Boxer since EPA first proposed the change in its import regulations. He said he usually does three or four per month.

Mardikian said EPA should license conversion shops if it doesn't have the manpower to make sure that all noncomplying vehicles entering the country are properly converted.

Production booster

The Mazda Familia, a new four-door notchback GLC available in Japan, helped Toyo Kogyo set production records this year. The company's domestic sales have been up in an otherwise poor car sales year in Japan.

Sports Illustrated, AIADA honor 31 import dealers

WASHINGTON. — Thirty-one imported-car dealers were honored here with the inaugural AIADA-Sports Illustrated magazine Dealers of Distinction Awards.

The awards, to be given annually, were presented by James B. Hayes, advertising sales manager of Sports Illustrated, and Edward C. Connelly, chairman of the American International Automobile Dealers Assn.

Judging for the awards was based on an individual dealer's excellence in business, on his service to the industry and on his contribution to community and country.

Final selections were made by a panel that included past and present officers of AIADA, manufacturers' representatives, consumer groups and others.

In remarks to more than 150 guests and to the winners at the awards dinner, Connelly said, "We are extremely proud of these, our first winners, for their service to our industry and for service to their individual communities and to the country. We look forward to the annual awards and to the increased recognition of our industry as one that serves the American consumer and represents a vital element in our free enterprise economy.

"The awards are a tribute to the small businessman in the U. S. as well as to our industry which is made up of 4,500 dealers and employs 140,000 Americans."

• Franchises represented by the winning dealers included: Datsun, 11; Volkswagen, 9; BMW, 8; Toyota, 8; Mercedes-Benz, 6; Porsche-Audi, 5; Volvo, 4; Fiat, 3; Honda, 3; Peugeot, 3; Ferrari, 2; Jaguar - Rover - Triumph, 2; Mazda, 2; Rolls-Royce, 2; Alfa Romeo, 1; Lancia, 1, and Maserati, 1.

Dealers winning awards were: Elvira Arman-Reed, Compton, Calif.; Arnold Baslow, Ft. Pierce, Fla.; James Bess, Canoga Park, Calif.; David P. Caldwell, Nashville; John E. Cronin, Covington, Ky.; Dam DiFeo Sr., Jersey City, N. J.; William C. Doenges, Bartlesville, Okla., and Harvey W. Ewing Jr., Reno.

J. Howard Glaners, La Crescenta, Calif.; James Giordano, New York City; Dallas Hall, Glendale, Ariz.; Robert W. Himsi, San Jose, Calif.; Fred O. LaFevers Jr., Goldsboro, N. C.; Robert G. McKamey, Chattanooga; Joseph P. Moore Jr., Philadelphia, and Frank L. Morsani, Tampa, Fla.

Thomas Nemet, Jamaica, N. Y.; Dale Olson, Santa Barbara-Goleta, Calif.; Rudy F. Pelle, Asheville, N. C.; David Prosky, New York City; Laurence G. Rader Jr., Augusta, Ga.; Robert J. Sharp, Wilton, Conn.; Phil Smart Sr., Seattle; Robert A. Smith, Hollywood, Calif., and Edward B. Snyder, Virginia Beach, Va.

Dan Unfug (posthumously), Denver; Jack K. Williams, Fort Worth; James W. Wiliams, Salt Lake City; Richard S. Wolfe, South Portland, Me.; Charles F. Yanco, Manchester, N. H., and David M. Zinn, Miami.

Auto reaction is favorable to Reagan election

Continued from Page 3

nomic conditions in the short and long term.

"When he says he wants to put America back to work, he means the auto industry," Eisenberg said. "Reagan is just what the doctor ordered."

Maryann Keller, Paine Webber Mitchell Hutchins vice president was more restrained in her appraisal. "Right now everyone is on a euphoria cloud," Keller said. "Anybody who thinks the auto industry is going to be a special beneficiary of this man in the next three months is out of his mind."

Keller agreed that the Reagan Administration will be generally good for business but said any specific benefits for the auto industry will likely involve longer-term developments and not regulations already on the books.

She said that to benefit the industry as a whole, any tax credit would have to be fully refundable in order to avoid giving GM a disproportionate advantage. "He must be careful not to further distort the competitive situation," she said.

Keller said there will likely be an easing of some small-car-occupant safety standards and that there will be an easing of the regulation pace. She said future regulations will probably be analyzed on a cost effectiveness basis.

"A lot will depend on the people who are appointed to key positions, but in general, I think the Reagan Administration will ask industry to do things in a way that will not destroy the capital base," Keller said. "I think you'll see government asking for things that are possible, realistic and affordable."

Individual import exemption encounters wide opposition

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — EPA has run into a brick wall of opposition from auto makers, dealers and importers on a proposal that would ban the importation of uncertified vehicles but give individuals a one-time-only exemption.

Far from eliminating the hardship on the few who bring cars to the U. S., unaware that they must meet U. S. emission standards, the regulation would "create a privilege" for people rich enough to import a car, Gary Rodrigues, general manager for Ferrari North America, said in arguing to leave the regulation unchanged.

Every year about 1,400 persons attempt to bring in cars that do not meet U. S. emission requirements. Many are unaware that the U. S. Customs Service must hold these vehicles under bond until they are either brought into conformity, or lacking that, shipped out of the country or destroyed.

The first option can be very expensive, running as high as $20,000 for certain models. The other options are also expensive, not to mention disheartening, to buyers.

EPA's proposal is aimed at addressing problems of these individuals at minimum cost. It says the current regulation requires too much time and talent to police.

The manufacturers, dealers and importers of cars for resale told EPA at a hearing here the proposed solution would create a worse situation.

• "This proposal displays to the members of our association, men and women engaged daily in the world of commerce, a naive underestimation of entrepreneurial ingenuity and a lack of understanding of the ardor of performance-car enthusiasts for road machines unencumbered by mandated emission controls," said Robert McElwaine, president of the American International Automobile Dealers Assn.

"This proposed rule, while designed solely for the purpose of administrative convenience, would exert a mischievous influence on the imported automobile industry, would have a deleterious effect on air quality, would deprive the consumer of needed protections and guarantees and would be manifestly unfair in its application," McElaine said.

It would result in an immediate influx of at least 40,000 noncomplying vehicles and the strong likelihood that the number could grow to at least 100,000 within the year, he said.

"I need not tell you what that could mean to some imported auto dealers," he said.

Ferrari's Rodrigues said his dealer body would cease to exist. He said few persons would pay U. S. Ferrari dealers $55,000 for a certified car when they could fly first class to Europe, buy a noncompliance Ferrari there and still save $15,000 to $20,000.

Who is going to service these cars, asked McElwaine. Import dealers will not: their memory is too fresh on Justice Department indictments of dealers for tampering with emission control systems, he said. Furthermore, it is highly unlikely any of these cars would be covered by manufacturers' warranties.

McElwaine said the result of the proposed rule would be a fleet of vehicles polluting the atmosphere considerably more than warranted, vehicles that cannot or will not be serviced by franchised dealers—and with owners unhappy because there are no warranties.

• Volkswagen of America Government Affairs Director Philip Hutchison said manufacturers would meanwhile be faced with unwarranted legal expenses because people would be driving vehicles never intended to be sold here.

"Where is equal protection under the law if a dealer is faced with criminal charges if he so much as changes the spark setting on an automobile, while individuals may, with impunity, import cars with no emission controls at all?" McElwaine asked.

"We recommend that the agency simply forbid the importation of any vehicle that

Service Index advance is best in nearly a year

By Francis J. Gawronski
Service Editor

With all indicators except repair orders written showing good gains, new-car dealers' service and parts business rebounded in September to register the highest gain in almost a year.

As measured by the AUTOMOTIVE NEWS Service Index, September shop business amounted to 108.1 percent of the volume for the same month a year ago.

September's increase was the highest since October, 1979, when the Service Index hit 109.5 percent of the volume for the like month the year before. September marked the fourth time this year that service and parts business has recorded an increase over the year-ago volume.

For the 18th consecutive month, repair orders written failed to show a gain. This indicator was down 3.9 percent in September.

The leading indicator in September was gross profit on all labor, parts and accessory sales —the most important item from the dealer's viewpoint. This indicator was up 15.4 percent over the year-ago figure for the biggest gain since April, 1979 when it was up 21.1 percent.

Sales of all parts and accessories advanced 13.6 percent in September, while shop parts sales (those used in both customer-paid and warranty work) were up 8.9 percent over the year-ago volume.

Total labor sales — customer-paid and warranty—showed a gain of 2.9 percent in September.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealers.

For the January - September period, shop business amounted to 97.5 percent of the business done in the same period a year ago, a slight improvement over the 96.2 percent showing for January-August.

The leading indicator for the nine months was gross profit, with an increase of 2.0 percent, while labor sales remained unchanged.

Repair orders written showed the biggest decline for the period, down 10.4 percent, followed by sales of all parts and accessories, down 0.7 percent, and shop parts sales, down 0.5 percent.

SERVICE INDEX
108.1*

	Sept., '80 vs. Sept., '79	9 mos., '80 vs. 9 mos., '79
Gross Profit on All Labor and P&A Sales	+15.4%	+ 2.0%
Repair Orders Written	− 3.9%	−10.4%
Total Labor Sales (Customer & Warranty)	+ 2.9%	0.0%
Shop Parts Sales (Customer & Warranty)	+ 8.9%	− 0.5%
Sales of All P&A	+13.6%	− 0.7%

*—Survey by Automotive News shows that dealers' service and parts business in Sept., 1980, was 108.1 percent of business in Sept., 1979. Service business in the two months of 1980 was 97.5 percent of business in the corresponding period in 1979.

Sprint Pack inside and out

The Sprint Pack version of the Escort GL from Ford Australia includes Escort-monogrammed cloth seats road wheel trim rings, spoiler, electric clock and side striping. Ford plans to offer the Sprint Pack at no additional cost to the recommended retail price on 750 Escort GLs on which it has been included.

Newly shaped Honda Civic

Honda Civic EX four-door notchback sedan is the same size as the recently introduced Ballade, but its front end is that of the Civic hatchback. Body panels differ slightly from those of the Ballade. The Civic notchback will be sold in markets not served by Ballade.

GM forms division for parts distribution

By Francis J. Gawronski
Service Editor

General Motors has reorganized its service parts operations into four separate sales activities and has consolidated its warehousing and distribution operations into a new division.

According to Reuben R. Jensen, GM executive vice president, the reorganization will provide better service to GM dealers and its independent wholesale parts distributors worldwide.

The four sales activities include GM Parts which will have sales and marketing responsibility for service and replacement parts for franchised dealers in the U. S.—the responsibility formerly assigned to GM Parts Division (GMPD), and AC-Delco which will sell and merchandise replacement parts to independent aftermarket wholesale distributors in the U. S.

Also, Overseas Service Parts with responsibility for sales of North American-sourced service parts throughout the world, with the exception of Canada and Mexico; and Canadian Parts which will continue to sell service and replacement parts in Canada under GM of Canada.

Jensen said all of the sales activities will be supplied with service and replacement parts by the new General Motors Warehousing and Distribution Division (GMWDD).

GMWDD was formed by incorporating the existing U. S. warehousing and distribution operations of AC-Delco Division, GM Parts Division, AC Spark Plug Division and Delco-Remy Division and the warehouse and distribution facilities of GM of Canada.

• Lewis G. Kalush, currently general manager of GM Parts Division, will retire Jan. 1, 1981, and J. Wayne Cagle, currently GMPD general director parts operations, has been named GMWDD general manager, headquartered in Flint, effective the same date. GMPD will be phased out at the same time.

William C. Lee will continue as general director of AC-Delco, while Van R. Peters, currently GMPD general sales manager, has been appointed general director of GM Parts. The general director of the Overseas Service Parts activity will be named later.

AC-Delco, GM Parts and Overseas Parts selling activities and the GMWDD will report to Archie M. Long, executive-in-charge of GM Service Parts Operations. The Canadian sales activity will continue to report to GM of Canada.

Naughton to head Chrysler sales in new shakeup

Continued from Page 1

ment of Naughton, Iacocca said, "I brought him over to Ford several years ago because he is one of the best automotive sales executives in the business. I am bringing him back to Chrysler for precisely the same reasons and am delighted to have him as part of the team."

The new vice presidents are: L. Donald Gschwind, vice president — product planning, and Robert S. (Steve) Miller, vice president and treasurer. Stephan Sharf, vice president, heads the new Power Train Division.

Gschwind reports to Harold K. Sperlich, executive vice president—engineering and product development. Miller reports to Gerald Greenwald, executive vice president—finance.

Sharf's division is newly formed out of the old Engine and Casting Division and the General Manufacturing Division. Sharf formerly was vice president—Engine and Casting Division. John Bruce, former vice president—General Manufacturing Division, has left Chrysler and has been named president of the Automotive Products Division, United Technologies Automotive Group.

Naughton began his 30-year automotive career in 1948 as a zone manager with Ford Motor. He moved through a variety of corporate positions, ran his own wholesale business and managed new-car dealerships.

He joined Chrysler the first time in 1955 and became general sales manager of Dodge in 1959. From 1962 to 1965 he was assistant general manager of Chrysler-Plymouth Division and a vice president of Chrysler Motors Corp.

In 1965, he rejoined Ford as marketing and planning vice president of Ford Motor Co. of Canada, Ltd. He was named assistant general manager of Ford Division in 1967, then general manager of the division and vice president of Ford Motor, and finally group vice president of sales for all of Ford's North American operations in 1973.

He retired from Ford in 1977.

While 4-speed manual shows biggest increase in popularity

Automatics drop in '80 market

By Joseph Bohn
Marketing Editor

Automatic transmissions' popularity declined sharply on '80-model domestic-built cars.

Their decline of exactly 7 percentage points was the sharpest yet, and signaled the growing consumer preference for manual transmissions on new small cars.

Among various manual transmissions, the four-speed was far-and-away the most popular. It jumped 6.7 percentage points in penetration. Three-speed and five-speed manuals played an inconsequential role in demand.

However, judging by Volkswagens' Rabbit, there is a place for the five-speed manual, if Big Three manufacturers can produce a good one. GM's previous five-speeds were hard-shifting and were dropped as options on '80 models.

GM, as well as Ford and Chrysler, are expected to come up with improved versions in the future.

The '81 model year should see a continued growth in manual transmissions as a result of new, small Detroit models like the Escort, Lynx and the forthcoming GM J-cars.

Ford particularly should see a sharp jump in manual transmission demand on its new small cars in view of their smooth shift—equal in ease of operation to the most expensive European manuals.

- Here is a breakdown of transmission popularity on domestically-built '80-model U. S. cars:

Industrywide, automatics ended up on 5,884,326 cars, equal to 82.36 percent of domestic output. That was down from 8,351,220, or 89.36 percent in '79.

General Motors installed automatics in 3,996,446 of its cars, equal to 87.16 percent of production. That was off from 4,798,295, or 93.11 percent in '79.

Ford Motor installed them in 1,077,764 cars, equal to 78.46 percent of production. That was down from 2,385,534, or 86.65 percent in '79.

Chrysler Corp. installed automatic transmissions in 625,864 cars, equal to 87.79 percent of output. That was down from 993,547, or 87.46 percent in '79.

American Motors installed them in 159,693, or 80.71 percent, of cars. That was up in volume from 143,734, but down from the 84.83 percent penetration in '79.

Volkswagen installed automatics in 24,559 domestically-built Rabbits, equal to 11.00 percent of its total. That was down from 30,110, or 22.70 percent in '79.

- Four-speed manuals, which are the fastest growing, ended up in 1,205,115 cars, equal to 16.87 percent of production. That was up from 948,239, or 10.15 percent, in '79.

General Motors installed four-speeds in 575,281 cars, equal to 12.55 percent of production. That was up from 328,989, or 6.37 percent, in '79.

Ford Motor installed four-speeds in 289,572 cars, equal to 21.08 percent of production. That was up from 13.35 percent in '79, but down in volume from 367,444 cars.

Chrysler Corp. installed four-speeds in 134,837 cars, equal to 17.62 percent of production. That was down slightly from 138,302, but up in percentage from 12.17 percent in '79.

American Motors installed the transmission in 38,174 cars, equal to 19.29 percent of production. That was up from 22,943, or 13.54 percent in '79.

Volkswagen installed four-speeds in 75 percent of its Rabbits—a total of 167,451 units. That was up from 68.20 percent, or 90,561 units in '79.

Five-speed manuals climbed to 0.52 percent of industry production, a still insignificant 37,503 cars. That was up from 0.26 percent, or 24,313 units in '79.

Volkswagen accounted for most of the increase, installing the transmission in 31,257 Rabbits, equal to 14.00 percent of production. That was up from 12,150 or 9.10 percent in '79.

- General Motors dropped the five-speed as an option on '80 models. In '79, it had accounted for 0.23 percent, or 12,163 GM cars.

Ford Motor installed five-speeds in 6,246 cars, equal to 0.46 percent of production. It didn't offer a five-speed in '79.

Neither Chrysler Corp. nor American Motors offered a five-speed in '80 or in '79.

The three-speed manual, which is just about dead, accounted for 0.25 percent of domestic production, equal to 18,412 cars.

That was down from 21,734 or 0.23 percent in '79.

All companies are phasing out their three-speeds.

But in '80, GM still installed them in 13,660 cars, equal to 0.29 percent of production. That was off from 14,855, or 0.29 percent in '79.

Ford Motor doesn't offer a three-speed and didn't in '79.

Chrysler installed this transmission in 4,552 of its '80 models, equal to 0.59 percent of production. That was up from 4,116, or 0.37 percent in '79.

American Motors didn't offer a three-speed. In '79, it installed 2,762 in 1.63 percent of its cars.

Volkswagen doesn't offer a three-speed and didn't in '79.

Total Cars, U. S.	5,884,326	82.36	18,412	0.25	1,205,115	16.87	37,503	0.52

NOTE: Installation numbers are based on U. S. car production only, with the exception of Chrysler's Cordoba and Mirada which were sourced only in Canada. The '80 production was 7,145,356. This included 4,585,387 for General Motors; 1,373,582 for Ford Motor; 765,253 for Chrysler Cor.; 197,867 for American Motors and 223,267 for Volkswagen.

The Chrysler total includes 34,214 Miradas and 57,479 Cordobas. It excludes 7,846 Caravelles, sourced in the U. S. but sold only in Canada.

Similarly, the GM total excludes 19,651 Acadians, sourced in the U. S. but sold only in Canada.

The Plymouth Voyager, Dodge Sportsman, Ford Club Wagon and Chevrolet Sportvan are no longer included in domestic production, since manufacturers began counting them as trucks in '80.

Fisher Body cites Hamill as 'quality supplier'

WASHINGTON, Mich. — Firestone's Hamill Mfg. Co., here has been honored for the third straight year by General Motors' Fisher Body Division as a "premier quality supplier" in 1980.

Hamill manufactures seat belts for several GM car lines.

Milestone reached with billionth lock for car makers

MILWAUKEE. — Briggs & Stratton Corp. has produced its billionth automotive lock.

The occasion was marked with a celebration by management and employes at the company's lock manufacturing plant in Glendale, Wis.

The company, the world's largest manufacturer of automotive locks and keys, counts American car and truck makers and a number of foreign automotive manufacturers as its customers.

The firm also manufactures lock and keys in Perry, Ga.

President Frederick P. Stratton Jr. said the U. S. auto industry has made a total of 375 million cars and trucks in its history. Briggs & Stratton has made enough locks and keys to supply each of them with almost three locks, he said.

Today's car usually has five locks: Two door locks, ignition, glove box and deck lid locks. Station wagons often have additional locks for underfloor or side storage compartments. In addition, auto manufacturers offer such optional equipment as locking gas caps, spare tire locks and complicated locks incorporating burglar alarm switches or illuminated lock faces.

Billionth lock

Briggs & Stratton's billionth car lock is inspected by William Rollo, vice president and general manager of the Lock Division, Alma Hauslade, veteran employe, and Frederick P. Stratton jr., president.

EV short-ranged, Florida dealer claims in suit

WEST PALM BEACH, Fla.— A franchise holder has filed suit in the Circuit Court of Palm Beach County against U. S. Electricar Corp., complaining that its electric vehicles did not get the per-day mileage the company advertised.

Joseph Clark, owner of Ziebart rustproofing centers in Delray Beach and West Palm Beach, is seeking to regain the nearly $80,000 he paid for the eight Lectric Leopards, according to the complaint.

Clark claims the cars he tested ran about 40 miles a day on an overnight charge. Lectric Leopard ads claim a maximum cruising range of 70 miles.

Albert Shelman, U. S. Electricar president, said dealers are told that the vehicles don't achieve their maximum range until a break-in period of 800 to 1,000 miles.

An Electricar representative sent to Clark's outlet reported none of Clark's vehicles had more than 200 miles on the odometer, Shelman said.

Even though their sales were down in both the second and third periods and down for the entire month of October, the domestic auto makers remained optimistic that a strengthened selling trend is underway following introduction of their 1981 models and signs of improvement in the overall economy.

Domestic sales were down 7.90 percent in October, the smallest decline for any month this year, to 663,843 from 720,781 in 1979. It was the lowest October since 1974. Third-period sales totaled 239,499, down 6.25 percent from 255,470 a year ago.

The domestic daily selling rate averaged 24,587 this October, down 7.90 percent from 26,696 in 1979. There were 27 selling days both years. It was the best monthly average since the 25,775 rate last March.

Import sales were up in October, in spite of the fact that it was the introduction month for the U. S. industry. Sales of imported new cars reached 182,933, up 7.49 percent from 170,184, and accounted for 21.60 percent of the market.

Combined domestic and import sales totaled 846,776, down 4.96 percent from 890,965 in 1979.

Domestic year-to-date sales were 5,577,578, down 22.12 percent from 7,162,217 last year. Import sales so far this year were up 3.11 percent, to 2,048,003 from 1,986,241. Combined domestic and imports for the 10 months totaled 7,625,581, down 16.65 percent from 9,148,458 in 1979.

- Chrysler Corp., with sales up 5.46 percent to 68,843 from 65,280, was the only U. S. auto maker to notch a sales increase for October. All its car lines were reported up on a daily-rate basis during the final 10-day period, and brisk sales of the corporation's new K-cars added the necessary thrust to push it ahead of year-ago totals.

General Motors reported sales of 418,575 new cars in October, down 2.22 percent from 428,099 in 1979.

"We are very encouraged by October's results since GM car sales were at the highest daily selling rate in 11 months and nearly matched last October," said GM Marketing Vice President Robert D. Burger.

Ford's October sales fell 19.91 percent, to 152,832 from 190,835 last year. American Motors reported a sales drop of 30.94 percent, to 12,176 from 17,632. Volkswagen of America was down 39.70 percent, to 11,417 from 18,935.

Imports made a respectable showing in the October marketplace, with 16 of the 27 included in the AUTOMOTIVE NEWS charts reporting increases for the month. The top two, Toyota and Datsun, were off 6.87 percent and 1.29 percent, respectively, but their closest competitors gained ground. Honda sales climbed 19.37 percent, Mazda was up 26.00 percent and Subaru had a 24.06-percent sales increase.

Other imports on the rise in October were Volkswagen, up 85.77 percent; Volvo, up 59.43 percent; Fiesta, up 33.01 percent, and Audi, up 18.14 percent.

Imports increased their share of the total October market to 21.60 percent from 19.09 percent a year ago.

- In the domestic market alone, GM earned 63.05 percent, up from 59.39 percent. Ford sales accounted for 23.02 percent, down from 26.47 percent. Chrysler climbed to 10.37 percent from 9.06 percent, AMC dropped to 1.84 percent from 2.45 percent and VWoA went to 1.72 percent from 2.63 percent.

Of the 14 domestic makes, four reported improved sales in October. Plymouth was up 11.78 percent, Dodge was up 11.76 percent, Buick was up 17.39 percent and Oldsmobile was up 11.28 percent.

Top-selling U. S. nameplates for the month were: Chevrolet Chevette, 35,533; Chevrolet Citation, 31,931; Oldsmobile Cutlass Supreme, 29,069; Ford Fairmont, 27,253, and Chevrolet Malibu, 27,216. One year ago, the top five were standard Chevrolet, Ford Fairmont, Oldsmobile Cutlass Supreme, Chevrolet Malibu and Chevrolet Citation.

In the domestic market, subcompacts accounted for 20.43 percent of all new-car sales in October, compacts were 27.45 percent, intermediates were 31.85 percent, standards were 13.74 percent and luxury models were 6.53 percent.

A year ago their shares were: Subcompacts, 16.18 percent, compacts, 25.84 percent, intermediates, 32.05 percent, standards, 18.02 percent and luxuries, 7.91 percent.

In the total market, imports accounted for 21.60 percent, subcompacts were 16.02 percent, compacts were 21.52 percent, intermediates were 24.97 percent, standards were 10.77 percent and luxury models were 5.12 percent.

This compares with 1979 market segments of 19.09 percent for imports, 13.09 percent for subcompacts, 20.91 percent for compacts, 25.93 percent for intermediates, 14.58 percent for standards and 6.40 percent for luxury cars.

Where Auto Market was in October

TRA is approved for 4,810 at GM

WASHINGTON. — A total of 4,810 workers at four General Motors component parts plants have been certified for trade adjustment assistance.

Those declared eligible include 880 workers at Fisher Body Plant No. 1, Grand Rapids, Mich.; 2,970 at Hydramatic Division, Ypsilanti, Mich.; 320 at Chevrolet, Muncie, Ind., and 640 at Central Foundry Division, Massena, N. Y.

Another 1,000 workers at two other GM plants were denied eligibility — 335 at the Fisher Body plant in Lordstown, O., and 665 at the New Departure-Hyatt Bearings Division plant in Bristol, Conn.

After poor showing in October

Week's car output rises slightly

Domestic auto production in October was the lowest for that month since 1970, a strike-ridden year, as the makers continue to sell fewer cars.

The October total of 675,020 was down 13.88 percent from the 783,843 units assembled in 1979. In 1970, the auto makers built 390,016 cars, kept low because of a contract strike at General Motors.

The decrease in production is particularly significant since October was the introduction month for the 1981 models. The figure was up slightly, 0.02 percent, from the September total when full-scale production of the new models began.

Planned production last week was 157,394, up 1.24 percent from the 155,461 cars built in the previous week, but down 11.61 percent from the 178,070 produced in the comparable week in '79.

Chrysler Corp. will close its Belvidere (Ill.) and Lynch Road (Detroit) plants today (Nov. 10) for one week. The move temporarily idles 6,000 hourly workers.

Lynch Road (St. Regis/New Yorker/Newport/Gran Fury) is down for inventory adjustment. Belvidere (Omni/Horizon) is down for realignment because it will begin building Miser models of the Omni and Horizon. The Lynch Road facility was also closed last week.

No downtime was scheduled at either Ford Motor Co. or General Motors last week.

Seven U. S. car plants worked Saturday last week: GM Tarrytown (Citation / Phoenix / Skylark); Willow Run (Skylark/Citation/Omega); Flint (Century/Regal/LeSabre/Electra), and Detroit (Cadillac), and Chrysler Jefferson (Aries/Reliant); Newark (Aries/Reliant), and St. Louis (LeBaron/Diplomat/Caravelle).

U. S. auto production for the year-to-date is 5,553,492, down 26.62 percent from the 7,568,249 built in the equivalent week last year.

Diesel now available in all big Chevrolets

WARREN, Mich. — Chevrolet Caprice and Impala coupes and sedans now are available with General Motors' 5.7-liter diesel engine as a $695 option. Standard engine is a 3.8-liter V-6 gasoline engine. Offered as a $50 option is either the 4.4-liter or 5.0-liter V-8 gasoline engine.

The 5.7-liter, or 350-cubic-inch diesel became available in Caprice and Impala wagons in the 1980 model year. It became available in Chevy pickups in the 1979 model year.

Truck production for October off 21 pct. from 1979

U. S. truck production in October was the lowest for the month since 1970 when a contract strike at General Motors Corp. held the numbers down.

The October total was 178,116 units, down 21.82 percent from the 227,853 assembled in the same month last year. The truck makers built 108,344 in 1970.

Planned production last week was 42,983, up 3.38 percent from the 41,575 assembled the previous week, but down 4.32 percent from the 44,925 built in the year-ago week.

Chrysler Corp. will close its Warren truck plant today (Nov. 10) for one week to balance inventories, temporarily idling 4,000 hourly workers. When the plant reopens on Nov. 17, the line speed will be cut to 424 units per day from 640.

International Harvester's Springfield (O.) plant remains down this week and production also remains partially down at its Fort Wayne (Ind.) facility. The slowdown which began Nov. 3 was scheduled for two weeks to balance inventories.

GM scheduled overtime last week at Baltimore and St. Louis. GMC will increase line speed from 288 to 342 units per day on Nov. 24 at its medium-duty truck plant in Pontiac.

Car production rises in Canada as AMC returns

Canadian auto production increased slightly last week because American Motors Corp. converted its Brampton plant from truck production and began building the Concord and the four-wheel-drive Eagle there on Nov. 3.

The Brampton faciilty had been closed since June for the changeover.

Planned car output last week was 21,554 units, up 3.26 percent from the 20,869 built in the previous week, and also up 7.58 percent from the 20,034 assembled in the comparable week in 1979.

Year-to-date, the Canadian auto makers have built 712,751 cars, down 17.27 percent from thet 861,527 produced at this time last year.

Scheduled truck production last week was 13,640, up 10.23 percent from the 12,374 assembled in the previous week and up 16.89 percent from the 11,669 of the comparable year ago week.

breaking news

offered. By that time, Peugeot will have an entirely new diesel engine in production, quieter and more efficient than present types.

Reagan Task Force includes Snow

WASHINGTON. — John Snow, a lawyer and economist who was head of NHTSA for a brief period during the Ford Administration, is on the Reagan Transportation Task Force to select appointees for DOT and make transportation policy. Snow is now senior vice president of CSX, Inc. (Chessie-Seaboard Railroad holding company). Snow headed NHTSA from July, 1976, to February, 1977. Before that he held various policy positions within the department and was deputy undersecretary of DOT until he took over from Dr. James Gregory.

Lander to join DeLorean in Northern Ireland

BELFAST, Northern Ireland. — Former Chrysler Canada President Donald H. Lander will join DeLorean Motor Cars, Ltd., as president and managing director Dec. 1. He replaces Charles Bennington, also a former Chrysler executive, who will move to New York to develop a stainless steel four-door sedan the company hopes to introduce in two years. Also new in New York is James G. Stark, DeLorean Motor Co. executive vice president and chief financial officer. Stark, former Northern Telecom executive vice president and Lehman Brothers partner, replaced Walter Strycker who left the company several months ago.

VWoA moving some operations

TROY, Mich.—Volkswagen of America has begun to move parts of its Detroit-area operations to six floors in the new City Center Building here. Moving will continue through the rest of the year.

When complete, VWoA's Parkview building in Warren, Mich., will be mainly for computer information services and financial operations. The Warren engineering center will be retained. Product planning, legal, public relations and some engineering personnel will be moving here.

Sporty Soala may arrive in the U. S. as an '82 model

Toyota Soala is the Japanese maker's first new sports car in more than 10 years. It will be introduced in Japan early in 1981 and may be offered in the U. S. as an '82 model. It is powered by a fuel-injected, twin-cam, 2.8-liter six developing 160 to 170 HP. An optional turbo version of the two-seater is rumored. Story on this and other new Japanese models on Page 2.

Escort/Lynx and K-car star in a difficult new-car market

By Joseph Bohn
Marketing Editor

The Chrysler K-cars and Ford's Escort/Lynx figure to be a sellout success, unless high interest rates torpedo them.

That's the consensus of automen and analysts who see the recent rise in the prime rate as anathema to the whole industry —not just Detroit's new small cars.

"Both Ford and Chrysler models are a success," observed a General Motors analyst who was asked to compare them to early introduction of the X-bodies.

"They were both widely publicized," he said. "People were waiting for them. They stacked up good orders. These cars went as well for them as the X did for us."

A few comparative numbers tell the story.

Chrysler retailed 18,272 K-cars in the three 10-day periods following announcement, accounting for 23.8 percent of company volume.

Ford retailed 23,523 Escort/Lynxs, which accounted for 14.8 percent of volume.

General Motors retailed 60,709 X-bodies in a similar April/May, 1979, announcement period, which accounted for 12.9 percent of volume.

GM had 60,961 X-bodies on hand on announcement day, 1979. It retailed 99.6 percent of its introductory stock.

Ford had 23,700 Escort/Lynxs on hand announcement day, retailing 99.3 percent of its stock.

Chrysler had 16,000 K-cars in dealers hands, retailing 114 percent of introduction stock.

"They were all very, very successfully launched products," added the GM analyst.

• In October, Ford's small cars pushed its market share to 23.0 percent of domestic industry, up from 22.1 percent during January/September, 1980.

Ford to be sure was still far below the 26.5-percent share it held in October, 1979, but most of the erosion occurred during the early winter months of 1980. From the company's standpoint, it is now rebuilding market share gradually.

Ford lost no time in claiming a record for its new little cars. The Escort outsold every one of over 70 imported car lines offered in the U. S. during October, according to Bennett E. Bidwell, vice president, car and truck group of Ford Motor.

Bidwell added that Escort exceeded the combined sales of any competitive domestic series of cars.

Chrysler's penetration meanwhile jumped to 10.4 percent in October from the 9.7 percent level it had been at during January/September, indicating the impact of K-cars in overall company sales.

The numbers underscore the companies' overall gains, independent of any cannibalization of sales of other company lines that might have occurred.

Momentum on the new models is building in November.

Chrysler has been tracking sales of its K-cars on a daily basis at its top 400 dealerships.

In early November, they were up 65 percent over October, ac-

Sales record could fall in 1982, Caldwell says

By Robert W. Irvin
Editor at Large

The slumping U. S. new-car market will recover with 10 million sales in 1981 and could zoom to record levels of 12.5 million as early as 1982, according to Ford Motor Co. Chairman Philip Caldwell.

"Sometime in the 1982-85 period we will have an alltime record year, and we should have two or three very good years then," he said.

"This year was below trend (at 9 million) and 1981 will also be below, which suggests there is a buildup in demand.

"So I can see 12.5 million cars a year sometime in that period after 1981. It could come as early as 1982, but it is hard to predict."

The present record is 11.35 million cars sold in 1973.

The truck sales record of 4.31 million, set in 1978, will not be broken in the 1982-85 period, according to Caldwell.

Truck sales dropped to about 2.6 million this year. Caldwell expects them to climb to 3 million in 1981.

And when car sales reach that 12.5-million level, truck sales should be up to 4 million again, he said.

• Caldwell made his bullish forecast in an AUTOMOTIVE NEWS interview. He also made these other points:

1. Ford's fourth-quarter financial results "will be substantially better than the third quarter" when the company lost a record $569 million. But he wouldn't comment on an analyst's prediction that Ford would still lose $400 million this quarter.

2. Rising interest rates again are having some impact on new-car sales "but our dealers are

NEWSPAPER

New-car supply falls to 56½ days but loses balance

By Richard A. Wright
Assistant Managing Editor

New-car announcements seemed to effect a quick cure for the domestic auto makers' inventory woes, slashing their new-car inventory from a burdensome 71-day supply Oct. 1 to a healthy 56½ days Nov. 1. But the healthy look was partly illusory.

The industry opened November with 1,389,549 new cars in stock, much lower than the 1,743,012 inventory on hand a year earlier. And this year's 56½-day supply compares very favorably with the 65-day stock Nov. 1 last year.

The Nov. 1 inventory included about 500,000 carryover '80 models.

But the balance of cars between General Motors and the other corporations was not good. And by and large the reason for the sound inventory figures was that production of many lines has been sporadic.

GM was the only corporate maker to trim its inventory unit count during October, although Ford Motor Co. and Chrysler Corp. had lower days-supply figures Nov. 1 than they had a month earlier.

• GM opened November with a lean 48-day supply, down from 60 days Oct. 1. Oddly, shortages in the GM stable did not follow size-class patterns as is usually the case, but followed divisional lines. Virtually all Buick and Oldsmobile lines were in short supply. At Chevrolet and Pontiac, not even the X-body cars were short.

Ford Motor Co. trimmed its inventory to a 65-day supply from 95 days a month earlier. Ford had a 39-day supply of Escorts and a 52-day supply of Lynx.

Chrysler Corp. had an 87-day supply of new cars Nov. 1, down slightly from 93 days Oct. 1. Chrysler had a 61-day supply of Reliant, a 59-day stock of Aries and a 61½-day supply of Imperial. Omni and Horizon were in 99½-day and 97-day supply respectively.

American Motors boosted its inventory to a 91-day supply, compared with a 74-day stock a month earlier. Volkswagen of America built up its stock of U. S.-made Rabbits to 64 days, compared with 44 days Oct. 1.

Table on Page 42.

The Nov. 1 domestic new-car inventory was divided this way: GM, 53.69 percent; Ford Motor Co., 25.51 percent; Chrysler Corp., 15.90 percent; AMC, 2.95 percent, and VWoA, 1.95 percent.

A month earlier, the new-car inventory was divided as follows: GM, 55.66 percent; Ford Motor Co., 25.78 percent; Chrysler Corp., 13.89 percent; AMC, 2.93 percent, and VWoA, 1.74 percent.

By size class, the Nov. 1 domestic new-car inventory was the reverse of what it had been through most of the 1980 model year — subcompacts were heaviest and the day-supply figures

Kopka to replace Bordinat in Ford design

DEARBORN.—Donald F. Kopka will replace Gene Bordinat as Ford Motor Co. design vice president when Bordinat retires this month. Bordinat, 60, joined Ford in 1947 after working in General Motor's defense operations since 1939. He was elected a vice president in 1961. Kopka, 54, who has been executive director of advanced and international design, administration and color and trim, joined Ford in 1964. He was a Chrysler Corp. stylist from 1950-1964.

Ford, Toyota executives to meet

TOKYO.—A team of high-ranking Ford Motor Co. officials reportedly will meet with Toyota executives this week. It is believed that a prime topic of discussion will be a proposed joint small-car manufacturing project in the U. S.

NHTSA declines to launch 2 defect probes

WASHINGTON.—NHTSA says it will not open safety defect investigations into alleged engine compartment fires in 1977-78 Subaru vehicles nor alleged front-wheel-bearing failures in Omni/Horizon models. In denying the petition of a Montana attorney whose client died when his vehicle caught fire while the engine was idling, the safety agency said it had only four other complaints of Subaru fires and that each was

Caldwell: '82 sales could set record

Continued from Page 1

in much better shape, at least as far as inventories are concerned, than they were in the spring."

3. Ford, noting General Motors' latest program to ease dealer floorplanning problems, is also "looking at the situation but there is nothing to announce."

4. Ford has already taken 250,000 orders in North America and Europe for the new Escort world car.

5. The big Ford and Mercury "are selling better than anticipated" but he denied reports the company is planning soon to restore the second shift at the Wixom plant near Detroit which builds the Lincolns and Continental Mark VI cars.

6. The presidential election of Ronald Reagan will boost the public's confidence in the economy and that in turn should help auto sales.

7. The new Republican administration should get a tax-cut bill through Congress next year and should grant the industry regulatory relief.

8. He doesn't believe the Japanese will build auto plants in the U. S. unless they are pressured into it because of "their huge capacity already in place in Japan."

9. He doesn't know if anything will come of the discussions Ford is having with Toyota about joint assembly of a Japanese car in this country. He said no decision is likely until next year and "these can't be called negotiations — they are just discussions."

10. He doesn't expect Henry Ford II, the retired chairman, to come back and take a more active role in the company, which has been suggested in some newspaper reports.

Ford called Caldwell after seeing the reports. "He surprised me by calling and was laughing about it harder than I was," Caldwell said.

"No," Caldwell added, he did not expect anything to change. Ford is still the chairman of the finance committee and a member of the board of directors, which means he is at company headquarters in Dearborn for meetings once a month. Caldwell added:

"He announced his plans in 1977 and what he said at the time he was going to do he has done. Yet, over this period there have been articles written about how he wasn't going to do it. Maybe sometime now people will start believing him."

Caldwell became chief executive a little over a year ago, in October, 1979, and then became chairman last spring when Ford relinquished that title as well.

Because of the company's mounting losses at home, he instituted a $1.5-billion cost-cutting program in mid-1979. The results are now being seen, he said, adding that "things will be better from here on out."

The auto market, he says, "is bottoming out. It's improving but slower than we would like."

- "We believe calendar year 1981 sales will be 10 million cars and three million trucks," he said. "The 1981 model-year outlook is a little less clear because of the interest rate, which is greater now at 15.5 percent than I had anticipated."

While car sales will in a year or two be at record levels again, he doesn't see the same thing for trucks.

"The truck situation is quite a bit different," he said. "The truck market had a very big buildup because so many people bought them for personal use. There has now been some swing back to cars."

But, he added, "we and some of our competitors have very aggressive new light-truck product programs," with the goal, of course, to improve fuel economy and enable more people to use them again as recreational vehicles.

He also confirmed Ford has stopped importing the Fiesta minicar from Europe because it could no longer be counted towards the fuel economy standard and because the new Escort/Lynx car covered that market.

Spurned on diesel waiver, Isuzu files an EPA appeal

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Isuzu Motors, Ltd., facing the prospect of having to become the first to build diesel engines meeting a 1.0 grams-per-mile NOx emission standard, has appealed to the EPA to take another look at its case.

The company earlier this year asked the EPA to waive the 1981-model-year standard to 1.5 gpm, saying it is unable to bring down emissions of the 1.8-liter diesel engine it wants to begin selling here this winter. The agency denied that request on the grounds that a minor adjustment would allow the vehicle to meet the 1.0-gpm standard.

In its appeal, Isuzu said EPA used the wrong data in coming to that conclusion.

Isuzu builds the LUV mini-pickup truck now sold by Chevrolet dealers, but plans to market its own version of the truck and a sedan in the U. S. under the banner of American Isuzu Motors, Inc.

General Motors, which holds a 34-percent share in Isuzu, will begin in 1982 to build a domestic version of the LUV to supplement Isuzu's LUV.

Waivers from the 1981 and later-model-year NOx standard of 1.0 gpm are available for diesels for up to four years and to 1.5 gpm. The waiver provision was included in the Clean Air Act Amendments of 1977 because NOx emissions are difficult to control in diesel engines.

EPA previously granted two-year waivers from the standard to General Motors, Mercedes-Benz, Peugeot, Volvo and Volkswagen of America. It has under consideration a request by Nissan for a diesel it wants to put in its small Datsun pickup truck.

Isuzu is the first maker to have been denied a waiver. Helping on its reconsideration request, however, is GM, which is planning to use the same 1.8-liter engine in its Chevette for the 1981 and 1982 model years.

- GM has supported Isuzu's claim that EPA made a mistake when it suggested that advancing the injection timing on the engine by three degrees would allow it to meet the 1.0-gpm NOx standard.

The accepted principles of diesel combustion hold that advancing injection timing will increase NOx emissions, GM said. "What you are suggesting asserts the opposite to be true without justification," the auto maker told EPA.

GM anticipates the 1.8-liter Isuzu diesel will allow its Chevette to achieve city mileage numbers in the 37 to 38-MPG range with a manual transmission and 33 MPG with the automatic. Highway mileages are expected to be in the ranges of 53 MPG and 42 MPG respectively.

EPA will hold a hearing in Washington today (Nov. 17) on the Isuzu and GM petitions. At the same time it will consider a request by VWoA to grant it a waiver to 1.4 gpm NOx for 1981 and 1982 for naturally aspirated and turbocharged versions of a 1.6-liter diesel it will offer in the Audi 4000 and redesigned Dasher.

EPA previously granted waivers for these, but body design changes raised both their weights by 250 pounds.

Although VWoA asked for the waivers for both 1981 and 1982, neither the diesel Audi 4000 nor the new Dasher diesel are expected to reach the U. S. until the 1982 model year.

New-car inventory of 1.38 million is a 56½-day supply

Continued from Page 1

got smaller as the size class got larger. Much of the reason for the leaner supply of big cars was simply lower production, but strong sales among GM intermediates helped keep that segment healthy.

Subcompacts were in 65-day supply, unchanged from Nov. 1. The industry had a 61-day supply of compacts, down sharply from 78 days a month earlier. Part of the reason for the compact dip was the fact that Chrysler's K-cars went on sale.

Intermediates were in 55-day supply Nov. 1, down sharply from 73 days a month earlier. Introduction of GM's restyled mid-sized A-Specials no doubt worked to reduce the intermediate stock, as did continued strong sales of Cutlass and Century.

The industry had a 48-day supply of standards, down from 66 days, and a 40-day supply of luxury cars, down from 58 days.

The Nov. 1 inventory was divided this way among the size classes: Subcompact, 23.58 percent; compact, 29.80 percent; intermediate, 30.27 percent; standard, 11.72 percent, and luxury, 4.63 percent.

A month earlier, the inventory was divided this way by size class: Subcompact, 21.95 percent; compact, 28.94 percent; intermediate, 31.50 percent; standard, 12.75 percent, and luxury, 4.86 percent.

The Nov. 1 days-supply figures by market class were:

Subcompact—Escort, 39; Monza, 41; Lynx, 52; Pinto, 54; Bobcat, 54; Sunbird, 62; Rabbit, 64; Chevette, 70; Horizon, 97; Omni, 99½, and Spirit, 111.

Compact—Omega, 33; Skylark, 35; Zephyr, 49; Phoenix, 49; Aries, 59; Reliant, 61; Citation, 62; Capri, 67; Camaro, 67; Fairmont, 67; Mustang, 79; Volare, 81; Concord, 82; Firebird, 83; Aspen, 86, and Eagle, 86.

Intermediate—Cutlass, 27; Supreme, 32; Century, 38; Regal, 38; Grand Prix, 53; Malibu, 62; Cougar, 64; Monte Carlo, 66; LeMans, 66; Cougar XR-7, 69; LeBaron, 78, Thunderbird, 78; Granada, 80; Diplomat, 108; Mirada, 115, and Cordoba, 118.

Standard—Olds 98, 27; Olds 88, 29; LeSabre, 38; Electra, 39; Pontiac, 52; Mercury, 54; Chevrolet, 60; Ford, 61; St. Regis, 102; Chrysler, 103, and Gran Fury, 113.

Luxury—Cadillac, 31; Toronado, 31; Eldorado, 32; Riviera, 33; Seville, 45; Lincoln, 51; Mark VI, 58; Corvette, 59, and Imperial, 61½.

In economic performance between 1966 and 1978

U. S. calls auto industry a winner

By Miles Moore
Washington Staff Writer

WASHINGTON. — The auto industry was a "winner" in economic performance between 1966 and 1978, according to a study just published by the Commerce Department's Bureau of Industrial Economics.

The study evaluates the performance of 22 U. S. industries during the above years, based on six economic factors. Those industries which achieved the highest output growth rate, the highest profitability, the highest return to labor, the greatest export share, the smallest price increase and the least import penetration were declared economic "winners."

In 1966-78, according to the study, the auto industry tied for fourth place with non-electrical machinery among the 22 industries, behind only chemicals, tobacco and instruments and photo equipment.

Autos ranked first in net output growth and third in returns to labor, but suffered (not surprisingly) from high import penetration and poor export/shipment ratio.

Output in the auto industry grew at an annual rate of 5.17 percent between 1966 and 1978, and hourly wages grew 8.51 percent annually. Prices rose an average of 4.71 percent annually, putting cars in sixth place in that category; profit-sales ratio grew 4.2 percent annually, for 12th place, and profit-equity ratio grew 12.8 percent, for a ninth-place tie.

Import penetration grew 9.29 percent in 1978, and averaged 7.23 percent between 1966 and 1978, for 16th place. The export-shipment ratio grew 3.94 percent in 1978 and an average of 2.32 percent between 1966 and 1978, for 14th place.

Autos ranked second in labor productivity (up 4.26 percent), third in least energy intensity (up 2.24 percent) and sixth in least unit labor costs (up 4.73 percent), but only 20th in least increase of hourly compensation (up 8.99 percent) and 14th in least increase in materials costs (up 6.37 percent).

- In capital factors, autos ranked second in new equipment (up 11.9 percent) but only 18th in new structures (down 9 percent). Autos were sixth in R&D expenditure (up 7.36 percent) and eighth in capital stock per production worker ($30,120), but 17th in rate of change in capital/labor ratio (3.79 percent).

Autos placed first both in concentration and in shipments from large plants, and fourth in least overall regulatory burden.

In discussing the study, the bureau said that "winning performance in the past is no guarantee of winning performance in the future." As an example, the bureau used the "winning" auto industry, citing its recent sales and production declines, rising imports and low profitability.

"Although many of the industry's difficulties are cyclical and of relatively recent vintage," the bureau said, "it stands out that the industry's winning composite rank of 8.5 was primarily due to its No. 1 rank in output growth and its No. 3 rank for return to labor.

"While the motor vehicle industry is likely to continue to rank high in terms of wage levels, given the prospects for energy prices, it is not likely to continue to show long-term growth considerably above the average," the bureau added.

Fraser sees no turnaround until 1983 at the earliest

By Marjorie Sorge
Labor Editor

DETROIT.—There will be no turnaround in the auto industry until at least 1983 and the greatest causes are the interest rates and the imports, according to UAW President Douglas A. Fraser.

While he said there is no greater cause for the market slump than the import invasion, he also said the slowing of car sales is directly attributable to the rising interest rates.

All the auto companies have been hit hard by the slump but Fraser said Chrysler Corp., still in dire financial straits, can't survive long with the interest rates as they are.

Last year the company received $1.5 billion in federal loan guarantees after a rugged Congressional struggle but would find it politically unfeasible to go back and ask for more, he said.

Part of the problem lies in the new Congress, which lost many liberal Democratic seats during the last election. According to Fraser, most of the senators who voted for the loan guarantees lost their bid for re-election.

He questioned whether Chrysler could even have gone back to the old Congress for more money. At the time the bill passed, many members had a "once - is - enough" attitude and the bill met with staunch opposition.

- Chrysler has been making progress in its drive to come back, according to a federal panel that oversees the company's loan guarantees, but it is far from out of the woods yet.

The report says it is unlikely Chrysler will achieve its profit projections for the fourth quarter of 1980 but that it would be better than the preceeding four quarters.

Pricing, too, has become a problem for the car buyer and Fraser, as a member of the board said he "wishes" prices at Chrysler could be lowered. He said Chryselr will lose $1.3 to $1.4 billion this year and a cut in prices would be difficult unless "you're anxious to increase that loss to $1.8 billion."

According to Fraser the only way an appreciable cut could be made would be with more volume.

Chrysler has also been discussing a joint venture with Automobiles Peugeot, Fraser said. That venture would include a jointly built car for 1985-86 which would replace the Omni and Horizon. He said the project was only in the talk stage and "I don't know if the agreement will be consummated."

Chrysler is not the only auto maker in financial difficulty, just the most visible. Both Ford Motor Co. and General Motors showed record losses for the third quarter.

GM Chairman Thomas Murphy has projected the sale of 13 million cars and trucks in the 1981 model year. Fraser called him the "optimist of the optimists" but said he would be "delighted" with the 13 million sales.

However, he pointed out 13 million is off substantially from the 15.3 million sold in 1978.

U.S. trade show opens today in mainland China

WASHINGTON. — A U. S. trade exhibition by 250 American companies officially opens in Peking today (Nov. 17).

Participants include such firms as General Motors, Ford Motor Co., TRW, Dow Corning and Caterpillar. The participants were assembled by the U. S. Department of Commerce after detailed consultation with the Chinese officials charged with advancing the industrial modernization of their country.

The exhibition will display products specifically chosen to assist mainland China's growth plans in five fields: Transportation, petroleum exploration and extraction, agriculture, power generation and textile and consumer goods machinery.

The 12-day event is expected to draw some 200,000 Chinese officials, managers, engineers and technicians.

Renault chief honored

PARIS. — Renault Chairman Bernard Vernier-Palliez has been designated manager of the year by Le Nouvel Economiste, a French business weekly.

Competitive Cortinas

Ford Australia says its new TF series Cortina sedans and wagons have improved safety features, more luxurious interiors, better handling characteristics and are quieter and more fuel efficient than the previous TE model. Standard engine is the two-liter OHC four; a six is optional. Both have a temperature-sensitive viscous clutch fan which is said to use less power and help improve fuel economy.

Month's import penetration soars to record 30.5 pct.

By Richard A. Wright
Assistant Managing Editor

Registrations of new imported cars in August set a record for the month and import penetration of the U. S. total was highest for any month in history, according to figures compiled by R. L. Polk & Co.

New import registrations in August totaled 214,742, up 10.21 percent from 194,849 a year earlier. Record for August had been 201,977, set in 1977.

The August total was down from 215,677 in July, but import penetration of total U. S. registrations in August hit 30.51 percent, topping the former high mark of 30.12 percent set in July.

For the first eight months of 1980, import registrations totaled 1,686,030, up 6.72 percent from last year's record 1,579,227.

Imports accounted for 28.72 percent of U. S. new-car registrations in the first eight months, compared with 22.41 percent last year.

- Front-running Toyota and Datsun led the strong import showing in August and both increased their shares of the import market, compared with the preceding year. Toyota accounted for 23.22 percent of import registrations, up 2.61 percentage points from a year earlier. Datsun was up 1.36 points to 20.88 percent.

Also gaining were Volkswagen, up 0.49 of a point to 10.97 percent; Mazda, up 0.13 of a point to 5.92 percent, and Subaru, up 0.86 of a point to 4.89 percent.

Down from a year earlier were Honda, off 0.61 of a point to 13.49 percent; Fiesta, off 1.23 points to 2.40 percent, and Volvo, which dipped 0.09 of a point to 2.36 percent.

Rounding out the top 10 imports were Mercedes-Benz, which accounted for 2.13 percent of the total, and Arrow, which accounted for 1.90 percent. Neither of these nameplates were in the top 10 a year earlier.

The top 10 imports accounted for 88.16 percent of total import registrations in August, up from 85.79 percent a year earlier. For the first eight months, the top 10 accounted for 88.97 percent, compared with 86.07 percent last year.

- Japanese nameplates accounted for 72.83 percent of the August import total, up from 69.87 percent a year earlier, but down from 73.83 percent in July.

Registrations of imported cars by country of origin, with year-earlier figures in parentheses, were: Japan, 156,403 (136,140); West Germany, 40,812 (39,733); Sweden, 6,347 (5,984); United Kingdom, 4,679 (4,312); Italy, 3,321 (5,907); France, 3,172 (2,773), and others, 8 (0).

Registrations of imported cars by country of origin for the first eight months of 1980, with year-earlier figures in parentheses, were: Japan, 1,260,078 (1,088,635); West Germany, 308,993 (349,076); Sweden, 42,666 (45,960); Italy, 30,511 (46,495); France, 23,841 (19,198); UK, 19,932 (29,862), and others, 8 (1).

- Registrations or imported trucks in August totaled 45,291, up 23.12 percent from 36,785 a year earlier.

Registrations of imported trucks in August, with year-earlier figures in parentheses, were: Toyota, 12,479 (10,785); Datsun, 9,615 (7,475); LUV, 6,494 (6,785); Courier, 5,952 (5,309), and others, 10,751 (6,431).

The truck import total for the first eight months of 1980 was 357,862, up 9.75 percent from 326,084 last year.

Registrations of imported trucks in the first eight months, with year-earlier figures in parentheses, were: Toyota, 93,210 (81,792); Datsun, 73,976 (73,056); LUV, 57,840 (66,384); Courier, 50,827 (51,309), and others, 82,009 (53,543).

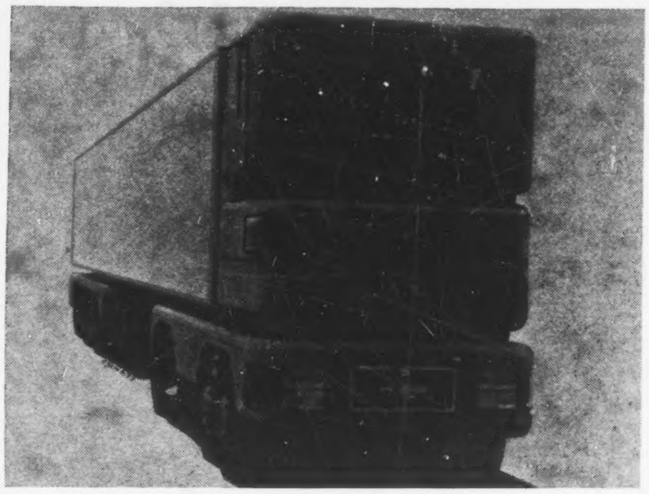
truck industry news



The future according to MAN

The MAN X 90 truck of the 1990s would have interchangeable cab, sleeping area and freight containers and could be easily transformed into a bus. Large windows and electronics play an important role, as do aerodynamics; the rounded-box shape and gapless cab-trailer junction give the truck as little wind resistance as a Porsche.

Truck talk fills air in Nissan's home state

By Edward Lapham
Financial Editor

NASHVILLE, Tenn. — There was no doubt that trucks were one of the most important topics in middle Tennessee following announcement that Nissan Motor Mfg. Corp. U.S.A. will build a $300 million truck plant in nearby Smyrna.

In fact, trucks were so important that Robert W. McComb, Nashville Lumber Inc., walked into Dixie Datsun within hours of the announcement and paid a $200 deposit "to purchase the first American produced Datsun pickup truck."

Glen Roberts, Dixie Datsun, said this sort of enthusiasm should help Datsun truck sales throughout the area.

Gary Proctor, Hippodrome Datsun sales manager, said that truck sales have held up well despite the imposition of the permanent 25 percent tariff. "The only problem I have right now is getting enough 4x4s to sell," he said.

Proctor told AUTOMOTIVE NEWS he approached the Governor's office the day of the announcement to talk about fleet sales to the state government.

- The state government has not used Datsuns in any quantity, although officials at a reception here were certain there would be fleet business in the future. Nashville Electric Co. and the state library have used Datsun trucks in the past, Proctor said.

It is assumed that the Datsun truck plant will begin to draw supplier plants into the area, which in turn will help the economy here.

However, there was some surprise at a press conference when Takashi Ishihara, Nissan Motor Co. Ltd. president and chief executive officer, said other truck manufacturers from Japan might also choose to locate in the Nashville area.

"Nashville might become lit-

Decline in sales, profits reported by Caterpiller

PEORIA, Ill. — Caterpillar Tractor Co. reported a decline in both consolidated sales and after-tax profits in the third quarter. Nine-month profits also were down from a year ago, but sales showed an increase of 33.3 percent.

Profits in the July-September period amounted to $109.1 million, down 35 percent from the year-ago $167.8 million. Sales decreased 6.6 percent, from $2.23 billion in 1979 to $2.0 billion.

Profits for the first nine months totaled $421.6 million, off 9.4 percent from a year ago. Sales were up from $6.29 billion in 1979 to $6.50 billion.

The company said the third-quarter drop in profits resulted from a decline in physical volume, higher depreciation expense, increased operating costs at some non-U. S. subsidiaries and reduced earnings of its main affiliate, Caterpillar Mitsubishi, Ltd.

Because of the U. S. recession, Caterpillar said, demand in almost all major machine and engine end-use categories declined. But it added that efforts to increase domestic oil production resulted in substantially increased demand for machines and engines used in a variety of petroleum applications.

Outside the U. S., the company reported, third-quarter sales amounted to $1.35 billion, an increase of 20.7 percent over the comparable period a year ago.

West Coast facilities being closed by Mack

ALLENTOWN, Pa. — Mack Trucks, Inc., will close its West Coast assembly/manufacturing facilities in Hayward, Calif., during the first quarter of 1981. The decision was based on "the desire to more effectively utilize corporate assets and reduce costs," a spokesman said.

About 70 percent of the Hayward production is sold outside the Western region, he added. Cruise-Liner and Super-Liner models built in Hayward will be transferred to the Allentown area, and lightweight features of West Coast models will be incorporated.

Compacts continue to rise in most cases

10-month truck sales drop 28.8 pct.

Franchised dealers and factory outlets retailed an estimated 2,139,931 new trucks of all types in the U. S. in the first 10 months of 1980, a decline of 28.8 percent from the 3,005,739 sold in the comparable period in 1979.

October sales were down 34.4 percent from the same month a year ago, from 298,300 units to an estimated 195,832. Totals for the month and the January-October period include the non-captive Japanese-built compact pickup trucks.

If retail sales hold at the October level for the last two months of the year, the total for calendar 1980 will come in at about 2.5 million units, a decline of 22.7 percent below last year's 3,235,795 units.

Sales of the compact pickups as a group were up for October and the 10-month period, but the non-captives—Toyota, Datsun and Mazda—were down for the month as a group and up for the year.

In October, combined sales of the Ford Courier, Chevrolet LUV, Dodge Ram 50 (formerly called the D-50), Plymouth Arrow, Toyota, Datsun, Mazda and Volkswagen totaled 35,948 units, a gain of 7.5 percent over last year's 33,433.

For the 10 months, the total of 447,511 units was 14.1 percent higher than the 392,364 delivered in the same period in 1979.

Table on Page 22

Dealers for the non-captive makes retailed 14,342 units during the month, down 16 percent from the year-ago 17,087. But the 10-month count was up 11.6 percent, from 199,965 in 1979 to 223,113, an alltime high for the period.

The Motor Vehicle Manufacturers Assn. said in a preliminary report that dealers franchised by U. S. truck producers and factory outlets sold 181,490 units in October, a decline of 35.4 percent from last year's

Argentine distributor is signed by White

FARMINGTON HILLS, Mich.—White Motor International, Inc., White Motor subsidiary, has signed a distributor agreement with PROMOVIAL, Buenos Aires, Argentina, and has begun manufacture of the first of an introductory order of 40 heavy trucks valued at approximately $1,570,000.

PROMOVIAL is a subsidiary of MACROSA, the Caterpillar distributor in Argentina. Alberto J. Boggio, PROMOVIAL president, visited White headquarters here recently to sign the distributor agreement. The Argentine company expects to begin regular monthly deliveries of White and Autocar trucks in January.

Z-van's MPG exceeds hopes, operator says

MEMPHIS. — When Federal Express, Memphis-based air express service, took delivery of its first U. S. shipment of IVECO Z-vans several months ago, Michael J. Fitzgerald, the firm's senior vice president for vehicle and ground transportation, said the pickup-and-delivery van, powered by a five-cylinder Deutz "AirDiesel" engine, was expected to achieve about 16 MPG.

According to recently compiled performance data, however, Fitzgerald said the first vehicles in service are getting 18 MPG, which he called a considerable improvement over the 10.4 MPG that Federal Express was getting from gasoline-driven vans.

Fitzgerald said the higher-than-expected fuel economy was achieved in spite of the fact that the Z-van is heavier than the gasoline van and has almost twice as much payload space.

He added that Federal Express has been impressed enough by this performance that it has ordered 150 more Z-vans to complement the original 250 units, and is planning to expand its use of the IVECO vans in the years to come until they represent the majority of vehicles in the fleet.

- The IVECO van is a joint venture of Italy's Fiat S.p.a. and the West German firm of Klockner-Humboldt-Deutz, AG (KHD). The 4.7-liter, five-cylinder air-cooled Deutz diesel, which delivers 108 HP at 2,800 RPM, is used in the Fiat chassis. A fiber-glass-reinforced body is added in the U. S.

According to Fitzgerald, Federal Express considered a number of vehicles when it realized it had to change its whole philosophy regarding Class 2 and 3 delivery vans.

No longer did Federal Express feel it could afford "throwaway" vehicles that have a life of only 3 to 5 years, he explained, adding that it was decided to look for a vehicle with a projected life of from 7 to 10 years.

Fuel economy and cargo capacity were other considerations in ultimately deciding which vehicle to go with, he said.

"In addition," he said, "air-cooled engines have no hoses, radiators or water pumps to contend with and therefore cost less to maintain than liquid-cooled engines. With a fleet of nearly 2,700 vehicles, the savings there could be very significant over the long run.

"There is a great market developing now for a premium priced vehicle," Fitzgerald said, "one that offers good perfor-

GRUMMAN OLSON

Ready for U. S. mail testing

This is one of 10 electric trucks being built by Grumman Allied Industries, Inc., for the U. S. Postal Service as part of a program to test commercially available electric vehicles. Each truck can accommodate a payload of 500 pounds.

Grumman builds electric truck for mail delivery

MELVILLE, N. Y.—Grumman Allied Industries, Inc., a subsidiary of Grumman Corp., has been awarded a contract by the U. S. Postal Service to build 10 light-delivery electric trucks as part of a program to test commercially available electric vehicles.

The Grumman vehicle will be aluminum and will meet the customer's specifications for a truck capable of making 350 starts and stops before recharging, a spokesman said.

The vehicles for the Postal Service essentially will be identical to Grumman's recently developed electric truck, which is the product of a two-year development effort. Each carries a driver and a payload of 500 pounds. The payload area exceeds 65 cubic feet.

The vehicles will be built in Sturgis, Mich., by Grumman Olson, a division of Grumman Allied Industries, Inc.

Although the Postal Service vehicles will be Grumman's first sale of production model electrical trucks, the company is a major builder of aluminum truck bodies, having built more than 140,000 since 1946.

Grumman Allied Industries also builds buses, fire trucks, canoes, boats, yachts, and storage and transportation systems for perishables.

10-month truck sales drop 28.8 pct.

Continued from Page 10

281,213. The count includes the captive compact pickups.

The 10-month total was 28.8 percent below that for the comparable period in 1979, from 2,805,774 units to 1,916,818.

In October, according to the MVMA report, domestic sales were down in all three market categories.

Light-truck deliveries totaled 157,158 units, off 36.8 percent from the year-earlier 248,639. Mediums were down 38 percent, from 12,636 a year ago to 7,833, and the heavies showed a decline of 17.2 percent, 16,499 units versus 19,938.

On Nov. 1, the number of unsold trucks in retailers' hands was down significantly in all three market segments.

The inventory of light trucks totaled 461,751 units, down 39.4 percent from last year's 762,103. Mediums were off 46.2 percent, from 45,146 to 24,275, and the heavies dropped to 42,750, a decline of 28.1 percent from the year-ago 59,468.

- During the month, the Big Three truck manufacturers said their dealers and factory outlets retailed 155,397 units, a decline of 39 percent from the 254,619 sold in the same month in 1979.

The 10-month total of 1,703,401 units was 34.6 percent lower than the year-earlier 2,603,240 vehicles.

In October, Ford dealers sold 70,220 units, off 37.5 percent from last year's 112,403. The count included 7,044 Couriers, an increase of 18.5 percent over the year-ago 5,943.

For the January-Ocober period, Ford sales totaled 676,991 units, down 33.8 percent from last year's 1,023,368. Courier sales, however, were 2.1 percent higher, from 66,710 in 1979 to 68,124.

Chevrolet dealers retailed 54,985 new trucks during the month, a decrease of 36.5 percent from the year-earlier 86,553. LUV sales were up slightly, from 7,308 units to 7,587.

Through October, Chevrolet sales totaled 645,956 units, off 34.3 percent from the 983,007 retailed in the like period in 1979. LUV deliveries for the 10 months were down 8.3 percent, from last year's record 85,217 to 78,119 units.

- Dodge and Chrysler - Plymouth retailed 16,992 light trucks during the month, down 50.6 percent from the year-ago 34,373. The total included 3,910 Ram 50s, up almost 85 percent from last year's 2,115, and 1,338 Plymouth Arrows, an increase of 36.5 percent over the year-ago 980.

For the first 10 months, sales were down 35.8 percent, from 344,885 in 1979 to 221,438. Ram 50 sales were 43.7 percent higher, 39,805 versus 27,703, and Arrow deliveries totaled 16,688, up 30.7 from last year's 12,769.

During the month, GMC outlets retailed 13,200 vehicles, a drop of 38 percent below the year-earlier 21,290. The 10-month count was 159,026, off 36.9 percent from last year's 251,980.

American Motors reported that 5,847 Jeep four-wheel-drive vehicles were sold in October, a decline of 58.3 percent from last year's 14,009. Through October, the total was off 43.6 percent, from 117,244 a year ago to 66,128.

Volkswagen dealers retailed 1,727 compact pickups during the month, bringing the 10-month total to 21,662. The vehicle was not available in volume until last January.

Datsun was the only one of the three non-captive truck distributors to report a sales gain in October. However, all three reported increases in 10-month deliveries.

Datsun dealers sold 7,298 units during the month, up 7.2 percent over last year's 6,805. The 10-month total was 13.7 percent higher, 98,119 versus 86,298.

In October, Toyota sales slipped 34 percent, from 9,443 a year ago to 6,229. Through October, the count was 117,459, an increase of 10.1 percent over last year's 106,693 units.

Mazda's October sales dropped almost 3 percent below last year's level, from 839 units to 815. The 10-month count was 8 percent hgiher, however, 7,535 versus 6,974.

Mercedes - Benz of North America reported 318 retail sales during the month, a decline of 7.8 percent from last year's 345. The January-October count was up 13.1 percent, from 2,954 a year ago to 3,340.

Tennessee hails Datsun's move to Dixieland

Continued from Page 10

tle Detroit," Ishihara said.

Tenn. Governor Lamar Alexander, who met the Nissan party at the Nashville airport and appeared at the press conference and reception with the Nissan officials, said the average annual wage for the workers would be about $20,000.

Marvin T. Runyon, retired Ford Motor Co. manufacturing vice president who became president of the Nissan manufacturing subsidiary earlier this year, told the Nashville press conference the company does not intend to interfere if the UAW or any other union tries to organize the workers at the truck plant.

"They won't have to organize me," Runyon said. "I have a withdrawal card from the UAW. I was a member many, many years ago," he said.

"It will be entirely up to the employes to decide whether they want to belong to the UAW, another union, or no union at all," he said.

The truck plant is the second Nissan operation in the state, the ninth Japanese manufacturing operation and the 13th Japanese-owned business, the governor said. Nissan has a Memphis parts operation.

"For three generations, Tennesseeans have left home to go to Detroit for the kind of jobs Nissan is now bringing here," Gov. Alexander said.

Z-van's MPG exceeds hopes

Continued from Page 10

mance and long life. I think the days of the throwaway model are over. It just isn't good economics anymore."

Fitzgerald said he had some concerns about purchasing a foreign product, but added that a vehicle to meet the Federal Express criteria simply wasn't available domestically.

Fitzgerald sees Federal Express eventually having a two-tier fleet, as its 2,700 vehicles—most of which are now Econolines—are replaced.

The majority of the fleet will be Deutz-powered Z-vans with 500 cubic feet of payload area, he said. A smaller fleet of Econoline-type vans with a payload space of only 275 cubic feet will be retained.

Bumper to Bumper remains defendant

Monroe Auto, B & E settle antitrust suit

KANSAS CITY.—Monroe Auto Equipment Co. and Barkley & Evergreen, Inc. (B & E) have agreed to a stipulation and order settling the civil action between them instituted by Monroe charging price fixing.

The lawsuit, which was filed by Monroe on June 16, 1980, charges violations of the Sherman Act and the Robinson-Patman Act by a number of defendants, including (B & E).

Previously, the court entered a similar order settling the action by Monroe against Bumper to Bumper Program, Inc., Kansas City, and four automotive parts distributors that are members of the Bumper to Bumper group. Maremont Corp. remains as the sole defendant in the proceeding.

James K. Ashford, Monroe president, in commenting on the settlement with B & E said: "We are especially pleased and gratified with this settlement in that it affirms the position of Monroe in this litigation.

"The favorable settlement of this suit should serve as an indication that Monroe will take appropriate action to protect its position and the position of its customers."

Under the stipulation and order, Monroe said, B & E has agreed that it will not engage in any discussions or negotiations concerning prices, terms or conditions at which Bumper to Bumper, or any other programmed distribution group may purchase ride control products.

Monroe said B & E has also agreed not to engage in, or recommend, the inducing or granting of discriminatory prices, services or facilities in connection with the purchase or sale of ride control products; and not to recommend that any programmed distribution group or member favor or select one manufacturer or supplier of ride control products over another.

The stipulation and order was signed by U. S. District Court Judge Howard F. Sachs. The court will retain jurisdiction to enforce the stipulation and order.

In addition to Bumper and Bumper, a buying organization that purchases parts for its warehouse distributor members, the earlier court order involved Keystone Automotive Warehouse, Kansas City; Wayne Bull Co., San Antonio; Parts Central, Inc., Macon, Ga., and Pacific Wholesalers, Inc., Eugene, Ore. B & E is Bumper to Bumper's advertising agency.

Monroe's suit alleged that Maremont gave a discriminatory 10-percent discount on shock absorbers to Bumper to Bumper and its distributor members in exchange for an agreement to boycott Monroe shock absorbers. Monroe alleged the discount was not available outside the group.

Maremont and Wayne Bull have been named in a price-fixing suit filled in Dallas by Mid-America Industries, Inc., a warehouse distributor in Fort Smith, Ark.

For the first time in 15 months

Week's auto output tops '79 figure

For the first time in 15 months, weekly domestic auto production topped year-ago figures as the makers continue their push to regain lost sales ground.

While weekly production seems to be improving, year-to-date output is still dragging far behind last year. Through Nov. 15, the makers built 5,564,745 cars, down 27.87 percent from the 7,715,681 completed in the comparable period. At this rate, the auto makers will build around 6.3 million cars in the 1980 calendar year, down 25 percent from the 8.4 million assembled in 1979.

Planned output last week was 152,999, up 2.03 percent from the 149,950 built a year ago, but off 2.13 percent from the 156,250 assembled the previous week. The last time the makers topped year-ago output was the week ended Aug. 11, 1979, when the makers built 81,621 cars, which was an increase of 7.65 percent over the comparable week one year earlier.

Last week, two Chrysler Corp. plants were closed but seven car points worked Saturday overtime. In the year-ago week, nine plants were closed for inventory adjustment and only two operated overtime shifts.

The downtime at Chrysler's Lynch Road (St. Regis/New Yorker/Gran Fury/Newport) and Belvidere (Omni/Horizon) facilities accounted for much of the decrease in production from the previous week.

The Lynch Road operation was closed for inventory adjustment, while Belvidere was down for realignment to begin building the new Miser models of the Omni and Horizon.

Both were slated to resume operations today (Nov. 17).

There was no downtime at either Ford Motor Co. or General Motors last week.

The auto makers scheduled Saturday overtime at four plants last week: GM at Oklahoma and Tarrytown (both X-car facilities), and Chrysler at Jefferson and Newark (both K-car plants). In addition, Chrysler's Jefferson, Newark and St. Louis points worked nine-hour shifts Monday through Friday last week.

For the year-to-date total, only Volkswagen of America showed an increase in output, up 9.73 percent to 170,496 from 155,371. Ford showed the largest drop, 41.02 percent, to 1,108,186 from 1,879,223.

Chrysler is off 33.64 percent to 549,447 from 828,019; Checker, off 34.21 percent to 2,784 from 4,252; GM, down 23.44 percent to 3,587,319 from 4,685,939, and American Motors, down 10.05 percent to 146,513 from 162,897.

breaking news

Continued from Page 1

attributable to a different cause. Regarding the alleged wheel-bearing problem on Omni/Horizon, NHTSA said Chrysler is aware of the problem and has announced a warranty system to cover it. It said it would not institute a recall campaign because it has received only 12 complaints and no reports of accidents.

Russians studying rotary engine

BERLIN.—Volga Auto Assembly (VAZ), Russian builder of Lada cars, is field-testing a single-rotor, 70-horsepower Wankel engine in 200 Lada sedans on Soviet highways, according to reports here. The VAZ rotary is said to be the first engine to use a digital electronic ignition advance. Audi-NSU, Wankel patent holder, has confirmed that VAZ is negotiating a Wankel production license.

Domestic new-car sales off slightly Nov. 1-10

DETROIT. — Domestic new-car sales Nov. 1-10 totaled 163,602, off 7.41 percent from 176,810 a year earlier. Chrysler Corp. sales were up 5.42 percent to 14,843. General Motors was off 2.57 percent to 105,123. Ford Motor Co. slipped 18.62 percent to 38,451, and Volkswagen of America dropped 32.40 percent to 2 285. Estimated sales of American Motors cars were 3,000, down 29.57 percent.

NLRB says Fraser's Chrysler board seat OK

WASHINGTON. — The National Labor Relations Board has dismissed charges by a New York resident that UAW President Douglas A. Fraser's seat on the Chrysler board will interfere with good-faith bargaining between the two factions.

U.S. truck output climbs slightly to 41,114 for week

Despite two plant closings and scattered downtime, U. S. truck production last week was able to pull slightly ahead of the previous week's output as overtime was slated at two General Motors points.

Scheduled output last week was 41,114, up 0.85 percent from the 40,767 completed the previous week, but off 14.65 percent from the 48,174 assembled in the year-ago week.

Chrysler Corp.'s Warren truck plant was closed last week for inventory adjustment, temporarily idling 4,000 hourly workers. The plant was scheduled to resume operations today (Nov. 17) but the downtime was extended to Nov. 24. When the plant reopens, the line speed will be cut from 640 units a day to 320. The company had previously announced the line would be building 424 units a day.

International Harvester's Springfield plant was down last week and production was also partially closed at its Fort Wayne point. The downtime began Nov. 3 and the Springfield plant is slated to return today.

Ford closed one line at its Kentucky truck plant last week to balance inventories. That line built the big CL-3.

General Motors has scheduled Saturday overtime at two plants: Baltimore and Janesville.

Year-to-date truck production through Nov. 15 was 1,374,652, down 51.20 percent from the 2,817,241 completed in the comparable 1979 period.

Advance by GM leads to gain in Canadian output

Canadian auto production increased slightly last week as a gain in General Motors' weekly output offset a decline by Ford Motor Co

Last week's scheduled output of 19,621 units was up 0.47 percent from the 19,529 built the previous week, though down 7.43 percent from the 21,197 assembled during the comparable 1979 week.

Ford production dropped last week because the maker's plants were closed Nov. 10 for Remembrance Day. General Motors, which did not close its plants for the holiday, recorded a substantial increase last week because the previous week's output at the St. Therese plant was hampered by quality control problems.

Output of Concord and Eagle vehicles at the American Motors Brampton plant has been picking up steam since the assembly-line start-up there Nov. 3.

Year-to-date, Canadian auto manufacturers have built 730,347 vehicles, a 17.10-percent drop from the 881,054 assembled during the equivalent period last year.

Black-ink month for Chrysler is first one since early 1978; Iacocca sees hurdles ahead

By Robert W. Irvin
Editor at Large

Chrysler Corp. Chairman Lee A. Iacocca said October was the auto firm's first profitable month since early 1978.

But he added that the way things are going Chrysler will probably end up losing money for the last quarter of the year — the full October-December period — because of soaring interest rates.

Iacocca noted that tight credit, with the prime rate up to the 17 percent range last week, is starting to have an impact like last spring when 20 percent interest devastated the auto market.

He also suggested that in order to get through January and February Chrysler will probably have to draw upon another $200 million in federal loan guarantees, although no request would be made until after the first of the year.

Iacocca, in an AUTOMOTIVE NEWS interview last week, made these other points:

1. To pump up sales of the new Reliant-Aries K-cars and the Omni-Horizon models, Chrysler will begin building and advertising "high value, high impact" offerings, instead of the expensive loaded models available up to now.

2. He hopes President-elect Ronald Reagan will carry through on a campaign promise to be a "tough negotiator" and persuade the Japanese auto makers to reduce their exports to America.

3. He hopes the arrival of the new administration will produce some "euphoria" which will help new-car sales enough so the market can recover in 1981 to the 10-million level from nine million this year.

4. In the mid-1980s he looks for "a lot of joint ventures, common designs" and other ties among the world's surviving auto companies.

• Chrysler lost $1.1 billion last year and has already lost $1.5 billion this year. The auto firm had been hoping to show a profit in the fourth quarter of this year.

Actually it did for the first month of the quarter, according to Iacocca.

"We should have run up a flag and thrown a big party in this company after just closing our books on October," he said.

"We don't report month-by-month results. We report quarterly, which is why this is touchy. But in October we had our first black month in about 2½ years — our first clean-cut, black month." He didn't give any figures.

Can the trend continue in November and December?

That will depend on getting enough dealer orders to fill next month's production schedules. The auto companies, of course, don't get their revenues from retail sales but rather from cars and trucks they build and sell wholesale to the dealers.

"Our biggest problem is getting the dealers to take the three weeks of December production —it all hinges on that," Iacocca said when asked about the fourth-quarter profit.

"I don't know how much we'll have to cut from our December schedules, if any," he hastened to add. But he made it clear any major cuts in the three weeks of production before the Christmas - New Year's holiday would more than offset the October profits.

"If sales continue the way they are the last 10 days, I doubt if the quarter will be profitable," he said. "I have a feeling we are headed into solid concrete with some dealers and fleets telling us to delay the units they have ordered.

• "Our only problem now is interest rates," he said. "I hope they peak at 17 and don't hang up there too long."

He said raising the interest rate isn't the answer to curbing inflation, that it didn't work when it was tried last spring. "All it does is emasculate the auto and housing businesses," he said.

"I don't care what the theories are — it doesn't work. I did applaud this originally last spring but we found then that money rates aren't the answer; I don't know why the Federal Reserve Board is flirting with this again.

"Monetary policy alone with-

Chrysler goes all out to hype auto market

By Joseph Bohn
Marketing Editor

Chrysler Corp., seeking to "force" the sagging car market, launched a sweeping series of special values, consumer rebates and dealer incentives, backed by heavy merchandising and advertising support.

Most of the 10 components of its "Market Force 10" program run for 40 days.

Highlights include:

1. Dealer cash incentives of $200 to $600 on carryover '80s, with additional $200 bonus payments and potential earnings of an extra $1,000 or $1,500 for sales managers.

2. A $417 special value package on Omni 024 and Horizon TC3.

3. A new low-line K-car four-door, priced $100 above the low-line coupe.

4. Special demonstrator allowance on Aries/Reliant.

5. Rebates of $250 to employes, retirees and supplier employes on '81s, plus $100 bird-dog payments to employes and retirees and wholesale prices available to vendors on three K-car models.

6. A $700 dealer allowance on Imperials and guaranteed resale value to Imperial lessors.

• With its "Operation: Cash out the '80s," Chrysler is paying all dealers $200 to $600 on eligible carryover '80s. Dealers earn $200 on Omni, Horizon, Volare, Aspen, LeBaron and Diplomat retailed from Nov. 11 to Jan. 20.

Also, they earn $400 on Cordoba, Mirada, vans and wagons and 2WD pickups and sport utilities; $500 on Gran Fury, Chrysler Newport and Dodge St. Regis and $600 on New

breaking news

Porsche 911 up $665; 928 climbs $920

WARREN, Mich —Prices of two Porsche models have been increased an average of 2.4 percent for 1981. The 911 coupe is $28,365, up $665, and the 928 coupe is $38,850, up $920. Option prices have been raised 2.4 percent, and transportation charges have gone up $20 to $245. Prices of the 1981 Porsche 924 and 924 Turbo models will be announced later when the vehicles become available.

Ban on Japanese cars moves ahead

WASHINGTON. — A resolution to curb Japanese auto imports—somewhat changed because of the President's objections—has been approved 16 to 1, by a House subcommittee and at presstime was being debated by the full committee. Earlier story on Page 2.

Escort/Lynx bodies welded automatically

A conveyor system, top photo, delivers Ford Escorts and Mercury Lynxes into new automated welding equipment called the Pivoting Pillar Buck (PPB). In operation, bottom photo, the PPB completely enfolds the body and subjects it to about 70 spot welds in slightly more than one minute. There are two PPBs at Ford's Wayne assembly plant and two at Metuchen.

Study urges shakeups in EPA and NHTSA

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — The Heritage Foundation, a conservative Washington based think - tank with good connections to the incoming Reagan Administration, is proposing major shakeups in the Department of Transportation and the EPA as part of an extensive action plan it has developed aimed at swinging the government to the right as quickly as possible.

In separate action proposals for EPA and DOT, the group suggests the time has come to seriously reappraise the functions of the two organizations and to change them from the advocatory bodies they have become back to the impartial arbiters they should be.

Of the EPA, Heritage Foundation says it is a classic example of a good idea gone too far. In the name of environmental protection, EPA is now "an indirect but often controlling power in decisions on domestic policy, foreign policy, land use, natural resource development, power facility citing, industrial growth and transportation restrictions," the foundation says.

"It illustrates the evolution of a new regulatory agency into a major force for exercise of direct federal controls over the private sector."

• EPA must be made to give greater consideration to the total human environment—health, food, energy, jobs, housing, recreation, safety and education—in its rulemaking procedures, the foundation says. And in this regard, EPA proposals should be handed down with an Environmental Impact Statement,

A genius at surviving, UAW's Majerus says

AMC called a 'miracle company'

By Marjorie Sorge
Labor Editor

DETROIT.—American Motors Corp. is a "miracle company," and would have pulled something out of its hip pocket to survive had it not reached an agreement with Renault, said UAW Secretary-Treasurer Raymond Majerus.

"They have been miracle people in staying alive and the union has been a great partner with them in that effort," said Majerus, who also is director of the union's AMC Department. "I don't think they would have folded without Renault. They would have found some way to limp along.

"They've always come up with the new car at the right time. When they were really down they came up with the Rambler, then the Ambassador and then they came up with the Pacer and now the Eagle, Concord and Spirit. Their genius is in putting together new cars, when a new car is needed, with old equipment."

In an interview with AUTOMOTIVE NEWS, Majerus also said the UAW is now spending more money than it is taking in and isn't sure when the situation will settle down. He said the union is studying the problem and is forecasting it will be continuous because it will take the industry several years to turn around.

"We are still in excellent financial position," he said. "There is no jeopardy to our general fund or strike fund but it is a worry we need to take into account."

He also said the UAW would have helped AMC if the situation had become that critical, but not in the same way it helped Chrysler.

"Chrysler wasn't used to being on the bottom end of the stick and fighting for survival and AMC was used to it," he said.

• AMC had also been romancing Volkswagen, Toyota and Datsun and others before the Renault agreement, Majerus said.

"This is not a new thing for them and I think they had some second bets and had their bets hedged someplace," he said. "They never got uncomfortable about staying in business and staying in the marketplace."

Innovation and ingenuity in making the models look like new cars on a very minimum budget has saved the company, he said.

Renault's role at AMC has been felt in the last two bargaining rounds, Majerus said. Although the French firm was not an active participant, it acted as a silent partner, overseeing the negotiations, and the Renault influence has always been felt, he said.

Renault was concerned with the length and continuity of the agreements plus other points, such as no arbitration, the seniority arrangement, which allows bumping, and voluntary overtime.

Although Renault was not a big stockholder in the round of negotiations concluded last September, Majerus said it was no secret it would be pouring more money into the American firm but the union was "surprised" it happened so quickly.

Majerus predicted AMC will in turn surprise the industry and get a bigger share of the market and could double its penetration with the Renault/AMC joint car. Currently, AMC is getting about 2.25 percent.

"They (AMC) are excited about the arrangement and it is going to strengthen that company a great deal," he said. "It will strengthen the worker's lives too."

• The UAW has also bargained a seat on the AMC board of directors in this round if it can get Justice Department approval. There is a question over the possible conflict of interest that could develop because UAW President Douglas A. Fraser sits on the Chrysler board of directors. Fraser, however, is not the likely choice for the AMC board, observers say. The nod would probably go to Majerus.

Currently, the union has submitted its position papers to the Justice Department and the National Labor Relations Board has dismissed charges by a New York resident that Fraser's Chrysler board seat will interfere with good-faith bargaining between the union and the company.

Majerus said the union is pushing to get the decision by February, when AMC holds its annual stockholders meeting.

Getting a labor representative on the AMC/Renault board will "strengthen the relationship between the French union and the UAW," he said. Currently the union has strong ties with the Japanese and German unions and "has a great relationship" with Volvo and the Swedish unions, according to Majerus.

Labor observers have said that the introduction of a world car will ultimately lead to a world union.

"I am sure there is no question that the best arrangement would be to have a world union and that is a lot closer now than it was 25 years ago, and 25 years from now there probably is going to be a lot more going for it than that," Majerus said. "There is already a mechanism to set it up, the machinery is available and it does function. In many respects there is a great line of communication between the Japanese auto workers, the German auto workers, the French auto workers and the United Auto Workers. It is a question of coordinating the efforts."

There are no longer the problems of time, language barriers and who is going to get the most out of the system, he said. There are still some bridges to be crossed but that won't be the same problem it was 10 years ago, he said, indicating technology would be a contributing factor.

• The UAW has also been looking into possible mergers with the Machinists Union and the United Rubber Workers. Many have said the merger possibilities are coming because the unions are hurting financially as more people are laid off, which cuts the unions' dues and its operating capital.

"We've suffered a great deal of loss of income during the last several months by reason of the layoffs," Majerus said. "But it hasn't settled down enough yet so we can make a decision on where we are. We had a substantial payment of per capita last month but that resulted from people who haven't paid their per capita in previous months. It doesn't represent any income."

The UAW is operating below the expenses of the union, spending more than it is taking in, and isn't sure where it will settle down, he said.

The union will also lose money from people paying SUB fund dues when their respective SUB payments run out in the near future and layoffs are edging further and further into the parts depots.

"We don't really have a good fix on where we are in terms of membership income and financial matters," Majerus said. "We have a lot of lost income and are cutting expenses where we can."

Cuts could include payroll, travel, and other areas, but Majerus emphasized the UAW is still in "excellent financial position."

OK Renault deal or go under, AMC tells its shareholders

Continued from Page 2

accounted for 3 percent in 1980, compared with 9 percent in 1979 and 10 percent in 1978. Transit buses accounted for 5 percent in 1980, compared with 18 percent in 1979 and 29 percent in 1978.

AMC described its overall financial position as having "deteriorated" during 1980 due to "substantial losses from operations."

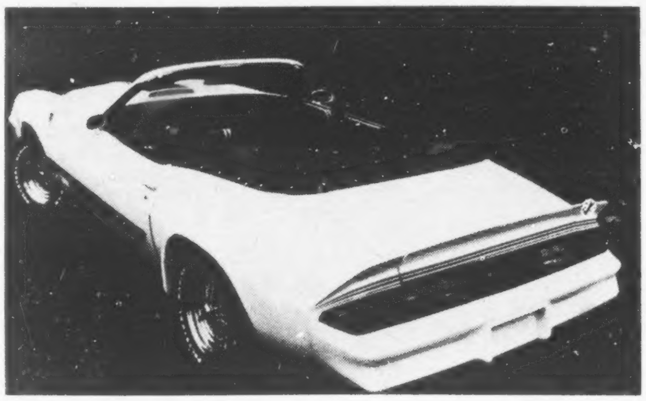
Working capital declined from $244.2 million at Sept. 30, 1979, to just $94.7 million at Sept. 30, 1980, attributable primarily to "$89.7 million in operating losses net of non-cash charges, $84.3 million of expenditures to improve capabilities and equipment and $17.8 million of investments and advances to unconsolidated subsidiaries, net of debt and equity investment from Renault of $60 million," the document said.

• The proxy also disclosed, "Aggregate borrowings increased by $183.5 million to $252.2 million" resulting in "a debt to equity ratio of 85 percent." AMC said at year-end the "quick ratio" had declined to 49 percent and the "current ratio" had dropped to 117 percent.

AMC's export sales "primarily to Asia, Africa and Latin America," were $421.6 million in 1980, compared with $350.3 million in 1979 and $267.6 million in 1978.

The mailing also said AMC retained independent financial advisor Warburg Paribas Becker, Inc., to evaluate the financial fairness of the Renault deal to AMC shareholders other than Renault. WPBI reported that, based on a study of AMC's information, the deal seemed financially fair.

AMC retained Morrow & Co. and D. F. King & Co. to assist in the solicitation of proxies for fees estimated to total about $60,000.



Camaro package includes insurance

This Camaro convertible, by American Convertible Corp., Fort Lauderdale, Fla., is billed as a traffic builder for new-car dealers. It retails for $16,000. American Convertible offers product liability insurance to participating dealers.

Chrysler only U.S. maker to chalk up sales increase

By Jenny L. King
Staff Writer

Early November domestic new-car sales slipped 7.41 percent as the U. S. auto makers struggled to bolster the softening market only one month after introduction of their 1981 models.

Sales totaled 163,702, down on a year-to-year basis from 176,810, but up 4.16 percent on a daily rate basis. There were eight selling days this year with an average of 20,463, compared with nine days a year ago with an average of 19,646.

Sales since the first of the year were down 21.77 percent, to 5,741,280 from 7,339,027.

Chrysler was the only domestic auto maker to report a sales increase. Its sales rose 5.42 percent, to 14,843 from 14,080 (up 18.61 percent on a daily-rate basis). General Motors sales dipped 2.57 percent, to 105,123 from 107,900 (up 9.60 percent daily rate).

Ford sales dropped 18.62 percent, to 38,451 from 47,250 (down 8.46 percent daily rate). Volkswagen of America reported sales of 2,285 U. S.-built Rabbits, down 32.40 percent from 3,380 (down 23.82 percent daily rate), and estimated sales of American Motors passenger cars were 3,000, down 28.57 percent from 4,200 (down 19.70 percent daily rate).

• GM's sales earned it 64.22 percent of the early-November market, up from 61.03 percent. Ford captured 23.49 percent, down from 26.72 percent. Chrysler sales accounted for 9.07 percent, up from 7.96 percent. AMC earned 1.83 percent, down from 2.38 percent, and VWoA claimed 1.39 percent, down from 1.91 percent.

Four makes were up for the period on a year-to-year basis. Plymouth pushed 7.60 percent ahead of last year's mark. Dodge was up 18.64 percent, Pontiac inched ahead 0.45 percent and Buick was up a generous 21.21 percent.

Losses among the remaining makes ranged from 2.91 percent for Oldsmobile to 57.72 percent at Lincoln. Chevrolet was down 7.29 percent, Cadillac was down 30.77 percent, Mercury fell 19.89 percent, Ford dropped 12.78 percent and Chrysler was down 19.30 percent.

Chevrolet Citation was the top-selling nameplate in early November, with 8,529 units sold. It was followed by Chevrolet Chevette, 7,951; Ford Fairmont, 7,578; Chevrolet Malibu, 7,278 and Oldsmobile Cutlass Supreme, 6,281. A year ago the top five were: Standard Chevrolet, 8,962; Fairmont, 8,075; Cutlass Supreme, 7,857; Chevette, 7,785 and Citation, 7,774.

Ford to produce new 4-cylinder engine at Lima, O.

DEARBORN. — Ford Motor Co. will manufacture a new, fuel-efficient 2.3-liter four-cylinder engine at its Lima (O.) Engine Plant with major components to be produced at Cleveland Engine Plant No. 2 in Brook Park.

John A. Betti, vice president - Powertrain and Chassis Operations, said the principal reason Lima was selected is that "the new 2.3-liter engine has been designed to make maximum use of certain existing six-cylinder manufacturing tools and facilities, and we can bring it on-stream more quickly at Lima than at any of our other engine plants."

He also said that sourcing the new 2.3-liter engine at Lima will enable the company to maintain employment levels as anticipated production volumes are adjusted between six-cylinder and four-cylinder engines.

Conversion of facilities at Lima for the new 2.3-liter line also will benefit the company's Cleveland Engine Plant No. 2, which has been selected to machine a trio of major components—the crankshaft, camshaft and connecting rods — for the new engine.

Automotive World News

Redesigned for Europe

Volkswagen's new Passat, which will debut in late '81 in the U. S. as the Dasher, is heavier, longer, wider and more aerodynamic than its predecessor. Fuel economy is rated at 22.8 MPG in the European urban cycle, 32.6 MPG for the three diesel models.

New Passat/Dasher larger and sleeker

When the original Passat was new in 1973, it was simply a fastback version of the Audi 80 (Fox) from the previous year—a highly up-to-date creation by Ludwig Kraus.

Now the Passat — known as the Dasher in the U. S.—goes into its second generation in Europe a little longer, a little wider and a little heavier. U. S. introduction is scheduled for fall, 1981.

The redesigned body has better aerodynamics, the drag coefficient having been reduced to 0.38.

The engine choice is ever wider. An optional 1.9-liter five-cylinder engine rated at 115 HP comes in at the top end. The 50-HP 1.5-liter diesel continues. The 1.6-liter gasoline engine is available in 75-HP and 85-HP carburetor versions, plus a fuel-injected job rated at 110 HP. At the bottom end, 55-HP and 60-HP (export) versions of the 1.3-liter engine.

Volkswagen offers a new 4+E transmission as an option on the upper-line models. The E stands for "economy," and the unit is a five-speed gearbox with an extra low 0.686 fifth overdrive.

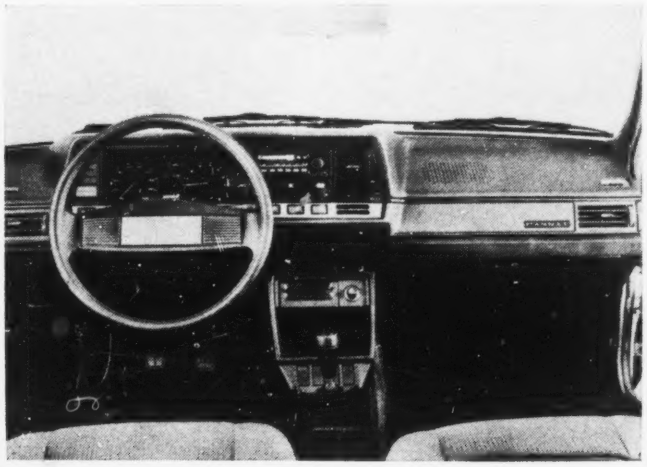
A new gauge with an arrow tells the driver if he can save fuel by shifting up into the next higher gear.

Automatic transmission is restricted to cars with the two most powerful engines.

In the chassis area, the Passat sports a new rear suspension. The former torsion-crank axle has been replaced by a new V-formation rear end with automatic toe-in corrections in the trailing arms (based on the design used on the 1981 Golf, Jetta and Scirocco).

Wheelbase on the new Passat is 100.4 inches, up about 3 inches from the old version; length is 174.6 inches, an increase of almost 6 inches; width, 66.3 inches, an increase of about 3 inches, and weight, (4-door) is 2,095 pounds, up 144 pounds.

Fuel economy in the European urban cycle is rated at 22.8 MPG for the L and GL models and 32.6 MPG for the diesel models.



Inside the Passat

Compact instrumentation is featured in the new Volkswagen Passat (Dasher). A new "4 plus E" transmission has been added on the top lines—"E," for "economy," refers to an extra low fifth-gear overdrive.

Few companies are without them

European makers big on diesels

By Richard Feast
European Editor

At the beginning of the last decade diesel auto production in Europe amounted to 135,000, or roughly 1.3 percent of the total. Only two manufacturers were really interested in the subject, Daimler-Benz and Peugeot.

But the cataclysmic effect of vastly increased energy prices has changed all that—indeed, is still changing it.

By 1979, diesel car production had grown to approximately 740,500, representing 6.5 percent of the contingent's output. The vehicle maker without a compression ignition engine in its lineup, or without plans for them in the very near future, was rare indeed.

Early industry estimates for this year were that diesel car output would grow by around 9 percent against an overall drop in production of a similar magnitude.

All of which is good news for fuel injection equipment manufacturers like Lucas CAV and Robert Bosch. Lucas's forecast is that world passenger-car diesel output this year will reach 1.3 million and that within 5 years, one-tenth of all passenger car output will be diesel-powered.

- The diesel's better consumption is clearly enough to offset the extra cost involved in purchase and the loss in performance. In addition, in many countries the cost of a gallon of diesel is significantly less than a gallon of gas.

Europe's leading diesel-car makers

Manufacturer	1979 Production	Pct. of Total
VW-Audi	268,000	16.5
Daimler-Benz	195,467	45.1
Peugeot	146,912	19.4
Citroen	53,684	7.9
Opel	51,533	5.4
Fiat	50,803	4.7
Seat	17,783	6.0
Volvo	13,300	4.4
Ford—Germany	9,912	1.8
Renault	3,565	0.2
Talbot—Spain	3,319	4.5

Belgium, Holland, Italy and Sweden are prime examples, though in practically all countries gas is a few cents more. Diesel skeptics point to the fact that pricing is largely at the whim of government tax collectors, and any advantage diesel has in price at the pumps could disappear overnight.

It seems amazing, then, that Europe's largest single diesel car market is West Germany. Almost 185,000 were sold last year, despite the country's comparative wealth, despite the great demand for high performance cars to take advantage of the lack of motorway speed limits, despite the fact that diesel is only a few pfennigs cheaper than gas.

The country has been a real pioneer of the diesel car, Daimler-Benz having introduced them in the 1930s. It has championed them ever since, as any person who has been driven in a taxi in the country can testify.

But arguably the real diesel revolution came with the introduction of the Volkswagen Golf (Rabbit) version. Here at last was a small, modern machine with a semblance of performance. The group recently constructed its one millionth diesel car engine, including the six-cylinder versions it sells to Volvo in Sweden.

- The Golf (introduced in 1976) was followed a couple of years later by a direct rival in the Fiat Strada. The Italian group was comparatively late on the diesel scene, but now has a full complement of Strada, Mirafiori and 132 models which are proving notably popular in their country of origin.

Soon after their introduction came some advantageous revisions to the tax on diesel car purchase in Italy—moves which did no harm in stimulating interest in the models.

The picture was really completed a year ago when Renault brought out diesel versions of its 20 sedan. This was followed a few months later by similar versions of the 18, and Renault has shot to the top of the French sales chart for these models.

So, within the past five years three of Europe's largest volume makers—VW-Audi, Renault and Fiat—have joined the club. The Peugeot group, No. 1 in Europe, has diesels for all three divisions, but they are largely concentrated at the upper end of the spectrum, where volume is lower.

- The most obvious non-member is BL, though its experience with the power unit in trucks, vans and taxis is enormous. One obvious ploy would be to buy the units, as Ford of Europe does from Peugeot for its Granada and Volvo does from VW.

Neither Saab nor Lancia have ever declared any real interest in diesel cars, though the Italian company can obviously draw upon the inventory of its Fiat parent.

Saab appears more interested in high compression gasoline engines, an area which BMW is pursuing in addition to the diesel turbos it is to produce with Steyr-Daimler-Puch, of Austria.

Here again, it is not clear where all the spare capacity from this project will go. Ford Motor Co. wants some, and BMW has talked to BL about possible sale. The UK company needs something economical to balance the luxury Rovers and Jaguars it is selling in the U. S. and Europe.

All-new Jaguar sedan in the works for 1984

An all-new Jaguar sedan forms part of the BL corporate plan for the early '80s, industry sources in the UK indicate. Unofficial costs for the smaller, lighter car—coded XJ-40 — are put at $220 million.

The car is expected to appear in 1984, a year after a new six-cylinder engine has been released for use in the current XJ range.

Today's XJ dates its origins back to 1968. The six and 12 cylinder cars are unfashionably heavy on fuel and any new model will show notable improvements in gas consumption like its rivals from Daimler-Benz and BMW.

It is one of the reasons why Jaguar is looking for a suitable diesel engine from an outside supplier. It needs to improve its CAFE rating on the important U. S. market.

All this, however, is still in the pending file of UK Industry Secretary Sir Keith Joseph. BL's board has approved the overall plan for the group, but it needs government backing to finance it.

- Details of the plan are secret, but estimates of BL's cash requirements in the four-year period vary from $300 million to $1 billion.

No word of government thinking has emerged, but BL management must have been relieved when the 73,000 workforce pulled back from a strike at the beginning of November over a wage increase offer of 6.8 per cent. The country's inflation rate is well over double that figure.

There is no question that the group is hard-pressed for cash, and it is expected to lose close to $1 billion this year before its state of health improves.

Other new models featured in BL's proposals include assembly of the Honda Ballade (1981), a hatchback version of the full size Princess sedan (1982), the LC10 medium-sized hatchback (1983) and a booted version of the LC10 known as AM2 and scheduled for 1984.

How fuel prices affect diesel car sales

Country	Gasoline (U. S. gal.)	Diesel (U. S. gal.)	Diesel market share (%)	Diesel sales
Belgium	$2.80	$1.68	10.8	45,761
France	$2.92	$2.57	7.3	145,204
West Germany	$2.32	$2.29	7.0	184,823
Holland	$2.60	$1.69	6.4	36,593
Italy	$3.10	$1.36	4.4	52,185
Sweden	$2.69	$1.33	6.5	13,980
Switzerland	$2.44	$2.48	0.6	1,631
UK	$2.75	$2.75	0.5	9,433

Porsche provides the power

The new Porsche 924 Carrera GT is a 150-MPH development of the 924. Initial production is set at only 400, and none is being exported to the U. S. In keeping with Porsche tradition, three tuned versions, with 330-HP engines, competed in the Le Mans 24-hour motor race.

Porsche plans build of 400 for new 924 Carrera GT

Initial production of Porsche's new 924 Carrera GT is set at 400—but it is fair to speculate that it will eventually become a full entry in the sports car makers' exclusive catalogue.

Porsche sees the car as a successor to the lightweight 911 Carrera of 1973-4.

Half of the production will go to the domestic market, the remaining 200 going for export. None is destined for the U. S., although 50 super-tuned versions are being prepared for IMSA and SCCA racing.

The 924 Carrera GT is the first road-ready competition version based on the new Porsche transaxle generation.

The planned production version differs from the 924 Turbo largely through increased performance and more-sporting layout.

With compression ratio raised from 7.5:1 to 8.5:1, a charge-air intercooler and new digital control of ignition timing, the engine of the Carrera produces 210 HP at 6,000 RPM.

This takes the car to a top speed of 150 MPH. The 924 Carrera GT is said to accelerate from 0-62 MPH) in 6.9 seconds (924 Turbo, 7.8 second).

The Carrera GT is powered by the four-cylinder 121 CID engine fitted with a turbocharger and intercooler. A five-speed gearbox is standard, and a limited slip differential optional.

Naturally, the suspension and brakes have been beefed up, and the car is distinguished by flared wheel arches, front air dam and an additional air intake on the hood.

- Porsche said the Carrera uses only slightly more fuel than the normal induction-engined Porsche 924.

Despite wider track and wider tires, enlarged air intakes and nose spoiler, Porsche maintained the same low drag coefficient of 0.34 as that of the 924 Turbo. The vehicle sits 0.4 inch lower in front and 0.6 inch lower in the rear, and its windshield is bonded to the body.

The 924 Carrera GT fenders are constructed of fiber-reinforced polyurethane. These are flexible, like the nose and tail pieces of a Porsche 928, so that light blows leave no trace. In addition, they resist corrosion and stone damage.

Body shells are made at Neckarsulm, and final assembly is at the company's Zuffenhausen factory. If series production does begin—as seems likely—in a couple of years, the model will then undoubtedly find its way across the Atlantic.

Price is in excess of $40,000.

5-week strike ends at Fiat; cost is high

Fiat in Italy and its workers have been counting the cost of the bitter five-week industrial dispute which paralyzed car production.

It ended in the middle of October after the government agreed to underwrite the wages of 23,000 laid-off workers.

In the wake of rapidly diminishing export sales, Fiat tried to cut its 117,000-man workforce and introduce short time working. This was too much for the powerful metal workers' union, and the dispute grew to the most serious industrial strike in Italy since the war.

Ironically, the very high stock levels put the auto company in a stronger position. The 35-day dispute meant that it was able to reduce its expensive stock of unsold cars in a way that could not be hoped for in normal negotiations.

The dispute, which is said to have cost workers in the region of $68 million in lost pay, may have left the powerful unions in a weaker position, industry observers beleive.

European show dates set for '81

Dates have been drawn up for Europe's 1981 motor shows. They are as follows:

Brussels, Jan. 15-25 (trucks); Amsterdam, Feb. 5-15 (autos); Geneva, Mar. 5-15 (autos); Belgrade, Mar. 27-April 5 (trucks, autos); Barcelona, May 2-10 (trucks, autos); Turin, May 15-24 (trucks); Frankfurt, Sept. 17-27 (trucks, autos).

In addition, the SMMT is helping organize Motorfair at London's Earls Court on Oct. 21-31.

But Italy's decline is yet to come

Europe sales off 8.2 percent for half

By Richard Feast
European Editor

An indication of the decline in demand for new cars in Europe emerges from returns for the first half of this year compiled by Fiat Auto in Italy.

Sales in the six-month period to the end of June fell by 8.2 percent to just over 5.6 million compared with the same period last year.

This is much in line with the forecast from the Economist Intelligence Unit (a 9.3 percent fall in demand for the whole of this year to 9.5 million) because in many countries the downturn did not occur until the second quarter.

Indeed, in a handful of countries, including the large Italian market, the sales graph has continued to climb.

The collapse of Italian demand is widely forecast to occur this winter, a full year after the first signs of the European sales slump occurred in West Germany. There are few clear indications why events should have happened so much more slowly in Italy.

- Even by the end of August sales were racing ahead—up 18 percent at 1,006,031. By the yearend, the country's market will be the third largest in Europe, having moved ahead of the UK.

It is the one bright aspect of Fiat Auto's current uphappy state. In the same period, domestic market registrations for the group were up 21.2 percent at 622,799 units.

This was in no small way on account of the popularity of the baby Panda and diesel engine versions of the Strada and Mirafiori. At the end of August Fiat's slice of the Italian market had risen to 52.5 percent.

Why, then, has Fiat just spent the month of October in crisis?

The downturn in its export sales has been dramatic. They have fallen by 22 percent, in many cases at the hands of the Japanese importers. Like so many car makers, it has tremendous overcapacity at present.

The dispute over the company's wish to reduce manning levels—by 14,500, or around 12 percent of the workforce — has been described as the worst industrial unrest in the country since the war.

The falling demand and consequent production cutbacks seem to have been accepted more stoically in other countries.

- In West Germany, Europe's largest single market, first half demand fell by 12.4 percent to 1.37 million. The companies worst hit—Ford, Opel and Audi — were forced to introduce shorttime working.

At Opel, where there were also redundancies, this was done against a background of capacity expansion in Spain, which greatly disturbed workers.

The French market fell by 6.1 percent to 1.02 million in the six months to the end of June. The Peugeot group was so badly hit that the recent announcement of the Peugeot/Talbot merger was perhaps the only logical conclusion.

The drop in French demand was despite a buoyant performance by Regie Renault. To the end of August its registrations rose by 11.5 percent to 518,961. by contrast, Peugeot SA's in the same period fell by 20.3 percent to 469,532.

Of the four major markets, the fall-off in demand was greatest in the UK. To the end of June it was down more than 16 percent compared with the same period last year. Just as important, during the same period, imported models increased their already very high penetration to practically 58 percent.

There was a later improvement in UK demand, bolstered by new introductions like the Ford Escort and Austin Metro, but the country faced an uncertain economic outlook.

Between them, Germany, France, Italy and the UK accounted for three-quarters of all European car sales.

As a whole, it must constitute the most competitive market in the world. There are half a dozen major manufacturing groups, plus another six medium and small makers. And there are the Japanese importers, who are slowly gaining ground on all fronts.

According to Fiat figures once more—and it must not be forgotten that the Italian company has suffered at the expense of the Japanese — Japanese cars captured a record 11.7 percent of the European market in the first half of this year.

That gave them sales of some 520,000, compared with 758,000 for the whole of last year. This is despite restrictions placed on the country by three of Europe's four largest markets, France, Italy and the UK.

Japan's big increases came in West Germany. Against a market fall of 12.1 percent, registrations by Toyota, Nissan, Honda, Toyo Kogyo and Mitsubishi rose 58 percent to nearly 122,000 in the first half of this year.

Fiat's reckoning of Japanese import penetrations in the various European countries in the six months to the end of June are as follows:

Austria, 17.6 percent; Belgium, 21.9; Denmark, 31.3; Finland, 35.0; France, 2.7; Germany, 9.1; Greece, 42.8; Holland, 25.0; Ireland, 30.6; Norway, 37.1; Portugal, 8.1; Sweden, 13.1; Switzerland, 18.0; UK, 10.6. (Italy and Spain are effectively closed markets to the Japanese).

Where Europe's car market has fallen

Country	1st half 1980	Share of total	1st half 1979	Change from '79
Austria	125,000	2.2	114,300	+ 9.4
Belgium	244,500	4.3	253,600	− 3.6
Denmark	49,600	0.9	80,700	−38.5

Porsche is gaining despite worldwide sales slowdown

The general slowdown in new-car sales this year has not affected Porsche of West Germany as much as the slump following the October, 1973, Middle East War.

"We are in a much stronger position now," says sales director Lars Schmidt. "Then we had just the 911. Now we have the 924 and 928."

To the end of August, sales were down around 10 percent compared for the same period last year. And the largest fall was in the U. S., where until recently Porsche sold half its cars.

Following introduction of the 924 in 1976 and the 928 the following year, Porsche output stood at just over 36,000 annually. In 1977 around half of that volume went to the U. S., around 30 percent was sold on the domestic market, and the remainder was classified as "rest of the world" sales.

The pattern is changing, in no small measure on account of the dollar / deutschmark exchange rate. Last year 42 percent of all cars were sold in the U. S., while deliveries to the home market accounted for an increased 35 percent of output. Other areas tok a more significant 23 percent as well.

This year the trend has continued, with U. S. sales down by a fifth, and German registrations down by around 18 percent. However, deliveries in the rest of Europe have gone up by some 5 percent, so that each of the three markets occupies roughly one third of output.

At present the plant at Zuffenhausen, near Stuttgart, is making around 65 vehicles a day (two-thirds 911 and one-third 928). This compares with capacity of 72 a day.

The Audi factory at Neckarsulm, which produces body shells for the 924, is making around 85 a day compared with a limit of 100.

Unofficially, this model is expected to get its own Porsche engine around the time of the Frankfurt Motor Show next year rather than the Audi-based unit it currently uses.

Assistance for India

Renault and Peugeot have agreed to submit proposals to India on ways to modernize the auto industry there. Their proposals will be compared with those made by other European firms.

To evaluate surface conditions

New Swedish device keeps tabs on roads

By John A. Russell

New York Staff Writer

A measuring system for road surfaces has been developed through a joint project between Saab Scania and a Swedish government agency.

The system measures the evenness, friction, rut depth, water depth, cross fall and distance. There is a provision to manually register cracking and wear on the road surface.

Called the Saab RST, it was developed from the Saab friction tester introduced last year.

Sivert Axelsson, project manager for the RST for Saab Aerospace Division, said that before this system was developed the only method to evaluate the condition of roads in Sweden was purely subjective. Now, with this system, exact measurements can be obtained on the road surfaces.

Saab officials and those of the Swedish Road & Traffic Research Institute believe the RST will prove invaluable in estimating the cost and materials necessary for road repairs as well as marking roads for safety reasons.

The RST will measure friction on wet and dry surfaces as well as crossfall of the roadway.

This, combined with the speed limit can give a precise measurement of the skid potential of the surface on wet and dry surfaces.

The heart of the RST is an onboard computer. The operator can select the test or tests he wants to perform such as friction on wet or dry surfaces, road unevenness and water depth.

- To test friction on a wet surface, the car is equipped with a water tank, as is the Saab Friction Tester.

Data is measured against criteria developed by the various agencies of tolerances of the road surface.

In the front of the car is attached the profile meter which measures the road conditions every 10 centimeters. There are 26 small wheels attached to this meter to measure the actual depth of ruts and unevenness in the surface.

Also, in the engine compartment, is a gyro system for the profile meter.

In the rear is the friction tester with its water tank and fifth wheel.

The computer can be programmed to include road-building requirements, according to officials of the Road & Traffic Research Institute, and the goal is to have the entire system commercially available for $100,000.

Keeping eyes on road

This Swedish device measures road surfaces as the vehicle moves along. It can check such factors as evenness, friction, cracking and wear. Safety improvement is one goal of its developers.

Scania goes double-decker

Scania, the Swedish truck and bus division of Saab-Scania, exhibited a new generation of double-decker city buses at the Birmingham Motor Show. The rear-engined machine is based on the standard BR112 transit bus chassis. The prototypes were built by East Lancashire Coachbuilders in England, a company with a two-year order book despite the recession.

Renault's latest line in trucks

Updated cab trim, improved suspension and changes to the electrics are part of the R360 (above) and R310 ranges shown by Renault Industrial Vehicles at the Paris Auto Show. The Renault name has been on the front of trucks since April 21 this year, when the old Berliet and Saviem badges were quietly replaced. Renault supplies trucks to its Mack affiliate in the U. S.

Domestic sales down, but factories still working at full capacity

Export gains offset slump in Japan

TOKYO. — Japan's auto makers continue to increase exports at a rapid rate, while domestic sales are in a slump.

In September, Toyota exported 147,218 units, up 28.9 percent from a year ago, and Nissan exported 132,187 units, up 17.7 percent. Toyo Kogyo, reporting an alltime production record in September, exported 62,722 units, up 31.2 percent.

What's more, shipments to the U. S. continue at high levels, with Toyota shipping 54,079 units, up 21.8 percent. Nissan's shipments were down 10.2 percent to a still-healthy 48,768.

Toyo Kogyo has already exported more cars to the U. S. than it did in the whole of 1979. With the export of the new Mazda GLC underway, Toyo Kogyo boosted shipments by 37 percent to Europe, while Toyota and Nissan shipments to West Germany rose by 22 and 67 percent respectively, both companies shipping over 6,000 units.

Toyo Kogyo's record production of 106,168 units is due almost totally to the enormous initial success of its GLC, now available in Japan in four-door notchback form, as well as in the original hatchback three- and five-door models.

Its domestic sales were up 8 percent, with 16,369 cars sold in September, in spite of a slumping market. Isuzu sales were up 37 percent to 4,687 units.

The other makers did badly at home; Mitsubishi was down 24 percent; Honda was down 14 percent; Toyota, 12 percent; Nissan 10 percent in Japan. Total sales came to 225,476 cars, including midgets, with sales of large cars down 27 percent, subcompacts down 9.7 percent, but midget cars up 8 percent.

Midget commercial vehicles sales continued to boom, up 22 percent. Imports also fared better than in the past few months, with sales down only 8 percent.

- It is forecast that total vehicle sales in Japan will reach about 4.5 million units, including midgets, whereas at the beginning of the year, more than 5 million sales were forecast. In fact, the Japanese auto makers based their production schedules on an 8 percent increase in domestic sales, and they forecast exports of some 5.5 million units.

So far, no manufacturer has admitted to revising production schedules downwards, so it is hardly surprising that exports are rising so fast.

The Japanese car companies are still operating flat out—in several cases working overtime—and are clearly diverting all the extra cars to the export markets. Although they claim that many of these cars are going to the Middle East, figures indicate shipments to the U. S. and Europe are still strong.

If this trend continues, as expected, to the end of the year, the Japanese will export 6 million units this year, up one-third from 4.5 million units last year.

Only one belt

The Fiat Ritmo 75 continuously variable transmission features two pulleys with one member each that is axially movable to increase or reduce the effective radius.

Mack ending long absence from MVMA

By Jack Walsh
Truck Editor

DETROIT. — Mack Trucks, Inc., is abandoning the Heavy Duty Truck Manufacturers Assn., which was the brainchild of Zenon C. R. Hansen, retired Mack chairman, and there's a good chance there won't be an American Historical Truck Museum, another Hansen dream.

The Motor Vehicle Manufacturers Assn., at a press briefing in conjunction with the recent S.A.E. national truck meeting in King of Prussia, Pa., announced that Mack will rejoin the association the first of the year after an 11-year absence.

Alfred W. Pelletier, Mack chairman, said Mack will not continue as a member of the HDTMA, and indicated that the approximately $2.5 million raised for a truck museum will be earmarked for other charitable endeavors.

Hansen, at his home in Sebring, Fla., said he was "sorry to hear" about Mack's decision to leave the HDTMA, and called the move a "step backwards."

"The truck industry needs an organization of its own, not a division of an association where the emphasis is on cars," said Hansen, the leader in the establishment of the HDTMA in

Texas firm to buy White non-truck units

FARMINGTON HILLS, Mich. — White Motor Corp. and TIC Investment Corp., Dallas, have signed an agreement for the purchase by TIC of White's U. S. farm and lift-truck equipment operations and certain related international farm-equipment assets. Negotiations continue with regard to White's Canadian farm-equipment business.

The agreement is subject to various conditions and approvals, including approval by the U. S. Bankruptcy Court in Cleveland, where White currently is in Chapter 11 proceedings. Purchase price was not disclosed.

Sales bosses take to the road

White Motor Corp.'s district sales managers hit the road in five 1981 Road Bosses for a six-week demonstration blitz of dealers and customers in the seven Great Lakes Region states. Before the end of the year, district managers in White's four other U. S. regions will provide similar demonstrations in their territories.

White blitz stresses Road Boss economy

FARMINGTON HILLS, Mich. —White Motor Corp. has launched a program to blitz the nation with personal, hands-on demonstrations that will emphasize the fuel economy and reliability built into the 1981 Road Boss conventional.

The blitz was kicked off late in October at White's new Chicago branch facility when five district sales managers climbed into the cabs of five identically spec'd Road Bosses that will serve as their "offices" for six weeks.

In that period they will visit every White dealer and many fleets in the Great Lakes Region, encompassing Ohio, Indiana, Illinois, Wisconsin, Minnesota, and portions of West Virginia and Kentucky.

Before the end of November, 16 additional district sales managers in White's four other regions will hit the road in Bosses spec'd for their particular parts of the country.

The hands-on demonstration plan was conceived by Mark J. Obert, White's Truck Operations truck marketing vice president, who said: "Even though our dealers already agree that we're building the best conventional in the industry, there's nothing better than personal demonstrations to underscore the important new features that make the 1981 Road Boss more reliable, more fuel efficient and easier to maintain.

"Moreover," Obert added, "this is a grass-roots program that includes all dealer personnel—not just the dealer principals who would normally attend a national sales meeting and new model introduction."

Dressed up in two-tone blue—White's new corporate color — the demo Bosses are equipped with Cummins Formula 300 engines, Fuller RT1109 transmissions and Rockwell SQHD 3.70 ratio rear axles.

Particularly important to the safety of the driver-sales managers is the inclusion of White's Air Brake Proportioning System which balances braking in bobtail mode operation.

The sales managers—turned-drivers are John Dando, Minnesota and Wisconsin; David Meyer, Illinois; Elmer Krueger, Indiana and Northern Kentucky; Jack Hienton, Michigan; and Donald Vogel, Ohio and West Virginia.

White dealers to have voice on creditors group

CLEVELAND.—The National Automobile Dealers Assn. has been appointed an ex officio member of the White Motor Corp. Creditors Committee in the truck manufacturer's Chapter 11 proceedings.

As an ex efficio member, according to the order entered by U. S. Bankruptcy Judge Mark Schlachet, NADA's dealer representative will have no voting rights, but will be included in all committee meetings and have a voice in those discussions.

The dealer representative is Frank X. Baumert, Baumert Sales Co., Inc., Hartford, Conn. He currently serves as the White line representative with NADA's American Truck Dealers Division (ATD).

Bernie Young, Charleston Truck & Trailer, South Charleston, W. Va., and present chairman of the White Dealer Council, was appointed alternate represenative.

At a recent hearing regarding expansion of the Creditors Committee, Bruce R. Baker,

Fire-fighting on large scale

This snorkel fire-fighting and rescue unit, produced by Cheshire Fire Engineering of Winsford, England, for the Nairobi City Council, Kenya, will be the largest of its type in East Africa. The Simon snorkel has a working height of about 108 feet, the vehicle is over 44 feet long, 8 feet wide and 11 feet high. The unit is powered by a Perkins 640 diesel engine with Allison automatic transmission.

truck industry news

Truck registrations in first nine months are lowest since '75

Nine-month registrations of new trucks of all types in the U. S. dropped below the two-million mark for the first time since 1975, and they were down more than a million units from the alltime high set in 1978.

In the January-September period, according to R. L. Polk & Co., 1,910,485 new trucks were registered, a decline of 27.8 percent from last year's 2,644,904, the second-highest total for the period.

In 1978, when the 12-month count fell only about 37,000 units short of the four-million mark, a record 2,983,847 units were tallied in the first nine months. Five years ago, the total hit only 1,728,516 through September.

New-truck registrations in September fell below the 200,000 figure for the first time since 1972. This year the count was 190,324, off 35.2 percent from last year's 293,705 and only 2,445 units higher than the 187,879 tallied in September eight years ago.

Over the nine-month span this year, registrations were off in all three market segments and seven of the eight weight groups. Heavies suffered the least because of the sharp gain in Group 7 tallies.

Light-truck registrations through September slumped to 1,713,825 units, down 27.6 percent from the year-ago 2,367,657. Groups 2 and 3 tallies were down sharply, but Group 1 was off less than 10 percent because of the increase in sales of the imported compact pickups.

- Largely as a result of the slump in demand for recreation vehicles, Group 3 registrations plunged 85.4 percent below last year's total, from 36,521 units to 5,329.

Group 2 tallies for the nine months failed to top the million mark for the first time since

Continued on Page 27, Col. 1

Group 7 surge helps HD tallies avoid sharp dip

In spite of the sharp decline in sales of new Group 8 trucks in the U. S., registrations of heavy vehicles in the first nine months of 1980 were down only 8.2 percent from last year's record levels.

A surge in nine-month registrations of Group 7 trucks was responsible for keeping the big-truck total higher than might

★—Groups 7 and 8 trucks only; no registrations for Oklahoma, 1980 and 1979; Utah, September, 1979.

Nine-month total off 28 percent from last year

Truck registrations lowest since '75

Continued from Page 18

1975. This year's total of 840,778 units was down 38.5 percent from last year's 1,367,799, but considerably higher than the 626,685 tallied in the first nine months of 1975.

The imported compact pickups accounted for 26.8 percent of Group 1's 867,718 nine-month registrations, which were off 9 percent from last year's 963,337. In 1979, the imports represented 20.2 percent of the total with 194,650 tallies. The 1978 count was 149,038, which accounted for 17.8 percent of the total of 836,036.

Medium-truck registrations declined 58.2 percent for the nine months, 48,466 versus 115,859, with major reductions in two of the three weight classifications.

The Group 4 total, due to the motor-home famine, dropped to only 199 units, down 95.5 percent from last year's 4,360. Dodge, which no longer is producing motor-home chassis, accounted for 190 of the total and the miscellaneous group the remainder. A year ago, Dodge had 4,357 of the total and miscellaneous the other three.

Group 5 tallies were down 18.5 percent, from 2,048 in the first nine months of 1979 to 1,670.

• The increase in the popularity of fuel-efficient mid-range diesel engines used in the so-called "recession-proof applications," such as pickup-and-delivery, beverage delivery and refuse collection, is responsible for the big drop in the Group 6 tallies.

Because of the heavier diesel engine and heavier components, trucks previously classified in the top end of Group 6 have moved into Group 7 with the switch from gasoline to diesel power.

Through September, only 46,597 Group 6 vehicles were registered, a decline of 57.4 percent from the year-earlier 115,859.

With Group 7 tallies showing an increase of 69.4 percent over a year ago, the heavy-truck count through September was down only 8.2 percent, from a record 161,388 units in 1979 to 148,194.

The Group 7 total was up from 35,626 units a year ago to 60,365. This year these vehicles have accounted for 40.7 percent of the heavy-truck registrations. Last year they accounted for only 22 percent.

Nine-month Group 8 tallies declined 30.2 percent from last year, sinking to 87,829 from a record 125,762 in 1979. Vehicles in this group, mainly line-haul tractors and big construction trucks, have been hurt severely by the downturn in the economy.

PRECISION MACHINED & HARDENED PARTS?
CALL THE PINMAKERS.

We'll precision machine and induction harden your parts. Both. We'll save you the added costs, in time and money, of separate suppliers.

Try us. Try our *Total Supplier Responsibility*. See what an experienced (since 1947) machining/hardening facility can do for you. Take advantage of our engineering and metallurgical skills, veteran personnel, sophisticated equipment. We'll prove to you why we are now one of the nation's foremost single-source suppliers of pin-type and other bar stock parts. Call us. The Pinmakers.

truck watch

Continued from Page 18

Washington 10 years ago.

"The truck industry is big enough, and it's strong enough to support its own association," he added.

• Mack withdrew from the MVMA, then known as the Automobile Manufacturers Assn., on Dec. 31, 1969. At the time, Hansen called a truck manufacturer's membership in AMA "a total waste of money," and indicated is still is "unless it's changed a lot since then."

In spite of Hansen's opinion of the value of MVMA membership, Mack was the only major U. S. truck manufacturer in the U. S. which hasn't been a member. PACCAR, Inc., parent firm of Kenworth and Peterbilt, joined MVMA in 1977, and Freightliner Corp. came in a year later.

F. Murray Callahan, HDTMA general counsel, declined to discuss the impact of Mack's withdrawal on the association's future. He said he would be meeting with Mack's Executive Committee early in December "to resolve Mack's role in the future."

Hansen, however, said he doubted that the HDTMA could survive without the support of Mack.

The HDTMA has close to 20 members currently, including truck manufacturers such as Crane Carrier and Osterlund, Inc. (Diamond Reo) and heavy-truck component suppliers such as Rockwell, Eaton, Dana, Sheller Globe and the major tire companies.

Hansen said he was not surprised to hear about the diversion of the museum funds, but indicated that directors of the proposed museum would have a voice in how they will be dispersed.

"The truck industry has been having a tough time selling their products, and I see little support in the future for a museum," he added. "But I do think there is support for a (trucking industry) library and Hall of Fame, and I'm going to fight for them."

Group 7 surge helps HD tallies avoid sharp dip

Continued from Page 18

have been expected in this off year for almost all types of trucks except mid-range diesels and the imported compact pickups.

R. L. Polk & Co. reported that 148,194 new Groups 7 and 8 trucks were registered in the U. S. in the January-September period, compared with the all-time high of 161,388 a year ago.

The September count of 15,838 units was down 8.1 percent from the 17,233 vehicles tallied in the same month a year ago.

Registrations of Group 7 trucks through September totaled 60,365, an increase of 69.4 percent over the year-ago 35,626. Group 7 tallies accounted for 40.7 percent of the nine-month heavy-truck total, compared with only 22 percent in 1979.

Group 8 registrations through September were down 30.2 percent from last year, from a record 125,762 units to 87,829.

White dealers to have voice on creditors group

Continued from Page 18

NADA staff attorney, emphasized that the White dealers represented approximately $6 million in outstanding claims, but had no voice in the Creditors Committee.

He noted that all but 11 of the 234 franchised White dealers are ATD members, and said that if White is to have a chance to rehabilitate itself, its truck dealers are vital to the manufacturer's future.

Ziebart appoints three to executive posts

TROY, Mich.—Ziebart Rustproofing Co. has promoted three employes to executive positions.

William E. Beaver has been named sales director for Ziebart Appearance and Protection Services; Theodore P. Nuoffer has been promoted to licensing director, and Robert D. Markey has been named retail advertising manager.

Our T.V. Sellathon Has NEVER FAILED To SELL CARS Fast!

We've improved on an old idea. The SELLATHON concept was developed years ago, but no one has ever done it better than ADAAM.

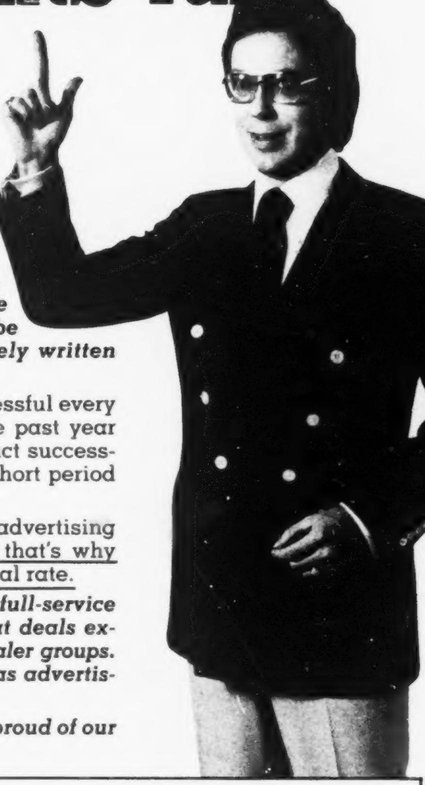
We've refined the SELLATHON, using the highest quality television production; top professional salesmen with proven effectiveness; and hard-hitting, straight-to-the-point sales messages. Combined with sophisticated time-buying procedures, ADAAM has made the SELLATHON a very effective short-run advertising product that can be fully tailored to each market—completely written and produced for your specific needs.

Our SELLATHON clients have been successful every time, even during the challenges of the past year and now. SELLATHON is a quality product successfully designed to move many cars in a short period of time.

SELLATHON is not the answer to all your advertising and marketing needs. ADAAM is. And that's why we're offering our SELLATHON at a special rate.

We want to introduce you to ADAAM—a full-service advertising and marketing company that deals exclusively with automobile dealers and dealer groups. We're automobile professionals as well as advertising professionals.

We're the best at what we do, and we're proud of our successes.



SUCCESSFUL EVERY TIME • MOVE INVENTORY FAST
BOOST CASH FLOW IMMEDIATELY • EXCLUSIVE IN EVERY MARKET

3. *We will advise you on important operational procedures which differ from market to market.*

Smallest autos show biggest rise

Car operating costs soar in 1980

NEW YORK. — Average cost to own and operate new U. S. cars jumped a record 18 percent —some 6.4 cents a mile—in 1980, with the smallest cars accounting for the largest increases.

According to Hertz Corp.'s annual auto expense estimates, subcompact cars jumped 8 cents a mile to 38.1 cents, a 27 percent increase over 1979, and compacts climbed 7.8 cents to 39.8 cents, 25 percent ahead of last year.

Intermediate - sized cars increased 6 cents to 44 cents a mile, 16 percent over last year's 38-cent figure, while large, standard - sized cars were up 4.8 cents to 48.1 cents, an 11 percent climb, according to Hertz.

Hertz said the latest round of double - digit auto expense increase puts per-mile outlays 123 percent above costs in 1972, the last full year before the Arab oil embargo, against an overall inflation rate of 88 percent for the nation in those same eight years.

"It now costs more to own and operate a typical subcompact than it did to drive a domestic luxury model in 1972," said J. E. Menendez, Hertz executive vice president for domestic operations.

According to Hertz, the expense figures are for normally equipped models purchased new and driven 10,000 miles a year for three years. Trading cars annually boosts expenses 2 to 3 cents a mile, while keeping vehicles for up to 10 years can lower outlays by as much as 11 to 14 cents a mile, Hertz said.

- Expenses in the estimates each year include gasoline, oil and other service station items; maintenance, parts and repairs; licenses, fees and insurance; car loan interest, and depreciation—which continues to be the biggest cost item for new cars, Hertz said.

Garaging and tolls are omitted since they can vary widely from place to place or driver to driver, but Hertz estimates such charges can add 5 to 25 cents a mile for some motorists in major cities.

List prices of typical compact and subcompact models, according to Hertz rose 20 percent and 21 percent in 1980, while sticker costs of intermediates and standards climbed 12 to 14 percent, narrowing the gap even more.

In 1979, for example, purchase price of a subcompact was figured at $4,865, against $6,962 for a standard, a $2,097 difference, Hertz said. For 1980, the subcompact was $6,033 versus $7,752 for the standard, a gap of only $1,719.

A typically-equipped compact-size car, which now best reflects average new domestic auto purchases, sold for $6,454 in 1980, against $5,079 in 1979, Hertz said. The purchase price of cars influences the depreciation, tax, insurance and interest factors in ownership and operation, the study pointed out.

Interest expenses showed the greatest percentage increase in 1980, up 54 percent to 5.82 cents a mile for the compact kept three years and driven 10,000 miles a year. This advance reflects both the higher purchase prices of the car and the soaring loan interest rates, Hertz said.

The category of insurance, licensing and fees for the compact was up 26 percent this year to 8.13 cents a mile, total gasoline and other service station charges rose almost 19 percent to 8.04 cents and maintenance climbed 10 percent to 2.28 cents a mile for the 30,000 miles of travel.

Gasoline prices averaged $1.25 a gallon, against 95.5 cents in 1979, putting per-mile fuel-only expenses at 6.3 cents for a typical compact getting about 20 miles per gallon, versus 5.2 cents last year, Hertz said.

Fairlane Sportsman for Australia

Ford Australia's limited-production Fairlane Sportsman features special two-tone paint treatment, wool tweed trim on interior facings and door trims, aircraft-style reading lights for front-seat riders and sports alloy road wheels. Of the first 500 produced, 325 will have a 4.1-liter six, the balance the 4.9-liter V-8. Fairlane is Ford's luxury model in Australia.

Used-car locator service uses computerized listing

JOLIET, Ill. — Midwest Auto Index, headquartered here, has opened its telephone lines and IBM computer equipment to used-car sales people in the surrounding seven-state area.

"We are a locator service for anyone who sells used cars," said Andy Paulson, spokesman for the one-month-old operation. "The idea is to expand a business's used-car inventory without raising inventory costs."

A dealer client pays an initial enrollment fee of $65, and is charged $12 for each request located.

For example, the dealer is looking for a 1978 four - door Chevrolet Nova, red, with automatic, V-8, on behalf of a prospective used-car customer. He phones the Midwest Auto Index toll-free number and reads his request. Within seconds, said Paulson, he will be given from the computer the names, locations and telephone numbers of dealers who have listed such a car in their inventories.

He is charged $12 for the completed location. If no other client has what he wants, he bears no expense.

Each client submits an inventory sheet listing all the used cars he has to sell to Midwest at the time of his monthly billing. In this manner, Midwest continually updates its computerized inventory, according to Paulson. Billing and updating are done on a staggered basis, he said.

The more dealers involved, the greater the inventory they share.

An annual renewal fee of $35 will be charged clients after the first year with Midwest.

"It has been difficult getting started," said Paulson. "But we think this is a simple, economical way for used-car dealers to multiply their inventories and turn a walker into a closed sale."

Makers schedule 157,249 cars

Production again exceeds year-ago

For the second straight week, U. S. auto production topped the figure for the same weeks a year ago, as the makers scheduled Saturday overtime at seven plants.

Last week's scheduled production of 157,249 U. S. cars was up 60.85 percent from the 98,059 completed in the comparable 1979 period but off 1.68 percent from the 154,760 built the previous week.

The low production in the comparable 1979 week was due to the Thanksgiving holidays.

General Motors led auto makers in production with 96,013 cars produced last week, 61.06 percent of U. S. auto production, Ford had 20.86 percent; Chrysler, 13.10 percent; Volkswagen of America, 2.89 percent, and American Motors, 2.08 percent.

Ford Motor had six plants working 10-hour days last week, with two of the plants, Wayne and Wixom, working Saturday.

GM scheduled Saturday overtime [illegible] Lansing, Detroit, Framingham, Oklahoma City and Tarrytown.

Ford had two plants closed to balance inventories last week, Lorain and San Jose. Lorain reopens today (Nov. 24) and San Jose remains closed until Dec. 1.

Also, a strike continued over local issues at GM's Norwood facility. The walkout started Nov. 12.

Year-to-date, the auto makers have assembled 5,723,755 units, down 26.74 percent from the 7,813,228 built through Nov. 24, 1979.

For the year, Chrysler is down in output 31.93 percent to 571,095 from 839,076. Ford is down 39.83 percent to 1,140,901 from 1,896,249. Volkswagen is up 12.43 percent from 155,847 to 175,234, Checker is down 35.29 percent to 2,754 from 4,256. GM, despite having 61.06 percent of total production in last week's figures, dropped 22.48 percent in the year to date total, from 4,752,428 to 3,683,982.

Upturn noted in Chicago

CHICAGO. — Dealers in the Chicago area see business looking up, but supplies of hot models as a problem at some outlets.

Marty Bennett, Bennett Motor Sales (Dodge), Oak Park, reported that the K-cars are doing well and that the future looks good.

At Ed-N-Sam Motors (American Motors), Chicago, Ed Peters said that all cars are moving.

He said Jeeps and used cars are selling well, too.

Availability of the K-cars is a problem according to Rich Crandall, of Rich Crandall Chrysler-Plymouth, Joliet.

"There's not sufficient supply especially of the price leaders," he said. "The low priced models aren't available, while we have $8,000 and $9,000 models which aren't selling. The future looks good."

The V-8-6-4 Cadillac engine has brought people in to see the new line, according to Fran Whibbs, of Whibbs Cadillac, Aurora. He thinks that the industry has turned the corner and that he's going to see a rise every month.

Price tag on regulations: $11 billion

WASHINGTON. — An internal Office of Management and Budget study says the U. S. auto industry will spend nearly $11 billion over the next five years to meet fuel-economy, safety and emission regulations. Most of the money, $9.1 billion, will go for fuel economy. The remaining $1.9 billion will go for safety and emission control. OMB said most if not all of the $9.1 billion for fuel economy would have been spent to meet consumer demand for economy.

Proposed ban on Lada is dropped

WASHINGTON. — A move to ban the Soviet-made Lada from the U. S. market—proposed by Senators Tom Eagleton, of Missouri, and Birch Bayh, of Indiana—has been dropped from EPA appropriations. This paves the way for possible import of some 50,000 Ladas next year.

GM recalls 2,600 trucks

DETROIT.—General Motors is recalling 2,600 1980 Chevrolet and GMC "P" model light-duty trucks to correct a potential braking problem. GM said there could be contact between the rear brake hose/pipe assembly and the axle housing. This could result in possible loss of brake fluid and the loss of rear braking action.

Truck production shows rise on overtime at GM

Overtime at two General Motors plants last week pushed U. S. production above both last week's and year-ago levels.

Scheduled output last week was 40,389, up 1.84 percent from the 39,656 completed the previous week, and up 29.55 percent from the 31,176 assembled in the year-ago Thanksgiving week.

Chrysler Corp.'s Warren truck plant has been down for the last two weeks to balance inventories but that point was slated to resume operations today (Nov. 21). However, the line speed has been cut from 640 units a day to 320.

Ford also had one line closed at its Kentucky truck plant last week to cut inventories. That line builds the big CL-3. That line reopens today.

GM scheduled Saturday overtime last week at two plants: Fremont and Baltimore. Overtime at the Baltimore plant was also scheduled the previous week.

Year-to-date production through Nov. 22, was 1,413,583, down 50.38 percent from the 2,848,840 completed in the comparable 1979 period.

Canadian output rises in wake of holiday shutdown

Canadian auto production increased last week, due to the reopening of Ford Motor Co., which had been closed Nov. 10, for Remembrance Day.

Last week's scheduled industry output of 20,726 was up 6.92 percent from the 19,384 built the previous week, and up 18.40 percent from the 17,504 assembled during the comparable 1979 week.

Ford's output of 5,440 was 16.93 percent above the previous week. General Motors output increased 1.21 percent last week with a total of 12,856.

Chrysler Corp. produced 1,800 units last week, a 21.21-percent increase over the previous week. American Motors had a 26.56-percent increase, with production of 405 units. Volvo production remained the same with 225 units.

Year-to-date, Canadian auto manufacturers have built 750,836 vehicles, a 16.25-percent drop from the 896,547 assembled during the equivalent period last year.

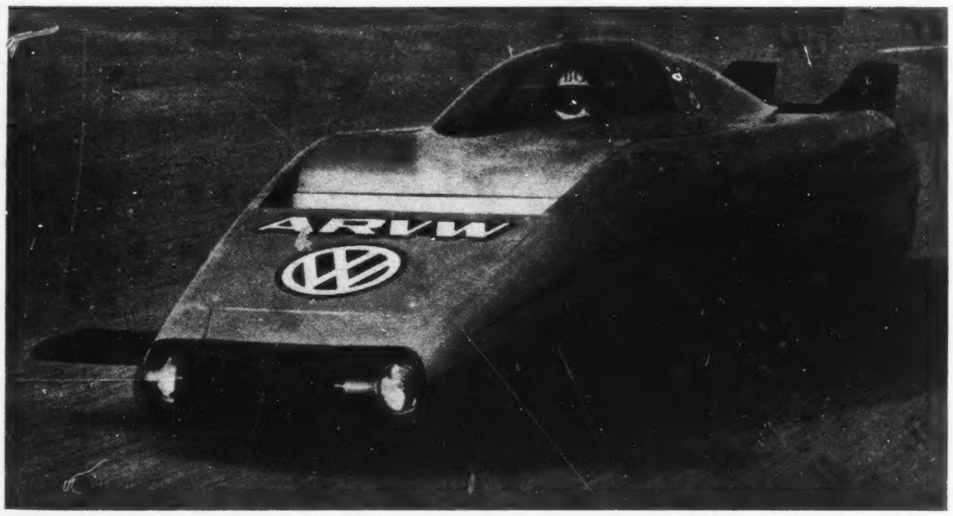
Fast, but stingy



Volkswagen research vehicle gets 39 MPG at 155 MPH

Aerodynamic Research Volkswagen (ARVW) has set eight world speed records for diesels, including 215.79 MPH for 100 miles. A fuel check showed 39 MPG at 155 MPH. One record was a one-hour stint at 219.47 MPH. The engine is a standard VW six-cylinder diesel with turbocharger and intercooling, putting out 175 HP. The transmission was taken from an Audi 100. Including front wings and rear fins, the 197-inch body has a drag coefficient of 0.15. The car has a 98.4-inch wheelbase. Top speed for one full lap at Fiat's Nardo test track was 224.85 MPH.

Retiring GM chairman still bullish on auto business

Murphy sees 11 million for 1981

By Robert W. Irvin
Editor-at-Large

General Motors Chairman Thomas A. Murphy believes the current runup of interest rates is a temporary thing and Americans will buy close to 11 million new cars next year.

That is the most bullish forecast for 1981 by a U. S. auto executive. Others have talked about sales in the 10 million range next year, which would be up from 9 million this year.

Murphy has always been more optimistic than his competitors. But more often than not, he has been closer in his forecasts.

This was his last forecast as GM's chief executive. Today he began his final month as GM chairman. He retires at the end of December, to be succeeded by Roger B. Smith.

There is no transition at GM of the sort that is going on now in Washington.

"It is somewhat different here because the organization is essentially the same," Murphy said in an Automotive News interview. "There will be two people moving out at the top in December and January and there will be some opportunities then to regroup our forces."

He was referring to the retirement of GM President E. M. Estes in January. Estes will be succeeded as president by F. James McDonald.

Both Smith and McDonald are now executive vice presidents and the "regrouping" Murphy referred to will be the elevation of other executives to those jobs.

At least some of those decisions could be made today at the December meeting of the GM board of directors, or they could be deferred until the January meeting. The likely successor to Smith as executive vice president - finance is David Collier, now finance group vice president.

• Asked how the power shifts at the top of GM, Murphy said "some things come along which are addressed to the chairman. I send them over to Roger and tell him this is something he will have to struggle with and we should sit down and talk about."

And, he added, "I haven't found any letup in my activity." He looked at his desk which was piled with papers, although not as high as a reporter had seen it on other visits.

In a few weeks, Murphy will vacate the chairman's corner office on the 14th floor of the GM

RV industry confident of better times in '81

By Jack Walsh
Truck & RV Editor

Anyone looking for optimists probably wouldn't expect to find many of them in the battered recreation-vehicle industry. But they'd be wrong; there are a lot of them and they are confident of better times in 1981.

Sales took a turn for the better in the third quarter, and with dealer inventories at their lowest levels in more than a decade, manufacturers are looking for an upturn in orders that will keep them busy well into spring.

Factory shipments in September, the latest month for which figures are available, were up for the fourth consecutive month and they were highest since October, 1979, according to the Recreation Vehicle Industry Assn.

The RVIA, which is holding its 18th annual product show and business meetings this week in Louisville, also reported that one of the nation's largest banks is predicting an increase in factory shipments in the coming year.

Optimism in the banking community is a significant development, since lending institutions generally have a long history of RV skepticism.

Dr. Raymond Jallow, chief economist for United California Bank—which RVIA says is the 15th largest in the U. S. and the fifth biggest in the state—has

U. S. paper urges a new approach to saving energy

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—A draft Energy Department strategy document — now being circulated within the auto industry — concludes that cooperation between government and industry is essential to save as much energy as possible and to lessen dependence on foreign oil.

The chapter on transportation, obtained by Automotive News, is expected to be sent to the current assistant secretaries for energy conservation and solar energy. It is thought likely to be used by the transition team of the Reagan Administration, at least for a glimpse of internal broad policy guidance suggested by energy experts to mitigate future energy shortages.

The document also stands in sharp contrast to the so-called Sawhill Project — a DOE-sponsored, broad investigation into the energy conservation potential in all sectors of the economy and lifestyle. Named for former DOE Deputy Secretary John Sawhill but now referred to as the SERI project (for the Solar Energy Research Institute, a private consulting organization in Colorado coordinating the project), it suggested in its draft that a CAFE standard of 80 MPG by 1995 could be achieved by a drastic shift in vehicle size and wholesale application of known fuel economy technologies.

This current internal DOE strategy document has no firm recommendations on future fuel economy standards.

• Highway transport now accounts for 79 percent of total transportation use of energy and by 2000 will still account for 73 percent. Truck consumption — 31 percent in 1980—will be 39 percent by 2000. While auto fuel use will decline in the '80s, it will gradually increase to its 1980 level by 2000. Trucks therefore are targeted as an increasingly important target.

The way vehicles are used, the document says, afford ways to save energy—car and vanpooling, preferential traffic control —a possible savings of between 1.4 to 2.1 percent. In long-haul efforts, increased use of piggyback rail is greatly more efficient.

The potential for energy savings from car to bus in urban areas is about 2 percent by 1990. Improving driver behavior and traffic control can have an immediate payoff of between 9 and 15 percent, although it drops to about half that over time.

More can be done by training truck drivers and by increasing loads on trucks and buses, reducing empty backhauls, and better matching size to load in trucks, trains and aircraft.

Telecommunications / computers can be used to improve efficiency and even to substitute for vehicle use.

As for increased auto efficiency, DOE strategy planners tote up savings from downsizings and improvements in drivetrains and say the auto makers believe they can surpass the 1985 goal of 27.5 MPG and reach a 31 MPG CAFE. No recommendation is made for a higher level.

But over the next decade, "very significant" savings can be made for trucks—perhaps as much as 40 percent—by turbocharging diesels, lowering trailer weight and aerodynamic drag, adding lead speed governors, decreasing engine size, lowering axle ratios, using radial tires, and declutching fans.

One of the most important points made by the analysis is that gasoline prices must rise—

breaking news

Chrysler launches advertising blitz

HIGHLAND PARK, Mich.—Chrysler is launching a heavy TV, newspaper and magazine campaign beginning today, featuring price and value leadership of its K-cars, Omni and Horizon Misers and others, like the Dodge Colt featured in California. K-cars are highlighted at $6,995 with the "optional equipment features America wants" included. Newspaper and spot TV is in 23 markets. A five-page magazine spectacular will run in five major news weeklies. Kenyon & Eckhardt handles.

Regular gas in Denmark: $3.11 per gallon

COPENHAGEN.—Danish motorists are paying $3.11 per gallon for regular gasoline—the highest price in Europe. Next in line are Portugal, Italy, Belgium, Sweden and France—all above $2.80. Premium fuel is most expensive in Portugal at $3.26 per gallon. Diesel fuel is cheapest in Italy at $1.37 a gallon, but Italy does not allow trucks to cross into neighboring countries with full tanks.

GTV due in U. S. next spring

New Alfa to push fast-car image

By Kathleen Hamilton
News Editor

ARESE, Italy. — Alfa Romeo plans to bring its new, top-of-the-line performance car, the GTV 6 2.5, to U. S. dealerships by March.

The new model is part of a push by the company to emphasize its fast-car image both in Europe and the U. S. Simultaneously, it has wooed Mario Andretti away from Lotus to head its Formula One race team.

The GTV 6 2.5 — for Gran Turisimo Veloce, six - cylinders, 2.5 liters — is powered by the same V-6 that is fitted in the Alfa sedan in Europe.

Indirect electronic fuel injection has been added, and the front end of Europe's four-cylinder version of the GTV has been lifted for this new lineup leader. Alfa officials foresee an introductory price tag in the $16,000 region.

The GTV 6 carries the burden of Alfa Romeo's short-term sales hopes in the U. S., and plays a similar role in Europe.

Alfa's U. S. sales for the first ten months of 1980 were 2,801, down 20 percent from the same period of '79 and running far short of the 6,712 sold in 1977, the record year for Alfa in the U. S.

Alfa's U. S. sales trend has certainly run counter to those of most other imports in the post-oil-embargo period, whether because of its performance image or a less-than-full commitment to the U. S. market.

- Alfa says it now has made that commitment. The recent appointment of Joseph R. Dent, a 29-year ex-Ford man, to head the U. S. operation and to advise the parent firm on the U. S. market, was part of the new emphasis.

Alfa is also organizing a committee to visit the U. S. on a regular basis to assess the market, according to Gianfranco Bellandi, Alfa chairman.

It also plans to build "two or three" new sports car which are to be introduced to the U. S. by 1985. Under consideration are a replacement for the two-seat Pininfarina - bodied Spider, a coupe and a targa-roof sporty car.

Product plans call for a continuation of the rear-drive, front-engined Alfa for the U. S., Bellandi said, but Dent added that a mid-engine version of the smaller, sporty Alfasud is also under the microscope as a potential U. S. car, perhaps as the Spider's replacement. Both the forthcoming Spider replacement and the coupe are targeted at the $13,000 price range (1981 dollars).

Alfa plans to ship 1,500 of the new GTV 6 to the U. S. in 1981, and hopes to be selling them at an annual rate of 2,500 by the end of calendar '81.

- It anticipates its corporate lineup in the U. S. will be selling in the 8,000 range before introduction of the new models in 1984-85, Dent said. An earlier projection of a 20,000 annual sales in the U. S. applies to the end of the century, he said.

If Alfa's U. S. sales hold to projections, it means good news for current dealers — the firm says it plans to increase dealers' numbers only slightly during the same period.

Dent said the firm has launched a dealer action plan, with market segmentation studies underway, to determine where to put the new Alfa deals.

The firm lost 25 outlets in the first half of this year.

Service training on the new GTV 6 will begin in mid-December, Dent said. The six-cylinder engine will be used exclusively in the GTV in the U. S. in 1981, he said.

The GTV will replace the four-cylinder Veloce Sprint in the U. S.

- The U. S., UK, France and Germany will be its main markets—not Italy, where the car is subject to a 35-percent tax. But Alfa sees the car as an "emblem"—a reminder of Alfa's racing tradition — throughout Europe.

The U. S. version weighs in at 2,800 pounds, and puts out a maximum of 154 HP— six HP short of the European version.

The European version has a 0-100 kmh (62 MPH) time of 8.3 seconds, and a top speed of 128 MPH, according to Alfa.

EPA rates the U. S. version at 17 MPG city, 28 MPG highway and 21 MPG in the combined cycle.

Leather interior, mag wheels, air conditioning and power windows are being considered as standard for the initial U. S. GTV 6s.

Gearbox is a five-speed manual. The car has rack-and-pinion steering, independent front suspension and a De Dion rear axle.

Wheelbase is 94.5 inches; overall length, 168 inches; width, 65.5 inches. Color choices are three: Red, metallic gray and black.

Alfa leader for Europe and U. S.

Alfa Romeo plans to replace its Sprint Veloce in the U. S. with its European top-of-the-line GTV 6 2.5 this spring. The sporty four-seater features a six-cylinder, 2.5-liter, electronically fuel-injected engine; front spoiler; black plastic moldings around wheel arches; new taillights; magnesium wheels, and electrically controlled exterior mirror. It is expeted to be priced around $16,000.

Star of dealer's Oktoberfest almost misses the show

POMPANO BEACH, Fla.— Rudy Kraft put on his own auto show here recently: It was known as the Oktoberfest. And his 1981-model Mercedes-Benz 300-SD, flown in from Germany via Lufthansa, barely arrived in time to be shown to hundreds of invited guests at Autohaus.

The scene was set at the dealership for a gala festival of German wurst, Beck Bier, sauerkraut, soft drinks and a German band when Kraft learned from Mercedes-Benz of North America that he would not have a new car for his fest.

With 5,000 invitations in the mail, Rudy Kraft wouldn't give up. He telephoned Stuttgart several times before locating one new 300-SD which he had purchased on the European Delivery Plan.

Many calls later, Kraft received word from Stuttgart that the new Mercedes would be trucked to Frankfurt, at which point it could be picked up for air-freight to the U. S.

The rest of the story is now history, but thanks to Lufthansa, which flew the Mercedes to Kennedy Airport, New York, and Kraft's son who, with a friend, drove the new car nonstop to Pompano Beach, all was perfect for the wave of guests who spilled into the Autohaus showrooms — everyone prompt for the big event.

The only U. S. dealer at the time with a new Mercedes W-126 (300-SD) fed more than 12,000 guests with 2600 German franks, thousands of Cokes, 15 kegs of beer, gallons of sauerkraut and lots of oompa from a German band.

In time for the show

The first of the new Mercedes 300-SD models in U. S. dealers' hands was this one, air-freighted and hand-delivered to Rudy Kraft's Autohaus in Pompano Beach, Fla. Some 12,000 guests arrived shortly after the car to enjoy the sneak preview, along with German beer, sausage and sauerkraut.

CARS is renamed Dyatron Corp.

BIRMINGHAM, Ala. — CARS —Computerized Automotive Reporting Service—has changed its name to Dyatron Corp. to reflect its recent entry into non-automotive fields.

The computer services vendor said its primary clients will continue to be auto dealerships, but sales to other vehicle and equipment dealers are expanding. The company recently acquired General Computer Services, Inc., which offers computerized payroll and investment systems to banking institutions.

The company also announced operating divisions—Dealer Systems Division, General Systems Division, Dyatron Canada, Dyatron Europe and Dyatron Australia.

Mid-November car sales up slightly over 1979 total

By Jenny L. King
Staff Writer

Mid-November domestic new-car sales edged above the year-ago level and hinted a promise of the long-awaited, albeit slow, recovery the U. S. auto makers have been predicting.

Nov. 11-20 sales totaled 213,235, up 1.40 percent over 210,284 in 1979. With nine selling days this year, the daily rate of 23,693 was 9.86 percent below the 26,286 average for eight days last year.

Year-to-date sales pushed toward the six million mark, reaching 5,954,515, down 21.13 percent from 7,549,311 a year ago.

On a year-to-year basis, two of the five major U. S. auto makers were up for the period. Chrysler Corp. sales climbed 10.95 percent, to 22,622 from 20,390 (down 1.37 percent on a daily-rate basis). General Motors reported a 3.67-percent sales increase, to 133,890 from 129,147 (down 7.84 percent daily rate).

Ford Motor Co. missed its year-ago level by 4.38 percent, slipping to 48,407 from 50,622 (down 15.00 percent daily rate). Volkswagen of America sold 4,416 U. S.-built Rabbits, down 13.83 percent from 5,125 (down 23.40 percent daily rate), and estimated sales at American Motors were 3,900, down 22.00 percent from 5,000 (down 30.72 percent daily rate).

GM earned 62.79 percent of the mid-November domestic market, up from 61.41 in 1979. Ford cornered 22.70 percent, down from 24.07 percent. Chrysler sales accounted for 10.61 percent of the market, up from 9.70 percent. VWoA owned 2.07 percent, down from 2.44 percent, and AMC had the smallest piece, 1.83 percent, down from 2.38 percent.

Six domestic makes reported improved sales, led by an impressive 26.13-percent gain for Plymouth. Dodge sales climbed 19.88 percent, Oldsmobile was up 26.85 percent, Buick was up 13.56 percent, Chevrolet was up 2.91 percent and Mercury was up 1.90 percent.

Lincoln topped the losers with its sales drop of 45.45 percent. Cadillac was off 23.28 percent, Chrysler was down 23.18 percent, Pontiac was down 12.93 percent and Ford dipped 1.24 percent.

Two Ford Motor Co. nameplates, Fairmont and Escort, moved into the top-five standings for the period. Chevrolet Citation was first in line, with sales of 11,923 units. It was followed by Chevrolet Chevette at 10,580, Chevrolet Malibu at 10,055, Ford Fairmont at 9,140 and Ford Escort at 8,410. A year ago the top five were standard Chevrolet, Citation, Malibu, Chevette and Fairmont.

Publication picks 3 top auto chiefs

NEW YORK.—The Wall Street Transcript has named what it considers to be the world's three top auto industry chief executives.

They are Thomas A. Murphy, chairman of General Motors; Lee A. Iacocca, chairman of Chrysler Corp., and Harvey Lamm, president of Subaru of America, Inc.

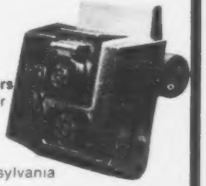
The Transcript is principally subscribed to by brokerage houses, financial institutions and investors.

Honda is fifth deal for Braman in Miami

MIAMI. — Norman Braman has opened a Honda dealership here.

It is his fifth dealership. The others handle Cadillac, Rolls-Royce, BMW and Toyota cars, as well as special classic models.

"Our business is up 40% . . ."



Richard G. Fetters
General Manager

Larry Murphy
Chevrolet, Inc.
Lancaster, Pennsylvania

We have Supra Key Boxes (including 100 of **the new** SUPRA **MAX**) installed in over 800 units in our 5 lots. As one of the largest Chevrolet dealers on the East Coast, it was imperative that we have a system that gave our sales staff the ability to efficiently demonstrate our cars and trucks. Supra gave us that system! Even in this economy, our business is up 40% over last year and our demonstration capability has increased to 97%. Part of this success I attribute to Supra Key Boxes!

SUPRA PRODUCTS, INC.
Celebrating our 25th year

But adjustable steering columns decline

Bucket seat installations up in '80

By Joseph Bohn
Marketing Editor

Bucket seats continued gaining popularity on '80-model domestic cars, but adjustable steering columns declined sharply, an AUTOMOTIVE NEWS survey reveals.

Bucket seats are expected to continue gaining popularity because they fit in with the trend toward smaller cars and because they are capable of meeting safety laws with passive restraints as opposed to more expensive air bags.

In '80, the industry installed bucket seats in 36.89 percent of cars, equal to 2,635,904 units. That was up from 30.48 percent, or 2,848,523 in '79. (The lower volume figure for '80 reflects the sharp decline in total industry production.)

General Motors installed these type seats in 1,349,957 cars, equal to 29.44 percent of production. That compared with 1,288,101, or 24.99 percent in '79.

The figure at GM could have been considerably higher, except for a phase-out of Buick Skyhawk and Oldsmobile Starfire production. At Pontiac, for example, where the Sunbird remained a strong seller, it accounted for 143,070 installations of bucket seats, equal to 100 percent of output.

Ford Motor installed bucket seats in 592,774 cars, equal to 43.16 percent of production. That compared with 948,355, or 34.45 percent in '79.

Chrysler Corp. installed the seats in 400,721, or 52.36 percent of its cars. In '79 only 37.20 percent of Chrysler cars, equal to 422,526, carried the option.

American Motors installed bucket seats in 69,185 cars, equal to 34.97 percent of output. That was up sharply from 56,720, or 33.48 percent in '79.

Volkswagen, of course, installed only bucket seats in the 223,267 Rabbits it built last year.

Adjustable steering columns accounted for 2,493,126 units in industry volume, equal to 34.89 percent of production. That was down sharply from 3,823,670, or 40.91 percent in '79.

General Motors, which accounted for 81.60 percent of industry installations, equipped 3,034,385 of its cars with this option. That was equal to 44.37 percent of GM's production.

Still, it reflected a sharp decline from the 2,710,019 units installed in '79 models and the 52.58 percent penetration they represented.

Ford Motor installed adjustable steering columns in 283,886 of its cars, equal to 20.67 percent of output. That was down substantially from 827,706, or 30.07 percent in '79.

Chrysler Corp. installed the option in 112,908 cars, equal to 14.75 percent of output. That, too, was down sharply from 231,715, or 20.40 percent in '79.

American Motors installed the item in 61,947 cars, equal to 31.31 percent of output. That was up from 54,230, or 32.01 percent in '79.

VW didn't offer adjustable steering columns on '80-model domestically-built Rabbits.

Total Cars, U. S.	2,635,904	36.89	2,493,126	34.89

NOTE: Installation numbers are based on U.S. car production only, with the exception of Chrysler's Cordoba and Mirada which were sourced in Canada only. The '80 production was 7,145,356. This included 4,585,387 for General Motors; 1,373,582 for Ford Motor; 765,253 for Chrysler Corp.; 197,867 for American Motors and 223,267 for Volkswagen.

The Chrysler total includes 34,214 Miradas and 57,479 Cordobas. It excludes 7,846 Caravelles, sourced in the U.S. but sold only in Canada.

Similarly, the GM total excludes 19,651 Acadians, sourced in the U. S. but sold only in Canada.

The Plymouth Voyager, Dodge Sportsman, Ford Club Wagon and Chevrolet Sportvan are no longer included in domestic production, since manufacturers began counting them as trucks in '80.

Delaware wants delay in I/M tests; blames slow EPA

DOVER, Del. — State officials called for a one-year delay in a mandatory auto emission inspection program for New Castle County, claiming the federal government has been too slow in developing pollution test standards.

The state had planned to begin inspections in January, 1982, but will ask the EPA to delay the start of the full program until January, 1983.

Robert R. French, chief of Delaware's air pollution control section, said the state didn't find out until late June that the federal agency is planning to set standards for the state inspection program. He said the state can't afford to buy testing equipment or develop auto mechanics' training programs and then to have to start over again if EPA changes the rules.

In order to get a three-year exemption from 1982 air pollution standards, the state must begin an emission-testing program by 1982. But the state does not believe it can get the inspection and maintenance program off the ground by the deadline, even if EPA adopts the regulations in the next few months, as is now anticipated.

The state is proposing to begin inspections in January, 1982, but it won't begin requiring that repairs be made on cars that flunk the test until 1983.

Advertising Assn. has hit what must be the absolute alltime low in the history of automotive advertising.

"But it got 43 MPG," which graphically depicts the aftermath of an automobile accident, is a most disgusting display of absolute panic run amuck I have ever seen.

This vulgar type of scare advertising rivals the very worst of political advertising. It is degrading to Chevrolet, its dealers, the advertising industry and a shocking insult to the intelligence of the buying public.

I predict that if the Chevrolet dealers continue this kind of irresponsible advertising they will suffer public indignation and the resulting loss of sales which they can ill afford.—**Harry P. Murphy Jr.,** Ramsey, N. J.

Style AND economy

Why can't American manufacturers give the public what it wants?

I do not want to give up style for economy. I want a sports model that has style and good gas mileage.

I was going to wait for a Ford EXP, but I read in your paper that it will not have a five-speed transmission until next fall. Tell Ford Motor Co. that if it does not have the sense to put a five speed in their sports model it has lost another car to Honda.

If I have to pay eight to nine thousand for a car, I will not settle for less than I want. I will wait till April and see.—**William M. Corwin,** Terre Hill, Pa.

Combined shops

As a consumer, I would like to advance several ideas and suggestions to the car dealers which might help bring down a bit those high prices on the new domestic models.

Why not combine the service departments of several dealerships into a single shop under one roof? This approach, I believe, could:

1. Reduce the overhead for each dealership in constructing and maintaining its own separate service department. Since the cost of the real estate is usually higher where the location of a dealership is more desirable, the service department can be on a less expensive property since its location is not that important to its overall function. This could result in each dealership needing less prime land for its operation, especially in the cities.

2. Permit fewer number of mechanics to work more productively by cross-training them on various models.

3. Reduce the duplication in the diagnostic equipment, car lifts and other fixtures.

4. Permit the standardization of labor costs and improve the overall quality of work. With the present state of the art in diagnostic equipment, tools, shop manuals, etc., there is really no excuse why a customer should have to keep coming back several times to have the same malfunction corrected; or why the car cannot be fixed on time.

5. Permit the application of quality of work life programs among the management and employes of the service department to ensure that the highly skilled people stay with the company.

6. Free the resources of the individual dealerships so they can concentrate on the selling aspect and the training of their salesmen, who could use much more detailed technical knowledge for each model they sell.

Domestic car dealerships ought to take a more active role in pressing the car manufacturers for a product appropriate for the current and future energy situation, rather than just waiting for car buyers to start the "stampede" toward the imported products.

Since in some areas the dealerships are bunched next to each other, why not have a shopping - mall - type arrangement in which the automotive-related products and services are brought in one place?

Why not have dealer-operated driving schools which also instruct in the basic car maintenance for the car owners?

And, lastly, why not have the dealers push for mandatory car inspections?

With the current money problems in this state which resulted in some worthwhile car-related programs being cut (such as the road test for student drivers), the automotive industry can take up the slack and ensure us, the driving public, somewhat safer roads while allowing itself a reasonable profit. — **Bud Damnjanovich,** Utica, Mich.

Saab as sedan

Saab adds a four-door notchback sedan to its U. S. lineup for '81. Available with normally aspirated or turbocharged four-cylinder engine, the new Saabs get a wider side molding, standard front power windows, new outside mirrors adjustable from the inside and aluminum rear panel.

Saab adds four-door model, redesigns engine for 1981

ORANGE, Conn. — A four-door notchback sedan has been added to the Saab 900 lineup for the U. S. in 1981.

The new sedan has a lightly curved window and trunk lid that extends to the rear window trim. Rear seat can be folded to provide a flat floor almost 6 feet long.

The Saab 900 sedan is available with a redesigned, normally aspirated four-cylinder engine or turbocharged engine.

Other changes for Saab this year include automatic transmission for the Saab Turbo models, a larger fuel tank (16.6 gallons) and simplified model designations.

The Saab Turbo's automatic gets a new torque converter, raised reduction ratio of primary drive and extra bands and special shift governor.

The five-speed transmission is standard on all Saabs for '81, and its first-gear ratio has been lowered for more low-end traction.

Saab's two-liter engine has been redesigned to shed 25 pounds. Renamed the Saab H-Engine, it has fewer moving parts. The engine block is said to be simpler and easier to service.

A new turbocharger with an integrated wastegate (charging pressure control valve) is controlled by the pressure in the intake manifold instead of by the pressure in the exhaust manifold, as in the past.

The new turbocharger uses a redesigned turbine, said to give better throttle response, especially at low speeds.

A new system of model designation means the basic Saab 900 is available as a three-door hatchback.

The earlier upscale normally aspirated EMS and GLE models are replaced by the Saab 900S models, in three-door hatchback and four-door notchback configurations. Equipment in the Saab 900S range is approximately the same as in the Saab Turbo versions.

U. S. makers schedule 527,875 cars

December production to top '79

By Patricia Hoffman
Staff Writer

U. S. car production in December will increase from a year ago, however calendar 1980 will end with a build of about 6.5 million, the lowest since the 5,522,004 completed in 1961.

The forecast for December is 527,875, an increase of 16.10 percent from the 454,669 built in December, 1979.

Breakdown by company is: General Motors, 305,000, up 1.71 percent from 299,851 built one year ago; Ford, 128,000, up 64.14 percent from 75,674; Chrysler, 68,000, up 38.13 percent from 49,227; Volkswagen, 15,470, up 2.90 percent from 15,033; American Motors, 11,135, down 23.87 percent from 14,627, and Checker, 270, up 5.05 percent from 257.

The estimate for November is 551,437, down 12.10 percent from the 62[illegible] 346 built in the same month last year. Actual November figures will be reported this week.

Due to the shortened-holiday week, planned production for the week ended Nov. 29, was 92,653, down 37.30 percent from the 147,774 built the previous week and down 36.14 percent from the 145,095 built the same week a year ago.

Ford's San Jose (Mustang, Capri) plant was closed last week for the second of two weeks. The point will reopen today (Dec. 1).

GM's Norwood plant reopened last week, after a strike over local issues had closed the plant Nov. 12.

GM's Lordstown facility shut down production of the Monza and Sunbird Nov. 26 for changeover to production of the new J-cars. Startup is scheduled after the new year.

Breakdown for last week was: GM, 56.50 percent; Ford, 23.63 percent; AMC, 3.50 percent; VWoA, 2.94 percent, and Checker, 0.09 percent. Chrysler's weekly figures for the weeks ended Nov. 22 and Nov. 29 were estimated by •AUTOMOTIVE NEWS because actual figures were not received by presstime. The estimated by AUTOMOTIVE NEWS 13.34 percent of last week's total.

So far this year, the auto makers have built 5,806,933 units, down 27.02 percent from 7,957,067 through Dec. 1, 1979.

142,400 trucks slated for month, lowest since 1963

U. S. truck production in December is scheduled to be the lowest for the month since 1963, and the year's total will be the lowest since the 1,583,886 assembled in 1967.

The forecast for the month is 142,400, down 2.95 percent from the 146,721 in 1979. In December, 1963, truck makers assembled 123,965.

Breakdown by company is: General Motors, 75,000, up 20.01 percent from 62,483; Ford, 44,000, down 19.33 percent from 54,547; Chrysler, 6,000, down 56.68 percent from 13,853; AM Jeep, 5,900, down 21.03 percent from 7,472; Volkswagen, 2,210, up 2.59 from 2,154; miscellaneous, 1,700, down 40.62 percent from 2,863; Mack, 1,600, down 8.09 percent from 1,741, and AM General, 290, down 81.96 percent from 1,608.

The December forecast for International Harvester is 5,700. There was no production in December last year due to a strike.

The estimate for November is 146,307, down 20.91 percent from 185,001 built in November, 1979. The estimate is the lowest for the month since the 92,449 assembled in 1970.

Planned output last week was 26,146, down 34.20 percent from the 39,738 units assembled the previous week. The drop was due to a holiday shortened week and was down 40.56 percent from the 43,992 assembled the same week a year ago.

Planned fourth-quarter truck production is 466,823, down 16.66 percent from the 560,143 produced in the same quarter a year ago, and the lowest since 344,420 produced in the fourth quarter of 1970.

There were no truck plants closed during the holiday week and no overtime was scheduled.

Canadian output holds steady for November

Canadian car and truck production in November changed only slightly from the comparable month in 1979.

Truck output in November is estimated at 46,478, a drop of 1.28 percent from the 47,081 assembled in the same month last year.

Car production for the month is estimated at 79,423, a decrease of 0.48 percent from the 79,811 built in November, 1979.

Car output last week was scheduled at 18,561, down 15.43 percent from the 21,949 assembled the previous week and up 6.22 percent from the 17,473 built the week ended Dec. 1, 1979.

Truck production last week was planned at 10,503, down 11.12 percent from the 11,818 built the previous week and down 12.03 percent from the 11,940 assembled the same week a year ago.

Ford will close its St. Thomas plant Dec. 5, discontinuing production of the Fairmont and Zephyr. Ford will resume operation of the St. Thomas plant Feb. 2, 1981, with two new lines, the Ford Escort EXP and the Mercury Lynx LN7.

Chrysler closed its Windsor car plant (Cordoba, Mirada) last week, but will reopen it today (Dec. 1).

So far this year, the auto makers have assembled 1,232,951 units, down 18.65 percent from the 1,515,736 built through Dec. 1, 1979.

Truck makers have assembled 462,331, down 22.89 percent from the 599,637 built during the same period last year.

breaking news

Continued from Page 1

Saab production to be cut back

LINKOPING, Sweden. — Saab-Scania is going to reduce production of passenger cars by idling assembly lines for 20 days in December, January and February. This will cut some 6,000 cars from the schedule. Although sales have been sluggish, the company said it is reducing production because high interest rates have made it too expensive to maintain stocks around the world.

Korean buys Panther Westwinds

BYFLEET, England. — Panther Westwinds, the specialist car manufacturer which went bankrupt a year ago, has been sold to Young C. Kim, a South Korean businessman. Kim has formed a partnership with Bob Jankel, founder of Panther Westwinds, and says he intends to resume production of the Panther range and possibly the Equus sports car.

Metro outsells Escort in UK

LONDON. — BL Metro outsold Ford Escort in the UK during the first 10 days of November, although both of the new British cars suffered from short supply. Metro's market share was 6.7 percent, compared with 6.4 percent for Escort. BL dealers say that adequate supplies could push Metro's share to 8 or 9 percent this month.

TRUCK PRODUCTION IN U. S.†

Datsun Laurel gets new body

Datsun Laurel has been given a new body to go with its refined mechanicals. An optional voice warning system tells the driver if he leaves the lights on and the electric windows can be operated up to 30 seconds after the ignition is switched off. The Laurel, which is about the same size as the 810, will not be sold in the U. S.

House rejects bill to require air bags in some '83 models; passive restraints still in effect

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — The House of Representatives said no to air bags again last week, rejecting legislation that would have required General Motors, Ford Motor Co., Toyota, Nissan and Volkswagen of America to offer air bags in one line each in 1983.

The legislation, rejected by a vote of 189 to 186, would have delayed the current passive restraint standard which is due to take effect in 1982. It also would have reversed the current schedule so that small cars would have been the first to be required to have passive restraints.

The action by the House means car makers must offer either passive belts, passive restraints or air bags in large cars in 1982, in medium-size cars in 1983 and small cars in 1984.

Besides dropping the air bag requirement, the House's rejection of the compromise legislation also throws out the door a plan to reduce the bumper standard from 5 MPH to 2.5 MPH. Also rejected is an exemption for tire dealers and distributors from mandatory tire registration which would have authorized DOT to require tire makers to give public notice of a tire recall when in the public interest.

- Another compromise proposal was being worked out at press time by Rep. John Dingell, Michigan Democrat, and James Scheuer, the New York Democrat who championed the original compromise proposal.

It would at minimum allow for a delay of the standard to 1983 and reverse the order of passive restraints, to start with small cars.

But in the helter-skelter closing days of Congress, there was concern expressed that the new compromise would not succeed, since it would need a two-thirds majority approval in both House and Senate.

Opponents of the rejected measure, led by Dingell, charged that it would have meant Congress would have been legislating design standards, a practice it previously rejected.

"A more reasonable approach would be to allow the marketplace to determine whether air bags will be in automobiles in the future," Dingell said.

GM and Ford have already announced they will voluntarily install air bags in certain cars

breaking news

Chrysler ties rebates to prime rate

DETROIT.—Chrysler Corp. has announced a cash rebate that fluctuates with the prime interest rate. Buyers of new 1981 domestic models except Imperials who finance purchases through loans are eligible. Rate of rebate is the difference between the prime at the time of purchase and a flat 12 percent. That rate is multiplied by the sticker price. Rebates run Dec. 3-Jan. 20.

Ford offers interest break

DETROIT. — Ford Motor Co. has launched a 12-percent loan program for buyers of Mustang, Granada, Thunderbird, Capri, Cougar and Cougar XR-7. Ford Motor Credit will participate; other loan institutions may be added. Cars delivered to buyers by Feb. 7 are eligible.

Honda celebrates with Accord SE model

MARYSVILLE, O.—Honda is marking its 10th year of selling cars in the U. S. with a special limited-edition Accord SE (special edition) model. The SE's standard equipment includes leather seats, special paint, mag wheels, air conditioning and power steering, doors and locks. Only 3,000 will be sold. Price is about $10,000.

Nissan-VW venture bid first step to alliance?

By Edward Lapham
Financial Editor

Nissan Motor Co. Ltd. and Volkswagenwerk AG jointly announced last week they are studying the possibility of a venture to produce VW cars in Japan. It was widely viewed by industry analysts as the preliminary stage of the first of many such arrangements.

No details were announced other than the statement that a team of VW and Nissan officials would study the various possibilities and decide if an arrangement is feasible.

Arvid Jouppi, John Muir & Co. auto analyst, said such an arrangement would be "the first direct link between Europe and Japan" with worldwide consequences.

He said that at the moment there are only two companies which can effectively compete on a Europe/American/Asia basis: General Motors and Ford Motor Co.

"The only way for other companies to compete in the world component concept market is through these alliances," Jouppi said. "I believe this will be pattern-setting and fit right into the continuing pattern of worldwide cooperation."

Other analysts agreed with Jouppi's "three - legged stool" theory that Europe/American/Asia marketability will be re-

Bob Irvin—'the best newsman on the auto beat'—dies at 47

DETROIT.—In the days when Walter Reuther of the UAW and Louis G. Seaton of General Motors made auto contract talks world news, a young, aggressive reporter from United Press International found a way to improve the system.

In a hall area where the company and union regularly held press conferences to announce developments, Bob Irvin had a phone installed and stashed under some risers months before negotiations reached the crucial stage.

Months later, when the settlement was finally announced, Irvin plucked the phone from its hiding place and began dictating to the world via UPI's wires, even as the announcement was being made.

He caught his competition flatfooted in the race to file. That typical Irvin coup prompted other news services to install their own phones under the risers.

Robert W. Irvin, Automotive News editor-at-large, died last Monday, Dec. 1, in Chicago. He was 47.

- The innovative method Mr. Irvin used to beat the competition in that contract year was only one of many which made him widely recognized as the world's leading auto writer.

Mr. Irvin's 25-year career as a newsman began when he joined United Press in 1955 after serving with a U. S. Army intelligence unit in Korea. He worked for UPI for 10 years and was the wire service's auto writer from 1961 to 1963 and Detroit Bureau chief from 1963 to 1965.

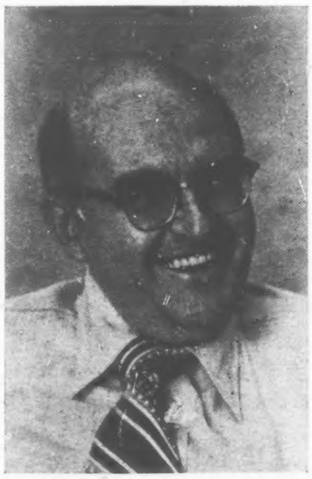
In 1965 he joined the Detroit News where he worked for 12 years as automotive writer and earned a reputation as a fine reporter and one of the best auto writers in the world.

Newsweek magazine once called Mr. Irvin "the best newsman on the auto beat." It was a title which he relished.

During his years at the Detroit News, Mr. Irvin also wrote for a number of freelance clients which included Reuters news service, the New York Times, the Washington Star, United Features syndicate, North American Newspaper Alliance, Argosy, Motor Trend and several trade publications.

Colleagues would often see Mr. Irvin after some event with a telephone receiver in each hand, simultaneously dictating stories to the News and the New York Times or one of his many other clients.

In September, 1977, Mr. Irvin joined Crain Communications Inc. as Automotive News editor-at-large as well as editor and associate publisher of AutoWeek, a weekly enthusiast motorsport publication.



Robert W. Irvin: 1933-1980

The move to Automotive News surprised most people in or close to the auto industry and it left the various pieces of his freelance empire "up for grabs," as he devoted all of his time and energy to the two Crain publications.

Mr. Irvin contributed much to the industry, and he was quite often involved in the "big" stories about the industry in a period when Detroit was undergoing a metamorphosis.

Some consider his 1971 Detroit News series about faulty GM engine mounts his finest work because it is credited with having led to a massive recall.

There were, however, many fine examples of Mr. Irvin's work, including his development of the fine art of spy photography over the years to his in-

Would give President power to deal with Japanese

Import resolution stalled in Senate

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — At presstime, the fate of a resolution giving the President temporary power to negotiate restraint in auto imports with the Japanese is far from clear. It depends upon the steadfast opposition of two key senators—Rhode Island Republican Senator John Chaffee and retiring Illinois Democrat Senator Adlai Stevenson III—and on whether an amendment added by Republican Pennsylvania Senator John Heinz to include auto parts will be dropped on the Senate floor.

The latter move is necessary because a conference to iron out differences with the House-passed version is extremely unlikely in the dying hours of the 96th Congress.

At a hastily called meeting of the Senate Finance Committee, the resolution as passed by the House but with the Heinz amendment got reported with two dissenting votes — Chaffee and Minnesota Republican David Durenberger. Nonetheless, there was a confusing interchange on whether Chaffee could file a minority dissent in a report which Chairman Russell Long said would not have majority views or even the existence of a report from which to dissent.

But at least it became clear that Senate passage was clouded: If the resolution gets to the floor, either on its own or as an amendment hung on to another bill, it was going to be strongly contested by at least two senators and possibly also even be filibustered. This was hardly a sanguine outlook in a Senate already embroiled in two other filibusters as it churned into the last 24 hours.

On the other hand, the plan was to add the resolution to the debt ceiling limit proposal—so-called "must" legislation—and a guarantee it will be considered. Its major sponsor, Michigan Democrat Senator Don Riegle feels sure he has the votes for passage if the parliamentary hurdles can be cleared.

The scenario was not improved by the fact that neither the views of the Carter Administration or the incoming Reagan Administration are known.

Stevenson opposes the special auto industry resolution on principle. Not only is he a free trader, but he feels the domestic industry needs the healthy competition offered by the imports. Chaffee described the resolution as bad legislation that would allow big industry to walk around the legal procedures embodied in the International Trade Commission.

The last-minute inclusion of auto parts—unless it is ditched by the full Senate — suggests another way to kill the measure indirectly.

• The House resolution had sailed through, 317 to 57, on Tuesday. Two hours before it did, the House Ways and Means Committee reported a slightly modified version, but the report itself was not expected to be filed until Friday — the last day of Congress. The customary three-day waiting period was suspended because proponents felt confident a two-thirds majority could be mustered.

Last-minute changes were made — and approved by the Justice Department — to narrow the waiver of the antitrust laws to be sure the application was to this resolution only and not to such crimes as price fixing. And the phrase "imports of autos and trucks" was changed to "increased importation of autos and trucks" to make it conform more closely to the trade law.

Report language was also added — to clarify the intent of Congress — that pay restraint should apply to white collar workers and officials as well as blue collar workers.

Further, Congress intends that overseas subsidiaries should refrain from seeking to restrain imports in their markets while the parent companies are doing the same to protect the home territory.

An amendment proposed by New York Rep. Barber Conable, the ranking Committee Republican, would have narrowed the Presidential authority even more, required the President to take into account various economic conditions, hold a public hearing and subject negotiations to congressional override. It was summarily defeated.

• But Minnesota Rep. Bill Frenzel, a conservative Republican, managed to get a few shots in. He said the only Japanese sin was to create good quality cars at reasonable prices and he inveighed against letting Ford Motor Co. and the UAW set trade policy.

If changes were to be made, he said, they should be made in

EPA expected to ease CO rule for small cars

By Jake Kelderman
Washington Staff Writer

WASHINGTON.—The EPA is expected to announce this week a relaxation of emission standards for three models of automobiles that play a key role in the future profitability of the Big Three manufacturers.

According to reliable sources, EPA will waive the 1982 carbon monoxide standard of 3.4 grams per mile to 7.0 gpm for General Motors' new J-cars, Ford Motor Co.'s Escort/Lynx and their sporty derivatives the Ford EXP and Mercury LN-7, and Chrysler Corp.'s K-cars.

The move is expected to save the companies money (GM estimates between $30 and $40 per car) and enhance their fuel economy (GM estimates a 0.7 miles per gallon loss in fuel economy on the J-cars without the waiver).

Waivers from the carbon monoxide standard are available through the 1982 model year under the Clean Air Act. Previously, the EPA issued CO waiver for vehicles representing about 28 percent of projected 1981 sales and 13 percent of projected 1982 sales.

Ford and Chrysler had received waivers for their Escort/Lynx and K-cars for the 1981 model year, but had been denied the waiver for the 1982 model year on the grounds that they will have their emission control system sufficiently developed to meet the lower standard.

• EPA administrator Douglas Costle indicated a change of mind was coming on this matter last week, however, when he issued a public notice saying he expected to reverse himself on a denial he had made of GM's waiver request for its new J-cars on grounds that circumstances had changed.

Citing the industry's depressed state, the prospect for only slow recovery and the competition of foreign makers, Costle said that in the light of these facts "I should give additional attention to the large issues involved in assessing the potential impacts of this waiver decision on the public interest."

The 1981 and later model year CO standard of 3.4 gpm has been labeled too stringent by the auto makers. Recently, they were supported in that argument by the National Academy of Sciences, which found after a long study of the pollutant that a standard of 7.0 gpm was probably more reasonable. This finding is expected to play a key role next year when Congress reviews the Clean Air Act.

Sweepstakes sweetheart

Harold Clizbe, center, president, Ballenger Automotive Service, Council Bluffs, Ia., takes title to this 1938 Ford Phaeton from Russ Richardson, right, Walker Mfg. Co. district manager, and Tom Scheel, territory manager for Walker. The '38 Ford was first prize in Walker's 1980 Olympic Trade sweepstakes.

DOE urges tax credits to boost 1990 CAFE

WASHINGTON. — The Department of Energy says the federal government should consider a CAFE target of 38 MPG for 1990 as part of a wide-ranging effort to wean the U. S. off imported oil.

In reporting on its eight-month study, the department suggests such a CAFE level would be within the reach of the auto makers with technology already in hand but that financial incentives would be cost-beneficial to insure it.

Done at the suggestion of DOE Secretary Charles Duncan and supervised by Assistant Energy Secretary William W. Lewis, the study says U. S. auto makers will reach a combined CAFE of 34.7 MPG in 1990 even in the absence of any refundable tax credits for each tenth of a mile-per-gallon a maker exceeds the 1985 standard, could produce a 38 MPG CAFE.

A further inducement to reach or exceed this standard would be to offer a tax credit of $73 per car for each mile-per-gallon the maker exceeds the standard, the study says.

Such a CAFE level would save the U. S. at least 130,000 barrels of oil per day by 1990 and 340,000 barrels per day by the year 2,000, the study says.

Tax incentives "would represent a more balanced approach to fuel economy improvements and would be consistent with other U. S. programs that subsidize residential conservation and production of alternate fuels," the study says.

Such assistance may be needed in any regard, since the shift to small cars makes pursuing advanced fuel-economy technologies less profitable, the study indicates.

• DOE expects small cars to take 37.7 percent of the market in 1990; mid-sized cars, 30 percent, and large cars, 32.3 percent.

Such a mix would produce a CAFE of 34.7 MPG but likely slow further research on fuel economy technologies such as variable valve timing, roller followers, continuously variable transmissions, diesel engines, turbocharged diesels and advanced electronics, the study says. Tax incentives might prevent this from occuring while also aiding the car makers, it says.

The DOE study also suggests imposition of a $10 per barrel tax on oil (24 cents per gallon.) Such a move would likely produce a CAFE of 39.1 MPG by 1990 and save the U. S. another 20,000 barrels per day in that year and 80,000 barrels per day by 2,000, it says.

Also under consideration is a requirement that all vehicles use fuel-efficient oils and tires and that tire pressure checks be mandatory in all state safety inspections and inspection-and-maintenance programs. Requiring valve stem caps that would show red when tire pressure is low is also being considered.

Even if only 20 percent of the driving public utilizes these technologies, further savings of 363,000 barrels per day could be achieved by 1995, the study says.

Recognizing the very real threat of another oil supply crisis, the study recommend that in the event of its occurrence, speed limits be reduced to 45 MPH, a four-day work week be imposed and school buses and the like be utilized to transport workers.

The DOE recommendations are directionally similar to

November total of 529,288 down almost 12 percent

U. S. new-car sales slump continues

By Jenny L. King
Staff Writer

Hopes for a year-end recovery for domestic new-car sales all but disappeared as the major U. S. auto makers reported an 11.67-percent decline in November, and an abysmal 28.93-percent drop during the last period. Only Chrysler Corp. made a gain, its sales up 2.56 percent for the month.

Imports continued on a level with year-ago sales, even edging ahead a few hundred units for a 0.25-percent increase in November. Import sales totaled 168,347, up from 167,929 and accounting for 24.13 percent of the market, compared with 22.18 percent in 1979.

U. S. auto makers reported a total of 529,288 retail deliveries for the month, down 11.67 percent from 599,247 a year ago and the lowest since the 505,511 reported in 1974.

With one less selling day this year (24, compared with 25 in 1979), the daily selling rate of 22,054 was down 7.99 percent from 23,970.

Third-period domestic sales totaled only 148,390, down 28.93 percent from 208,784 and the softest since 138,556 in 1970, a strike year.

• General Motors earned 62.31 percent of the domestic market in November, up from 61.34 percent in 1979. Ford sales accounted for 23.12 percent, down from 24.71 percent. Chrysler Corp., busy surviving, increased its share of the market to 9.96 percent from 8.58 percent. American Motors cornered 2.56 percent, down from 2.92 percent and Volkswagen of America had 2.05 percent, down from 2.45 percent.

GM sales for the month totaled 329,793, down 10.28 percent from 367,560. Ford sales dropped 17.39 percent, to 122,356 from 148,109. Chrysler sold 52,740 new cars, up 2.56 percent from 51,422. American Motors sales of

Where Auto Market was in November

	Total Sales	Pct. of Total
SUBCOMPACT	107,581	15.42
COMPACT	154,903	22.20
INTERMEDIATE	155,320	22.26
STANDARD	75,594	10.84
LUXURY	35,890	5.15
IMPORT	168,347	24.13
TOTAL	697,635	100.00

November total of 529,288 down almost 12 percent

U. S. new-car sales slump continues

Continued from Page 1

13,561 were down 22.43 percent from 17,482, and VWoA plunged 26.14 percent to 10,838 from 14,674.

A few increases and some declines balanced the import total at 168,347, up from 167,929. Toyota headlined its press release "Toyota sales down in November," referring mostly to truck sales, cut in half probably by the new tariff imposed by the U. S. government in August. Toyota car sales were down a mere 0.22 percent on a year-to-date basis and actually were up on a daily rate basis. Datsun sales slipped 5.50 percent, Mazda was down 8.00 percent, while Honda leaped 17.06 percent.

BMW reported record sales in November, and Peugeot claimed record year-to-date sales. Toyota was up 15.36 percent for the year and Datsun was up 11.81 percent.

- Of the domestic makes, three of the 13 reporting a year ago were up for the month: Plymouth, up 15.73 percent, Dodge, up 10.19 percent and Buick, up 14.01 percent. Declines ranged from 9.21 percent for Oldsmobile to 53.38 percent for Lincoln. Buick surpassed Oldsmobile in November for the first time this year and seems intent on taking over second place in sales among the GM divisions.

Year-to-date sales for the industry totaled 8,323,605, down 16.07 percent from 9,915,735 through Nov. 31, 1979. The domestic industry remained 21.32 percent off the mark with sales of 6,106,867, compared with 7,761,562. Import year-to-date sales reached 2,216,738, up 2.90 percent from 2,154,173. Imports share of the market for the first 11 months was 26.63 percent.

Of the total market for the month, U. S. subcompacts accounted for 15.42 percent, compacts were 22.20 percent, intermediates were 22.26 percent, standard-size cars were 10.84 percent, luxury models were 5.15 percent and imports were 24.13 percent.

Subcompacts represented 20.32 percent of the domestic market, compacts were 29.27 percent, intermediates were 29.35 percent, full-size models were 14.28 percent and luxuries were 6.78 percent.

Top-selling U. S. nameplates in November lined up behind first-place Chevrolet Citation at 28,356; Chevrolet Chevette, 25,609; Ford Fairmont, 23,787; Chevrolet Malibu, 23,351 and a three-way "tie" for fifth, Oldsmobile Cutlass Supreme, 19,438, Ford Escort, 19,386 and standard Chevrolet, 19,356.

Nissan-VW Japan venture first step toward alliance?

Continued from Page 2

quired for survival beyond the 1980s.

Arthur Davis, Prescott Ball & Turben analyst, was even more specific than Jouppi. "I think that very soon you'll see Chrysler joining the Nissan-Volkswagen arrangement," he said.

"I also think this will push Ford and Toyota closer together," David added.

- Unlike Jouppi, Davis believes the arrangements will be more than just "handshake alliances." He believes there will be eventual equity arrangements involving direct investment in other companies by some of the auto makers involved in the worldwide auto axes.

Davis said that by "late December or early January" he thinks Chrysler Chairman Lee Iacocca "will be trying to line up a fast mate" to avoid total corporate collapse in the sagging U. S. auto market.

"The problem with these types of equity arrangements is that they take a long time to finalize," Davis said. "Sometimes the mortar falls out from between the bricks before they can be put together."

The immediate benefits to a Nissan - Volkswagen link would be access to the Japanese and perhaps other Asian markets for mid-size VW products, plus less political resistance to Nissan's planned penetration of the West German market.

There were denials from within both companies that any kind of merger was being considered or that there was any grand design involved. One source said it could involve something as traditional as licensed production of Audi or VW Passat (Dasher) models.

VW, apparently, is anxious to export production of some Audi models. Chrysler chairman Lee Iacocca has said that company's 1979 "marriage" talks with VW included an option of building Audis at Chrysler's St. Louis plant, which currently builds LeBaron/Diplomat models (AUTOMOTIVE NEWS, Dec. 1, 1980).

Summed Davis, "This is the way you get the job done; the Japanese really know how to do it."

NADA to Detroit: Hold price line, offer rebates

WASHINGTON.—The NADA has urged domestic and imported auto manufacturers to hold the line on new car price increases and to stimulate sales by offering rebates and dealer incentives on slow-selling models.

NADA also is calling on the Federal Reserve Board to reverse the rapidly rising cost of money for new-car buyers and dealers.

NADA President George S. Irvin said auto manufacturers and government must act to stimulate new car sales, which have fallen sharply in the past few weeks as banks' prime lending rate began rising toward its current 18.5 percent.

"People are discouraged by high interest rates and the cost of new cars and they have stopped shopping," he said.

Irvin said NADA is urging auto manufacturers to provide immediate cash rebates on slow-selling 1981 model cars and light trucks, and additional sales incentive programs for dealers.

Reuss will head Buick Division

GM appoints Decker to new quality position

NEW YORK.—General Motors has created a new position, vice president in charge of quality and reliability, and named Robert W. Decker to the post. Decker has been vice president and group executive in charge of the car and truck group.

GM's Board of Directors announced several other high-level personnel changes, including the elevation of Lloyd E. Reuss to vice president and general manager of Buick Division.

Decker, a 38-year veteran of GM, has been the executive in charge of GM's five car divisions, truck and commercial vehicle operations and General Motors of Canada Ltd. He will report directly to the president.

R. W. Decker

Several other key appointments were also announced by the board.

Donald H. McPherson was named vice president and group executive of the car & truck group, succeeding Decker. McPherson has been vice president and general manager of Buick Division.

Lloyd E. Reuss was elected a vice president of General Motors and named general manager of Buick, succeeding McPherson. Reuss had been director of engineering for Chevrolet.

Paul D. Pender was named vice president and group executive in charge of the mechanical components group, succeeding George R. Elges, who is on a disability leave of absence. Pender has been vice president in charge of the operating staffs group, including industrial relations, marketing, materials management and personnel administration and development.

David C. Collier was named vice president and group executive in charge of the operating staffs group, succeeding Pender. Collier has been vice president and group executive in charge of the finance group.

Activities which previously reported to Collier, including the financial staff, the economics staff, the information and communications operations and the finance and insurance subsidiaries, will now report directly to Roger B. Smith, executive vice president and chairman-elect.

In a statement concerning Decker's appointment, the board said:

D. H. McPherson

Lloyd E. Reuss

"General Motors is determined to give its customers the highest value possible and Mr. Decker's appointment reflects GM's dedication to build the best possible cars and trucks. The importance of product quality cannot be overemphasized in today's highly competitive automotive world. It rates right up at the top along with fuel efficiency and safety."

Decker, a General Motors vice president since March 1, 1970, was appointed group executive in charge of the car and truck group, August 8, 1978.

Decker is a member of the administration committee and serves on nine of the corporation's top policy groups—energy, industrial relations, marketing, personnel administration and development, materials management, product, public relations, research and service.

Born Nov. 5, 1919, in Columbus, O., he was graduated from Ohio State University in 1941 with a bachelor of science degree in industrial engineering. Soon after graduation, he joined GM's Saginaw Steering Gear Division as a time study engineer. After a series of promotions, he was appointed a plant manager in September, 1952.

He was transferred to the Rochester Products Division, Rochester, N. Y., as works manager in April, 1957. In October, 1963, Decker was named works manager at AC Spark Plug Division, Flint, Mich. He held that position until November, 1967, when he returned to Saginaw Steering Gear Division as general manager.

Decker was elected a vice president of the corporation and put in charge of the manufacturing staff in March, 1970. On January 1, 1973, he was appointed general manager of Fisher Body Division and on October 6, 1975, was named a group executive in charge of the mechanical components group, the position he held until his current assignment.

- McPherson was appointed general manager of Buick on Nov. 6, 1978. He has been a vice president of the corporation since October 6, 1975. Prior to going to Buick, McPherson served as president, general manager and chief executive officer of General Motors of Canada since October, 1975.

Born in Wayne, Alberta, July 8, 1923, he joined Chevrolet Division in 1940 following graduation from Cass Technical High School in Detroit. Two years later, he entered the University of Michigan, and after service in the U. S. Navy, was awarded a bachelor of science degree in mechanical engineering the following year.

Reuss has been director of engineering for Chevrolet since Nov. 8, 1978.

Born Sept. 22, 1936, in Belleville, Ill., he received a bachelor of science degree in mechanical engineering from the University of Missouri-Rolla in 1957 and then served two years in the U. S. Army Corps of Engineers.

Henry II calls imports economic Pearl Harbor

By Ralph Gray
Crain News Service

DEARBORN. — Japanese car imports are causing an "economic Pearl Harbor" in the U. S. auto market, Henry Ford II charged.

He called for "voluntary restrictions" on the export of Japanese vehicles to the U. S., saying the Japanese government "runs its industry with a very strong hand."

If that isn't done, "they're going to find themselves in a hell of a lot of trouble. I think we've got an economic Pearl Harbor with the Japanese and if they don't wake up to it, they're going to be in a lot of trouble," said Ford, retired chairman of Ford Motor Co., who is now chairman of the finance committee.

"I don't know what Pearl Harbor (the Japanese attack that marked America's entry into World War II) was caused by. I don't know what the reasons for Pearl Harbor were in the Japanese mind. But they can't take us over trade-wise. We're just not going to stand for it.

"We just can't stand for it. We can't degrade this country the way it's been degraded by the way the Japanese are treating us. We can strike back—decide what to do and get on with it," Ford said.

"We've got to talk to the Japanese government in a very

702,111 new-car total lowest for month since 1970

September registrations still slump

By Richard A. Wright
Assistant Managing Editor

U. S. new-car registrations in September continued to plod along at the lowest level since 1970 despite record import totals, according to figures compiled by R. L. Polk & Co.

New-car registrations in September totaled 702,111, down 17.91 percent from 855,346 a year earlier. The total was off 0.26 percent from the August tally of 703,923.

It was the lowest September count since 1970, when 612,140 new cars were registered. Record for September is 912,473, set in 1977.

While the domestic total of 489,682 was down 25.95 percent from 661,265 a year earlier, the import tally of 212,429 was a record for September, up 9.45 percent from 194,081 last year.

Registrations of new cars in the U. S. for the first nine months of 1980 totaled 1,898,459, down 16.81 percent from 1,773,308 last year.

- Of the U. S. corporate makers only American Motors increased its share of September market compared with the preceding year, accounting for 1.79 percent, up 0.37 of a percentage point.

Biggest loser was Ford Motor Co., down 3.91 points to 13.94 percent, followed closely by Chrysler Corp., off 3.63 points to 7.73 percent. General Motors accounted for 46.22 percent of September registrations, down 0.42 of a point.

Miscellaneous domestic lines accounted for 0.06 percent, up 0.02 of a point.

Gathering up all those losing shares were the imports, which took 30.26 percent of the September registrations, a gain of

702,111 new-car total lowest for month since 1970

September registrations still slump

Continued from Page 3

7.57 points from a year earlier.

Excluding imports, domestic-only registrations in September were divided this way: GM, 66.27 percent; Ford Motor Co., 19.99 percent; Chrysler Corp., 11.09 percent; AMC, 2.56 percent, and miscellaneous, 0.09 percent.

A year earlier, domestic-only registrations were divided as follows: GM, 60.33 percent; Ford Motor Co., 23.09 percent; Chrysler Corp., 14.69 percent; AMC, 1.83 percent, and miscellaneous, 0.06 percent.

By size segments, only subcompacts improved their market share over the preceding September among domestic cars. Subcompacts accounted for 14.95 percent of the total, up 5.49 points.

Standards suffered the biggest loss, down 6.45 points to 9.82 percent. Also down were intermediates, off 3.59 points to 21.62 percent; compacts, down 1.47 points to 19.18 percent, and luxury cars, off 0.70 of a point to 4.17 percent.

Registrations by size class in September were: Subcompact, 104,972; compact, 134,639; intermediate, 151,790; standard, 68,974; luxury, 29,307, and import, 212,429.

Among the top 20 nameplates in registrations, standard Ford was missing for the first time and Chrysler Corp. had two entries for the first time in a while as Omni moved into 19th place.

Chevette took over the lead from Citation and, more evidence of the subcompact surge, Pinto moved up from 17th place into 11th.

The top 20 domestic nameplates in registrations during September were:

1—Chevrolet Chevette	31,048
2—Chevrolet Citation	28,100
3—Olds Cutlass Supreme	22,762
4—Chevrolet Malibu	20,229
5—Buick Regal	17,618
6—Standard Chevrolet	16,927
7—Standard Oldsmobile	15,946
8—Ford Mustang	15,875
9—Oldsmobile Cutlass	15,825
10—Ford Fairmont	15,462
11—Ford Pinto	15,114
12—Chevrolet Monza	14,620
13—Buick Skylark	14,296
14—Plymouth Horizon	13,389
15—Chevrolet Monte Carlo	12,770
16—Pontiac Sunbird	12,607
17—Standard Buick	11,902
18—Buick Century	11,263
19—Dodge Omni	9,814
20—Pontiac Grand Prix	9,813

Ford to produce parts in joint Mexican venture

MEXICO CITY.—Ford Motor Co. has announced another joint venture in Mexico, this one to manufacture automotive plastic parts with the Monterrey-based Valores Industriales (VISA) group.

The new operation, scheduled to be producing by mid-1982, will involve a projected investment of $45.6 million. Sixty percent of the equity is to be held by VISA, 40 percent by Ford.

Two other Ford joint ventures are also scheduled to be producing from Villa de Garcia plants: A project with the Alfa Industrial Group which is scheduled to produce aluminum engine parts for autos and a project with the Monterrey-based Vitro glass group to produce auto glass.

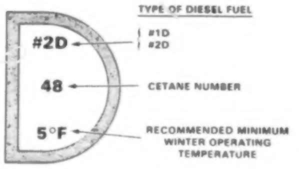
No site has yet been named for Ford's proposed $365 million engine plant which is to produce four- and six-cylinder engines.

In an unrelated development, Ford and unionized workers at Mexico City's engine and vehicle assembly plants reached agreement on a one-year pact, ending a 12-day strike.

The contract calls for a 27.5-percent wage increase plus increases in fringe benefits.

MacKenzie's winner

Gordon MacKenzie, Lincoln-Mercury general manager, draws the name of the first weekend winner in the division's employe test-drive program. The new 1981 Lynx and Cougar models can be driven overnight by participating employes, and six will have the use of a car for a weekend.



Fuel info

General Motors would like to see a symbol like this on diesel fuel pumps. Tied in with information in owner manuals, the symbol would let a fuel buyer select the fuel preferred for a particular car engine and time.

Ground broken for Marysville (O.) car plant

Honda 'proceeds with ambition'

By Jim Plegue
Staff Writer

MARYSVILLE, O.—Posted at several locations within Honda's year-old motorcycle assembly plant here is a five-point list of the Japanese maker's management policy. At the very top is this directive: "Proceed always with youthfulness and ambition."

Honda of America Mfg., Inc., closely following its management's top directive broke ground here last week for its $200 million automotive assembly complex, the first Japanese auto plant to be built in the U. S.

Construction of the 900,000-square-foot complex, located on 260 acres of land adjacent to the cycle factory, comes almost exactly 10 years from the date that Honda began importing cars in the U. S. The complex will not only house assembly operations, it will also include stamping, welding, painting and plastic injection-molding facilities.

Plant start-up is expected in two years with the 1983 Accord model, which will be identical to the car sold in Japan but "restructured" from the current Accord model, Honda officials said.

At peak capacity, the one-line assembly operation will build 10,000 Accord models per month, Honda said.

It could have been the groundbreaking festivities for a new branch of the local bank or a new city hall. Politicians made speeches, photographers snapped photos and journalists conducted interviews, an American flag was prominently displayed and the Maryville high-school pep band played the Star Spangled Banner.

The difference was that many of the honored guests were from the other side of the globe. Some did not speak English. And many of the photographers and journalists were from the international media.

The groundbreaking ceremony—a unique and unlikely meeting of East and West in rural Ohio—got its kickoff when Kiyoshi Kawashima, president of Honda Motor Co., Toyko, and Ohio Governor James Rhodes shoveled the first spade of dirt from a four-foot hole in a tent-covered concrete floor.

The event was well attended by dignitaries from both sides, including Clarent Brown, Ohio's U. S. representative, Jiro Aiko, Japanese minister to the U. S., and an entire platoon of local elected officials as well as a dozen high-ranking Honda officials from both sides of the ocean.

At peak production, the Honda auto plant will employ about 2,000 workers — or "associates," as Honda calls them — most of whom will be hired from a 75-mile area radius surrounding Marysville, a small town located northwest of Columbus, O.

- About 80 percent of the Honda's $200 million U. S. investment (which is equal to almost twice the company's net worldwide income last year, according to one official) will be financed by Honda of America. The balance will be met by the parent company in Tokyo.

Koichiro Yoshizawa, a senior director of the parent company and director of Honda of America Manufacturing, said Honda will increase U. S. imports 6 percent next year, a necessity both to maintain a healthy dealer network and to insure financing of the U. S. plant.

Yoshizawa said Honda will retail about 400,000 cars in the U. S. during calendar 1981. Sales this year are expected to total 375,000 units, up six percent from the 353,000 sold during calendar 1979.

The UAW has clearly expressed its intentions to unionize both the motorcycle and the auto assembly plants. To date, the cycle plant is not organized by the UAW. Pressed on the question of unionization, Honda President Kawashima said the company will remain "neutral."

"The situation is the same here as in Japan," he said. "It has to be decided by the members (employees) of the company themselves, not by the administration. We are taking no steps to stop unionization."

- Honda publicly announced its car assembly project in 1977, but the original decision dates back to 1974. In addition to the 260-acre car assembly site and the 214-acre motorcycle plant, Honda has also purchased an adjoining 390 acres which officials have said are reserved "for the future." The Honda complex abuts the Ohio Transportation Research Center.

"We're proud to say that our motorcycle plant is well managed by our U. S. associates and we are confident that our car assembly operations will be the same."

Jim Plegue

Honda has arrived

Ohio Governor James A. Rhodes and Kiyoshi Kawashima, president, Honda Motor Co., Tokyo, turn the first spade of soil at ground breaking ceremonies for the new Honda car assembly plant being built in Marysville, O.

Service Index climbs again in October on parts sales

By Francis J. Gawronski
Service Editor

Despite a sharp drop in the rate of growth, new-car dealers' service and parts volume showed an increase in October for the second consecutive month, and for only the fifth time this year.

As measured by the AUTOMOTIVE NEWS Service Index, shop business in October amounted to 100.3 percent to barely top the volume recorded in the same month a year ago.

In September, the Service Index was 108.1 percent of the 1979 figure—the biggest increase since October, 1979, when shop volume hit 109.5 percent of the business for the like month the year before.

For the 19th consecutive month, repair orders written failed to show a gain in October. This indicator was 10.4 percent below the figure for the like month the year before.

Other indicators showing declines were gross profit on all labor, parts and accessory sales—the most important item from the dealer's viewpoint — down 1.9 percent, and total labor sales—customer paid and warranty—off 1.6 percent from the year-ago figure.

The indicator showing the highest increase in September was sales of all parts, which advanced 8.8 over the year-ago volume. Shop parts sales (those used in both customer-paid and warranty work) were up 2.2 percent over last year's volume.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of nation's new-car dealers.

For the January-October period, shop business amounted to 97.8 percent of the business done in the same period a year ago, a slight improvement over the 97.2-percent showing for the January-September period.

The leading indicator for the 10 months was gross profit, up 1.6 percent, followed by sales of all parts and accessories, up 0.3 percent.

Repair orders written showed the biggest decline for the period, down 10.4 percent, followed by labor sales, down 0.3 percent, and shop parts sales, down 0.2 percent.

SERVICE INDEX
100.3*

	Oct., '80 vs. Oct., '79	10 mos., '80 vs. 10 mos., '79
Gross Profit on All Labor and P&A Sales	− 1.9%	+ 1.6%
Repair Orders Written	−10.4%	−10.4%
Total Labor Sales (Customer & Warranty)	− 1.6%	− 0.4%
Shop Parts Sales (Customer & Warranty)	+ 2.2%	− 0.2%
Sales of All P&A	+ 8.8%	+ 0.3%

*—Survey by Automotive News shows that dealers' service and parts business in Oct., 1980, was 100.3 percent of business in Oct., 1979. Service business in the 10 months of 1980 was 97.8 percent of business in the corresponding period in 1979.

Tax credits urged by DOE to boost 1990 CAFE level

Continued from Page 2

those being made by the auto industry which has argued before NHTSA and Congress that post-1985 fuel economy standards are not needed because market demand will insure higher CAFEs than the 27.5 MPG mandated by Congress and that the government should be providing financial assistance in the form of tax credits for the development of fuel-economy technologies.

The study also echoes the sentiments of the incoming Reagan Administration, and indeed, Lewis said it would be turned over to the Reagan transition team and "we think this should be the top priority for the next Administration."

Besides the higher CAFE standards the study recommends decontrol of natural gas prices by 1982 and a speed-up in leasing offshore oil fields. The former could cut oil imports by 430,000 barrels a day by 1995 and the latter 400,000 barrels a day in 1990, the study says.

It projects U. S. oil imports will average 6.7 million barrels a day in 1990, down from the 7.9 million barrels per day being used today, but if all the recommendations made in the report were implemented, oil imports could be reduced by 2 million to 3 million barrels a day.

Japan cuts car shipments to U.S. during October

By John Hartley
Staff Correspondent

TOKYO.—Evidence that Japan is reducing shipments of autos to the U. S. comes in the statistics for October.

Toyota shipped 53,697 units to the U. S., down 1.8 percent from the same month last year, and Nissan's 39,086 was down 16 percent. However, the overall trend was for exports to increase, with Toyota exporting 141,126 units (up 12 percent) and Nissan 109,791 (up 16 percent).

October was the first time in 17 months that Toyota did not increase exports to the U. S., whereas Nissan's were down in September as well. However, the volume is still high.

The reduction is partly due to lower shipments of trucks, following the tariff increase, and some loss of market share to the new small American cars. It is hardly a case of reducing the exports to help the U. S. industry.

All is not well at Toyota—October domestic sales fell 14.5 percent. Nissan suffered a much smaller—5.6 percent—drop. The fall in the market in Japan has led to a lot of special promotion schemes this fall, and auto makers are hoping for some respite now that the discount rate has been reduced by one percent to an amazingly low 7.25 percent.

Japanese auto makers seem to be surprised that this downward trend hides a downsizing operation on the part of Japanese buyers. The trend is for cars with engines of over 120 CID to lose out to the smaller ones; the gain in the market for cars of 60-90 CID has been about 10 percent. At the same time, sales of midget vehicles are booming, and are expected to reach one million units for the first time in many years. (The record is 1.25 million, set in 1970).

Takashi Ishihara, Nissan Motors' president, said recently he hoped Nissan would be able to maintain its current levels of sales of larger cars in the next year. He said that Nissan and its competitors had been busy introducing new models to stimulate sales of larger cars.

Nissan, of course, has just introduced the Leopard specialty hardtop and coupe, and the rebodied Laurel sedan and hardtop. Both these models have a number of luxury features that should appeal to Japanese motorists. The Datsun maker hopes the Leopard, as an extra model, will gain extra sales.

Toyota has recently rebodied its Chaser and Mark II (Cressida in export markets) and is also hopeful that these will increase sales. However, neither the new Nissans or Toyotas offer anything new to motorists worried about the cost of fuel and running costs in general. There is some weight saving—50-100 pounds — and some improvement in gas mileage, but these improvements are minor.

None of the cars is smaller, so it is more likely that they will help to retain a proportion of customers, rather than extend that sector of the market. In addition, the Leopard is likely to take sales away from the bigger Gloria/Cedric (280C) sedans and the 280ZX sports coupe, which is not the success it might have been in Japan.

Therefore, it looks as if the Japanese market may follow that in the U. S., but more slowly, with a gradual change in sizes taking place. And as more small luxury cars are introduced, the trend is likely to accelerate—so long as the Japanese put a bit more effort into increasing passenger space.

Vinyl, electric and T-type down sharply

Fancy roofs nosedive on '80 cars

By Joseph Bohn
Marketing Editor

Car buyers still want fancy looking automobiles, but they are mostly getting them without the aid of various kinds of optional roofs, an AUTOMOTIVE NEWS survey revealed.

Pop-up sunroofs and manual sliding sunroofs are still holding their own generally because they are an inexpensive way to add something extra.

But vinyl roofs, electrically controlled sunroofs and T-roofs were down sharply on '80-model domestically built cars.

Vinyl roofs in particular suffered a decline, with the increasing popularity of two-tone paint combinations, such as Seville offers.

Last year, the industry installed only 1,717,050 vinyl roofs on 24.03 percent of its cars. That was down sharply from 3,346,118, or 35.80 percent, a year earlier.

General Motors was down considerably, particularly at Cadillac, where the luxury Seville didn't offer a vinyl roof option.

GM installed vinyl roofs on only 22.10 percent of its cars, equal to 1,013,532. That was down from 31.01 percent, or 1,598,218 in '79.

Ford Motor's penetration also fell, even though it was still well ahead of GM's. Ford installed 455,374 vinyl roofs in 33.15 percent of its domestically built cars. That was down from 1,243,300, or 45.16 percent, in '79.

Chrysler installed vinyl roofs on 174,478 cars, equal to 22.80 percent. That too was off from 436,886, or 38.46 percent, in '79.

American Motors installed them on 73,666 cars, equal to 37.23 percent of output. That was up in volume from 67,714, but down in percentage from the 39.96 percent penetration of '79.

Volkswagen didn't offer the vinyl roof on domestic Rabbits.

• Volkswagen, however, was the only domestic to offer a manual sliding roof, having installed 46,886 of them on 21.00 percent of its Rabbits.

The option, offered in '79 on Cutlass as well as Rabbit, accounted for 13,672 units in '79, or 0.03 percent of industry production. In '80 it accounted for 0.66 percent of production.

Electrically operated sunroofs took a big beating, dropping to

Continued on Page 19, Col. 1

Total Cars, U. S.	1,717,050	24.03	46,886	0.66	88,649	1.24	132,703	1.86	121,987	1.71

NOTE: Installation numbers are based on U. S. car production, with the exception of Chrysler's Cordoba and Mirada which were sourced only in Canada. The '80 production was 7,145,356. This included 4,585,387 for General Motors; 1,373,582 for Ford Motor; 765,253 for Chrysler Corp.; 197,867 for American Motors and 223,267 for Volkswagen.

The Chrysler total includes 34,214 Miradas and 57,479 Cordobas. It excludes 7,846 Caravelles, sourced in the U. S. but sold only in Canada.

Similarly, the GM total excludes 19,651 Acadians, sourced in the U. S. but sold only in Canada.

The Plymouth Voyager, Dodge Sportsman, Ford Club Wagon and Chevrolet Sportvan are no longer included in domestic production, since manufacturers began counting them as trucks in '80.

By Borg-Warner chairman

Japanese challenge called U. S. prod

SAN FRANCISCO. — "Being challenged by Japan may be the best thing that has happened to American industry in decades," Borg-Warner Chairman James F. Bere told the World Affairs Council here.

"That challenge is forcing the U. S. to improve productivity so we can deliver a better product for less than anyone else, and to improve our marketing to supply the products the world needs, when and where they need it," Bere said.

Bere, who is chairman of the Advisory Council of Japan-U. S. Economic Relations, said calls from within the U. S. for protectionism are "a mistake."

"Protectionism simply eliminates the incentives to become more efficient and more competitive," Bere said. "Nor will more Japanese-owned and operated plants in this country improve either the immediate job situation or domestic industry's competitive position."

Japanese executives have indicated that such plants would probably be so highly automated as to be almost negligible as a new job source, Bere said. "And, by implication, they would also be more efficient than existing U. S. operations."

Bere called for increased American productivity and exports as solutions.

"Thirty years ago, the U. S. sent abroad only 4 percent of its total output. Last year it was 8 percent of a much larger base. Still, our share of world trade has declined by almost a third," he continued. "Only about 10 percent of our 300,000 manufacturing firms export at all, while 80 percent of all our exports come from some 200 companies. We simply never have built up the traditions and the techniques for true mercantilism.

"Things are changing now. We, as well as the Japanese, must export more if we are to pay for the oil and other resources we must import," he said.

"It reportedly took Toyota 10 years of losses in its American operations before it finally turned an annual profit here. We must similarly modify our compulsion for short-term achievements and focus more on long-range investments," Bere said.

Bere also encouraged the U. S. government to support U. S. export efforts, including making an effort to moderate restrictions to the Japanese markets, easing current tax laws for individuals working overseas and creating better funding of export sales through quasi-governmental institutions and the private banking network.

He advised Japan to eliminate the protectionist barriers established in Japan during the post-war years.

Car buyers want fancy cars, not fancy roofs, survey finds

Continued from Page 18

88,649, or 1.24 percent of industry production, against 166,593, or 1.78 percent in '79.

This option may strengthen as the demand for luxury cars improves.

GM installed 73,877 electrically operated sunroofs on 1.61 percent of its cars, compared with 93,352, or 1.81 percent in '79.

Ford Motor installed 12,154 electric sunroofs on 0.88 percent of its '80 models. That compared with 62,680, or 2.28 percent in '79.

Chrysler Corp. installed 2,618 of them on 0.34 percent of its cars. That was down from 10,561, or 0.93 percent in '79.

American Motors and Volkswagen didn't offer an electrically controlled sunroof.

Pop-up sunroofs showed a slight penetration increase, particularly at Ford Motor, though they were down on a volume basis.

Industrywide, they ended up on 132,703 cars, equal to 1.86 percent of production. That was up slightly from 1.61 percent in '79 on a volume of 150,836.

GM installed the pop-up roofs on 48,241 cars, equal to 1.05 percent of production. That was up from 16,346, or 0.32 percent in '79.

Ford Motor installed the pop-up roofs on 69,325 cars, equal to 5.05 percent of production. That was up in penetration from 4.32 percent in '79, but down in volume from 118,953.

Chrysler installed pop-up roofs on 10,034 cars, equal to 1.31 percent of production. That was up from 9,367, or 0.82 percent in '79.

American Motors installed 5,103 pop-up roofs on 2.58 percent of its cars. That was off from 6,170 or 3.64 percent.

Volkswagen didn't offer the option.

T-roofs are still fairly strong on selected sporty models, like Corvette where they accounted for 100 percent of production. But, by their nature, they continue to have a limited market.

Industrywide, T-roofs ended up on 121,987 cars, equal to 1.71 percent of production. That compared with 198,071, or 2.12 percent in '79.

GM installed them in 120,107 cars, equal to 2.62 percent of output. That compared with 187,161, or 3.63 percent in '79.

Ford Motor, American Motors and Volkswagen didn't offer a T-roof.

Chrysler installed them in 1,880 cars, equal to 0.25 percent of its production. That compared with 10,910 or 0.96 percent in '79.

Rose buys L-M deal

DELAWARE, O. — Bill Rose has purchased Ramme's Lincoln-Mercury and will operate it as Bill Rose Lincoln-Mercury-AMC-Renault. Rose also owns Bill Rose Ford-Mercury in Richwood, O.

Officers named for Wisconsin

DEALER CERTIFICATION FOR EMISSION CONTROL EQUIPMENT

A WORD FROM YOUR DEALER ABOUT THE EMISSION CONTROL EQUIPMENT

ON YOUR NEW ____________

We (the Dealer) want you to know that at the time your new ____________ is being delivered that

1 Based upon ____________ (furnished by the manufacturer) we have knowledge that this vehicle is covered by an Environmental Protection Agency (EPA) Certificate of Conformity

2 We have made a visual inspection of the vehicle including the engine based upon such visual inspection all emission related components have been properly installed by the manufacturer

3 We have performed all emission related preparation required by the manufacturer prior to the sale of the vehicle as set forth in the current predelivery service manual provided by the manufacturer

4 If the vehicle fails an EPA-approved emission test prior to the expiration of three months or 4,000 miles (whichever occurs first) from the date or mileage at the time of delivery to the ultimate purchaser and the vehicle has been maintained and used in accordance with the written instructions for proper maintenance and use, then the vehicle manufacturer shall remedy the nonconformity free of charge to the vehicle owner under the terms of the manufacturer's 5 year/50,000 mile emission performance warranty

NOTE
THE DEALER MAKES NO REPRESENTATION OR WARRANTY THAT THE EMISSION CONTROL SYSTEM OR ANY PART THEREOF IS WITHOUT DEFECT NOR THAT THE SYSTEM WILL PROPERLY PERFORM THE MANUFACTURER'S EMISSION PERFORMANCE WARRANTY REFERRED TO IN PARAGRAPH 4 ABOVE FURNISHED WITH THIS VEHICLE IS SOLELY THAT OF THE MANUFACTURER AND THE DEALER IS NOT A PARTY THERETO

The above statement is required by section 207 of the Clean Air Act (42 U.S.C. 7541) and the EPA regulations issued thereunder

702,111 new-car total lowest for month since 1970

September registrations still slump

Continued from Page 3

7.57 points from a year earlier.

Excluding imports, domestic-only registrations in September were divided this way: GM, 66.27 percent; Ford Motor Co., 19.99 percent; Chrysler Corp., 11.09 percent; AMC, 2.56 percent, and miscellaneous, 0.09 percent.

A year earlier, domestic-only registrations were divided as follows: GM, 60.33 percent; Ford Motor Co., 23.09 percent; Chrysler Corp., 14.69 percent; AMC, 1.83 percent, and miscellaneous, 0.06 percent

By size segments, only subcompacts improved their market share over the preceding September among domestic cars. Subcompacts accounted for 14.95 percent of the total, up 5.49 points.

Standards suffered the biggest loss, down 6.45 points to 9.82 percent. Also down were intermediates, off 3.59 points to 21.62 percent; compacts, down 1.47 points to 19.18 percent, and luxury cars, off 0.70 of a point to 4.17 percent.

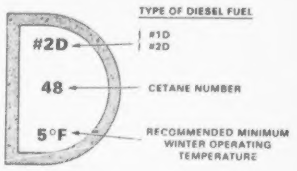
Registrations by size class in September were: Subcompact, 104,972; compact, 134,639; intermediate, 151,790; standard, 68,974; luxury, 29,307, and import, 212,429.

Among the top 20 nameplates in registrations, standard Ford was missing for the first time and Chrysler Corp. had two entries for the first time in a while as Omni moved into 19th place.

Chevette took over the lead from Citation and, more evidence of the subcompact surge, Pinto moved up from 17th place into 11th.

The top 20 domestic nameplates in registrations during September were:

1—Chevrolet Chevette	31,048
2—Chevrolet Citation	28,100
3—Olds Cutlass Supreme	22,762
4—Chevrolet Malibu	20,229
5—Buick Regal	17,618
6—Standard Chevrolet	16,927
7—Standard Oldsmobile	15,946
8—Ford Mustang	15,875
9—Oldsmobile Cutlass	15,825
10—Ford Fairmont	15,462
11—Ford Pinto	15,114
12—Chevrolet Monza	14,620
13—Buick Skylark	14,296
14—Plymouth Horizon	13,389
15—Chevrolet Monte Carlo	12,770
16—Pontiac Sunbird	12,607
17—Standard Buick	11,902
18—Buick Century	11,263
19—Dodge Omni	9,814
20—Pontiac Grand Prix	9,813



Fuel info

General Motors would like to see a symbol like this on diesel fuel pumps. Tied in with information in owner manuals, the symbol would let a fuel buyer select the fuel preferred for a particular car engine and time.

Ford to produce parts in joint Mexican venture

MEXICO CITY.—Ford Motor Co. has announced another joint venture in Mexico, this one to manufacture automotive plastic parts with the Monterrey-based Valores Industriales (VISA) group.

The new operation, scheduled to be producing by mid-1982, will involve a projected investment of $45.6 million. Sixty percent of the equity is to be held by VISA, 40 percent by Ford.

Two other Ford joint ventures are also scheduled to be producing from Villa de Garcia plants: A project with the Alfa Industrial Group which is scheduled to produce aluminum engine parts for autos and a project with the Monterrey-based Vitro glass group to produce auto glass.

No site has yet been named for Ford's proposed $365 million engine plant which is to produce four- and six-cylinder engines.

In an unrelated development, Ford and unionized workers at Mexico City's engine and vehicle assembly plants reached agreement on a one-year pact, ending a 12-day strike.

The contract calls for a 27.5-percent wage increase plus increases in fringe benefits.

MacKenzie's winner

Gordon MacKenzie, Lincoln-Mercury general manager, draws the name of the first weekend winner in the division's employe test-drive program. The new 1981 Lynx and Cougar models can be driven overnight by participating employes, and six will have the use of a car for a weekend.

But November production is lowest since 1970

Makers slate overtime at 12 plants

By Patricia Hoffman
Staff Writer

Auto makers slated Saturday overtime at 12 plants last week, the largest number of plants to work overtime in a single week in the last 18 months. For the week of June 2, 1979, there were 16 plants slated for overtime.

U. S. auto production for November was the lowest since 1970 when production dropped due to a UAW strike at General Motors over contract issues.

During November, the auto makers completed 543,627, down 32.68 percent from the 807,597 assembled the same month a year ago. In November, 1970, however, 372,561 units were assembled.

Last week's planned production was 141,830, up 43.10 percent from the 99,107 assembled the previous week, but down 3.95 percent from the 147.673 assembled in the year-ago week.

In the fourth quarter, the auto makers should build about 1,746,522 units, making it the lowest since the 1,365,783 built in 1970's fourth period.

With GM's Northwood facility having shut down production for two weeks last month due to a strike over local issues, and its Lordstown facility closing the last week of November, GM showed a large decline in output for the month with a drop of 20.77 percent from 407,510 to 322,858.

Chrysler also fell slightly behind last year dropping production down 1.78 percent from 68,309 to 67,094.

Ford Motor Co.'s output rose 4.03 percent to 124,406 from 119,586. American Motors was down 22.14 percent from 17,032 to 13,261.

Volkswagen, jumping the line rate from last year, was up 8.02 percent to 15,734 from 14,566.

Checker dropped 20.12 percent from 343 to 274.

Closed this week at Ford are the Atlanta (Ford), Chicago (Thunderbird) and Dearborn (Mustang and Capri) plants.

Saturday overtime was slated at 12 plants: Arlington, Doraville, Linden, Oklahoma, Tarrytown, Willow, Wilmington, Pontiac, Framingham, Lansing and Flint and Ford Wayne.

House rejects bill to require air bags in some '83 models

Continued from Page 1

in the 1982 model year. It therefore makes no sense to make other companies who are already supplying (VWoA) or planning on passive belts to dramatically change their production plans at this late date and be forced to install air bags, Dingell said.

- GM, Ford, the UAW and others had pushed for the rejected legislation on the grounds that, if nothing else, "it will eliminate the confusion and uncertainty on passive safety requirements that have been extremely costly and disruptive of orderly product development." At the same time, it would have put the major Japanese producers on somewhat the same competitive footing as the domestic producers, they argued.

GM, for example, is believed to be spending on the order of $6 million to $7 million a month on passive restraint development and production work. It told the House that this kind of investment necessarily puts it at a competitive disadvantage to the Japanese makers who, because they produce only small cars, need not worry about passive restraint tooling until 1984.

But Dingell and his partners rejected the anticompetitive argument, saying that requiring only the five major makers to offer air bags in one line of cars in 1983 still left a good number of other Japanese makers, like Honda, Mazda and Subaru, free to sell here at lower costs.

This compromise legislation gives Mazda and the others a competitive advantage, Dingell said.

Rep. Delbert Latta, Ohio Republican, said he could not see how the compromise legislation could in any way help the auto industry. Adding $1,000 to the price of a car that is already too expensive and subject to rising interest rates is not doing someone a favor, he said.

Latta said he hasn't had one letter from a constituent asking for an air bag in his or her car. Latta suggested the Representatives "reject this whole idea and go home."

Truck production of 147,138 is lowest since '70

U. S. truck makers built 147,138 vehicles in November, the lowest total for the month since the 92,449 assembled in 1970.

The November total was a drop of 21.44 percent from the 187,296 completed in November of 1979.

In the fourth quarter, the truck makers should complete about 467,654 making it the lowest for that quarter since the 344,420 built in 1970.

Despite the International Harvester strike in November, 1979, and the beginning of Volkswagen of America production in October of 1979, (full scale production began in 1980), U. S. truck output still fell below last year's November total. All companies reported a drop in output from 1979.

Ford was down 3.58 percent from 59,692 to 57,552; Chevrolet, 27.22 percent from 67,295 to 48,972; Dodge, 76.10 percent from 17,805 to 4,254; GMC, 20.91 percent from 22,937 to 18,140; American Motors Jeep, 28.53 percent from 9,939 to 7,103; miscellaneous, 46.61 percent from 3,373 to 1,800; Mack, 40.41 percent from 2,729 to 1,636, and AM General, 84.70 percent from 2,223 to 340.

International Harvester's November total for 1980 was 5,062 from the 313 it produced in 1979 because of the strike. Volkswagen of America produced 2,289 last month, up from the 245 it produced in November, 1979

Scheduled output last week was 38,566 units, up 40.57 percent from the 27,434 built the previous week and down 18.23 percent from the 47,167 completed the week ended Dec. 8, 1979.

Four General Motors plants were scheduled for Saturday overtime last week: Flint, Fremont, Janesville and St. Louis.

So far this year, the truck makers have completed 1,478,932 units, down 49.69 percent from the 2,940,206 built through Dec. 8, 1979.

U.S. sales slump slashes Canadian car, truck output

Canadian car production for November was the lowest since 1970 and truck output was the lowest since 1975 as the Canadian auto makers are drastically affected by continuous declining sales in the U. S.

During November, the auto makers built 76,024 cars down 12.10 percent from the 86,497 completed last year. In that month in 1970 they assembled 60,253 units.

The truck makers completed 42,169 units last month, down 8.84 percent from the 46,460 built last year. In November, 1975 they built 36,504 vehicles.

Planned output for cars last week was 20,358, up 6.83 percent from the 19,055 completed the previous week and 20.74 percent from the 16,861 assembled in the year-ago week.

Scheduled truck production last week was 13,077, up 28.62 percent from the 10,167 built the previous week and down 5.68 percent from the 13,865 assembled the week ended Dec. 8, 1979.

So far this year, the auto makers have assembled 791,472 units, down 15.21 percent from the 933,605 built through Dec. 8 last year.

Truck makers have assembled 475,072, down 22.60 percent from the 613,830 assembled year-to-date in 1979.

Stocks swell to 65 days as domestic sales falter

By Richard A. Wright
Assistant Managing Editor

The hoped-for sales surge never really materialized after new-model introductions and one of the results was that the domestic new-car inventory ballooned to a 65-day supply during November, up from 56½ days a month earlier.

The industry opened December with 1,439,998 new cars in stock, up from 1,389,549 on hand Dec. 1.

This year's 65-day supply was lighter than the 73½-day stockpile on hand a year earlier, and the unit count of 1,439,998 this year was much smaller than the 1,767,097 new cars in stock Dec. 1 last year.

In fact, a 65-day supply on Dec. 1 is a little higher than the average over the past few years, but is not really burdensome. But the stubborn problem that seems to defy solution is that of inventory balance. After months of shortages among the hotter-selling subcompact and compact lines, these segments are now the heaviest in supply—an ominous indication perhaps of widespread buyer resistance to smaller cars.

The Dec. 1 inventory of small cars included some 420,000 carryover 1979 models.

American Motors was the only maker to open December with a smaller inventory than it had a month earlier. AMC had a 74-day stockpile Dec. 1, compared with a 91-day supply Nov. 1.

General Motors entered the month with a 55½-day supply, up from 48 days a month earlier. GM dealers were beginning to run short of luxury models which had been rising to burdensome heights only a few months ago. Cadillac was shortest at 27 days, while the subcompact Chevette had climbed to 90 days.

Ford Motor Co. had a 74-day supply Dec. 1, up from 65 days a month earlier. Shortest in the Ford stable was Escort, at 41 days, but the new Granada and Cougar were both over the 100-day mark.

Chrysler Corp. saw its inventory swell up from 87 days Nov. 7 to 107 days Dec. 1. All Chrysler lines were in heavy supply, including the new K-cars (Reliant, 99, and Aries, 97½).

Even Volkswagen of America, whose hot-selling Rabbit had been in short supply for months until the new-model introductions when sales eased, had a 77-day supply of U. S.-built cars, up from 64 days.

The Dec. 1 domestic new-car inventory was divided this way: GM, 52.97 percent; Ford Motor Co., 25.35 percent; Chrysler Corp., 16.35 percent; AMC, 2.91

Chrysler K-car plants going down early

By Marjorie Sorge
Labor Editor

Faced with an uncertain future and a nation of uncertain car buyers, Chrysler Corp. will close its K-car plants seven days early for the Christmas holidays and will continue downtime at its Omni/Horizon facility.

In addition, there will be staggered plant closings at all other Chrysler assembly plants over the next two months. Some parts plants also will be affected.

Chrysler is also talking about selective department shutdowns in the research and engineering areas, according to sources. The closings would begin soon and continue through the first part of the year.

According to Chrysler, its K-car plants, Jefferson Ave. in Detroit and Newark, Del., will close today (Dec. 15) and will not reopen until Jan. 5, temporarily laying off 10,000 workers. However, one source said it is very likely the downtime would be extended at least another week. The scheduled closing for the Christmas break was Dec. 23.

The company's Omni and Horizon plant in Belvidere, Ill., will continue down as sales of the subcompacts drag. The facility closed Dec. 1 and is not scheduled to reopen until Jan. 12. The move will keep 4,400 hourly people on temporary layoff.

The closings of Chrysler's two K-car plants will cause the layoff of 2,500 hourly workers at the company's Twinsburg (O.) stamping plant and an extension of downtime for 700 workers at a Syracuse gear plant. The two points make parts for the K-cars.

- While the remaining assembly plants will be open until Dec. 23, downtime is expected in January and February. These plants are St. Louis, Lynch Rd. (Detroit), Warren (Mich.) truck and two plants in Windsor, Ont.

Lynch Rd. already working

Upcoming Toyota

Osaka show provides first look

Toyota showed its new sports car for the first time at the Osaka International Auto Show. Dubbed EX-8 for show purposes, the two-seater will be marketed as the Soala. It is expected to go into production next spring and arrive in the U. S. as an '82 model to compete with the Datsun 280-ZX. The 170-HP engine is a twin OHC version of the Crown six. Story on Page 4.

Facing a bleak future, JRT slates cutbacks

By John A. Russell
New York Staff Writer

LEONIA, N. J. — Severe cutbacks that could threaten its future as a factor on the import scene are in store at Jaguar Rover Triumph.

Sagging sales, an aging product lineup and lack of market support are the root of the problem.

One highly placed source told AUTOMOTIVE NEWS that staff cuts could amount to 50 percent across the board. A company spokesman, in response to AUTOMOTIVE NEWS queries, confirmed plans for staff cuts in January, but said they would amount to "less than 10 percent."

The cuts will be spread through all departments. They come on the heels of other layoffs earlier this year and the closing of a zone office. The company currently employs 230 persons at headquarters.

The JRT spokesman denied that JRT has decided to abandon the Rover 3500 in the U. S. market. AUTOMOTIVE NEWS has learned that such a plan is afoot.

The spokesman said it is no secret that there are Rovers in stock, but plans are being made to introduce an '81 model. This would be done in the spring.

- As for the future of the Rover, the JRT spokesman said it was far too early to make any decision. The Rover, introduced last May, has not been selling as well as the company anticipated. To date, company figures indicate that 282 of the cars have been sold.

Anemic sales have been a continuing problem with JRT over the past several years. The decline is continuing and there is a hefty supply of '80-model Triumph TR-7s as well as MGs

breaking news

No replacement yet for Phillips, VWoA says

DETROIT. — A Volkswagen of America spokesman last week said no replacement has been named yet to replace Sales Vice President Noel Phillips who is leaving VWoA at year's end. Earlier in the week, there was a report that Phillips will be replaced by Peter Weiher, 43, managing director of Ford of Germany. The report said Weiher would be replaced by Renault export manager Daniel Goeudevert.

EPA, industry to cooperate on research

WASHINGTON. — In what some are hoping will be a model of future cooperation between government and auto workers, EPA and the auto industry announced the creation of an independent nonprofit health research institute. Designed to be a "primary source" of information on the nature and effect of auto-related air pollution, the Health Effects Research Institute stems from a joint desire of the industry and EPA to have standardized health effects research so that the results of all such research will be comparable.

To be funded by EPA and all the auto companies, based on their market share, the institute will begin its work with an

Shutdowns planned elsewhere, too

Chrysler K-car plants going down early

Continued from Page 1

on borrowed time, is scheduled to resume operations today (Dec. 15) and will work until the Christmas break. It had been closed since Dec. 1. Lynch Rd. builds the full-size Chrysler, Dodge and Plymouth models.

Chrysler had planned to mothball the plant after the 1980 model run but dealer pressure caused the company to recant. Much of the demand was for fleet cars and the dealers guaranteed orders of 18,000. UAW President Douglas Fraser, a member of the Chrysler board of directors, said the company planned to build about 5,000 units a month.

At the time, Chrysler gave no promise of the length of Lynch Rd.'s reprieve and sales of the full-size cars have been low while inventories are high.

Among industry observers, there is speculation this plant may still be mothballed.

According to sources, there will also be heavy downtime in January at other Chrysler plants, both U.S. and Canadian, as inventories continue to balloon.

Chrysler's Windsor point, source of the Imperial, Cordoba and Mirada, has been closed since Nov. 24 to try to balance inventories. The plant will resume operations today (Dec. 15) and will work through Dec. 23.

However, the 3,500 hourly workers there will be idled again the weeks of Jan. 5 and 12 as the plant closes again to cut inventories. It is scheduled to resume operations Jan. 19.

The Pillette Rd. truck plant, also in Windsor, will also work through Dec. 23 but will be closed the week of Jan. 5, reopening Jan. 12. The move temporarily idles 2,500 hourly workers.

The heavy downtime schedule may also extend to parts plants such as Trenton, Mich., source of the engines for the Omni and Horizon; New Castle, Ind., forging and machining; Mound Rd. (Detroit), engines and Kokomo (Ind.), transmissions, in other attempts to cut costs.

• Sales of all Chrysler cars have continued to slide and have been especially poor as the interest rates keep rising. Sales of the Omni are off more than 14 percent for the year compared with 1979, while Horizon sales have dropped more than 10 percent.

Inventories of Omni have swollen to 138 days, and Horizon has 130 days, both more than double the normal supply. The only car in the industry topping those figures is the Dodge Mirada with 149 days' supply. Running close behind is the Ford Granada with 133 days.

The K-cars, the Reliant and Aries, have 99 and 97½ days supply, respectively, and are not living up to the schedule needed for the target of 490,000 sales in the 1981 model year.

Since their introduction in October, 34,000 compact K-cars have been sold compared with 49,000 Ford Escort and Mercury Lynx subcompacts. Both the K-cars and the Escort and Lynx have been in head-to-head competition for the buyer dollar and the Ford models are less expensive.

Chrysler has said it would build only to dealer order to avoid such high inventories. Some industry observers say the company was overly ambitious in its sales forecast for the K-cars and is now paying the price with bloated inventories.

Facing an uncertain future, JRT schedules cutbacks

Continued from Page 1

and Spitfires, both discontinued models.

Sales for the entire JRT organization for the 11 months ended Nov. 30 were down over 10,000 units from 1979 to 30,583 from 41,120.

Massive rebates have been offered on the TR-7 to bolster sales and totals have been running slightly ahead of last year to date. Sales of Jaguars are about normal.

AUTOMOTIVE NEWS also learned that JRT is considering abandoning the sports-car market, its mainstay for many years, in favor of only Jaguar. This brought a flat denial from the company.

One source said that both Rover and the JRT sports cars are in "big trouble" This source also said there was a meeting of highly placed BL, Ltd. executives three years ago which studied the financial and economic ramifications of sports cars. At that time it was decided that the company could not develop a new model because of cost so the market should be abandoned, but no date was set.

• This same source described the situation of JRT in the U. S. as "terminal" with respect to the Rover and the Triumph and the basic reason, the source said, has been the failure of the company to come up with a development program to evolve a modern two-seater automobile.

The parent company, BL, Ltd., has often been accused of failing to develop modern replacements for its products. A case in point was the MG, which had long passed its prime in technical innovation but which remained the best-selling model for JRT because of the devoted following it developed over the years.

According to the source, TR-7 sales have been holding only because of massive rebates and "enormous support" in the form of advertising.

The question of whether JRT would abandon all but Jaguar and even in that seek another marketing partner, again brought a flat denial from the company. The company has bought out three of its independent distributors and the JRT spokesman said such a move would be a step backward.

He did note that JRT, as have others, has been looking for partners but nothing has materialized.

"The company intends to remain in the market," he said.

• But the symptomatic problems with JRT here stem from the parent company in Great Britain, where serious problems have been mounting.

The company was forced to close its MG plant in Abingdon and cease production of that marque.

A JRT spokesman stressed that the company intends to introduce its '81 models of Jaguar and Triumph to dealers in meetings this week.

'Excitement '81' heralds auto show in Detroit

DETROIT. — The 65th Detroit Auto Show gets under way at Cobo Hall here Jan. 10 under the banner "Excitement '81."

Sponsored by the Detroit Auto Dealers Assn. and chaired by R. F. Whelan, a Sterling Heights Chevrolet dealer, the 1981 show runs through Jan. 18 and is expected to attract an audience from all parts of southeastern Michigan and southwestern Ontario.

Whelan said the show is planned to be "exciting and educational. It gives everyone a chance to see how the emerging product lines compare with one another in price, fuel efficiency and comfort."

The Detroit Auto Dealers Assn. emphasized credit would be available to all new-car buyers at the auto show.

The 11-member auto show committee has developed a number of special events for the week including kids' nights, celebrity night and new-car auction nights.

The eve of the show will again be a charity preview night, with three Detroit-area organizations sharing the proceeds: Boys' and Girls' Club of Metropolitan Detroit, Easter Seal Society for Crippled Children and Adults in Wayne, Oakland and Macomb counties, and Assistance League to the Northeast Guidance Center.

Lucini elected

WEST BRIDGEWATER, Mass. — Julian (Jiggs) Lucini, of Lucini Motor Sales, Inc., has been elected chairman of the New England Ford Dealers Assn.

McLaren Mustang

The McLaren Mustang M-81, powered by a Ford 2.3-liter turbo, sports flared fenders plus front air dam that directs air to both front brakes and through the functional waste-gate hood. Other features of this street car are Firestone HPR tires, Koni shocks, a roll bar, Recaro seats and an engine dress-up package and optional suspension pieces. The McLaren Mustang is offered in very limited numbers (249) through Motorsport, Birmingham, Mich.

New-car inventory swells to 65 days as sales falter

Continued from Page 1

percent, and VWoA, 2.42 percent.

A month earlier, the new-car inventory was divided as follows: GM, 53.69 percent; Ford Motor Co., 25.51 percent; Chrysler Corp., 15.90 percent; AMC, 2.95 percent, and VWoA, 1.95 percent.

• By size class, the Dec. 1 domestic new-car inventory was heavier than a month earlier in all segments except luxury.

The industry had a 76-day supply of subcompacts, up from 65 days Nov. 1, and a 68½-day stock of compacts, up from 61 days.

Intermediates were in 66-day supply, compared with a 55-day stock a month earlier, while standards were in 53-day supply, up from 48 days. The luxury segment held steady at 40 days.

The Dec. 1 inventory was divided this way by market class: Subcompact, 23.73 percent; compact, 30.73 percent; intermediate, 29.83 percent; standard, 11.53 percent, and luxury, 4.18 percent.

A month earlier, the inventory was divided this way by size class: Subcompact, 23.58 percent; compact, 29.80 percent; intermediate, 30.27 percent; standard, 11.72 percent, and luxury, 4.63 percent.

The Dec. 1 days-supply figures by market class were:

Subcompact—Escort, 41; Monza, 44; Lynx, 51; Pinto, 61; Bobcat, 72; Sunbird, 77; Rabbit, 77; Chevette, 90; Spirit, 96; Horizon, 130, and Omni. 138.

Compact—Skylark, 35; Omega, 45½; Zephyr, 46; Phoenix, 51; Concord, 57; Fairmont, 65; Citation, 68; Camaro, 74; Volare, 83; Eagle, 83; Capri, 89; Aspen, 89½; Mustang, 95; Firebird, 95½; Aires, 97½, and Reliant, 99.

Intermediate—Cutlass, 39; Regal, 40; Century, 45; Supreme, 48; Malibu, 62½; Grand Prix, 63; Monte Carlo, 78; LeMans, 78; LeBaron, 78; Cougar, XR-7, 86; Thunderbird, 96; Diplomat, 103; Cougar/Monarch, 105; Cordoba, 127; Granada, 133, and Mirada, 149.

Standard—Oldsmobile 98, 33; Oldsmobile 88, 35; LeSabre, 37; Electra, 39; Mercury, 53; Chevrolet, 59; Pontiac, 65½; Gran Fury, 72; Ford, 75; Chrysler, 78, and St. Regis, 99.

Luxury—Cadillac, 27; Riviera, 29; Eldorado, 31; Toronado, 32; Seville. 42; Corvette, 62½; Lincoln, 67; Mark VI, 69, and Imperial, 90.

New attempt expected next year

Long air-bag battle changes nothing

WASHINGTON. — The 1980 version of the air-bag war is over.

It appears to have been a year-long waste of time for, as Congress heads home for the winter recess, auto makers find themselves facing the same standards and deadlines they did at the end of 1979: Passive restraints must be in large cars in 1982, in medium-size cars by 1983, and in small cars by 1984.

In the final analysis, many of them are probably thankful for that, however, for it looked for a time that Congress might actually mandate the use of air bags in certain vehicles.

Congress has had twin concerns for the industry's depressed financial condition and the impact of the Japanese. At the behest of General Motors, Ford Motor Co. and the other domestic makers, a House-Senate conference committee had worked out compromise legislation that would have delayed the standard for one year while also turning it around so that small cars would need to be fitted with passive restraints first. It was reasoned that this would give the industry some temporary financial relief and also put the Japanese on equal competitive footing.

In exchange for this delay, safety proponents demanded that air bags be available in at least one car line beginning in 1983. The conference committee agreed to that, making it applicable to the five largest manufacturers, GM, Ford, Toyota, Nissan and Volkswagen.

The Senate had no trouble agreeing to this plan but the House had different ideas, and in the end shot it down not once, but twice.

The first time around the vote was in favor of the measure but it failed to pass for lack of a two-thirds majority. In late November the measure was brought up again and this time failed by three votes, 189 to 186 largely at the doing of Michigan Democratic Representative John Dingell, who argued that Congress should not be in the business of legislating technology.

A final effort to pass a further compromise measure that would have eliminated the air-bag requirement but left the one-year delay of the standard plus its reversal in place, failed in early December by a vote of 205 to 126 for lack of a two-thirds majority.

Air-bag legislation is expected to come up again next year.

But, the survivors of '80 will still find it difficult

Death knell won't toll as often for dealers in '81

By Kathleen Hamilton
News Editor

The death knell for auto dealerships isn't likely to toll as frequently during 1981 as it has in 1980, but the year promises to be a difficult one, nonetheless, for the survivors.

The number of U. S. dealerships handling domestic lines has declined every year since 1956, and the total dealer population —including the import-car outlets—has seen only one up year —1966—in 23 years. So it's not a question of whether 1981 promises to be up or down, but, simply, how far down?

Interest rates will be the major determinant, of course, and at least one auto analyst foresees last year's peaks and valleys in the prime rate will level out around 14 percent sometime in February, 1981, and average about 12 percent through the end of the year.

"Under these conditions, dealer mortality will get back to normal rates," said Arvid Jouppi, analyst for John Muir & Co.

He anticipates less than 400 domestic-car dealerships will be shuttered in calendar 1981, about two percent of the 21,945 counted in the Oct. 1 Automotive News dealership census.

That certainly represents an improvement from the 1,434 dealers who closed their doors in the first nine months of 1980, representing more than six percent of the local domestic-car outlets.

Pent-up demand

Jouppi's rather optimistic forecast for the nation's auto dealers is based in part on his analysis of a pent-up demand for new cars.

"The market for cars is strong —so strong that it is battling through some extremely hard conditions," he said. Rising prices and interest rates would have choked off demand for the imports if the market weren't so strong, he said.

But dealers suffer from declines in the interest-rate roller coaster as well as the inclines, as customers delay purchases in hopes of even better rates. Recovery takes a good 60 days, according to one analyst.

Fluctuations in the prime have been so frequent in '80 that "there's not a dealer in the country who can operate intelligently with the interest rate jumping in that way," Jouppi pointed out.

The Federal Reserve Board holds the Tarot cards for '81, of course, and no one gets more than a peek, but the economic downturn promises to slow inflation of its own accord, without any help from the Fed in the form of discount rates that manifest themselves in interest-rate hikes.

Easing the fall

And that could mean a bit of good news for dealers, if interest rates stabilize and would-be buyers return to the marketplace.

Jouppi also pointed to the ironies of evolution — dealers who have survived 1980 are the strongest, and their share of the 1981 sales pie should be larger.

Service needs of the nation's fleet also put a floor on the number of outlets which will close.

But times look difficult for those who remain. In most cases, they have already trimmed operations to the bone.

Net working capital and cash on hand have decreased dramatically for a significant number of dealers during the last 20-24 months, according to NADA.

Restructuring of the dealer discount rates hasn't been a boon, and the new, small fleet that America's dealers sell reduces the profit possibilities as well.

On the positive side are the recent wave of Small Business Administration loans and changes in franchise agreements at General Motors and numerous import lines.

U. S. OUTLETS

Date	No. of Retail Outlets	Pct. Gain or Loss from Previous Year

Changing agreements

NADA reported Chrysler Corp. and American Motors have agreed to look at their sales and service agreements, with an eye to giving dealers a larger role in determining their financial futures.

New franchise agreements have already been signed this year by General Motors, Datsun, Toyota and Mercedes-Benz. New agreements are on the way for Subaru, Alfa Romeo, Volkswagen and Porsche-Audi dealers, according to Walter Huizenga, NADA chief counsel.

NADA has been singing the praises of the new sales and service agreements, especially those by GM, Datsun and Subaru, as making marked improvements from dealers' point of view. It is hoping to take similar strides among the remaining imports and domestics.

American Motors last overhauled its AMC and Jeep franchise agreement in 1972, following the firm's acquisition in 1970 of Jeep Corp.

The Renault franchise agreement was new in 1979, when AMC and the French auto maker joined first for a marketing agreement.

The first wave of AMC dealers who signed on Renault were brought on for two years. That's the length of term AMC otherwise reserves for dealerships which are deficient in capital investment of facility.

Otherwise, AMC, Jeep and Renault agreements run 10 years.

NADA targets

AMC and Chrysler Corp. have been targeted by the NADA for negotiations on revamping their aging franchise agreements. The dealer group said both makers indicated a willingness to discuss the issue.

Ford Motor Co. talks are a bit further down the line, according to NADA. Its last overhaul of the sales and service agreement was in 1972. Ford dealers have continuous-term agreements, rather than a set time period.

Volkswagen of America's five-year franchise agreement is due to be renewed Dec. 31, 1981. The first time VW, Porsche and Audi dealers had the five-year contract with a standard expiration was 1977.

The recently signed sales and service agreements give a hint as to what dealers will be expecting from other makers in the near future. The goal—as it has been since the start of the franchise system in the early days of the auto—is more of a bilateral agreement.

The sales and service agreements have been returning to simpler language.

Another trend analysts note is a lessening of restrictions so that dealers may take on other lines, although a number of the most successful import lines are requiring facilities which effectively guarantee that they must be exclusive.

Florida's top brass

Taking over leadership of the Florida Automobile Dealers Assn. are, from left: J. W. Leonard, Buzz Leonard Chrysler-Plymouth, Inc., Panama City, secretary-treasurer; John C. Dingman, Dingman-Hatch Pontiac-Cadillac, Inc., Ocala, president-elect; Thomas J. Hawes, Hawes Chrysler-Plymouth, Inc., Gainesville, president; Edwin H. Hallett, Hallett Pontiac, Inc., Miami, immediate past president, and Dennis C. McNamara, McNamara Pontiac, Inc., Orlando, NADA director.

Solid gold for Cadillac

J. Saxton Lloyd, center, celebrated his golden anniversary as a Cadillac dealer in the best of company: Cadillac Motor Car Division general manager Edward C. Kennard, right, and the Division's general sales manager L. B. Pryor. Lloyd owns Lloyd Buick-Cadillac, Inc., Daytona Beach, Fla.

Datsun's franchise agreement has been extended from a three-year term to a perpetual one.

And NADA reported Subaru's recently revamped dealer agreement incorporated "all or part of virtually every recommendation" the dealers made.

The big issues can be seen in the new General Motors franchise agreement. Although it incorporated some changes instituted earlier by other makers, it also promises to set a pattern for those that follow.

Distribution revamped

One of good changes for GM dealers will be in the area of distribution, explained H. E. "Buddy" Derrick, who heads NADA's Industry Relations Committee, which spent two years with GM negotiators on the new sales and service agreement.

GM now allows a dealer to find out, line by line, how many cars his zone received and his particular dealership's percentage share. It is part of the agreement's specific commitment to distributing cars in a "fair and equitable manner."

Warranty reimbursement has been a cause celebre among dealers ever since Henry Ford first declared that any one who held a Ford franchise would be responsible for servicing any Ford which happened into the area.

(Another suggestion, which apparently never made it into the Ford rule book for dealers, was to tow disabled Fords only after nightfall—because a disabled Ford in full sunlight was a bad advertisement, author Alan Nevins reported in "Ford: The Times, the Man, the Company.")

Warranty advances

GM's new franchise agreement promises "fair and adequate reimbursement." But Herb L. Galles Sr., who holds major shares in six Western GM dealerships and who helped orchestrate the 1950s industrywide overhaul of the franchise system, sees another helpful trend in warranties.

The extended warranty plans which are spreading throughout the industry help take pressure off the dealers to make good on items which go bad just after the warranty expires, Galles explained.

"It's a never-ending problem, but I've seen improvements," Galles said of the rate of reimbursement for warranty work.

A say in location

GM dealers are now informed when the corporation is considering putting another outlet in the area. They may present data showing why a new franchise should not be approved.

It's a measure which stands in stark contrast to the first decade of the 20th century, when auto stocks far exceeded demand, yet manufacturers subscribed to a policy of annually increasing the dealership population while forcing dealers to take as many cars as could be built.

Makers have mellowed over the years—GM, for example, began population studies as early as the 1920s to determine which markets weren't saturated. But "stimulator dealers" were still used well past World War II by a number of makers to increase competition among their dealers.

Advances in dealer indemnification from product liability suits and better allowances for transportation-damaged products are other topics covered by the recently revamped agreements that are likely to come up in negotiation sessions with other makers.

The quarterly price hikes the industry seems to have locked onto will demand improvements in price protection, dealers say.

And even though the car companies are strapped for cash to develop new products, a number of the major imports are examining their chances of setting up in-house finance companies to help cushion dealers from interest-rate hikes of the ilk of 1980.

November totals down for second month

'81 model sales still lack spark

Continued from Page 14

43,088 units to 24,211, while the heavies were off 22.8 percent, 43,609 versus 56,506.

Ford dealers retailed 60,277 units during the month, down 28.6 percent from last year's 84,465. The total included 4,625 Couriers, compared with 5,464 in 1979.

Thorugh November, Ford sales totaled 737,268 units, a decline of 33.4 percent from last year's 1,107,833.

Chevrolet reported that its dealers sold 53,898 vehicles during the month, including 5,388 LUVs. The total was 32.5 percent below last year's 79,857, which included 7,642 LUVs.

The 11-month Chevrolet count was down 34.2 percent, from 1,062,864 units in 1979 to 699,854.

Dodge and Chrysler-Plymouth dealers sold 12,896 trucks in November, off 25.7 percent from the previous year's 17,354.

The January-November total of 235,833 deliveries was down 35.2 percent from the year-earlier 364,090.

GMC sales during the month were down 34.8 percent, from 20,310 a year ago to 13,249. The 11-month total of 172,275 units was 26.7 percent lower than the 272,290 vehicles retailed in the same period in 1979.

• Sales of Jeep four-wheel-drive vehicles were down 50.4 percent during the month, 6,163 versus 12,414. The 11-month total was 72,291, a decline of 44.2 percent from the 129,658 retailed through November a year ago.

Volkswagen dealers, in their first full year in the compact-pickup market, retailed 1,773 units in November. It brought the 11-month total to 23,442 units.

Sales of Mercedes-Benz mid-range diesel trucks were down 13.8 percent in November, from 419 a year ago to 361.

Toyota dealers retailed only 6,310 pickups during the month, a decline of 49.4 percent from last year's 12,471.

In November, Datsun outlets sold 7,503 compacts, a decline of 3.8 percent from the 7,802 sold in the same month a year ago.

Mazda sales were down 8.3 percent during the month, from 744 units in 1979 to 682.

Trails 1979 pace by 3 months

Year's car output reaches 6 million

By Patricia Hoffman
Staff Writer

U. S. auto production last week hit the six million mark for the year, more than three months behind the 1979 pace. Auto makers completed 6.1 million by Sept. 8 last year.

Year-to-date, the domestic makers have built 6,077,864 cars, down 26.72 percent from the 8,294,794 assembled during the equivalent period in 1979.

Domestic makers scheduled output of 151,812 cars last week, up 5.68 percent from the 143,648 completed the previous week but down 19.15 percent from the 187,786 units assembled the comparable week last year.

Ford Motor Co.'s San Jose point (Mustang and Capri) closed for two weeks today, laying off 950 hourly workers.

Ford reopened its Atlanta and Dearborn points last week. The Lorain and Chicago plants will reopen today (Dec. 15) after shutting down Dec. 1 for inventory adjustments.

Chrysler Corp. will close its Jefferson and Newark (K-car) points today. Both plants will resume operation Jan. 5.

Chrysler's Belvidere plant, which closed Dec. 1, is slated to reopen Jan. 12. The Lynch Rd. and St. Louis points will remain open until Dec. 23 and then close for the holidays, and should resume operations Jan. 5.

Checker Motor closed its Kalamazoo point last week for inventory adjustment.

Saturday overtime was slated at two plants last week, Ford Metuchen and Ford Wayne.

GM has slated Saturday overtime at seven plants this week. They are Lansing, Flint, Arlington, Linden, Oklahoma City, Tarrytown and Willow Run.

The breakdown for last week's production was: GM, 63.20 percent; Ford Motor, 23.02 percent; Chrysler Corp., 8.59 percent; Volkswagen, 2.99 percent; American Motors, 2.15 percent; and Checker Motors, 0.05 percent.

Truck production shows decline of 3 pct. for week

Domestic truck production so far this year shows a drastic decline from the 1979 year-to-date output.

Year-to-date, U. S. truck makers have built 1,519,333 units, a big 49.24 percent drop from the 2,993,314 units produced through the comparable week last year.

Last week's output was 38,340, down 3.20 percent from the previous week's 40,127 and down 28.42 percent from the 54,264 units assembled the same week last year.

Ford's Kentucky plant closed one line last week for inventory adjustment. Ford's Lorain (O.) truck plant will resume operations today after closing Dec. 1.

General Motors has slated Saturday overtime at three plants this week; Baltimore, Janesville, and St. Louis.

Chrysler closing, dip at Ford cut Canadian output

Canadian auto production dropped 22.22 percent last week as Chrysler Corp.'s Windsor car point continued downtime and Ford Motor Co.'s output was down.

The auto makers scheduled 15,611 units last week, down from the previous week's 20,073 and off 30.73 percent from the 22,537 completed in the comparable week last year.

Truck production, planned at 13,273 units last week, was up 2.88 percent from the previous week's 12,901 but down 2.46 percent from the 13,608 completed in last year's comparable week.

Chrysler's Windsor car plant, reopening today (Dec. 15) after being closed since Nov. 24, will remain closed after the holidays. It will resume operations Jan. 19.

In addition, Chrysler's Pillette Rd. plant will not reopen until Jan. 12.

The late reopenings are due to heavy inventories of unsold vehicles.

breaking news

initial budget of $3.5 million. It will be chaired by former Watergate Prosecutor Archibald Cox, with the assistance of Donald Kennedy, president of Stanford University, and William O. Baker, chairman of Rockefeller University.

EPA orders GM to recall 570,000 '79s

WASHINGTON. — The EPA last week ordered General Motors to recall 570,000 of its 1979 Pontiacs, Buicks and Oldsmobiles because they fail to meet oxides of nitrogen standards. EPA said the cars missed the 2.0-grams-per-mile standard by an average of 35 percent. The cars have 301-CID two-barrel V-8s and automatic transmissions. Models involved are the Pontiac LeMans, Grand Am, Grand Prix, Catalina, Bonneville and Firebird, the Buick Century, Regal and LeSabre and the Oldsmobile 98. GM has 45 days to submit a remedial plan or to request a public hearing.

Honda-Renault agreement hinted

TOKYO.—Reports here say that Honda and Renault may soon sign an agreement for joint production of a Renault model in Japan. Under an existing agreement, BL, Ltd., will produce a version of a Honda design in the UK. Under still another arrangement, between Nissan and Volkswagen, a VW model will be produced in Japan.

Chrysler extends Christmas downtime

DETROIT. -- Chrysler Corp. will extend Christmas downtime at five U.S. plants. The company's K-car plants, Jefferson Ave. and Newark; the St. Louis plant, and the Warren truck plant, originally scheduled to reopen Jan. 5, will not resume operations until Jan. 12. The Lynch Road plant, which reopens today (Dec. 15), will remain down after the holiday hiatus until Jan. 19. All plants will close Dec. 23 for the holidays. See story on Page One.

GMAC runs record radio campaign

NEW YORK. — GMAC is running a record radio schedule on CBS, NBC, Mutual and Keystone radio networks, with additional spots in the top 50 markets, during Dec. 10-23 and Jan. 5-26. Purpose is to point out that auto financing rates have not risen like the prime rate, that rates haven't changed much over the past few years and that GMAC financing is available at dealerships. Buyers are encouraged to visit dealerships.

Ford enlists Toyo Kogyo for help with '84 minicar

By Paul Lienert
Contributing Editor

DEARBORN.—Ford Motor Co. has asked its Japanese partner, Toyo Kogyo, to supply it with major components for a new U. S.-built front-drive minicar Ford plans to introduce in the 1984 model year to compete with the new front-drive S-car mini from General Motors, according to company sources here.

Ford apparently had discussed the minicar project with Toyota, but the Japanese firm reportedly is now seeking to launch a joint venture with Ford to build small commercial / utility vehicles in the U. S.

"We've discussed minicars with both companies, but the decision on who will build it or supply parts for it won't be made until after the first of the year," said Walter Hayes, Ford vice president for public affairs.

"The decision may be another seven to eight weeks away," he added.

Ford is seeking help from Japan in developing a front-drive minicar that would be smaller than its subcompact Escort because the U. S. firm already has its engineering and design capacity stretched to the limit in redesigning its larger cars over the next five years.

Briefly, Ford plans to introduce front - drive replacements for the Fairmont/Zephyr compacts in '83½, codenamed "Topaz;" front - drive replacements for the full-size Ford, Mercury and Lincoln cars in '86, codenamed "Taurus," and an all-new front-drive minicompact for 1986-87, codenamed "Optim."

The Optim program, which replaces the earlier Apex mini-

Downsized Continental to replace Versailles

Ford Motor Co.'s entry in the luxury small-car market will be a downsized Lincoln Continental, expected next fall as a 1982 model. With an estimated length of just over 200 inches it will be a foot shorter than the Imperial and several inches shorter than Seville. It features the "bustle-back" look. Story on Page 2.

A Christmas Fantasy

or, Praise the Lord and Pass the Legislation

'Twas the night before Christmas and all through the land
New-car sales reminded of Custer's last stand.
From Boston to Dallas, L. A. to Ann Arbor,
Henry Ford warned us all of a new Pearl Harbor.
Like a modern-day Paul Revere in Fiesta he rode
And warned our economy imports would erode.

Doug Fraser joined ranks the makers to save,
Causing poor Walter Reuther to spin in his grave.
Since companies and union all shared common dread,
Politics had got these strange fellows in bed.
When Carter complained to Japan, why, by golly,
They were very polite and they told him "so solly."

Then Santa appeared in a shiny new car
Wearing a shirt that said "I shot J. R."
From the windblown snowdrifts we could see something climb;
A sleigh of reindeer? Good grief, it's the prime!
Past the top of the house like a space shot it went
Now 13, now 16, now 21 percent.

Santa's bag overflowed with fine gifts we all like—
Several liberal Congressmen's heads on a pike;
A new car for Volcker (with 24 percent loan),
For Mazda what looks like a Ford Escort clone;
For Reagan a four-year contract with no cuts,
For Carter a shortage and price hike for nuts;

A wealthy French suitor for poor AMC,
And a new Datsun truck plant for dear Tennessee;
New top-level bosses for GM and Ford,
At Chrysler, old Blue Eyes will help chair the board.
The Government sought to help Chrysler to live
So to help bail it out, it gave Lee a sieve.

When the Russians invaded and shouldn't have oughta,
Some Canadians couldn't get gas for their Lada.
Santa gave out the gifts and got into his sleigh
And 8-6-4'd through the night to the Pole far away;
But we heard him exclaim as he finished his job:
"Merry Christmas, Detroit . . . We'll miss you, Bob."

Concessions sought from suppliers, workers, lenders

Chrysler asks another $400 million

By Edward Lapham
Financial Editor

Chrysler Corp. last week went back to its federal loan guarantee board with a request for $400 million in additional guarantees and a revised operating plan which lopped more than $1.0 billion from its spending needs.

The plan included proposed concessions and sacrifices from suppliers, workers and lenders as well as internal cuts which will alter future product programs and trim white collar employment by more than 2,000,

Chrysler Chairman Lee Iacocca told a press conference he believed the loan guarantee board can and will give provisional approval to the new plan which will allow Chrysler to solicit the required support from its constituents in order to qualify.

Iacocca said the new plan allows profitability in 1981 if Chrysler gets 9.0 percent of a 9.6 million car market.

Iacocca said the company would seek to draw down as guarantees for as much as the auto makers has the required "matching funds." He hopes to have the new loans by mid-January when the company will really need them.

"We feel we should draw down as much as we can qualify for because the roughest times are directly ahead of us," said Iacocca.

The company already has drawn down $800 million in guaranteed loans this year.

The loan guarantee board must approve the new plan as "viable."

When asked what happens without board approval, Iacocca said. "There is no future."

Iacocca said the company was not in a rush to draw down additional guarantees because it was uncertain of support from the incoming Reagan Administration.

He said he believes the new administration will honor the loan guarantee arrangement because it is law and "a national policy."

Chrysler also has sought aid

Cadillac Cimarron to start at $12,500

DETROIT.—The new Cadillac Cimarron, a luxury four-door version of the General Motors J-car subcompacts, will be priced at about $12,500 when it is introduced in early May. Two other J-car models, the Chevrolet Cavalier and Pontiac J-2000, will start at close to $6,500—higher than the compact X-cars, according to sources at GM.

600,000 suggestions from the staff

HIROSHIMA, Japan. — Employes of Toyo Kogyo Co., Ltd., offered some 600,000 suggestions for improving productivity and quality of Mazda vehicles during the past fiscal year, said Yoshiki Yamasaki, president.

Senate tables trade authorization measure, then adjourns

Japanese issue shuffled to Reagan

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—One of the final acts of Congress was its decision to punt the auto import question to the Reagan Administration.

The Senate tabled the resolution that would have given the president authority to negotiate a reduction in Japanese auto imports.

President Carter had said he was not going to use the authority anyway. But the sponsor of the bill, Senator Donald Riegle, Michigan Democrat, said the overwhelming approval of the measure in the House and the Senate's 65-to-12 vote to table rather than kill the measure would be a signal to the Japanese.

As a result of the tabling, the Senate Finance Trade Subcommittee will start hearings even before President-elect Ronald Reagan is inaugurated Jan. 20.

Senator John Danforth, the Missouri Republican who cosponsored the Riegle resolution, will chair the subcommittee.

He promised quick action, starting with hearings "to probe in depth to determine the precise nature of the problem, the needs to modernize plant and all other aspects of the automobile problem, with a view for trying to reach a sensible governmental approach to dealing with it."

Senator Robert Dole, the Kansas Republican who will head the Senate Finance Committee, will become a key figure as his party's major spokesman on the Hill for trade and tax matters.

Dole noted the importance of

NEWSPAPER

As part of $600 million request to UAW

Chrysler asks wage, pension freeze

By Marjorie Sorge
Labor Editor

Chrysler Corp. last week asked the UAW to up its ante another $600 million in the company's life - or - death game. It would make the union's total sacrifice to the company over $1 billion in the last year.

Chrysler is now pleading with the union to accept a wage freeze for the duration of the current three-year contract which expires Sept. 16, 1982.

According to UAW President Douglas A. Fraser, the freeze would include both cost-of-living - adjustments (COLA) and the 3 percent annual improvement factor and would be extended to all salaried, nonunion workers. Chrysler has also offered about 1,250 senior white-collar workers early retirement packages.

According to a Chrysler spokesman, the company has also asked that pension benefits be frozen as of 1981. He said health insurance benefits would be left alone and the negotiated increases would continue.

Making any more concessions to the company must be approved by the UAW membership and Fraser said he and Marc Stepp, union vice president and director of the Chrysler department, will recommend reopening negotiations on the current contract.

The 200-member International Chrysler Council meets today (Dec. 22) in Detroit, but no action can be finalized until at least Jan. 12 when most Chrysler plants reopen.

If the union accepts these conditions, Chrysler will save $250 million in 1981 and $350 million in 1982, but it may create problems for the union with other companies.

- Ford Motor Co. has indicated it will also be interested in asking the union for contract concessions "to remain competitive," a spokesman said. Peter J. Pestillo, Ford vice president for labor relations, has said the previous concessions to Chrysler have already put Ford at a competitive disadvantage.

If Ford does seek concessions it would leave the door wide open for General Motors, American Motors and supplier companies organized by the UAW to ask for concessions.

"If the UAW should make concessions to Ford and Chrysler, the next bargaining round will be very difficult," said Maryann Keller, vice president of Paine Webber Mitchell Hutchins, Inc. "How can they deal with GM?" she asked. "The union's bargaining power will be very weak."

She said she doesn't expect GM to ask for any concessions and said she sees this as the end to pattern bargaining, leaving each company to set its own pact with no guidelines from a "target" company.

Currently, however, the UAW has no real choice but to give Chrysler the concessions it is asking, according to one union source. But, he said, there will have to be a clause in the contract giving the money back to the workers if Chrysler becomes profitable.

- Lee A Iacocca, Chrysler chairman, told the UAW the company is in dire need of more union concessions if it is to survive. The question will be how much of the proposed package the union membership will agree to, UAW sources said.

Fraser told reporters, "I've never gotten everything I asked for in collective bargaining, and there's no reason to expect they will in this case."

"I don't have anything to negotiate with except their jobs," Iacocca said at a news conference last week.

The current proposal calls for hourly base wages of the workers to be frozen at $9.47 for the rest of the contract rather than being raised to $9.75 in 1981 and $10.04 in 1982.

With fringes included, the hourly rate would stay at $17.31 in 1981 rather than $20.45. In 1982, it would be $17.52 because of the "creep" increases in areas such as Social Security, instead of $22.11 with regular increases.

"We have a lot of good jobs at $17.50 an hour," Iacocca said. "We don't have any at $20 an hour."

According to a Chrysler spokesman, the workers just got an additional $2.31 an hour on Dec. 12 which was negotiated in the modified January, 1980, contract. The increase consisted of a $1.32 "float" and 99 cents COLA. Workers are not due for another increase until March, 1981.

In the normal round of bargaining in 1979 between the UAW and Chrysler, the union agreed to a contract giving the company $203 million in concessions. In January, 1980, the Loan Guarantee Act required an additional $243 million in savings from the union which brought the total to $446 million.

Stockman holds key budget post on Reagan team

'Ventilation' of auto rules sought

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—One of the truisms of government is that there exists a man behind the scenes who knows how things work and who can gum it all up when occasion demands.

In the Nation's Capital, there are many—in Congressmen's offices, in agencies, in departments. Some are more effective than others—some even as good as they themselves think to be.

But, as every bureaucrat knows, the single most powerful ally or enemy for their programs is a director of the Office of Management and Budget. And so do the lobbyists, since they may scurry there to reduce the budget of a line item, possibly even one of the agency head had just sweated blood to get pumped up.

As for reporters, they are lucky if they can even find the middle guy who is manipulating the pursestrings—much less getting him to talk, whether on or off the record.

The new head of that powerful office under the Reagan Administration is David Alan Stockman, of Michigan State and Harvard Divinity School. The Michigan Congressman, a 34-year-old bachelor and member of the House Commerce Committee, is well known to the auto industry, but perhaps not very well understood by anyone.

He is known for his gift of computer-like total recall, which can spew out enormous amounts of data. He can perform lightning calculations guaranteed to show the costs exceed the benefits.

Stockman's star was rising in Congress as a man who knows how to operate—he slipped in a couple of Chrysler amendments to the 1980 fuel economy law and he started the whole air-bag debacle that Congress never did finish by a seemingly simple amendment, stating the consumer should have free choice of a restraint system.

His star rose even more when he drew Candidate Reagan's attention, first as a double for John Anderson (for whom he used to work) in a mock debate and then as a stand-in for Carter during another mock session.

Now he has a chance to show

Kudos for K-car

DETROIT. — Motor Trend magazine has selected Chrysler's K-car as its Car of the Year and will announce the award shortly.

'82 Lincoln Continental smaller than Seville

By Paul Lienert
Contributing Editor

Ford Motor Co. is planning to unveil a new car next fall for those well-heeled souls who believe luxury should come in small packages.

Ford in '82 will offer its smallest U. S.-built luxury car when it introduces the new Lincoln Continental, the successor to the ill-fated Lincoln Versailles which was dropped for '81.

The '82 Continental will be considerably smaller than the competition from Chrysler and General Motors. Industry sources say the baby Lincoln will tip the scales at about 3,400 pounds—about 600 pounds less than the Chrysler Imperial and Cadillac Seville.

With an estimated overall length of just over 200 inches, the Continental will be about a foot shorter than the Imperial and several inches shorter than Seville.

The only U. S. luxury car that will be smaller than Continental in '82 is the Cadillac Cimarron, which bows in May. Cimarron is Cadillac's four-door version of the new General Motors J-car, a front-drive subcompact series that eventually will be offered by every GM passenger-car division.

A sneak photo of an early prototype shows the new Lincoln bears a strong resemblance to both the Imperial and Seville. The car carries the traditional stand-up Lincoln grille, flanked by dual rectangular headlamps. The rear end resembles the classic "bustleback" styling theme revived last year on the new Seville and picked up this fall by the Imperial. The new Lincoln, as on past models, will also get a mock spare-tire motif on the deck lid.

The usual array of power equipment — brakes, steering, seats, windows—will be standard, along with a choice of custom sound systems and plenty of high-level trim options.

It is believed Ford will install

Dec. 1-10 tally of 174,898 up nearly 5 percent

New-car sales top year-ago total

By Jenny L. King
Staff Writer

U. S. auto makers notched their fifth increase against 29 declines this year as Dec. 1-10 new-car sales squeezed ahead of the 1979 level. Early-December retail sales totaled 174,898, up 4.86 percent from 166,790 last year.

On a daily-rate basis, sales were down 6.79 percent. With nine selling days this year, the average was 19,433, compared with 20,849 based on eight days in 1979.

Three of the five major auto makers were up for the period. Chrysler Corp. announced a sales increase of 15.45 percent, to 18,535 from 16,054 last year (up 2.59 percent daily rate). General Motors sales of 108,585 were up 5.48 percent from 102,946 (down 6.24 percent daily rate). Volkswagen of America was up 36.31 percent to 3,690 from 2,707 (up 21.30 percent daily rate).

Ford Motor Co. missed its 1979 mark by a few hundred units. Its sales numbered 39,688, down 1.72 percent from 40,383 (down 14.47 percent daily rate). Estimated sales of American Motors cars were 4,400, down 6.38 percent from 4,700 (down 16.84 percent daily rate).

Of the early-December market, GM earned 62.08 percent, up from 61.72 percent. Ford's share slipped to 22.69 percent from 24.21 percent. Chrysler sales accounted for 10.60 percent, up from 9.63 percent. VWoA had 2.11 percent, up from 1.62 percent, and AMC dropped to 2.52 percent from 2.82 percent.

Seven U. S. makes reported sales increases compared with their year-ago levels. Plymouth sales climbed 37.65 percent, Dodge was up 29.09 percent, Ford was up 2.94 percent, Chevrolet was up 6.76 percent, Oldsmobile was up 0.92 percent, VW was up 36.31 percent and Buick leaped 60.83 percent. The wind-up of a long sales incentive program was responsible for the extraordinary performance at Buick.

Chrysler sales dropped 30.84 percent, Mercury was down 0.49 percent, Lincoln was down 43.99 percent, Cadillac was off 28.99 percent and Pontiac sales tumbled 23.08 percent.

Dec. 1-10 top-selling nameplates were: Chevrolet Citation, 10,117; Ford Fairmont, 8,408; Chevrolet Chevette, 7,570; Ford Escort, 7,224, and standard Chevrolet, 7,222. One year ago, the top five were Citation, standard Chevrolet, Chevette, Fairmont and Chevrolet Malibu.

Year-to-date domestic sales totaled 6,281,765, down 20.77 percent from 7,928,352 last year at this time.

IH expecting loss to follow 3-month gain

CHICAGO.—International Harvester Co. reported a profit in the final quarter of its 1980 fiscal year, but it is anticipating a loss in the first three months of fiscal 1981.

The company said earnings in the quarter ended Oct. 31 amounted to $20.2 million, down 86 percent from the year-ago $147.6 million. Sales totaled $2.32 billion, a drop of about 7 percent from last year's $2.49 billion.

A first-quarter loss is expected because "the recent sharp rise in interest rates is once again putting pressure on customer demand in all markets," said Archie R. McCardell, chairman.

He added that the company expects interest rates to decline gradually beginning in February or March, and that the company hopes to report a profit for the full year.

Harvester lost a record $397.3 million in fiscal 1980 as a result of a six-month UAW strike which ended in April and record interest rates that caused a sharp reduction in demand for the company's products, McCardell said.

Sales for fiscal 1980 were down 25 percent, from $8.39 billion the previous year to $6.31.

"In the two three-month periods following the strike," McCardell said, "International Harvester has reported earnings, has regained market-share momentum, has exceeded its cost-improvement targets and has maintained low dealer inventories."

Marking Mercedes milestone

Heinz Glass, left, general manager of the Mercedes-Benz diesel truck assembly plant in Hampton, Va., receives the keys to the 1,000th truck built in the U. S. from Glenn Ford, quality control inspector. Mercedes-Benz opened the plant in June.

1,000th U. S. Mercedes built

HAMPTON, Va. — Mercedes-Benz of North America reached a milestone with the assembly of the 1,000th truck at the company's plant here on Dec. 4.

Production started in early June with two trucks a day at the facility in Virginia's Tidewater region. As new personnel were trained in assembly techniques, production increased to the present 14 trucks a day.

The 1,000th truck was a white Mercedes-Benz L-1116, which has a gross vehicle weight of 25,000 pounds and is powered by a 160-HP turbocharged diesel engine. Major components for the milestone truck and others built in Hampton are shipped in semi-knocked-down configuration from the Daimler-Benz AG subsidiary in Sao Paulo, Brazil.

In addition to the L-1116, the Hampton plant also is producing the heavier L-1316 model, which has a GVW of 30,000 pounds. The two models account for more than half of the Mercedes trucks sold in the U. S.

Other models will be phased into the assembly operations later. These include the L-1013, L-1113 and the L-1418, which range from 22,000 pounds GVW up to 32,225 pounds.

The Hampton facility has an annual capacity of 6,000 trucks. However, due to startup proce-

Large and medium-size outlets fare better, survey finds

Bigger is better for RV dealers in '80

By Patricia A. Kelsey
Staff Correspondent

ST. PETERSBURG, Fla. — Parts sales in the do-it-yourself RV market have increased this year and RV sales in the large and medium-sized dealerships have increased, according to an AUTOMOTIVE NEWS survey here.

The big dealerships are continuing their winning ways and their strength has carried them through the rough market conditions to a point where they are now experiencing healthy sales gains.

The medium-sized dealers, like the strong dealers, report record increases, while the smaller dealer has remained the same saleswise this year as last.

Trends in buying patterns, by and large, find customers "finally cognizant of the fact that their newly purchased $10,000 car won't carry much weight, necessitating a forced move to lighter units," said one dealer.

Those who in the past bought the large units loaded with extras continue to want such units this year, other dealers reported.

A large-volume St. Petersburg dealer, C. J. Stoll had a busy summer and fall.

"We had a resurgence through May of last year, with a slight slackening through December, 1979," said Bob Troke, general manager. "Since that time we've sold the same number of units we did last year."

Summer is normally a slack period, he added, "but this year we made money in our five summer months."

The best movers are equally distributed, he said. Motor homes have been going well mainly because "we're heavy into motor homes. We do cover, though, the whole RV field with the exception of the fold-down units."

Troke said gross and profit margins are higher this year. On percentage of sales, he said profits are running about 17 percent. "But that's not a net figure, just a percentage of the profit of sales."

Although financing availabil-

Ford installs 175,000th mid-range diesel

Ford Motor Co., which has been building mid-range diesel trucks since 1962, recently installed the 175,000 engine at its Kentucky Truck Plant. Ford claims it has produced more than 10 times the number of mid-range diesel trucks sold by all imported-diesel distributors since 1973.

truck industry news

Totals down in 7 of 8 weight groups

October registrations drop to nine-year low

October registrations of new trucks of all types in the U. S. dropped to their lowest level since 1971, and were down 41 percent from the total for the same month a year ago.

During the month, according to R. L. Polk & Co. statistics, 185,434 units were registered, compared with 314,229 in 1979. In October 1971, the count was 185,356 units. It also was the first time in six years that the October total failed to top 200,000.

The 10-month total of 2,095,919 registrations was down 29.1 percent from last year's 2,957,752 units, with declines in all three market segments and in seven of the eight weight classifications.

Medium trucks have been hit hardest in the 1980 tallies, suffering substantial losses at both the high and low ends of the market.

Registrations of these vehicles through October totaled 54,306, a drop of 58.1 percent from the year-earlier 129,657.

Because of the slump in big motor-home sales, Group 4 tallies were down 96 percent, from 4,881 a year ago to only 199. Dodge accounted for 190 of the total and the miscellaneous group the other nine.

The switch from gasoline power to the heavier, more fuel-efficient mid-range diesels by operators of Group 6 trucks continues to erode that group's totals with the increased weight moving vehicles at the high end of the classification into Group 7.

Ten-month registrations of

Continued on Page 14, Col. 3

HD registrations for 10 months off 9.7 pct. from 1979

Ten-month registrations of new heavy trucks in the U. S. totaled 163,437 units, according to R. L. Polk & Co. statistics, a decline of 9.7 percent from the year-ago 181,053, the alltime high for the period.

October tallies, however, were down 22.5 percent from last year's record levels, from 19,665 to 15,243 units.

Through October, registrations of Group 7 trucks soared to 66,560 units, an increase of 65.5 percent over last year's 40,221. Group 8 tallies, on the other hand, were down 31.2 percent, from the year-ago high of 140,832 to 96,877.

International, which lost heavy-truck sales leadership as a result of the six-month UAW strike, continues to eat into Ford's lead. In November, 4,529 Groups 7 and 8 International

Truck registrations drop to '71 level

Continued from Page 6

Group 6 trucks were down 57.4 percent from a year ago, 52,306 versus 122,430. The Group 5 count was off 16.2 percent, from 2,346 units in 1979 to 1,966.

Because of the growth in demand for the mid-range diesels, the heavy-truck market has suffered the least decline in 1980 registrations. The 10-month total was down only 9.7 percent, from a record 181,053 last year to 163,437 units.

Group 7 tallies through October were at an alltime high of 66,560 units, an increase of 65.5 percent over last year's 40,221, the previous 10-month mark. And the 1979 total was 28 percent higher than the previous year's 31,445 units.

The recession and decline in freight hauled by over-the-road trucks have resulted in a sharp decline in sales of the Group 8 vehicles. Registrations through October totaled 96,877, down 31.2 percent from the record 140,832 units tallied in the same period a year ago.

Light - truck registrations for the 10 months totaled 1,878,176 units, a decrease of 29 percent from last year's 2,647,042.

- Group 3 registrations were off 84.8 percent in the January-October period, from 38,499 a year ago to 5,843. As with the Group 4 tallies, the decline in Group 3 was due principally to the sag in RV demand.

Ten-month Group 2 registrations totaled 914,217 units, a decrease of 40.3 percent from the year-ago 1,530,783. This group's tallies have been falling steadily since the fuel crisis early in 1979 and owners' switch to more fuel-efficient vehicles.

Upturn in sales of the Japanese-built compact pickups and the introduction of the Volkswagen compact softened the impact of lower truck sales on Group 1 tallies. Over the 10-month span, 958,116 of these vehicles were registered, down 11.1 percent from last year's 1,077,760 units.

The miscellaneous group's share of the 10-month registrations showed a dramatic improvement as a result of the surge in sales of the imported compacts.

Tallies through October totaled 261,646 units, compared with 221,217 a year ago. The group's penetration was up five percentage points, from 7.48 percent in 1979 to 12.48 percent.

Story of Chrysler gamble detailed in Stuart's 'Bailout'

BAILOUT, The Story Behind America's Billion Dollar Gamble on the 'New' Chrysler Corporation. Reginald Stuart, and books, South Bend, Ind., 208 pages. $6.95.

Chrysler Corp., which has flirted with financial ruin on several occasions during its history, has attracted a number of crepehangers and journalistic prophets of doom over the years. It has not been the subject of much objective or scholarly work; Chrysler has not had the flamboyance of Ford Motor Co. nor the organizational supremacy and notoriety of General Motors to make it a popular subject.

However, it is not surprising that Chrysler's financial problems, which nearly forced the auto maker into bankruptcy a year ago and resulted in the Chrysler Corp. Loan Guarantee Act of 1979, have focused attention on the company. In fact, various authors are producing books which deal with the Chrysler financial mess in one form or another.

BAILOUT, was written by Reginald Stuart, who was the New York Times bureau chief in Detroit, and thereby that publication's auto expert, during Chrysler's struggle for federal assistance.

The book thoroughly details the history of the auto industry, stringing together anecdotes of importance in Chrysler's lineage which seem to lead, inevitably, to Chrysler's current plight, and beyond.

Stuart, who is recognized as a good reporter and writer in Detroit, stylized BAILOUT into an authoritative and direct history of the mess, which reads very closely to the New York Times style.

In fact, the book closely parallels the work Stuart did for the Times during the period. Like the Times, the book will very likely be considered by auto historians as the account "of record" of the Chrysler bailout, although there is still room for embellishment.

Included in the book are such historical items as the provisions of the act itself, as well as a member-by-member congressional vote record and a list of Chrysler's banks which were involved in the financing.

Chrysler's problems are not over. Stuart, who ended the book by writing that the Chrysler bailout "represents a crucial turning point in the finding of answers" to U. S. industrial problems, apparently believes a reindustrialization is nigh.

If that supposition is true, then BAILOUT will prove to be as significant as some of the earliest auto industry classics which taught American industry how to grow and prosper, and not merely a chronicle of struggles of a once-proud company.

Top executives named by Dana

TOLEDO.—Gerald B. Mitchell has been elected chairman and chief executive of Dana Corp., and Stan Gustafson has succeeded him as president.

As chairman, Mitchell replaces Rene C. McPherson, dean of the Graduate School of Business Administration at Stanford University. McPherson, chairman since 1972, has retired from Dana but continues as a director of the company.

Mitchell, 53, joined Dana's Canadian subsidiary 36 years ago. He became president of Dana Corp. in 1972 and chief executive officer last year. Gustafson, 50, has been with the company since 1958 and has been executive vice president since 1976.

NEW DATSUN "SX" CONVERTIBLES

"Dealers Largest Profit Potential"

American Custom Coachworks, Ltd.'s answer to the Datsun dealers' search for a high quality, reasonably priced, convertible for 1981. The finest showroom traffic builder and superbly engineered and styled for the '80s. Base units can be drop-shipped to American Custom Coachworks, Ltd. plants, or sometimes there are some open factory (pool cars) presently in build that are available.

Large and medium-size outlets fare better, survey finds

Bigger is better for RV dealers in '80

Continued from Page 6

ity was rough going for a while, Troke said, the dealership is in good shape now. He said that Stoll has its own financing, plus three other sources and doesn't have a floor plan.

"We own everything we have," he said.

Stoll plans to carry the same inventory as last year. But Troke said the dealership has run low on used units and will be stocking more new units.

Its customers continue to buy large and small units, with choices for luxury items remaining about the same as last year's preferences, Troke said.

Parts and service volume is up 20 percent, an increase brought on by Stoll's increasing its manpower "and several other adjustments," said Troke.

"We're one of the few dealers who can do just about anything to a coach, and our body shop is going full-blast," he said.

Dealers without as much clout as C. J. Stoll "have been going out of business over the past few years," Troke said.

- "The 22 percent floorplanning killed a lot of them, and the high interest rates put them under. Specifically, one area dealer has gone under this year, while another has reduced his stock drastically.

"I think the ones still in business now are pretty strong," Troke said.

With the decline in "the administration's talk of fuel shortages," said Bill Lunsford, RV Travel Center, St. Petersburg, he's enjoyed an upswing in business, most noticeably over the past four to five months.

Lunsford has changed his inventory in that he no longer handles large motor homes. "The largest I stock are 25-foot units which are fully equipped and go up to $27,000," he said.

He said he's had increased sales of the large van-type motor homes which are "more or less replacing the minihomes."

"These are expanded vans, like the Transstar and Transvan, with the Transstar being fully equipped just like a motor home, and we are enjoying extremely good business with these units," he said.

Gross and profit margins are better this year for RV Travel Center, "running about 25 percent," said Lunsford. He intends to maintain his current "bullish" inventory at $500,000.

He feels the biggest reason for increased sales is the easing of the gas scare.

"The price of gas did go up, but not nearly as high as we thought it would," Lunsford said. "We were anticipating $2 a gallon by now and it didn't materialize. Customers no longer bring up gas consumption. They appear content to accept the current gas price level and are living with it."

- When it comes to parts and service, RV Travel Center has been "overwhelmed in the past few months," said Lunsford. "When we should have had a slow period, it was just going like crazy," he said. "We now have four men and myself working ourselves to death."

Business has never been this good during a fall season, a normally slow period when only one or two salesmen were needed, said Lunsford. "We could use one or two more servicemen this fall," he added.

"Last year we did 50 percent better than the previous year," Ellen Cole, owner of Tri-County RV Sales, Clearwater, said. "Given that excellent year, one hard to improve on, we are nearing another 50 percent increase, running now a little more than one-third over last year."

Tri-County carries Starcraft, Scamper, Coleman, Trillium, and Palomino units. It does a big business in pop-ups, is a family-owned business, and considers itself a medium-volume dealer.

The best movers are the lightweight and smaller luxury-type units, Cole said. Travel trailers are down and the pop-ups are going best, she said.

"There is a lot of interest in real big motor homes, but financing is not easy to get," she said. "For example, we have a 29-foot unit, but five customers with good downpayments have not been able to get needed financing."

Inventory will remain consistent with market conditions, Cole indicated. She said service volume is good, and parts are moving rapidly. The latter was attributed to a marked increase in owners "fixing their own units."

In Holiday, just north of Clearwater, Keith Webb, World of Leisure, a small-volume outlet, noted that "business is basically the same as last year—flat."

"Granted, we figure that if we don't sink, that's considered a plus," he said. "But, we're disappointed that it has stayed so flat, because you're not making money when your costs continue to rise so rapidly."

- Financing is most difficult, said Webb, "No matter what any one says, the banks are being very selective. We are not a large-volume dealer, and I believe banks prefer to deal with larger dealers," he said.

World of Leisure carries Apache, Coleman and Rockwood units. The inventory will remain the same as last year.

Webb said he no longer carries motor homes.

"The working man is no longer buying these units unless they are used," he said. "The market for units in the area of $20,000 has pretty well dried up."

The economy is creating a customer who is more conservative and shops more, forcing dealers and factories to squeeze their profits more, he said.

"It's very difficult to make a good, honest gross," he said. "The car people started it when they began advertising $1 over invoice—and a lot of people look at that as a fact of life.

"They don't realize rebates from the factory keep those dealers going. And so, some customers have come in and offered me $50 over invoice if I'll show them the invoice," he said.

trucks were registered, compared with 2,545 Ford vehicles.

Going into the 11th month of the year, Ford's lead had been cut to slightly less than 7,000 units, 39,276 versus 32,340. At the end of August, Ford had a lead of about 10,500 units.

Ford's strength this year has been in Group 7 tallies. Through October, its Group 7 count was 27,396, compared with 14,622 for International. International was No. 1 in Group 8 registrations with 17,718, compared with 13,883 for GMC and 11,880 for Ford.

Mercedes marks 1,000th assembly at U.S. facility

Continued from Page 6

dures which include training personnel in assembly techniques, Mercedes-Benz officials expect the new plant to turn out some 3,000 units, during its first 12 months.

The 130,000-square foot Hampton facility is located on 45.3 acres in a recently developed industrial park. Mercedes-Benz also has an option on an additional 45 acres adjacent to the present site. This will provide for expansion at a later date if additional production facilities are needed.

While most parts used in the Hampton-produced trucks come from Mercedes-Benz do Brasil, other components come from West Germany and the U. S. More than 41 parts are sourced in the U. S., including turbochargers, fasteners, tires, batteries, electrical components and automatic transmissions.

It is expected that additional parts will come from North American sources in the months ahead, but nearly all major components (such as engines, axles, springs, cabs, etc.), will continue to come from Daimler-Benz plants in Brazil or West Germany.

Mercedes truck retail sales in the first 11 months of 1980 were 3,701 units, compared with 3,373 trucks in the same period last year, an increase of 9.7 percent.

U. S. makers build 131,110 for week

Early closings trim car production

By Patricia Hoffman
Staff Writer

U. S. auto production was down last week due to the early holiday closings of Ford's San Jose and Chrysler's Jefferson, Newark and Belvidere points.

Planned output last week was 131,110, down 14.05 percent from the 152,543 units assembled the previous week, but up 16.12 percent from the 112,907 built the comparable week ended Dec. 22 last year when 16 assembly plants had closed one week early for the holidays.

So far this year, domestic auto makers have assembled 6,209,705 units, a 26.13 percent drop from the 8,407,174 cars built in the comparable 1979 period.

Breakdown for this year by company is: General Motors, 63.98 percent; Ford Motor, 20.40 percent; Chrysler Corp., 9.90 percent; American Motors, 2.60 percent; Volkswagen of America, 3.07 percent, and Checker Motors, 0.05 percent.

Overtime was slated at seven plants last week: Ford Metuchen and Ford Wayne, and GM's Tarrytown, Willow Run, Lansing, Arlington and Linden points.

All domestic car plants except those already down are scheduled to close Dec. 23 for the holidays.

breaking news

Continued from Page 1

End of line looms for Chrysler big-car plant

DETROIT. — Chrysler Corp. will mothball its Lynch Rd. plant April 3, according to union sources. A Chrysler spokesman said closing the plant is a definite possibility but no date has been set. He said it will depend on the market. UAW sources say the plant will work two weeks in January and then will be down three weeks in February and four weeks in March as it builds out. There are about 2,300 hourly workers at Lynch Rd. The plant builds the Dodge St. Regis, Chrysler Newport and New Yorker and Plymouth Gran Fury, all standard-size cars.

VWoA challenges EPA recall

WASHINGTON.—Volkswagen of America has challenged EPA over the recall of some 140,000 Rabbits and Sciroccos (97-CID engines with fuel injection) for allegedly failing to meet both HC and NOx standards. A hearing time and place will be set after 30 days. This is only the second time an EPA recall has been challenged. The first challenge was by Chrysler over a CO failure on some 208,000 '75 cars. EPA's action was upheld recently by the U. S. Supreme Court.

Volvo signs deal with Chinese

GOTEBORG, Sweden.—A five-year bilateral trade agreement with expected annual volume of $115 million has been concluded between AB Volvo and officials of Canton Province in Mainland China. Volvo will supply trucks, buses and machine tools in exchange for textiles.

VW and Renault plan joint effort

PARIS. — Executives of Renault and Volkswagen have signed a letter of intent to collaborate on the design, development and production of a new type of automatic transmission. A Renault spokesman said the two firms realize that present types of automatics are too inefficient.

'82 F-body intros delayed

DETROIT. — The traditional fall new-model introduction may become obsolete, at least at General Motors where the large volume of design work is causing new-model timing delays. Latest example: The redesigned F-body cars, Chevrolet Camaro and Pontiac Firebird, scheduled to bow next September, will now debut no earlier than November, according to a source. The new 1982 A-body cars, too, have reportedly been delayed as GM takes an "introduce-them-as-they-are-ready" attitude.

Truck production inches upward to 40,947 for week

Last week's planned output of 40,947 trucks was up slightly from the 39,073 built the previous week, but down 28.42 percent from the 50,307 units assembled in the comparable week last year.

Ford Motor Corp.'s Kentucky plant reopened last week after being closed the previous week for inventory adjustment.

All domestic truck points will continue operations until Dec. 23 at which time they will close for the holidays.

For the year to date, truck output is far below last year's. The 1980 total is 1,560,513, down 49.24 percent from the 2,043,910 built through the week ended Dec. 22 last year.

Chrysler return boosts Canadian car production

Canadian auto production jumped 9.19 percent last week with Chrysler resuming normal operations at its Windsor car plant which had been down since Nov. 24.

The makers scheduled output of 17,018 units last week, up from the previous week's 15,585, but down 7.27 percent from the 18,353 built in the comparable week last year.

Truck production, planned at 13,129 units last week, was up slightly from the previous week's 12,904, and up 15.62 percent from the 11,355 units built during the year-ago week.

So far this year, Canadian auto production is 823,790, a 15.56 percent drop from the 975,635 units built through Dec. 22 last year.

Canadian truck production for year-to-date is 500,929, down 21.53 percent from the 638,400 units assembled through Dec. 22 in 1979.

All Canadian assembly points will remain open until Dec. 23 when they will close down for the Christmas holidays.

Story of the Year: Auto industry awash in red ink

By John K. Teahen Jr.
Managing Editor

From start to finish, 1980 has been a rotten year for the U. S. auto industry. A year in which it has been difficult indeed to find any shred of good news.

This was borne out in the AUTOMOTIVE NEWS editorial staff's 28th annual Story of the Year poll.

Voted Story of the Year was the financial bloodbath experienced by each of the Big Four auto makers.

In second place was a familiar tale of woe — Chrysler Corp.'s struggle to survive.

And third place was taken by the year-long sales slump for domestic cars.

The fourth-place story was the Renault - American Motors financial agreement under which the French firm will hold a dominant share, maybe even a majority share, of a U. S. auto maker.

In fifth place was the growing tide of resentment against imported cars.

Not a happy event in the whole bunch.

• The auto industry's financial losses for 1980 are staggering. They will total some $4.76 billion to $4.8 billion for the year.

And each of the four major car companies is in the red, even mighty General Motors. It's GM's first full-year loss since 1921, which saw a deficit of $38.7 million. (In 1932, GM reported a loss of three cents per share of common stock, although it made a $165,000 profit before payment of dividends on preferred stock.)

GM is expected to lose nearly $1 billion for the calendar year, and Ford Motor Co.'s projected loss is about $1.8 billion. It's $1.7 to $1.8 billion for Chrysler Corp. and $156 million for American Motors in its fiscal year.

These are worldwide losses. North American losses are partially offset by overseas profits at GM and Ford.

The reasons for the losses are many and have been repeated

Miserly mite

Three-wheeler claims 155 MPG

The California Commuter, a product of Aerovisions, Inc., Irvine, Calif., is a single-seater with three wheels that delivered 155 MPG in a recent Los Angeles-to-San Francisco test. Its backers are careful to point out that it is a motorcycle—not a car—and that all controls are of the motorcycle type. It weighs 230 pounds and is 119 inches long. A top speed of 82 MPH is claimed. Production of 500 is planned, with a price of $6,500 each for the first 10.

It would be a 'first' for convention

Reagan invited to speak at NADA

By Robert M. Lienert
Editor

Holmes Tuttle, a Ford dealer in Los Angeles, is a man who wields a considerable amount of political clout.

Tuttle, recognized as a key figure in the brain trust that masterminded Ronald Reagan's campaign, may also be instrumental in making this winter's NADA convention the first ever to be addressed by a president of the United States.

Reagan has been invited to address the general session on Feb. 10 which will close the 64th NADA Convention and Equipment Exposition in Los Angeles. Inviting Reagan was said to be Tuttle's idea.

As AUTOMOTIVE NEWS went to press, NADA spokesmen were uncertain as to whether Reagan—who on that day will have been president for only three weeks—will actually take the podium.

Early program outlines simply identify Reagan as "Guest Speaker: Invited."

It will be the first time the NADA convention has been held in Los Angeles, which comes as close as anyplace to being Reagan's home town.

• Keynote speaker for the opening convention session in the Los Angeles Convention Center on Saturday, Feb. 7, will be Philip Caldwell, chairman of Ford Motor Co.

George S. Irvin, 1980 NADA president, will report on his term of office at that opening session.

Wendell Miller, incoming president, will accept the 1981 gavel at the general session on Tuesday afternoon—the session to which Reagan has been invited.

Time Magazine Quality Dealer Awards will be presented in ceremonies at the opening session on Saturday.

On Tuesday, Feb. 10, at 7 p.m., NADA will host a Diamond Dinner and Reception for DEAC contributors. Entitled, A Return of the Big Band Era, it will feature Les Brown and His Band of Renown, with Anna Marie Alberghetti as a singer.

Attendance at this year's convention is expected to trail last year's 11,000 (including some 3,400 dealers) because of economic conditions.

• Although the convention does not officially open until Feb. 7, early registration will begin at 1:30 p.m. on Feb. 6.

Registration desks will be open from 8:30 a.m. to 5 p.m. on Saturday; from 9 a.m. to 5 p.m. on Sunday and Monday, and from 9 a.m. to 3 p.m. on Tuesday.

Workshops and make meetings will be held on Sunday, Monday and Tuesday. Topics include advertising, trucks, financing, insurance, taxes, employe compensation, estate planning, electric vehicles and used cars.

The equipment exposition will be open from 8:30 a.m. to 2:30 p.m. on Saturday; from 11:30 a.m. to 5 p.m. on Sunday; from 9 a.m. to 12:30 p.m. on Monday, and 9 a.m. to noon on Tuesday.

The Life Style program for women will feature various local tours, including a shopping expedition to Beverly Hills.

No quick approval seen on Chrysler loan request

Chrysler Corp. last week went to the federal loan guarantee board with a formal request for an additional $400 million in loan guarantees. The request included revised operating and financing plans.

No quick approval is expected.

Rather, it is anticipated that Treasury Secretary G. William Miller, who heads the board, will wait until Chrysler comes up with a package of concessions it is attempting to gain from the UAW, suppliers and banks.

That may take time. And, if any part of the package fails to materialize, it could jeopardize approval of Chrysler's latest request.

Chrysler Chairman Lee A. Iacocca said the company is trying to set a timetable on the draw-down and said he was optimistic that the loan guarantee board would grant Chrysler's request.

It is possible that no action will be taken on the request for new guarantees before the Reagan Administration takes over on Jan. 20.

Treasury Secretary G. William Miller said he has briefed Reagan's choice for a successor to Miller—Donald Regan—on Chrysler's complex financial problems.

Chrysler, however, has had no meetings with Regan, which would seem to indicate that the company hopes for action before Jan. 20.

Interestingly, one key executive of the new administration is David Stockman, a former Michigan congressman recently named to head the Office of Management and Budget.

Stockman voted against the original Chrysler rescue plan, but has since said he favors the loan guarantee.

• Miller has said he believes Chrysler's long-term survival probably depends on a merger or joint ventures with other companies. Such a development is not imminent, he said, although Chrysler has told the loan guarantee board that it is looking into such possibilities.

The original loan guarantee program for Chrysler was for $1.5 billion. Chrysler has already drawn down $800 million.

If Chrysler obtains $400 million in additional guarantees under its current plea, it would have only $300 million remaining from the amount originally set up to guarantee loans.

That may not be enough to get it over the hump in the current tough market.

Last year, Chrysler red ink totaled more than $1 billion and it lost about $1.5 billion in the first three quarters of 1980. After showing a small amount of black ink in October, it slipped back into the red and is expected to lose at least $200 million in the fourth (current) quarter.

In fact, Iacocca has said the company will lose $1.7 billion this year.

Some analysts say this means Chrysler could wind up the year with a negative net worth—which means that creditors would own the company and stockholders would have no equity.

Would that leave the company viable? This is an interesting point, because if Chrysler is to win approval of the loan guarantee board for its latest request, it must convince the board of its viability.

Analysts say that if Iacocca is correct in his statement of 1980 losses, the company's net worth probably would fall "below zero" in January.

At the beginning of 1980, shareholders' equity in Chrysler amounted to $1.82 billion.

It has, indeed, been a long year.

breaking news

Subaru flat-six headed for U. S.

TOKYO.—Subaru is rumored to be developing a fuel-injected flat-six displacing about 2 liters for use in its high-line GL sedan in '82. The engine probably will share major components with the current Subaru four-cylinder and may be fitted with a Bosch L-Jetronic system. Sources here say Subaru still has no plans to market diesel cars in the U. S.

Renault top seller in Common Market

ENGLEWOOD CLIFFS, N. J.—In the first 10 months of 1980, Renault was the leading make in the nine-country European Common Market with penetration of 14.1 percent. Renault penetration is 40.7 percent in France, its home market; 38.9 percent in Spain; 10.7 percent in Italy; 5.7 percent in Great Britain, and 4.7 percent in West Germany.

They'll send 400 cars for the ceremonies

U.S. makers to be inaugural movers

By Joseph Bohn
Marketing Editor

Detroit's auto firms will be heavily represented during Ronald Reagan's inaugural ceremonies—if not in person, then through their vehicles.

More than 400 domestic cars are being lent by General Motors, Ford Motor, Chrysler Corp. and American Motors for the Jan. 20 event and various activities in the days preceding it.

The cars—75 each from American Motors and Chrysler, 135 from Ford and 150 to 160 from GM— will arrive about Jan. 10 and be released Jan. 31, according to Robert Mann, director of the transportation committee of the Presidential Inaugural Committee.

The cars will be driven by military personnel as a safeguard precaution.

They'll be used to ferry out-of-towners around for tours of inaugural facilities and for general transportation to other events. Some will be featured in a parade.

For Detroit, it's a return to a tradition that was broken in 1976 when President Carter elected to use cars from the government's fleet rather than requesting companies outside to supply them.

- There's a colorful assortment of vehicles coming from Detroit. American Motors, for example, is supplying 75 Eagles; Chrysler, 60 K-cars, 10 LeBarons and five Ramchargers. General Motors is supplying 30 Cadillac deVille Broughams and an assortment of vehicles from other divisions.

A Ford spokesman said there would be a variety of models provided.

The cars are turned in and sold by the companies after the event.

For Detroit, it's the equivalent of a monetary contribution to the Inaugural Committee.

Many firms were asked by the Inaugural Committee to "provide funds or other assistance, and the committee was particularly interested in in-kind contributions from the major auto firms to assist in its transportation needs," a Ford spokesperson said.

"The cost to Ford is in the neighborhood of the amount requested of all the firms through a letter—about $50,000," the spokesperson added.

"The presidential inauguration is a national event. As corporate citizens, we felt it was worthy of our support and agreed to comply with the request. Obviously, our vehicles are going to be visible and that certainly is a plus," the spokesperson added.

Said a GM spokesman, "This is a national event. This committee asked GM, and we want to be part of it."

With the presence of so many domestically built cars in the capital, Detroit is at least getting off to a better start with the new administration than it did four years ago.

Inaugural Eagles

Charles Johnson, general plants manager of American Motors' Assembly Division, Kenosha, gives the "thumbs up" signal for the first shipment of Eagles to Washington, D. C., for the Presidential Inaugural activities. AMC is providing 75 Eagles for the activities.

Pharis joins Chief as industry liaison

GRAND ISLAND, Neb.—Robert J. Pharis, retired manager of service requirements for General Motors, has reentered the automotive industry as special liaison and product consultant for Chief Automotive Systems, Chief Industries, Inc.

Pharis will be responsible for the dissemination of advanced technical information through personal appearances at trade group seminars, workshops and expositions. Speaking engagements may be arranged by contacting Chief Industries.

Alfa considers aluminum, fiberglass for new models

By Kathleen Hamilton
News Editor

ROMULUS, Mich.—Alfa Romeo is considering aluminum and fiberglass for the skins of its new models that are scheduled to appear in the U. S. by 1985.

The disclosure came during a press conference called by Alfa during its U. S. shopping trip that included a stop at Synthetex, Inc., a fast prototype builder here.

Alfa has a long tradition of aluminum—forged, for engines and mechanicals, and cast, for bodywork on its race cars.

And since Alfa has no intention of trading its performance image for the mass market in the U. S., the added cost of aluminum may be only a minor deterrent

If a contract is signed with Synthetex, the Michigan firm would build static renditions of facelifted Alfas and the forthcoming new models which are being designed in Italy.

The international approach is a new one for the auto maker, which is owned by the Italian government. Company officials stopped at Budd Co., presumably to check out its preproduction and design services, and have been shopping for electronic componentry in Japan.

All this follows on the heels of Alfa's recent consummation of a joint venture with Nissan which is to produce 60,000 cars a year in Italy beginning in the 1984-85 model year.

That car won't be brought to the U. S.

Plans call for a new Spider—the current one is a two-seat Pininfarina-bodied convertible—and a new GTV—a performance coupe—for the U. S. by '85. Facelifts in '83 will tide the company over until then.

The Spider's basic body style dates back to '66, the GTV's, to '74.

The forthcoming new models—and the facelifts to a lesser extent—will attempt to Americanize the cars by adding power options and increasing interior dimensions to accommodate the larger Americans.

There are no definite plans to bring the Alfasud to America, although the company is looking at a mid-engine version as a potential U. S. offering.

It looks as though the first two cars for the U. S. will be two-seaters — "very high performance, very deluxe" and positioned against the Porsche 924 Turbo, according to Joseph R. Dent, chief executive officer of Alfa's U. S. operation.

Subsequent models may compete with the mass-produced Japanese sports cars, he said.

Other types of tires decline

Glass-belted radials posted gains in 1980

By Joseph Bohn
Marketing Editor

Domestic auto makers shifted to a heavier use of fiberglass-belted radial tires on 1980 models, while steel-belted and bias-belted tires declined in popularity, an AUTOMOTIVE NEWS survey revealed.

Glass-belted radials accounted for a little over one-fourth of the tires installed on '80 model domestically built cars. However, there are some strong philosophical differences between companies using them.

Ford Motor Co. continued to shun these lower priced tires in favor of 100-percent use of steel-belted radials on its '80 product line. Volkswagen did the same. However, glass radials continued to gain favor at General Motors and Chrysler.

Industrywide, glass radials were installed on 1,891,158 cars, equal to 26.47 percent of production. That was up from a 16.93 percent penetration, or 1,581,983, in '79.

General Motors installed the tires on 1,192,848 cars, equal to 26.01 percent of its output. That was up sharply from 598,293, or 11.61 percent, in '79.

Chrysler Corp. installed the tires on 621,580 cars, equal to 81.23 percent of production. That compared with 82.04 percent, or 931,971 cars, in '79.

American Motors installed the tires in 76,730 cars, or 38.78 percent of its production. That was up sharply from 51,729, or 30.53 percent, in '79.

As indicated, Ford Motor and Volkswagen didn't offer this type of tire in either the '80 or '79 model years.

- Meanwhile, steel-belted radials dropped to 4,927,895, or 68.97 percent, of production. That was down from 7,029,705, or 75.22 percent, in '79.

GM installations totaled 3,153,571 cars, equal to 68.77 percent of production. That was down from 4,292,555, or 83.28 percent, in '79.

Ford Motor installed steel radials on its total production of 1,373,582 cars, down from 2,469,737 in '79 because of a big drop in Ford's total production.

Chrysler Corp. installed steel radials in 193,673 cars, equal to 18.77 percent of production. That compared with 113,028, or 9.95 percent, in '79.

American Motors installed them in 36,035 cars, equal to 18.21 percent of production. That compared with 26,671, or 15.74 percent, in '79.

Volkswagen installed them in 221,034 domestically built Rabbits, equal to 99.00 percent of its production. That compared with 127,714, or 96.10 percent, in '79.

- Bias-belted tires, clearly on their way out, managed to capture a slim 4.56 percent of auto production, ending up in a total of 326,303 cars. That was off from 7.85 percent, or 733,818 cars, in '79.

Ford Motor and Chrysler Corp. didn't offer this type of tire.

But American Motors installed it in 85,012 cars, equal to 43.01 percent of production. That compares with 91,039, or 53.73 percent, in '79.

GM installed this tire in 238,968 cars—all of them the Skyhawk, Sunbird, Monza, Starfire series being phased out to make way for the new J-cars this spring. The replacement models will undoubtedly feature radials as standard equipment. Bias-belted tires accounted for 5.22 percent of GM's output.

In '79, they accounted for 263,464, or 5.11 percent, of production at GM.

Volkswagen installed the low-priced tires in 1.00 percent of its Rabbits, equal to 2,233. That compared with 5,108, or 3.80 percent, in '79.

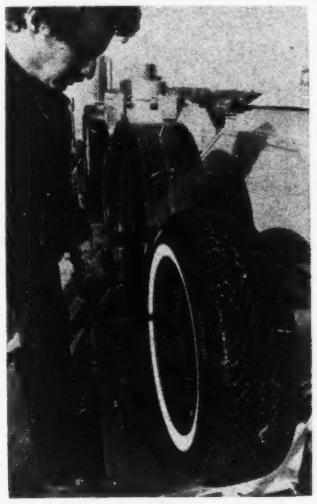
NOTE: Installation numbers are based on U. S. car production only, with the exception of Chrysler's Cordoba and Mirada which were sourced in Canada only. The '80 production was 7,145,356. This included 4,585,387 for General Motors; 1,373,582 for Ford Motor; 765,253 for Chrysler Corp.; 197,867 for American Motors and 223,267 for Volkswagen.

The Chrysler total includes 34,214 Miradas and 57,479 Cordobas. It excludes 7,846 Caravelles, sourced in the U. S. but sold only in Canada.

Similarly, the GM total excludes 19,651 Acadians, sourced in the U. S. but sold only in Canada.

The Plymouth Voyager, Dodge Sportsman, Ford Club Wagon and Chevrolet Sportvan are no longer included in domestic production, since manufacturers began counting them as trucks in '80.



Arriva tested

An all-season Goodyear Arriva radial tire is bolted onto an outdoor dynamometer at Goodyear's test center in Akron, for its 50,000-mile test for weather cracking.

Marra appointed

DAYTON. — Anthony W. Marra has been appointed vice president engineering and development for Allen Industries. Allen, a subsidiary of Dayco Corp., is a supplier of soft trim interior component parts to the automobile industry.

Ourisman Chevrolet begins its 60th year in business

MARLOW HEIGHTS, Md. — Ourisman Chevrolet has entered its 60th year.

With annual sales topping $61 million, the Ourisman dealership ranks in the elite Top 10 Circle among the nearly 6,000 Chevrolet dealerships nationwide. Since 1921, when the dealership was opened by Benjamin Ourisman, it has sold about 500,000 vehicles.

Now in its third generation of family operation, the dealership is run by Mandell J. Ourisman, the founder's son, assisted by his sons, John and Robert.

Mandell joined his father's business in 1946, following his discharge from the U. S. Navy after World War II.

The Ourisman dealership originally was located at H St., N.E., in Washington, D. C.

Florenz, another son of Benjamin, later ran a second dealership on Nichols Ave., S.E.

Following the elder Ourisman's death, the two brothers merged and together operated the Southeast location.

In 1964, the dealership moved to a suburban location in Marlow Heights. Florenz later left the business to pursue interests in real estate.

"Our pioneering move to Marlow Heights triggered relocations by other car dealers," said Mandell Ourisman. "Eventually more and more dealers came here as they discovered operating in the suburbs could be done more economically and conveniently than in downtown locations. Today, you'll find virtually every new car make represented by a dealership in Marlow Heights."

One of the largest Chevrolet dealerships, Ourisman covers 23 acres, maintaining an inventory of over 2,000 new cars and trucks. With fleet sales comprising a large portion of the business, the company is also presently advancing its position in the lease field. The Ourisman staff totals almost 200.

"One of the biggest changes I've observed in the business over the years is the growing need for college-educated sales personnel who have product, parts and service knowledge," said Ourisman. "This is a reflection of the times in that everything has become more sophisticated and specialized."

The "biggest change" in the car sales industry since World War II has been computerization, he said. Having recently signed a contract for in-plant computer capabilities, Ourisman predicted all large dealers eventually will computerize to provide the fast, efficient service demanded by the buying public.

Other observations and trends he noted were:

1. Service is the prime consideration to persons buying cars today, and those dealerships who cannot satisfy this need are doomed to failure.
2. More women are buying cars now than ever before (divided into two age groups: 18-21 and 35 and older).
3. Consumer buying habits eventually will shift toward more economical cars as gasoline prices continue to rise.

- "Five years ago, full-sized cars accounted for 17 percent of our sales volume," Ourisman said. "This year, that percentage will drop to about 5 percent.

"And later this decade, I see many families having three cars; a full-sized family car, a subcompact vehicle for short trips and an electric car for local transportation," he said. "We will be moving into an era of specialized vehicle sales, and consequently business potential will not be inhibited by the energy crunch."

Used-car sales will continue to be good, he said as long as "quality" used cars are sold.

Production of 6.2 million is 25 pct. below 1979

Year's car output lowest since 1961

By Patricia Hoffman
Staff Writer

U. S. auto production for 1980 is estimated as the lowest for the year since 1961 although the projected December output is up slightly from the same month last year.

Planned output for the year is 6,246,749, down 25.79 percent from the 8,418,369 built last year and the lowest since the 5,522,004 built in 1961.

The projected December output is 464,345, up 2.12 percent from the 454,669 assembled the same month last year.

Even though the December total is up somewhat from last year's projected fourth-quarter bullet of 1,682,992 is down 9.80 percent from the 1979 fourth-quarter output of 1,865,858.

Breakdown for the year is: General Motors, 64.10 percent; Ford, 20.31 percent; Chrysler, 9.85 percent; American Motors, 2.63 percent; Volkswagen of America, 3.07 percent; and Checker Motor, 0.04 percent.

Due to the shortened holiday week last week, planned output of 47,283 was down 60.88 percent from the previous week's 120,871. Due to holiday closing of the assembly plants on Dec. 22 last year, there were no comparable 1979 figures.

The auto makers closed six assembly plants early for the holidays. Checker Motors, Ford San Jose and Chrysler Newark and Jefferson all closed Dec. 12. Chrysler's Belvidere plant went down Dec. 1, and GM's Wilmington point closed Dec. 19.

Chrysler will extend downtime at its Lynch Road point until Jan. 26 and at its St. Louis point until Jan. 19. All other Chrysler points will be down until Jan. 12. Volkswagen of America will also be extending downtime until Jan. 12.

Chrysler reportedly plans to cut production of the K-car when operations resume at its Newark and Jefferson points Jan. 12. Total production of the K-car will be cut 21 percent. The Jefferson plant will reduce production from 1,120 to 800 daily, and Newark will cut its output of 1,120 to 960.

No Saturday overtime was scheduled last week due to the holiday.

All plants are down until after the Christmas holidays. Most will reopen Jan. 5.

Ford to redesign T-Bird for '83

DEARBORN.—Ford Motor Co., in an effort to reverse slumping sales of its sporty Thunderbird and Cougar XR-7 intermediates, plans to completely restyle the cars for the '83 model year. T-Bird and XR-7 were downsized and redesigned just a year ago, but sales have tailed off drastically since then. The cars will stay rear-drive in '83; new front-drive replacements for the mid-size models aren't due until 1986-87.

VW to shut down to trim inventory

DETROIT.—Volkswagen of America will shut down production at its Westmoreland (Pa.) assembly plant and its South Charleston (W. Va.) stamping plant for an additional week after the Christmas break, the first such production cut to control inventories of new cars since VWoA began operations in the U. S. in 1978.

Japan tops U. S. in 1980 vehicle output

DETROIT.—Japan took over first place in motor-vehicle production for 1980 with the U. S. falling to second. Japan won by a wide margin. The Japan Automobile Manufacturers Assn. estimated that Japanese makers built about 11 million cars, trucks and buses for the year. The U. S. total was about 8 million.

Standard & Poor's cuts Chrysler bond rating

NEW YORK.—Chrysler Corp.'s financial crisis has caused Standard & Poor's Corp. to lower its rating on Chrysler debentures to triple-C, its second lowest rating. It is the second time this year that S&P has lowered Chrysler's rating.

Truck production for year dips to lowest since 1964

U. S. truck production for 1980 is estimated as the lowest since 1964, and planned output for December is the lowest since 1963.

Truck output for 1980 is estimated at 1,577,979, down 46.93 percent from the 2,973,498 assembled in 1979. In 1964, domestic truck makers built 1,559,515 units.

The planned December output is 137,613, down 6.56 percent from the 147,289 assembled in 1979. In 1963, the makers built 123,965 trucks.

Last week's scheduled truck output was 15,852 units, a 62.75 percent drop from the previous week's 42,561 because of the shortened holiday week. There were no comparable 1979 figures for last week due to the Dec. 22 plant closings last year.

Fourth-quarter domestic truck output is projected at 462,867, down 17.37 percent from the 560,143 units assembled in the comparable quarter last year.

Chrysler's Warren truck point, down as scheduled for the holidays, will resume operations Jan. 5, but will close for the week of Jan. 12 and will reopen Jan. 19.

No overtime was slated last week due to the holiday.

Auto production in Canada falls to 13-year low

Canadian auto production for 1980 is the lowest since 1967, and December is estimated to be slightly above the same month last year.

The 1980 planned output for cars was 830,624, down 12.09 percent from the 944,933 assembled in 1979. In 1967, the makers produced 714,084 units.

The December estimate of 59,510 is up 1.48 percent from the 58,640 assembled last year.

Canadian truck production for 1980 fell considerably below last year's output and was the lowest for the year since 1976.

The estimated 1980 output of trucks was 506,093, down 23.02 percent from the 657,436 assembled in 1979. In 1976, truck output was 497,430.

The projected December total for this year is 44,098, a 9.95 percent increase from the 40,104 assembled the same month last year.

Last week's scheduled auto production was 6,394 units, down 63.37 percent from the 17,458 assembled the previous week because of the shortened holiday week.

Truck production last week was estimated at 5,116, a 61.17 percent drop from the 13,177 built the previous week also due to the shortened week.

Downtime will be extended after the holidays at two Chrysler plants. Chrysler's Windsor car plant will remain down until Jan. 19, and Chrysler's Pillette Rd. (truck) point will resume operations Jan. 12.

There was no overtime slated last week due to the holidays.

Outlook glum for production in 1st quarter

By Patricia Hoffman
Staff Writer

There is little hope of speedy recovery for the domestic auto industry in early 1981, as many of the makers are forced to continue cutting production because of slumping sales.

Although Ford Motor Co. and Volkswagen of America are making their way into the new year with a jump over last year's figures, the industry as a whole will see little change in first-quarter production from the comparable 1980 period.

The 1980 recession, which dragged auto production for the year down below the 6.3 million mark from 1979's 8.5 million, is expected to continue through the first quarter of 1981. Auto output is scheduled at 1,792,581, down a slight 0.36 percent from the 1,799,108 units built in the corresponding months in 1980, and the lowest since the 1,300,792 assembled in the first quarter in the recession year of 1975.

Breakdown by companies for this quarter is: General Motors, 1,130,000, down 4.39 percent from 1,181,890 last year; Chrysler Corp., 123,934, down 26.67 percent from 169,022; American Motors, 39,875, down 22.34 percent from 51,347, and Checker Motors, 617, down 19.87 percent from 770.

• Ford Motor has scheduled a 26.04 percent increase for the quarter. Planned output is 439,000, up from the 348,313 built a year earlier.

Volkswagen of America also has scheduled an increase with a target of 59,155, up 23.84 percent from 47,766 last year.

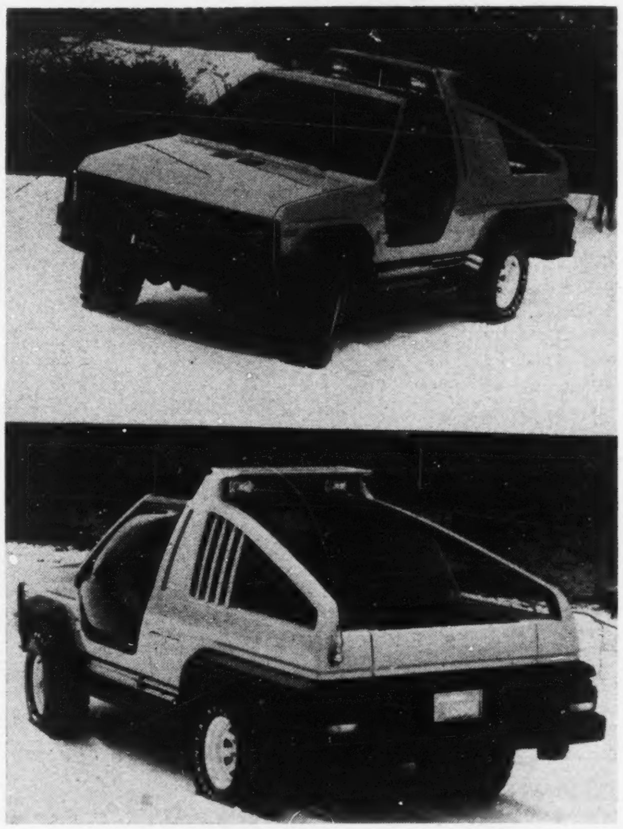
Despite the extended downtime for some auto makers in January, output for the month is scheduled to be up from 1980. Planned output for January is 558,831, up 5.12 percent from the 531,584 units built the same month last year.

The increase is primarily due to downtime at several Ford assembly plants during the entire month of January last year and a strike at VWoA which cut production two weeks that month.

Ford plans a January increase of 68.75 percent from last year's 81,777 to 138,000, and VWoA has scheduled output of 17,335 cars, more than triple last years 5,680.

January forecasts for other companies for this month are: GM, 345,000, down 9.04 percent from 379,305 last year; Chrysler, 45,000, down 5.87 percent from 47,805; AMC, 13,291, down 20.35 percent from 16,688, and Checker Motor, 205, down 10.48 percent from 229.

4x4 Concept



Meet Montana Lobo

This mustard gold-and-black Montana Lobo, a four-by-four vehicle engineered by Ford Design Center, International Studio, Dearborn, claims to take over where most off-road vehicles quit. Features include tinted bubble doors, a sliding glass rear door, integral roll bar, overhead airfoil and side rails with louvered panels. Inside, operational readouts are located on a floating pod and electronic digital instruments are located on an overhead console.

Ford-U.S. deal avoids big recall on transmissions

WASHINGTON. — Ford Motor Co. will not have to recall some 16 million 1972-79 vehicles whose automatic transmissions allegedly slip from Park to Reverse.

The company and the NHTSA reached an agreement on the matter last week. It would have been the most extensive and the costliest recall in history. The potential cost to Ford was estimated at $100 million.

Ford will not have to modify the transmissions. Instead, it will mail owners of the vehicles a sticker to be placed on the instrument panel.

The sticker will warn drivers not to leave the vehicle when the engine is running, to use the parking brake and to make sure the shift lever is placed firmly in the Park position.

This will cost the company $5 million to $10 million, according to a Ford spokesman.

The stickers will be mailed to about 20 million owners of 1970-79 vehicles. As noted, the recall would have involved 16 million 1972-79 cars and trucks. The statutory provisions of a recall have expired on the earlier units.

Ford, Lincoln and Mercury cars and Ford light trucks were included in the long dispute.

Ford Motor, naturally, was delighted with the settlement. In addition to the monetary considerations, the publicity of a recall would have been extremely bad for a company that already has more than its share of problems. Ford lost $1.2 billion in the first nine months of this year, and its full-year loss could reach $1.8 billion.

"We were very pleased with the resolution (of the matter," a Ford spokesman said. "We have said throughout that there is no defect in our vehicles, and we're very pleased that the investigation has been dropped."

Ford agreed to send out the stickers, he said, because "we believe that unexpected vehicle movement can be avoided though drivers' observing these longstanding safety rules and because we believe this is an appropriate way of resolving this matter with NHTSA."

At presstime, there had been no comment from Joan Claybrook, NHTSA chief, on the dropping of the investigation. There were reports that NHTSA's bid for a recall was overruled by Transportation Secretary Neil Goldschmidt and members of his staff.

Ford has been fighting the possible recall strenuously. The company's counsel in the proceedings before NHTSA was William T. Coleman Jr., a former Secretary of Transportation.

• NHTSA has been investigating the Ford vehicles for more than three years trying to decide whether the design of the Ford automatic shift mechanism is responsible for the vehicle's alleged tendency to slip from Park to Reverse without warning or whether it is the car owner's negligence.

Last June, in the face of more than 23,000 complaints from Ford owners and 98 fatalities attributed to the problem, the safety agency decided it was Ford's fault and issued its initial defect finding.

Luxury J-car destined for Cadillac-only points

Outlets for Cimarron to be limited

By Joseph Bohn
Marketing Editor

Has Cadillac found a more profitable way to market a car?

In a move that has clearly upset a majority of its dealers, the division is limiting availability of its new luxury small car, the Cimarron, to about 15 percent of the dealer body during spring introduction.

That means only about 250 "exclusive," non-dual dealers out of 1,600 nationally will get a Cimarron to sell. There is no definite date when other Cadillac dealers will get the car, according to a factory letter to franchisees.

The Cimarron, which is expected to be priced at about $12,500, is Cadillac's version of the General Motors subcompact J-car. The J will also be marketed by Chevrolet as the Cavalier and by Pontiac as the J-2000.

The new small car will be billed as "Cimarron by Cadillac." Whether this is a subtly sufficient change to enable GM to get around its franchise agreement with Cadillac dealers is a moot point.

Only 15,000 Cimarrons will be built in the first April-October run, and 30,000 from April to December, 1981.

Chuck Crissman, Wilson-Crissman Cadillac, Birmingham, Mich., is among the fortunate few who qualify for the car from day one. He agrees with Cadillac's position that dealers who haven't dualed with any other make, need more financial support.

"This is an opportunity, a good show on the division's part, to those dealers who have been loyal," Crissman said. "I think dealers who stood by Cadillac and did not dual with foreign makes deserve a shot at that market . . . They haven't had anything to sell in that price range."

Dana Martin, Martin Cadillac, Los Angeles, also gets first crack at the Cimarron. He said that "maybe it's true that single-line dealers are hurting the most. Maybe there's a good rationale for giving them the car."

But, generally, he feels, "If you have Cadillac on your door, you should have access to the vehicle . . . Any franchised dealer should have the opportunity to have the vehicle.

"I'll benefit by the exclusive

breaking news

Isuzu to build version of GM's J-car

DETROIT. — Isuzu Motors, Ltd., will build a version of General Motors' new J-body subcompact in Japan beginning late this year or early 1982, a GM source confirmed. The Isuzu-built model will be sold primarily in Japan, though export is a possibility, the source said. Reports from Tokyo said Isuzu would build 5,000 J-cars per month.

Chrysler reports sales up 19.80 pct.

DETROIT. — Chrysler Corp. announced a mid-December sales increase of 19.80 percent and best K-car sales since the introductory period in October. Breaking the tradition of no reports during the industry's Christmas holiday, Chrysler staff released domestic passenger-car sales figures of 19,529, up from 16,301 a year ago. Volkswagen of American Rabbit sales numbered 3,445, down 18.69 percent from 4,237. General Motors and Ford Motor Co. mid-December sales will be released today.

Market penetration tops 30 percent

Registration of imports sets year's 5th record

By Richard A. Wright
Assistant Managing Editor

Registrations of new imported cars in September set a record for the month, the fifth monthly record of the year and the second in a row, according to figures compiled by R. L. Polk & Co.

New import registrations in September totaled 212,429, up 9.45 percent from 194,081 a year earlier. The former record for the month was 199,332, set in 1977.

Import penetration of the September new-car market was 30.26 percent, compared with 22.69 percent a year earlier. Penetration was slightly lower than the record 30.51 percent in August.

For the first nine months of 1980, import registrations totaled 1,898,459, up 7.06 percent from last year.

Imports accounted for 28.88 percent of U. S. new-car registrations in the first nine months, compared with 22.44 percent last year.

- Market shares were little changed from a year earlier, with Subaru posting the biggest advance by taking 5.27 percent of September registrations, up 1.58 percentage points.

Other gainers were Volkswagen, up 1.11 points to 10.73 percent; Honda, up 0.72 of a point to 14.52 percent; Mazda, up 0.07 of a point to 6.31 percent, and Volvo, up 0.02 of a point to 2.63 percent.

The top two import sellers were both down. Toyota took 21.74 percent of the September import market, off 0.81 of a point, while Datsun accounted for 20.00 percent, down 0.37 of a point. Fiesta was also down 0.54 of a point to 2.71 percent.

Rounding out the top 10 imports in September were Mercedes-Benz, which took 2.26 percent, and Arrow, which accounted for 1.81 percent. Neither was in the top 10 a year earlier.

The top 10 imports accounted for 87.98 percent of total import registrations in September, up from 86.59 percent a year earlier. For the first three quarters of the year, the top 10 accounted for 88.63 percent, compared with 86.12 percent last year.

- September registrations of imported cars by country of origin, with year-earlier figures in parentheses, were: Japan, 153,421 (138,447); West Germany, 41,165 (37,483); Sweden, 6,646 (6,316); United Kingdom, 4,536 (3,991); Italy, 3,536 (5,015), and France, 3,125 (2,829).

Registrations of imported cars by country of origin for the first nine months of 1980, with year-earlier figures in parentheses, were: Japan, 1,413,499 (1,227,082); West Germany, 350,158 (386,559); Sweden, 49,312 (52,276); Italy, 34,047 (51,510); France, 26,967 (22,027); UK, 24,468 (33,853), and others, 8 (1).

Registrations of imported trucks in September totaled 50,061, up 38.35 percent from 36,185 a year earlier.

Registrations of imported trucks in September, with year-earlier figures in parentheses, were: Toyota, 13,669 (12,012); Datsun, 10,913 (5,533); Chevrolet LUV, 7,644 (6,976); Ford Courier, 6,845 (5,470), and others, 10,990 (6,194).

The truck import total for the first nine months of 1980 was 407,923, up 12.60 percent from 362,269 last year.

Registrations of imported trucks in the first three quarters, with year-earlier figures in parentheses, were: Toyota, 106,879 (93,804); Datsun, 84,889 (78,589); Chevrolet LUV, 65,484 (73,360); Ford Courier, 57,672 (56,779), and others, 92,999 (59,737).

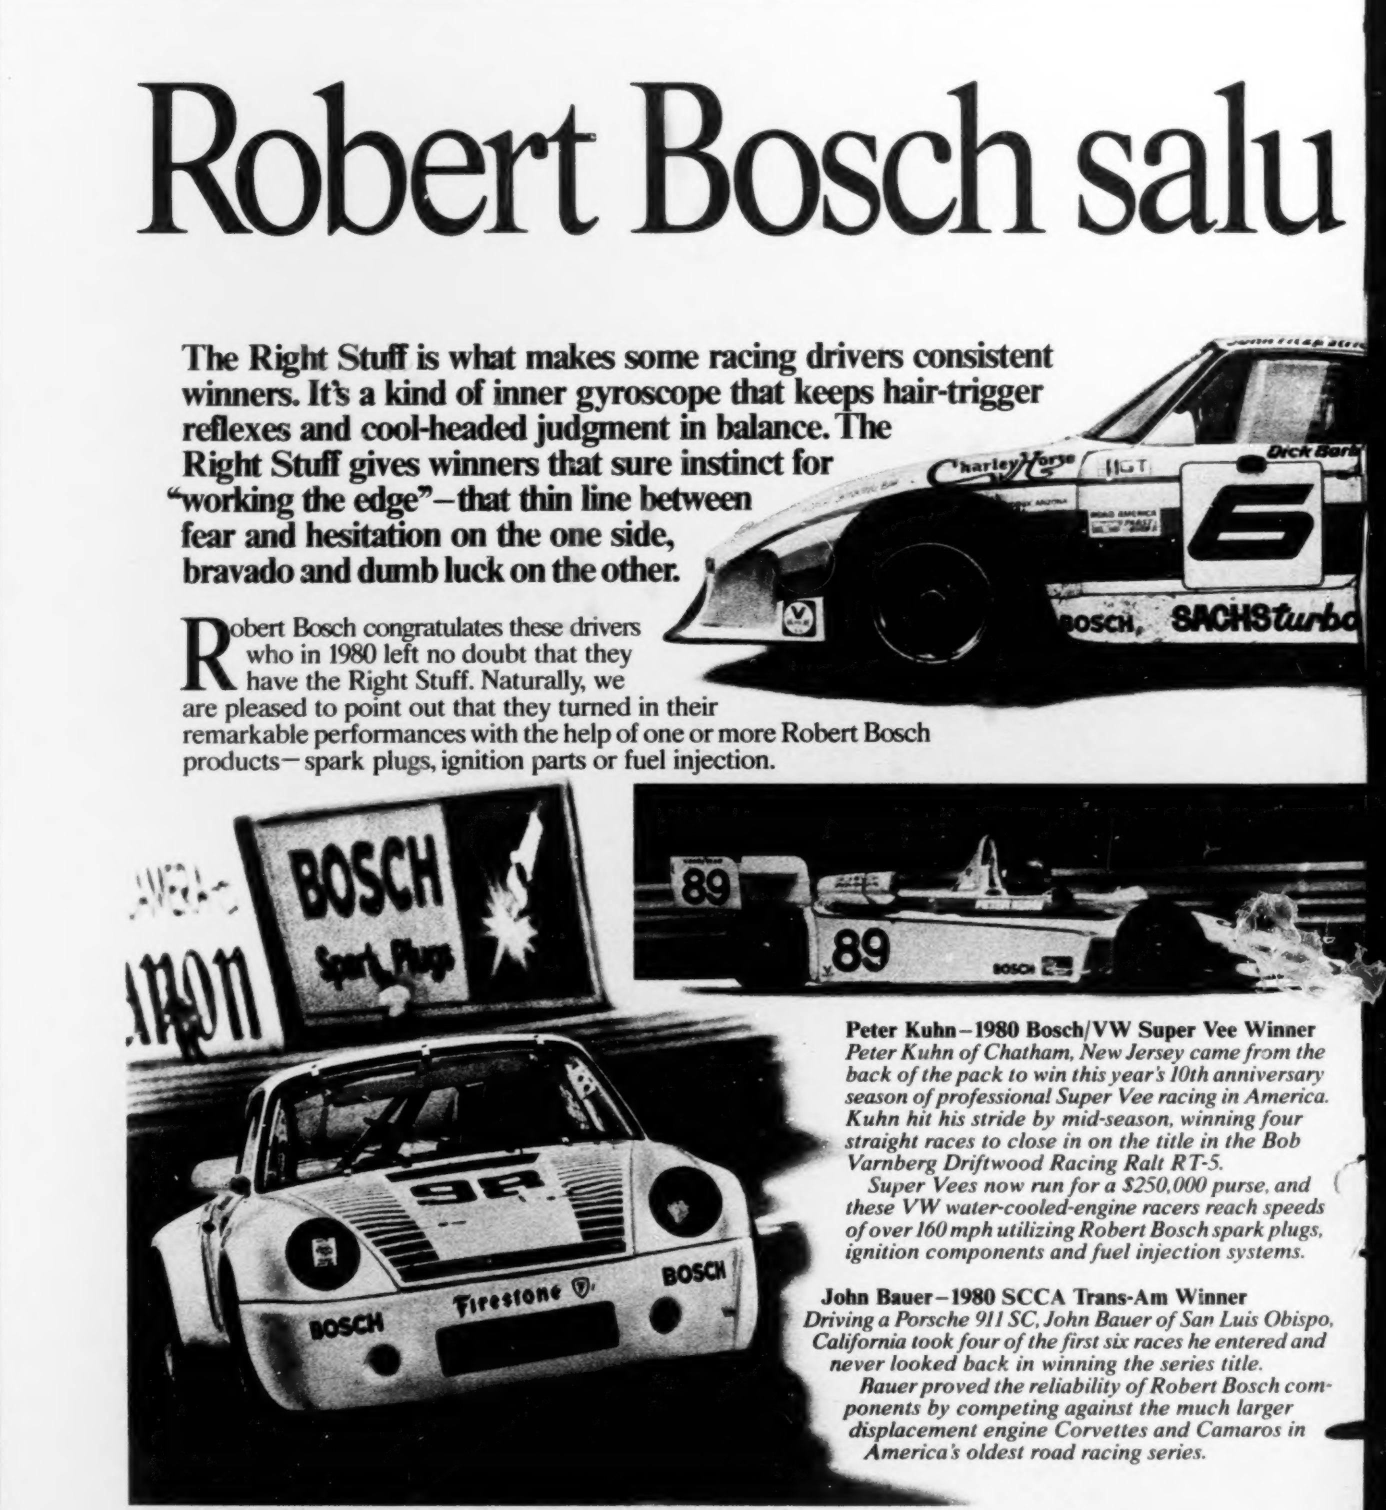
Detroit Diesel recalls 20,000 'Fuel Pinchers'

DETROIT. — Recall of about 20,000 of its 8.2 liter Fuel Pincher diesel engines has been announced by the Detroit Diesel Allison Division. The engines are used in certain 1980 and 1981 medium trucks and school-bus chassis.

The recall is to correct two conditions which DDA said could cause the throttle to become ineffective in controlling engine speed. One results from the engine crankcase becoming overfilled. The other results from a possible separation of the governor linkage lock.



Robert Bosch salu

The Right Stuff is what makes some racing drivers consistent winners. It's a kind of inner gyroscope that keeps hair-trigger reflexes and cool-headed judgment in balance. The Right Stuff gives winners that sure instinct for "working the edge"—that thin line between fear and hesitation on the one side, bravado and dumb luck on the other.

Robert Bosch congratulates these drivers who in 1980 left no doubt that they have the Right Stuff. Naturally, we are pleased to point out that they turned in their remarkable performances with the help of one or more Robert Bosch products—spark plugs, ignition parts or fuel injection.

Peter Kuhn—1980 Bosch/VW Super Vee Winner
Peter Kuhn of Chatham, New Jersey came from the back of the pack to win this year's 10th anniversary season of professional Super Vee racing in America. Kuhn hit his stride by mid-season, winning four straight races to close in on the title in the Bob Varnberg Driftwood Racing Ralt RT-5.

Super Vees now run for a $250,000 purse, and these VW water-cooled-engine racers reach speeds of over 160 mph utilizing Robert Bosch spark plugs, ignition components and fuel injection systems.

John Bauer—1980 SCCA Trans-Am Winner
Driving a Porsche 911 SC, John Bauer of San Luis Obispo, California took four of the first six races he entered and never looked back in winning the series title.

Bauer proved the reliability of Robert Bosch components by competing against the much larger displacement engine Corvettes and Camaros in America's oldest road racing series.

Chevy's minitruck entry

This Chevrolet S-10 minipickup is scheduled to arrive in showrooms next fall. A rear-drive model, it is destined to replace the Chevrolet LUV, which is now imported from Japan. A similar model will be sold by GMC dealers.

Auto crisis given priority by incoming DOT chief

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — President-Elect Reagan's choice for the Department of Transportation said last week he would try to pick up where outgoing Secretary Neil Goldschmidt left off in his dealings with the U. S. auto industry.

Drew Lewis said at his confirmation hearing the auto industry crisis was at the head of the list of problems the incoming Reagan Administration wants to tackle. He said it was his hope that he would be leading the Administration's effort, much as Secretary Goldschmidt had done in the Carter Administration. Responding to a question from Michigan Democratic Senator Donald Riegle, he admitted, however, the decision would be up to Mr. Reagan.

Nonetheless, he said, "Whether I or someone else in the Administration leads the effort the crises in the domestic auto industry will be addressed, and addressed immediately. We don't have time for leisurely studies in dealing with this problem."

He said the Reagan Administration would have its auto policy in place within days of taking office, but he said he could give no specifics of the policy. He did say, however, that the Administration will be looking at imports, safety requirements, interest rate levels and government-sponsored loans in developing that policy.

Clearly, in some safety areas, regulation has hit the law of diminishing returns, and obviously reductions in red tape and regulations can be made, he said.

• Lewis, a Harvard trained Philadelphian, sought to reassure some on the Senate Commerce Committee that the auto industry will not be getting the hard-nose treatment being intimated for other sectors of the economy. He said its needs "required special attention" and that a sector of the economy so vital to the well-being of the country was not going to be left to the wolves because of a philosophical bent to free enterprise.

"We're not going to stand on philosophical principle and watch a company like Chrysler or the whole of the auto industry go belly up if reasonable solutions are available," he said.

"This Administration will be flexible."

Lewis is expected to be confirmed without a hitch if the easy questioning of him by the Commerce Committee is any indication.

On other matters related to the auto industry, he said he favored giving back to the states the right to set their own speed limits, though he himself favored it for safety reasons.

He said the U. S. should also make a final decision to finish the parts of the interstate highway system that can reasonably be finished and walk away from those that clearly cannot.

For the past 10 years, Lewis has served as a trustee of Reading Co., which operates the Reading railroad. He has been the Republican National Committeeman from Pennsylvania since 1976. His transportation experience has been almost exclusively mass transit.

Domestic models due within two years

Four new minitrucks on the way

By Paul Lienert
Contributing Editor

The continuing fuel crunch, a stiff 25-percent tariff on imported trucks and the release of tough new fuel-economy standards for light trucks appear to be the major incentives behind plans to launch at least four new American-built minitrucks in the next two years.

Most of the small pickups sold in the U. S. today come from Japan, while only one, the Volkswagen Pickup, is produced in the States.

That situation will change dramatically next year when General Motors, Ford Motor Co. and Chrysler Corp. all introduce new U. S.-built minitrucks. Nissan will begin U. S. truck assembly in '83, and there is talk that Toyota and Honda are seriously contemplating similar moves in the next two to three years.

Following are current U. S. minitruck programs in the works for 1982-83:

1. GM will unveil its new S-10 minitruck in the fall of '81. A rear-drive model, it will be sold by Chevrolet and GMC dealers and eventually will replace the LUV, which Chevy now imports from Isuzu Motors. The S-10 truck will be assembled in Dayton, O., and Shreveport, La. A four-wheel-drive option will be added in '83, and a diesel is rumored for '83 or '84.

2. Ford plans to begin building its new Ranger minitruck in Louisville in early '82. The Ranger ultimately will replace the Courier, which Ford now gets from Toyo Kogyo. Like the GM S-10, the Ranger is a rear-drive model, with a four-wheel-drive version in the works for '83. Ford may install Toyo Kogyo diesels in the Ranger, too, in '83.

3. Chrysler is planning to launch its 110 minitruck next fall. The 110 is derived from the front - wheel - drive Omni/Horizon two-door models and will offer a choice of 1.7-liter or 2.2-liter fours.

The company is said to be working on a larger FWD minitruck, based on its compact K-cars, but introduction is at least two years away. Chrysler also is still negotiating with its Japanese affiliate, Mitsubishi Motors, to assemble the imported Dodge D-50 and Plymouth Arrow trucks in the U. S. in '83.

4. Nissan recently announced plans to open a new $350-million truck assembly plant outside Nashville in '83. The Japanese firm will build Datsun pickups in the U. S. in order to skirt the 25-percent tariff levied on imported trucks.

Toyota had been discussing joint assembly of subcompact cars with Ford, but now talks between the two firms reportedly have centered around U. S. production of some Toyota commercial/utility vehicles, including a minivan.

Honda is said to be consider-

Reagan team to shift emphasis at NHTSA

WASHINGTON. — Emphasis at NHTSA under the Reagan Administration is likely to shift from the vehicle to the driver.

A Reagan transition team document says the agency has "effectively exhausted its ability to increase automobile safety at reasonable social costs, although there may be opportunities to improve the competence of drivers."

Before concluding that all future actions need careful examination, it says: "While there is no loud clamor from the auto industry to undo NHTSA's past regulatory action, neither does it appear that NHTSA's new actions would have a favorable benefit/cost ratio."

The new initiatives emphasized by outgoing NHTSA chief Joan Claybrook include side impact protection, structural improvements, padding to protect unrestrained children and pedestrian protection.

The Reagan transition team focuses on three current actions as warranting early, careful study.

One is the passive restraint standard mandating either airbags or automatic belts which the Reagan team thinks becomes effective in 1983. Actually, its three-year phase-in starts September, 1981, for '82-model full-size cars. Intermediates then follow a year later, and small cars a year after that.

Reason given by the transition team is "to avoid unjustifiable expenses by manufacturers and, in turn, consumers."

The team would also like the criteria for recall to be looked at promptly. It notes recalls have expanded "many fold" in Claybrook's tenure and "may have passed way beyond a reasonable cost-effective limit."

The third area to be reexamined is post-1985 fuel-econ-

breaking news

Chrysler cutting orders for Mitsubishi engines

DETROIT. — Chrysler Corp. is "substantially reducing" orders for Mitsubishi-built 2.6-liter K-car engines as part of an inventory adjustment program. The adjustment became necessary when K-car sales in November lagged and stocks grew. K-car sales in December rebounded, but the engine inventory still needed adjustment for the earlier lag, the company said.

Goodrich to quit OE car-tire market

AKRON.—B. F. Goodrich Co. said last week it will abandon the original-equipment passenger-tire market, beginning with 1982 models. Goodrich is currently a supplier to Ford Motor Co. and General Motors. Goodrich will continue its private-brand and replacement business, as well as OE for truck, farm and other equipment.

Chrysler K sales move higher

DETROIT.—Chrysler Corp. logged its best K-car selling period in the final 10 days of December, according to Jerry Pyle, vice president sales. For the period, Chrysler sold 1,267 K-cars, up over 11 percent from the 1,135 sold during the introductory period in the first 10 days of October. The last sales period was also a 70-percent rise from the 788 sold during the second 10 days of December.

Ford denies sale of steel operations

DEARBORN.—Thomas C. Page, vice president Diversified Products Operations, Ford Motor Co., denied that "Ford is planning to sell its Steel Division to the Japanese or anyone else . . . We expect our steel production to rise during 1981, along with the auto industry's fortunes." Ford has been holding routine technical discussions with the Japanese, he said.

Car sales lowest since '75; 7 imports shatter records

Jenny L. King
Staff Writer

There was little rejoicing in Detroit last week when new-car sales were totaled and recorded, and what rejoicing there might have been at import headquarters on the East Coast and West Coast was kept quiet.

The industrywide sales sum was 8,973,345, down 15.68 percent from the 10,641,679 sold in 1979. It was the lowest grand total since 1975 when combined sales reached 8,639,120. But it differed vastly from the 1975 figure because it was full of record sales—all of them belonging to the imports.

Tables on Page 41.

Seven of the major imports notched records in 1980, and the import total for the year of 2,395,036 was itself a record, an increase of 2.97 percent over the former record of 2,326,057 set in 1979. The seven records belonged to BMW, Datsun, Honda, Mazda, Mercedes-Benz, Subaru and Toyota.

Imports accounted for a record 26.69 percent of the total market for the year. In light of burgeoning resentment among many Americans toward imports, particularly Japanese-built products, celebrations were not shared outside their immediate families.

The five domestic auto makers reported their lowest sales total in 19 years: 6,578,309, down 20.89 percent from 8,315,622 in 1979. Back in 1961, sales stood at 5,556,102. The daily selling rate for the year was 21,358, down 21.15 percent from 27,087 the preceding year. There were 308 selling days in 1980 compared with 307 in 1979.

• Of the U. S. auto makers, only Volkswagen of America managed to beat its 1979 sales. VWoA was up 6.17 percent for the year, to 177,140 from 166,839. Small-car specialist American Motors suffered the least decline; its sales were down 7.79 percent, to 149,438 from 162,057.

General Motors, dragged down by a very weak December, reported a sales drop of 16.19 percent for the year, to 4,116,482 from 4,911,875. Ford Motor Co. reported the biggest domestic decrease — 30.83 percent. Ford sales numbered 1,475,232 passenger cars, down from 2,132,644 in 1979.

Chrysler Corp. rebounded a bit in December, recording a sales increase for each 10-day period, plus record K-car sales. But its final 1980 sales totaled 660,017, down 29.95 percent from 942,207 a year earlier.

As had been the pattern through most of the year, General Motors averaged more than 60 percent of the domestic market for the 12 months. Its share settled at 62.58 percent, up from 59.07 percent in 1979. Ford sales accounted for 22.43 percent, down from 25.64 percent. Chrysler earned 10.03 percent of the market, down from 11.33 percent. VWoA increased its share to 2.69 percent from 2.01 percent, and AMC had 2.27 percent, up from 1.95 percent.

VW and Buick were the only two U. S. makes to show an improvement in sales in 1980. VW was up 6.17 percent, and Buick squeezed past its '79 total by a 0.82-percent margin. Buick also surpassed Pontiac to become GM's number-three-selling car division behind Chevrolet and Oldsmobile.

Among Chrysler Corp. makes, Plymouth sales were down 22.80 percent, Dodge was down 27.56

Zimmer Motor Car Corp., Pompano Beach, Fla., has introduced this Golden Spirit, designed and engineered by Zimmer. The distinctively styled car has a price tag of $45,900. Production of 300 cars a year is planned.

In appeal to Loan Guarantee Board

Signs point to OK for Chrysler

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Chrysler Corp., whose future has been on a roller coaster ride for the past two years, rolled toward high point last week with the indication from Treasury Secretary G. William Miller that the company's bid for another $400 million in federal loan guarantees would likely be given conditional approval prior to the change in administrations.

Chrysler had been hoping for such an indication because it feared the Reagan Administration might not look with the same amount of sympathy on its problems as the outgoing Carter Administration has.

However, Treasury Secretary-Designate Donald Regan said at confirmation hearings last week that Chrysler's situation is somewhat unique and that he would give the company's request careful consideration.

Regan said that, as a general policy, he objected to the government's bailing out failing companies but that the Chrysler situation "is a special one" since Congress already has agreed to help it.

He said that the auto industry as a whole "must be dealt with on a priority basis" because it is "one of the underpinnings of the economy."

Miller, speaking with reporters following a four-hour meeting of the Chrysler Loan Guarantee Board, said it was his hope that the infusion of money plus the further reorganization of the company and concessions by its union and non-union employes, creditors and suppliers would "allow it perhaps to ally with a foreign maker, where its future clearly lies."

And making a subtle pitch to the incoming Treasury Secretary not to overturn a conditional approval if it is given, Miller said the company's current efforts to reorganize itself outside U. S. bankruptcy laws were preferable to doing it the other way.

Chrysler has said that it will be out of money by the middle of the month if it does not receive the additional loan guarantees.

To get the loan guarantees, however, it must prove to the loan board it can survive as a viable firm and also come up with a matching $400 million.

To satisfy the former requirement, it has submitted yet another reorganization plan and to satisfy the latter, it has asked the UAW for a wage and pension freeze worth $673 million, its suppliers to freeze prices and its creditors to convert the debt into stock.

Miller has said in the past that Chrysler must ally with a foreign maker if it is to survive. With the company's latest crises, that point was made more emphatic than ever at the board meeting, according to a source attending the session. The board insists, in fact, that Chrysler immediately begin a search for such a partner, the source said.

• UAW President Douglas Fraser, also in town for the loan board meeting, said afterwards that while Chrysler's situation is troublesome, the problems were not insurmountable and that the union "has never shirked its responsibility and won't this time."

"If the banks and the dealers ante up, we will too," he said.

Fraser said, however, that even if Chrysler does get the additional funds there will not be a future for the company if the economy does not improve and if interest rates do not decline.

"Chrysler cannot long survive in the present economic climate," he said. "There is a breaking point out there somewhere. Spring, summer, fall, I don't know when, but sometime this year unless we get a turnaround."

Fraser said that in return for concessions from the union Chrysler will be asked to allow the union to share in its profits when the company is once again profitable.

"We tried to tell Volcker (Federal Reserve Board Chairman Paul Volcker) that the auto industry, not just Chrysler, is in desperate trouble," Fraser said, "but we did not hear anything encouraging from him.

"It seems only fair to us that we share in the good times if we share in the bad," he said.

Then sounding his pugnacious best, Fraser cautioned General Motors not to try to renegotiate its contract with the union.

"When they get to be like Chrysler, we might reconsider," he said, "but not until then. Ford, we would have to take a look at, but after we get through with Chrysler they might not want to renegotiate anyway."

Fraser said he thinks Chrysler can still do it, but that the publicity over its current loan request wasn't helping it any.

To that end he suggested to the board that it authorize the company to conditionally draw down all of the $700 million in loan guarantees still available to it.

"If you are going to make an expression of confidence in the company, as granting the $400 million request would be, why not make a real statement with a full $700 million authorization," he said.

"That way the public will have some confidence in the company. Interest rates are not hurting it nearly as much as this continuing concern over its future is."

The Loan Guarantee Board, while sympathetic to this logic, told Fraser that the loan guarantee law prevents it from doing this as Chrysler must have matching funds on hand. At present, Chrysler has only $360 million, he board said.

Miller said the loan board would likely meet again this week on the Chrysler request.

Problems not related to interest rates, Volcker says

It's 'brink of disaster' for dealers

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Jerry Hayes, a Buick-Jeep dealer from Salt Lake City, told the Senate Banking Committee that new-car and truck dealers are "literally on the brink of disaster."

If the country cannot find a better way to control inflation other than forcing up interest rates, then mechanisms must be structured to help the auto and housing industries so they no longer have to shoulder a "disproportionate share of the national sacrifice."

Hayes' testimony followed a lengthy discussion between Paul Volcker, chairman of the Federal Reserve Board, and committee members about the need to coordinate both monetary and fiscal restraints.

The thrust, however, was that the Reagan Administration and the Republicans—fully as much as the Carterites before them—want controls on the supply of money and the independent Federal Reserve Board will continue its present policy.

Interest rates, which are not set by the Reserve Board, behave naturally—that is, they are low when money is abundant and high when it is scarce—except they react to anticipatory forces, rising in an accelerated fashion and now falling in anticipation.

This necessarily impacts most heavily on credit-dependent industries like housing and autos.

• The point which Volcker has made consistently is that inflation must be controlled and that monetary policy is only half the problem. Interest rates will straighten out when Congress controls fiscal policy, perhaps by tax cuts and perhaps by controlling spending through the budget.

But Volcker avoiding giving any advice, no matter how hard he was pressed—saying to the Congressmen that it was their problem, not his. His general feeling was that whether tax cuts were for businesses or for individuals, they should involve incentives and be forward-looking.

Volcker was pressed by Senator Don Riegle, Michigan Democrat, for advice as to how to get off the "roller coaster" of interest rates and credit shortages. Volcker is one of the three voting members of the Chrysler Loan Guarantee Board.

Volcker pointed out the auto industry has not traditionally been sensitive to money supply. Its problems are deep-seated and not directly related to the current interest rates which, however, do directly affect dealers.

He admitted the high prime had not come at a good time for the industry and he sympathized with the "heavy burden" on dealers. But he also said that if the industry had been healthy, it could have taken it.

Riegle disagreed, saying that Volcker underestimated the impact of high interest rates. He cited Chrysler's 7-percent price cut to offset higher rates which resulted in a pickup in sales.

Volcker replied the Chrysler action was to "lower its price"—adding that the price of the K-cars was very high. Volcker

Seven imports shatter records

New-car sales lowest since 1975

Continued from Page 2

percent and Chrysler was down 43.84 percent.

At Ford Motor Co., Ford sales were down 27.94 percent, Mercury was down 35.13 percent and Lincoln dropped 46.90 percent.

General Motors declines included Cadillac down 32.17 percent, Chevrolet down 18.83 percent, Oldsmobile down 13.57 percent and Pontiac down 21.27 percent.

• Top-selling domestic nameplates lined up behind Chevrolet Citation, which grabbed first place with sales of 374,706. Second was Chevrolet Chevette at 373,988, followed by Ford Fairmont at 285,272, Chevrolet Malibu at 267,732 and standard Chevrolet at 261,819.

Oldsmobile Cutlass Supreme was sixth at 258,789, followed by Ford Mustang at 225,290, Oldsmobile Cutlass at 210,784, Buick Regal at 199,207 and Buick Skylark at 175,741.

Only 11 nameplates which were on the market in 1979 reported sales increases in 1980.

Fourth-quarter domestic new-car sales totaled 1,664,574, down 11.18 percent from 1,874,088 for the comparable 1979 period.

December new-car sales included a record for the imports and the lowest domestic total since 1974. Import sales climbed 3.72 percent to 177,658 from 171,279. The domestics dropped 14.91 percent to 471,443 from 554,060. Combined sales numbered 649,101, down 10.51 percent from 725,339 the preceding December.

Imports accounted for 27.37 percent of the December new-car market. Thirteen foreign-car makers enjoyed sales gains for the month, and Honda surpassed Datsun to become the number-two-selling import for December. Toyota continued in first place and recorded a 7.15-percent sales increase.

• Chrysler was the only domestic auto maker to boast a sales increase the final month of 1980.

Chrysler sales were up 10.69 percent, to 63,127 from 57,034.

GM sales dropped 19.16 percent, to 272,004 from 336,462. Ford reported sales of 115,615, down 13.33 percent from 133,398. VWoA was down 13.83 percent, to 11,103 from 12,885, and AMC plunged 32.82 percent, to 9,594 from 14,281.

The daily selling rate in December of 18,132 was the lowest for any month in 1980. It was down 18.18 percent from 22,162 for the same month in 1979.

GM earned 57.70 percent of the December domestic market, down from 60.73 percent in 1979. Ford sales accounted for 24.52 percent, up slightly from 24.07 percent. Chrysler jumped to 13.39 percent from 10.29 percent, while VWoA rose to 2.35 percent from 2.33 percent, and AMC slipped to 2.04 percent from 2.58 percent.

Plymouth reported a 31.26-percent sales improvement for the month, Dodge was up 18.43 percent and Buick was up 2.98 percent.

Chevrolet Citation was the top-selling nameplate in December, with sales of 25,975. It was followed by Ford Escort at 22,097, Chevrolet Chevette at 21,030, Ford Fairmont at 19,664 and standard Chevrolet at 18,532.

Dec. 21-31 sales were a disaster — their lowest since 1953 when the sum was only 122,815. This year's total was 146,435, down 24.42 percent from 193,741. During the period Chrysler leaped to 17.12 percent of the market, GM had 53.44 percent, Ford had 24.27 percent, VWoA had 2.71 percent and AMC had 2.46 percent.

Special report opposes curbs on Japanese autos

WASHINGTON. — With hearings to start this Wednesday on the auto industry by the Senate Finance Trade subcommittee looking into the impact of imports, a report from the Japan - U. S. Economic Relations Group — the so-called "wise men"—says that quotas or other restrictions are not in the interests of either the U. S. or Japan.

This comes at the same time that the the new head of the Senate Finance Committee, Senator Robert Dole, is also opposed to quotas on Japanese cars or other interference with the International Trade Commission decision, which found no injury to the domestics caused by rising imports.

Meanwhile, both Michigan senators are pushing for Presidential negotiation and Senator Carl Levin, citing a new Justice Department letter, says there exists no antitrust barrier to Presidential negotiation.

Although the Reagan Administration and the designate for the trade ambassador — Bill Brock, former chairman of the Republicans—have taken no position, one American from the "wise men" is A. W. Clausen, president of Bank of America and Reagan's appointment to head the World Bank.

This makes the "wise men's" report as close as possible to an official Reagan's position.

The "wise men" say that restrictions on Japanese cars would limit consumer choice, channel demand to less efficient cars, worsen inflation—all while not effectively dealing with unemployment or capital formation problems. Further, the decision on whether or not to make cars in the U. S. should be left to Japanese businessmen.

The report of the "wise men" says the "primary responsibility for expanding U. S. auto sales in Japan rests with the U. S. manufacturers and their representatives in Japan."

New ITT official

TONAWANDA. N. Y.—Robert J. Kick has been named account executive by ITT Aimco. He will be responsible for Aimco products to General Motors worldwide. ITT Aimco's product line includes brake shoes, disk plates, drums, rotors and hub and drums for OEM and the aftermarket.

Equipment survey shows defrosters and defoggers as the only gainers

Buyers skip power options in '80

By Joseph Bohn
Marketing Editor

Power equipment options proved less popular with buyers of 1980 domestic cars, the result of a greater price consciousness and the increasing shift toward smaller cars.

Of the six power equipment options surveyed by AUTOMOTIVE NEWS on domestic cars, only rear window defrosters and defoggers increased their appeal. Down were power brakes, power seats, power steering, power side windows and speed regulating devices.

Rear window defoggers and defrosters ended up on 50.68 percent of domestic cars up from 47.60 percent in '79. The industry installed 3,621,119 of these devices on cars, down from 4,448,179 in '79 because of an overall slump in car production.

Chrysler Corp. led the way by installing defrosters/defoggers in 68.73 percent of its cars, equal to 525,977 units. That was up from a 60.69 percent penetration, equivalent to 689,418 units, in '79.

The fact that rear defroster/defoggers were standard on Omni and Horizon, which accounted for a greater percentage of Chrysler production, helped push Chrysler's total up.

At American Motors, rear defoggers/defrosters accounted for 52.63 percent of company production, equal to 104,145 units. That was up from 45.43 percent, or 76,968, in '79.

General Motors followed, with an installation rate of 47.98 percent, equal to 2,200,267. That was up from 45.51 percent, or 2,345,924, in '79.

At Ford Motors, the options ended up on 42.94 percent of cars, equal to 589,790 units. That compared with a 43.85 percent, or 1,207,051, in '79.

Volkswagen installed rear defroster/defoggers in 90.00 percent of its domestic Rabbits, equal to 200,990 units. That was down from 96.90 percent, or 128,818, in '79.

- Power steering, still the most popular option in the group, nonetheless declined in popularity.

The option ended up on 83.83 percent of odmestic cars, equal to 5,989,989 units. That was down from 89.46 percent, or 8,360,703, in '79.

American Motors equipped 90.61 percent of its cars with power steering, equal to 179,280 units. That was up from 89.41 percent, or 151,493, in '79.

General Motors had an 87.55 percent installation rate, equal to 4,014,660 units. That was down from 91.96 percent, or 4,740,059, in '79.

Ford Motor equipped 87.49 percent of its cars with power steering, equal to 1,201,684 units. That was down from 91.68 percent, or 2,524,044, in '79.

Chrysler Corp. equipped 77.67 percent of its cars, a total of 594,365, with power steering. That was down sharply from 83.20 percent, or 945,102, in '79.

VW didn't offer power steering on its Rabbits.

Power brakes, which rival power steering's popularity, likewise declined on 1980 models.

Industrywide, 81.87 percent of domestic cars carried this option compared with 85.49 percent in '79. The total was 5,850,171 compared with 7,989,472 in '79.

Volkswagen equipped 100 percent of the 223,267 domestic Rabbits with power brakes in '80, compared with 94.60 percent, or 125,729, in '79.

At GM, power brakes ended up on 84.95 percent of cars, equal to 3,895,199 units. That was off from 90.10 perecnt, or 4,644,078, in '79.

At Ford Motor, the feature was installed up on 83.34 percent of cars, equal to 1,144,774 units. That compared with 83.19 percent, or 2,290,263, units in '79.

Chrysler Corp. installed power brakes on 62.09 percent of its cars compared with 74.37 percent in '79. Altogether, some 475,117 cars carried power brakes compared with 844,869 in '79.

American Motors installed them on 56.51 percent of its cars, equal to 111,814 units. That was up from 49.89 percent, or 84,533, in '79.

Speed regulating devices also were down.

Industrywide, they accounted for 2,286,091 cars, equal to 31.99 percent of production. That compared with 3,612,300, or 38.65 percent, in '79.

General Motors installed speed controls on 1,681,497 cars, equal to 36.67 percent of its production. That was off from 2,224,672, or 43.16 percent, in '79.

Ford Motor installed speed regulators on 404,439 cars, equal to 29.44 percent of production. That was off from 964,956, or 35.05 percent, in '79.

Chrysler installed them in 171,261 cars, equal to 22.38 percent of production. That was off from 400,921, or 35.29 percent, of its '79 production.

American Motors installed them in 28,894 cars, equal to 14.60 percent of production. That was up from 21,571, or 12.73 percent, in '79.

Volkswagen didn't offer the option on either its '80 or '79 U. S.-built Rabbits.

Power side windows also continued losing popularity.

Industrywide, they ended up on 1,536,314 cars, equal to 21.50 percent of produtcion. That was off from 2,636,050, or 28.21 percent, in '79.

GM installed power side windows on 1,189,661 cars, equal to 25.94 percent of production. That was off from 1,808,018, 35.08 percent, in '79.

Ford Motor installed them in 247,701 cars, equal to 18.03 percent of production. That was off from 645,454, or 23.45 percent, in '79.

Chrysler Corp. installed them in 86,574 cars, equal to 11.31 percent of production. That was off from 179,922, or 15.84 percent, in '79.

American Motors installed them in 12,378 cars, equal to 6.26 percent of production. That was up from 2,656, or 1.57 percent, in '79.

Industrywide, some 1,072,615 cars, or 15.01 percent of production, were equipped with power seats. That was down from 1,776,000, or 19.00 percent, in '79.

GM installed the option on 803,942 cars, equal to 17.53 percent of production. That was off from 1,134,101, or 22.00 percent, in '79.

Ford Motor installed power seats in 199,866 cars, equal to 14.55 percent of production. That was down from 499,574, or 18.15 percent, in '79.

Chrysler Corp. installed the option in 65,542 cars, equal to 8.56 percent of production. That was down from 142,325, or 12.53 percent, in '79.

American Motors installed power seats in only 3,265 cars, equal to 1.65 percent of production. Still, that was an improvement over '79 when the company didn't offer the option at all.

NOTE: Installation numbers are based on U. S. car production only, with the exception of Chrysler's Cordoba and Mirada which were sourced only in Canada. The '80 model year production was 7,145,356. This included 4,585,387 for General Motors; 1,373,582 for Ford Motor; 765,253 for Chrysler Corp.; 197,867 for American Motors and 223,267 for Volkswagen.

The Chrysler total includes 34,214 Miradas and 57,479 Cordobas. It excludes 7,846 Caravelles, sourced in the U. S. but sold only in Canada.

Similarly, the GM total excludes 19,651 Acadians, sourced in the U. S. but sold only in Canada.

The Plymouth Voyager, Dodge Sportsman, Ford Club Wagon and Chevrolet Sportvan are no longer included in domestic production, since manufacturers began counting them as trucks in '80.

The Backwall Storage System for Pick-Up Trucks

- Features built-in storage pockets to organize all your travel needs
- Ideal for: Maps, books, games, thermos, guns, fishing rods, tools, etc.
- Made of fade-resistant, non-raveling polypropylene velour
- Custom tailored to fit along back wall
- Won't stretch out of shape
- Insulates against heat & cold
- Available in 5 attractive colors
- Meets Federal Standard Code #302

SuperStor
Eliminate clutter with this revolutionary new pocket liner!

AUTO DEALERS:
SIGN UP FOR PROFITS

Maaco AUTO PAINTING & BODYWORKS

A MAACO Auto Painting & Bodyworks franchise at your location means:

- You'll increase service profits *now* from people who are keeping their cars longer…
- You'll create greater loyalty as customers get used to turning to you for *all* their automotive services. This means new car sales, too, when they buy…
- Your customers will give you a more salable car at trade-in time.

If you don't have a body shop now…
Or if you have a body shop that doesn't provide the profit and service image that you want…
Consider the advantages of teaming up with the world's largest auto painting and bodyworks franchise!

But demand dips for tape players, CBs

Factories get more of radio market in '80

By Joseph Bohn
Marketing Editor

Detroit is doing a better job of selling its radios through its dealer network, a survey of '80 model installation rates reveals.

Penetration by Detroit auto firms in the AM, AM/FM stereo radio categories was up for '80, indicating Detroit is doing a better selling job against independent manufacturers.

Demand for the tape players and CB radios was down last year, the survey revealed. That may be the result of tougher economic times signalling a greater buyer frugality. It is also due, however, to slumping sales of luxury cars, where the combination radio/tape players, for example, are in greatest demand.

Overall, AM radios ended up in 38.13 percent of domestic cars last year, up from 30.60 percent in '79. Some 2,724,639 cars carried this basic type of radio compared with 2,859,457 in '79.

At General Motors, AM radios went into 39.90 percent of its cars, equal to 1,829,400 units. That was up from 30.56 percent, or 1,575,253, in '79.

Ford Motor installed AM radios in 447,540 cars, equal to 32.58 percent of production. That compared with 730,692, or 26.54 percent, in '79.

Chrysler installed them in 292,463 cars, equal to 38.22 percent of production. That compared with 451,425, or 39.74 percent, in '79.

American Motors installed them in 90,489 cars, equal to 45.73 percent of production. That was up from 66,373, or 39.17 percent, in '79.

Volkswagen installed them in 64,747 domestic Rabbits, equal to 29.00 percent of production. That compared with 35,714 or 26.90 percent in '79.

- AM/FM monaural units accounted for 12.99 percent of industry production, about equal to their 12.76-percent penetration in '79. Altogether, the industry installed 927,852 AM/FM radios in its domestic models, compared with 1,192,666 in '79.

At GM, AM/FM radios accounted for 558,193 cars, or 12.17 percent, of production. That was comparable to the 12.43 percent penetration, or 640,515 cars, of '79.

Ford Motor installed AM/FM units in only 91,035 cars, equal to 6.63 percent of production. That compared with 195,984, or 7.12 percent in '79.

Chrysler Corp. installed them in 196,015 cars, equal to 25.61 percent of production. That compared with a 25.94 percent penetration, or 294,657 units, in '79.

American Motors didn't offer AM/FM monaural radios on '80 models, repeating its pattern of the previous year.

VW installed these radios in 82,609 cars, equal to 37.00 percent of production. That compared with 61,510, or 46.30 percent, in '79.

- AM/FM stereo radios increased their penetration industrywide to 29.13 percent, compared, with 25.44 percent, in '79. Altogether, some 2,081,704 cars carried these units, compared with 2,377,241 in '79.

GM installed the stereo units in 1,528,113 cars, equal to 33.33 percent of production. That was up sharply from 27.27 percent, or 1,405,365, in '79.

Ford Motor Co. installed the radios in 344,985 cars, equal to 25.12 percent of production. That compared with 635,473, or 23.08 percent in '79.

Chrysler installed the stereo radios in 130,303 cars, equal to 17.03 perecnt of production. That was down from 269,784, or 23.75 percent, in '79.

American Motors installed stereo radios in 40,348 cars, equal to 20.39 percent of production. That compared with 38,393, or 22.66 percent, in '79.

Volkswagen installed these units in 37,955 cars, equal to 17.00 percent of production. That compared with 28,226, or 21.20 percent, in '79.

Installations of tape players totalled 942,989 industrywide, equal to 13.20 percent of production. That was down from 16.85 percent, or 1,574,672, in '79.

GM's installations of tape players, both eight tracks and cassettes, totaled 695,182, or 15.16 percent of production. That was down from 926,230, or 17.97 percent, in '79.

Ford Motor installed tape players in 186,224 cars, equal to 13.56 percent of production. That was down from 559,617, or 20.33 percent in '79.

Chrysler Corp. installed the tape players in 37,866 cars, equal to 4.95 percent of production. That was off sharply from 86,011, or 7.57 percent, in '79.

American Motors installed them in 5,856 cars, equal to 2.95 percent of production. That was up from 552, or 0.33 percent, in '79.

Volkswagen installed tape decks in 17,861 cars, equal to 8.00 percent of produtcion. That was up from 2,262, or 1.70 percent, in '79.

CB radios continued to lose popularity with most car buyers. Industrywide, CBs ended up on 118,898 cars, equal to 1.66 percent of domestic production. That compared with 288,684, or 3.09 percent, in '79.

GM installed CB units in 86,899 cars, equal to 1.90 percent of production. That was down from 211,414 or 4.19 percent, in '79.

Ford Motor installed CBs in 24,171 cars, equal to 1.76 percent of production. That was down from 69,657, or 2.53 percent, in '79.

Chrysler Corp. installed them in 4,492 cars, equal to 0.58 percent of production. That was down from 7,215, or 0.64 percent in '79.

American Motors installed them in 3,336, or 1.69 percent of production. That was up from 398, or 0.24 percent in '79.

Volkswagen didn't offer a CB unit on its '80 model Rabbits.

NOTE: Installation numbers are based on U. S. car production only, with the exception of Chrysler's Cordoba and Mirada which were sourced in Canada only. The '80 production was 7,145,356. This included 4,585,367 for General Motors; 1,373,582 for Ford Motor; 765,253 for Chrysler Corp.; 197,867 for American Motors and 223,267 for Volkswagen.

The Chrysler total includes 34,214 Miradas and 57,479 Cordobas. It excludes 7,846 Caravelles, sourced in the U. S. but sold only in Canada.

Similarly, the GM total excludes 19,651 Acadians, sourced in the U. S. but sold only in Canada.

The Plymouth Voyager, Dodge Sportsman, Ford Club Wagon and Chevrolet Sportvan are no longer included in domestic production, since manufacturers began counting them as trucks in '80.

AOT restructured at top; Minshall to be chairman

MIDLAND, Mich.—Top leadership of the Automotive Organization Team has been restructured, according to President Al Parrish.

The change will take effect Feb. 7.

Drex Minshall will become chairman; Wendell Minor will become vice chairman, and Dorothy M. Ross will become president.

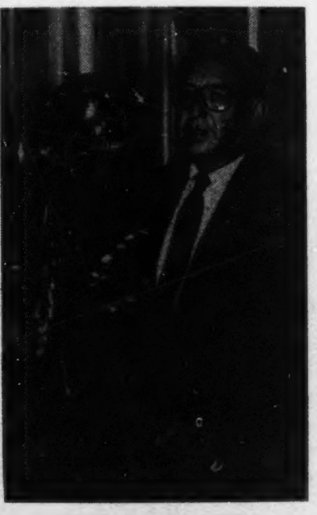
Ross, who has been in charge of general operations of AOT since 1963 as executive vice president and general manager, will continue to oversee day-to-day operations of AOT.

Minshall spent 40 years in the industry prior to his retirement in 1980. He served Gates Rubber Co. from 1939 to 1961 in several managerial positions and in 1961 became marketing vice president of Perfect Circle Corp. He later was named president of Dana Parts Co. and in 1978 he became president of Dana's Worldwide Service Parts Division.

Minor is executive vice president of Goodyear Tire & Rubber Co. He joined Goodyear in 1952 and served in several managerial positions prior to his election as a vice president in 1972.

Minshall's first official duty will be to serve as master of ceremonies at the Los Angeles Hilton Hotel in Los Angeles during AOT's 42nd annual luncheon, held during the NADA convention.

Minshall said that when he takes office he will spend much of the year on two major projects: Expanded membership and a drive to expand the AOT Hall of Fame.



Best in United Fund

Jim Riehl, Roseville Chrysler-Plymouth Inc., holds the Big Eye trophy awarded to Chrysler-Plymouth dealers for their support in the recent Metropolitan Detroit United Fund charity drive. Dealers were best among the divisions for the third time in four years.

24 pct. below 1979, lowest since 1961

Auto production for 1980: The pits

By Patricia Hoffman
Staff Writer

U. S. auto production for December fared somewhat better than the comparable month in 1979; however, despite the improvement in the final 1980 month, the year came to an end with the lowest total since 1961.

The total for the year was 6,377,667 units, down 24.24 percent from last year's total of 8,418,369. In 1961, the makers built 5,522,004 cars.

Output for December was 475,421 units, a 4.56 percent increase from the 454,669 completed in December of 1979.

Breakdown by company for the year was: General Motors, 63.72 percent; Ford Motor Co., 20.49 percent; Chrysler Corp., 10.02 percent; Volkswagen of America, 3.09 percent; American Motors, 2.63 percent, and Checker Motors, 0.05 percent.

During the fourth-quarter, the makers completed 1,694,068 units, down 9.20 percent from the 1,865,858 assembled in the last quarter of 1979, and the lowest since 1,365,783 units completed in the fourth-quarter of 1970.

Planned production last week was 115,363 units, up 2.38 percent from the 112,680 completed in the comparable week last year.

For the week ended Dec. 27, 1980, the auto makers assembled 51,490 units.

There were seven plants working Saturday last week: General Motors Linden, Framingham, Tarrytown, Flint, Willow Run and Oklahoma City, and Ford Motor Kansas City.

Downtime was slated last week at Ford's Lorain, Atlanta, San Jose and Wixom points.

Checker Motors has extended downtime until January 19.

All of Chrysler Corp.'s car assembly plants remained down last week with most resuming operations today (Jan. 12).

Ford Motor plans to end production of the LTD at its Louisville plant on June 12, leaving the Ford Oakville plant in Canada the sole source of assembly for the LTDs in both the U. S. and Canada.

The Louisville point, which currently builds 20 LTDs and 20 vans an hour, will end production of vans Feb. 27, and change over to total LTD assembly beginning March 9. The changeover will increase LTD production at Louisville from 20 to 42 hourly.

1980 truck total of 1,584,837 is lowest since 1967

U. S. truck production for 1980 was far below the 1979 total and was the lowest since 1967.

In 1980, truck makers assembled 1,584,837 units, down 46.50 percent from the 2,962,238 trucks built in 1979. In 1967 the makers assembled 1,583,860 units.

The December total for the makers was 133,550, down 8.97 percent from the 146,721 units built in the comparable month in 1979 and the lowest December output since the 123,965 units completed in 1963.

Truck production for the week ended Dec. 27, 1980, was 15,845.

Planned production last week of 30.372 units was down 23.94 percent from the 39,930 units completed in the comparable week last year.

The fourth-quarter total for truck makers was 458,813 units, down 17.75 percent from the 557,874 completed in the last quarter of 1979 and the lowest for the quarter since the 344,420 assembled in 1970.

Five Ford Motor Co. plants were down last week: Lorain, Kansas City, Norfolk, San Jose and Twin Cities.

Ford plans to end production of vans at its Oakville plant in Canada on Feb. 27. Currently the plant assembles 20 vans hourly. Ford Lorain will become the only source of vans in the U. S. and Canada. The rate of 49 vans per hour at the Lorain point will not be changed.

'80 a rough year for car and truck output in Canada

Canadian auto production for the 1980 calendar year fell below the 1979 total with the lowest output since 1967, although the 1980 December total was slightly better than December, 1979.

Truck makers also had a decline in production for 1980 with the lowest output since 1976. The December total for truck makers was up from the comparable month in 1979.

The auto makers built 847,167 cars during the 1980 calendar year, down 10.34 percent from the 944,933 units assembled in 1979. In 1976, the makers completed 714,084 units.

The December total was 59,510 cars, up 1.48 percent from the 58,640 completed in the comparable month of 1979.

The truck makers assembled 524,324 units in 1980, down 19.76 percent from the 653,445 completed in 1979. In 1976, the total was 497,430 units.

The December count was 43,827, up 9.99 percent from the 39,846 completed in the 1979 month.

The first full week of production for the auto makers since the Christmas holidays was somewhat better than the comparable week last year. Planned production last week was 15,487 units, up 1.45 percent from the 15,265 units completed the week ended Jan. 12, 1980.

Chrysler has extended downtime at its Windsor car plant until Jan. 26, and at its Windsor truck plant until Jan. 19.

Ford Motor Co. plans to end production of vans at its Oakville plant, which currently assembles 20 vans hourly, on Feb. 27. The Ford Oakville point will then become the only source of Ford LTDs, and the Lorain point in the U. S. will become the sole source of van production in the U. S. and Canada.

Sharf, Dauch named to head realigned Chrysler groups

DETROIT. — Chrysler Corp. has realigned its North American Manufacturing, Diversified and Defense groups and International operations and announced new responsibilities.

Stephan Sharf, 60, vice president, assumes top responsibility for all manufacturing and vehicle production operations. He reports to President J. Paul Bergmoser. Sharf succeeds Richard A. Vining, 55, who retires as executive vice president.

Richard E. Dauch, 38, executive vice president, will head the new Stamping, Assembly and Diversified Operations Group. Dauch will report to Sharf.

In addition to his present relitics, John W. Day, 47, vice president and controller, will head the newly established Defense and International Group, reporting to Bergmoser.

Lee H. Runk, 40, is the new general manager — Power Train Division, succeeding Sharf who was vice president of the division.

Jerry L. Mathis, 40, is general manager—Stamping and Assembly Operations for cars and trucks. He succeeds Frank O. Anderson II, 56, who retires as vice president.

Ronald L. Stewart, 38, has been named general plants manager — Diversified, with responsibility for component and electronic plants.

Frank M. Clark Jr., 48, becomes general plants manager—Engine and Casting, replacing Runk.

The new Defense and International Group will include Chrysler Defense, Inc., Chrysler de Mexico, S.A., and International Sales and Supply.

Diversified Operations includes powdered metal, marine engines, chemical, plastic, vinyl trim, electronic, electrical and spring manufacturing operations.

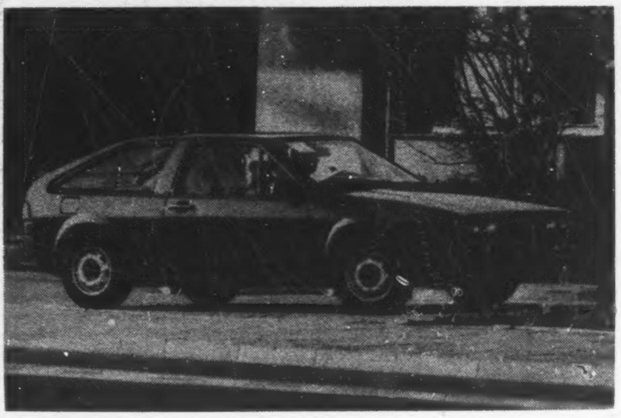
New Scirocco bows



Rounder, faster, more efficient

The new Volkswagen Scirocco, set to be introduced in February, will have a new body designed to be more aerodynamic than the original coupe, which dates back to 1974. Its shape is rounder, windows are larger, there is an integrated roll bar and the interior has been entirely restyled. A 1.6-liter turbo version will be offered.

Chrysler averts a collapse on billion in concessions

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Chrysler Corp. pulled itself back from the brink of disaster again last week, wresting concessions from its workers, lenders and suppliers totaling more than $1 billion, thereby allowing the Chrysler Loan Guarantee Board to tentatively rule the company a viable one and eligible for an additional $400 million in federal loan guarantees.

Chrysler Chairman Lee Iacocca hailed the agreement as a "historic" one, the first time a company as large as Chrysler has gone through what amounts to private reorganization.

UAW President Douglas Fraser, looking weary and downcast, called it "the worst economic settlement we've ever made." The union agreed to it because the alternative is no jobs, he said.

At press time, the Loan Guarantee Board was expected to give conditional approval to the new plan. It calls on the UAW to agree to forego current and future cost of living adjustments and other compensation increases that, together with identical pay policies for the company's other workers, could reduce Chrysler's costs by about $783 million through September, 1982.

For UAW workers, this means they will receive a $1.15 COLA accumulating since Dec. 1 but no COLA increases beyond that. It also means they will forego two annual improvement factors of 3 percent and two incremental increases in pension funding. Together they will save the company some $250 million in 1981.

Salaried employes will have their wages frozen as well. There will likely be a further reduction in the number of salaried employes, Chrysler spokesmen said.

Under the proposal, the UAW would also agree that at the end of the current contract it will not necessarily try to achieve immediate parity with workers at other companies.

In return for these concessions, the UAW and Chrysler will work out a plan that will allow the workers to share in the profits of the company. Additionally, the UAW will be made privy to financial data, particularly on productivity, never available previously. It will also be allowed to participate in work quality programs.

Five Chrysler plants tenta-

Pontiac dealers to sell own model of Chevette

By Paul Lienert
Contributing Editor

Pontiac dealers finally are getting a version of the subcompact Chevrolet Chevette, which sources say will be called the T-1000.

There is also a new Bonneville in Pontiac's immediate future. The division will drop the full-size body shell it now uses for Bonneville at the end of the '81 model run. But sources say an '82 Bonneville will debut this fall as a mid-size four-door sedan, built off the Grand Prix platform.

Thus, Bonneville will switch from the B-car to the A-special (or G-car) series in '82; it will remain a rear-drive model for at least two years after that.

Meanwhile, the Catalina name will be dropped, and the mid-size LeMans will be replaced this fall by the new front-drive Pontiac 6000.

The subcompact T-1000 will not arrive before March, according to a Pontiac official. It will have few changes from the Chevette outside of badges and trim.

Prices on the two-door and four-door models of the T-1000 will be competitive with those of the comparable Chevy models—stickers will start at about $5,250—but Pontiac won't get an equivalent to the base Chevette Scooter.

The T-1000 will get a modest facelift in about six months, prior to the 1982 model year, to further distinguish it from Chevette, but both cars are essentially identical under the skin.

Pontiac has been wrangling for a Chevette lookalike ever since the Chevy subcompact was introduced in 1975, but it took the current sales slump to convince General Motors officials to give the so-called "T-car" to another division.

- Economics prompted the move. There currently is about a four-month supply of unsold Chevettes; both Chevette assembly plants were shut down in early January for inventory ad-

1.4 million on hand as year opens

Car inventory spurts to 80 days

By Richard A. Wright
Assistant Managing Editor

The domestic auto makers opened the new year with the heaviest days' supply of new cars for any Jan. 1 since 1975.

The industry opened 1981 with 1,448,450 new cars in stock, an 80-day supply, compared with 1,439,998 units on hand a month earlier. The Dec. 1 stockpile represented a 65-day supply.

The gain during December was ominous not only because of its size — an increase of 15 days—but also because it occurred during a month in which plants were closed for the holidays.

A year earlier, the industry had a much higher unit count—1,661,718 new cars—but a lower 75-day supply. In 1975, the industry had a 96-day supply, heaviest ever for a year-opener, and a unit count of 1,654,500 cars.

The Jan. 1 inventory included some 312,000 carryover 1980 models.

The increase during December was almost entirely accounted for by General Motors, which boosted its unit count and saw its days-supply level rise from 55½ to 77 days. The GM inventory was lighter in big cars (31-day supply of Cadillac) than small (125-day supply of Chevette).

Table on Page 41

The only other U. S. maker to increase its unit count during December was Volkswagen of America, which opened January with a 95-day supply, up from 77 days on Dec. 1.

The other makers all trimmed their unit counts, but only Chrysler Corp., which experienced something of a sales surge in December while everyone else went downhill, managed to cut its days-supply figure.

Chrysler Corp. had an 83-day supply Jan. 1, down from 107 days a month earlier. Cutbacks of Omni-Horizon stocks and improved K-car sales accounted for most of the improvement.

Ford Motor Co. had an 82-day supply Jan. 1, up from 74 days a month earlier. American Motors saw its inventory climb from a 74-day supply Dec. 1 to a 108-day stock Jan. 1. The gain was caused by a lower sales pace, as AMC cut its unit count during the month.

The Jan. 1 domestic new-car inventory was divided this way: GM, 55.75 percent; Ford Motor Co., 24.72 percent; Chrysler Corp., 13.95 percent; VWoA, 2.81 percent, and AMC, 2.77 percent.

A month earlier, the new-car inventory was divided as follows: GM, 52.97 percent; Ford Motor Co., 25.35 percent; Chrysler Corp., 16.35 percent; AMC, 2.91 percent, and VWoA, 2.42 percent.

- By size class, all segments opened the new year with heavier supplies than a month earlier and the pattern of smaller cars in heavier supply than big cars continued.

The industry had a 83-day supply of subcompacts, up from 76 days, and an 81-day stock of compacts, up from 68½-days a month earlier. The supply of in-

breaking news

'82 Chevy Celebrity replaces Malibu

DETROIT.—Chevrolet plans to introduce a new front-drive intermediate series this fall under the name Celebrity, according to industry sources. Based on the compact X-car platform, the '82 Celebrity will be offered in two body styles—coupe and sedan—with a 2.5-liter four as the base engine. Chevy will drop the mid-size Malibu coupe and sedan when Celebrity debuts in early November, but the division now plans to carry over the rear-drive Malibu wagon in '82. Celebrity is part of the new intermediate A-car series at General Motors. The '82 A-bodies will be about 18 inches shorter overall and 700 pounds lighter than GM's present mid-size models—Malibu, LeMans, Century and Cutlass.

Millionth Fiesta built in Spain

VALENCIA, Spain.—The Ford plant here has manufactured its one-millionth Fiesta to establish production and export records for the Spanish motor industry. More than 700,000 have been exported to markets in Europe, North Africa and Latin America. Production began in October, 1976.

Industry ills laid to management, labor, government

Goldschmidt draws up survival plan

Continued from Page 2

process and product technology for major productivity gains.

While the industry is investing billions, U. S. energy policy must send a "consistent gasoline pricing signal to the market" to support the move toward more fuel efficient cars. Even so, jobs and some cities will be heavily impacted and the federal government should continue help for workers and communities. What is needed is a "new socio-economic compact" with labor, government and industry.

So far, said Goldschmidt, all are to blame: Management, for neglecting production efficiencies, rigorous quality control and far-sighted product development; labor, for expecting annual wage and benefit increases "as a matter of course;" and government, for "loading" on safety and health regulation without carefully examining their cost or their cumulative effect.

Besides, there is that "adversarial relationship" which must not continue.

Further, said Goldschmidt in his transmittal letter, the challenge is not purely economic; it is political as well. But it must be viewed as transitional and all parts must work toward the vision of what is needed.

This means redeveloping communities (no Frostbelt-to-Sunbelt movement), retaining substantially the U. S. workforce, and having the industry make the highest quality, most fuel-efficient and safest vehicles in the world, at a competitive price, and mostly doing it in the U. S. —not making parts abroad and letting the industry become a mere assembler.

While Goldschmidt advocates the government negotiating an import restraint agreement with the Japanese on a needed time period, he stresses much else from labor and government and management should be occurring simultaneously.

He does not want the auto question to be handled separately from other problems with the Japanese nor to have the U. S. become "protectionist." But he agrees with the two Michigan Senators and many on the Hill that the industry needs a reasonable time to retool without facing the permanent loss of additional market share.

Government should also help the industry through specific changes in depreciation and the tax code or "if needed, through the creation of an institution such as a re-industrialization finance corporation." The end result is to signal the private sector that the auto industry is still a good investment.

Labor should decide on a strategy to close the gap with Japan. The DOT analysis shows that for every one dollar in decrease or deferral in labor cost is about a $1 billion savings to the auto makers. While labor must substantially restrain its demands for higher wages, management must compensate by negotiating profit-sharing or other incentives — thus giving labor a stake in the future.

• After 1985, the situation will be even more critical, according to Goldschmidt, who believes that there will be no need for post-'85 fuel economy standards.

Instead, he proposes negotiating a goal linking fuel-economy target with expected fuel prices. Government should assure that gas prices rise in a steady, predictable fashion so both the public and the industry get the same message.

The approach to regulating the auto industry also ought to be changed although Goldschmidt thinks the cost has been less than the industry says. Without abandoning the commitment to safety and health, there must be an end to "fruitless and bitter regulatory battles."

Instead, there should be the kind of negotiation found in other countries. Further it might be possible to change from a system based on penalties to one based on incentives.

Asked about the passive restraint standards. Goldschmidt said that safety must be stressed as the risks increase with more small cars.

Goldschmidt noted in particular that the bitter battle over air bags could have been short-circuited had the government been willing (as he now advocates) to pick up some part of the cost.

Finally, Goldschmidt advocates slowing the rate of regulation and putting priority on preserving our industrial base and jobs.

The DOT report also suggests redefining the antitrust laws because now we are dealing with an international market played by international rules. The antitrust laws should be "honed" to deal with real abuses and not to prevent needed structural adjustments or joint ventures.

Specifically, Goldschmidt complained that Justice Department clearance or presence was needed for every meeting with the auto industry (because of the still extant smog conspiracy consent decree) and what was needed was some sort of exemption so the industry could communicate with the government and with each other.

• More also needs to be done in helping communities facing permanent change instead of concentrating on cushioning temporary cyclical recessions. The UAW should continue supporting productivity advances as it has in the past and it should take the lead in working with management to identify needed job skills and retraining for future opportunities.

As for management, said Goldschmidt, it needs to change its relations with labor — relying more on the judgment and experience of workers. It should also greatly improve its uses of equipment, redesign plants, and change products and processes to improve productivity.

The companies are in a "catch-up" position in R&D for smaller vehicles and they should place a premium on innovation, research and development. Finally, management should accept more responsibility for the social and environmental impact of their products and their facilities.

Goldschmidt concluded by saying it is not merely a debate over free trade versus protectionism or inflation versus anti-inflation. It is a broad debate over future nationoal security and recognizing our own interest and acting accordingly.

DOT's Goldschmidt bows out with call for trade curbs

By Kathleen Hamilton
News Editor

ANN ARBOR. — In his last formal speech as DOT secretary, Neil Goldschmidt issued a strong warning that the U. S. auto industry must be protected from the Japanese for five years in the interest of national security.

Every other industrial nation in the world has concluded it needs a strong industrial base to maintain its economic leadership position, he said. He reminded his automotive audience of the role the industry played during World War II.

Goldschmidt's remarks came at a University of Michigan conference on the Japanese automotive industry.

He repeated much of his advice given earlier to the Reagan Administration in the form of the DOT report on the industry that was ordered by Congress when it first approved the Chrysler Corp. loan guarantees more than one year ago.

• At a press conference after his address, Goldschmidt was asked if his strong endorsement of temporary trade restraints weren't late in coming.

On the contrary, he said, the comprehensive report was pushed through one month early. Besides, he said, the auto industry has long been aware of his position in favor of temporary protection.

The U. S. industry is operating at a severe disadvantage to the Japanese, he said, citing the report's finding that Japanese imports land in the U. S. with a cost advantage of $1,000-$1,500 over domestics, due to lower wages, favorable government policies and higher productivity rates.

He debunked the arguments of the free traders, saying there is no such thing in any nation but the U. S.

And he debunked the likelihood of obtaining voluntary retraints from the Japanese.

"I don't think the Japanese think we'll do anything about this," he said.

"They think they are going to be left with one car company in the U. S., and they will buy the rest at a fire sale" if they are forced to build here, he said.

• Goldschmidt and other speakers at the conference made a strong appeal for changes in the antitrust laws.

"It is inconceivable that the new secretary of transportation, Drew Lewis, will find it impossible to convene the heads of the auto industry in the same room without violating antitrust laws," Goldschmidt said.

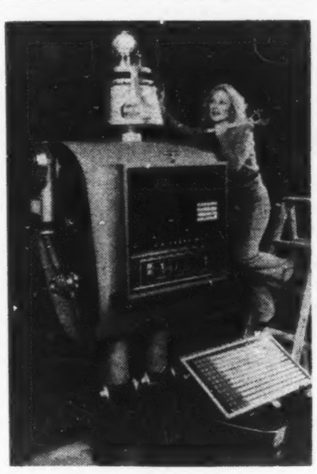
He warned against viewing the current downturn in the U. S. auto industry as cyclical, saying even if Detroit sells all its cars, the industry will see a permanent downsizing that will include a loss of 500,000 jobs.

He recommended against future CAFE standards, saying they are no longer needed. But long-term conservation goals should be negotiated with the auto makers to protect from market fluctuation should OPEC glut the market with oil thus potentially resurrect big-car demand.

Road to Datsun plant upsets some in Smyrna

SMYRNA, Tenn.—Some residents of Smyrna are not exactly happy with the new Datsun light-truck plant coming to town. They are protesting a proposed access road to the plant, saying that the route would go through their living rooms.

More than 250 residents jammed a City Hall hearing to complain to the state Department of Transportation. The access road was one of the many inducements offered by state and local officials to Nissan Motors Co., Ltd., to build the plant here.



Freddie is ready

Freddie Ford, a nine-foot talking robot built from Ford vehicle components — including a Thunderbird electronic instrument cluster and diagnostic warning lights — is made ready for this year's round of auto shows.

1.4 million on hand as year opens

Car inventory spurts to 80 days

Continued from Page 1

termediates shot up to 91½ days from 66 a month earlier.

Standards were in 65-day supply Jan. 1, up from 53 days Dec. 1, while luxury cars were in 44-day supply, up from 40 days.

The Jan. 1 inventory was divided this way by market class: Subcompact, 22.26 percent; compact, 29.82 percent; intermediate, 31.90 percent; standard, 11.76 percent; luxury, 4.26 percent.

A month earlier, the inventory was divided this way by size class: Subcompact, 23.73 percent; compact, 30.73 percent; intermediate, 29.83 percent; standard, 11.53 percent, and luxury, 4.18 percent.

• The Jan. 1 days-supply figures by market class were:

Subcompact—Escort, 47; Monza, 48; Lynx, 52; Bobcat, 80; Pinto, 84; Horizon, 87½; Sunbird, 88; Omni, 93; Rabbit, 95; Chevette, 125, and Spirit, 136.

Compact—Skylark, 50½; Zephyr, 52; Reliant, 66; Aries, 66; Fairmont, 73; Omega, 77; Citation, 85; Eagle, 92; Camaro, 92; Capri, 93; Phoenix, 95; Aspen, 102½; Volare, 105; Concord, 110; Mustang, 112, and Firebird, 138½.

Intermediate—Regal, 61; Century, 62; Cutlass, 65; LeBaron, 77; Supreme, 80; XR-7, 90; Malibu, 90; Diplomat, 92; Grand Prix, 102½; Thunderbird, 107; Monte Carlo, 110½; Cougar, 120; Cordoba, 120½; LeMans, 121½; Granada, 149, and Mirada, 151.

Standard—Olds 98, 43; Olds 88, 47; Electra, 47; LeSabre, 51; Mercury, 62; Chrysler, 66; Chevrolet, 67½; Gran Fury, 70½; Ford, 86; Pontiac, 95, and St. Regis, 109.

Goldschmidt offers a blueprint to save the U. S. auto industry

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Labor, government and auto industry management should all bring "something to the table" to save the auto industry and then the U. S. government should negotiate with the Japanese some temporary restraint.

That is the main advice given by outgoing Transportation Secretary Neil Goldschmidt to the incoming Reagan Administration just one day before the Senate Finance Trade subcommittee started hearings on auto import questions.

At the same time, new General Motors Chairman Roger Smith told the National Press Club that he agreed wholeheartedly with Goldschmidt's rousing endorsement of cooperation with the government and wished the recommendation had been made four years earlier instead of seven days before the end of the Carter Administration.

The Goldschmidt package resulted from a year-long study of the auto industry, mandated into law when Congress gave Chrysler its loan guarantee legislation and also requested into the '80s, neither dwells on or glosses over the oil shocks, but it does address what needs to happen in all segments.

One of the major headlines from the Goldschmidt press conference is that the Japanese have a cost advantage — after shipping and customs clearance —of $1,000 to $1,500 per car and less than half of that is the wage differential between the two countries.

Another headline is that even if the auto industry recovers, an estimated 500,000 fewer workers will be needed by 1990.

- But the good news—if any—is the finding that the auto is the "centerpiece" of the American transportation system and a strategy must be designed to return this key industry and the nation's larger industrial base to international competitive health.

The report to the President and the Congress is described by Goldschmidt as not "unduly pessimistic" and not deterministic of the future. The "alarming trends" developed over years and will not be remedied overnight.

The industry no longer enjoys "worldwide pre - eminence and unchallenged dominance of the domestic market," with the oil shocks, it has changed "permanently and dramatically."

In the future, the world car market will be characterized by "uncertainty" with consumers deferring buying or demanding more fuel efficient models than those made by domestic companies; by "maturity," with largely a replacement market, and in the decade ahead little net growth in world auto sales; and "self-sufficiency," in that world trade will not be a safety valve for excess domestic production since each geographic submarket will be supplying itself.

In fact, says the report, there may well be over-capacity in world auto supply in view of the "internationaliaztion and homogenization" of the market. Consequently, the auto market will in the years ahead be extremely competitive, especially in price.

- Crucial is the landed cost advantage of the Japanees of $1,000 to $1,500 per car. The Japanese have greater productivity because they have more modern plants and management geared to efficiency and quality. They also have sophisticated production procedures featuring "less manpower, less energy, and less waste" than in the U. S.

In addition, the labor cost per hour worked is lower, with the Japanese worker paid about two-thirds as much as his U. S. counterpart.

Finally, the Japanese government—and most foreign governments—"have shaped industrial policies relating to taxes, trade, regulations, and other key issues in a more coordinated and helpful fashion than has historically been the case in this country."

In order to become competitive, the U. S. industry faces "at least one and perhaps several rounds" of major spending (more than $70-billion over the next five years) to make small, fuel efficient cars. This is being exacerbated by the market shift and the recession and at a time when foreign competitors have been able to retain earnings, make new products and engage in fierce price competition. Add to this structural changes in the domestic industry and supplier industry, the new world market, new products, the need for greater productivity and the rise in import share and the result is—even with recovery—a shrinkage of jobs—potentially half a million, mostly in the industrial Northeast and Midwest.

- Goldschmidt and the DOT thinkers believe it will take at least five years to return to full competitive strength, but Goldschmidt refused to say that Japanese imports should be restrained for that period.

Instead, he said, it was the depth of the restraint as much as the length that might count, and besides, it was not his decision but the priority attention given by incoming Secretary Drew Lewis and the Reagan Administration.

Elimination of the "substantial competitive edge" of the Japanese automakers must be the "key goal" over the next five years, but since labor is not the sole cause of this, it should not be looked to as the sole solution.

The greatest source of the Japanese advantage is structural and this means U. S. industry must modernize and look to

Service Index declines 6th time in 11 months

By Francis J. Gawronski
Service Editor

For the sixth time in 11 months, new-car dealership service and parts in November dipped below the volume recorded in the same period the year before.

According to the AUTOMOTIVE NEWS Service Index, dealers' service and parts business in November amounted to 89.7 percent of the business achieved in November, 1979.

November also recorded the second lowest volume in 1980 and the third worst showing of any month in the 19-year history of the Service Index.

The lowest volume of service and parts business occurred in March, 1980, when dealership business amounted to 86.9 percent of the year-earlier volume.

Dealers still blame the general economic downturn, including high unemployment, for the motorists' apathy toward car maintenance and repairs.

None of the five indicators used in the Service Index registered an increase in November.

Dealers reported the biggest decline in repair orders written. This category was down 21.2 percent from a year ago, supporting the dealers' contention that car owners "aren't concerned about service or can't afford it."

Gross profit, on all labor, parts and accessories,—the most important indicator from the dealers' viewpoint—was down 10.8 percent, while total labor sales (customer - paid and warranty) dipped 10.6 percent.

Shop parts sales (those used on customer-paid and warranty repairs) declined 7.1 percent from the year-earlier figure, while sales of all parts and accessories dropped 4.0 percent.

Service Index figures are compiled from monthly reports on service and parts business from dealers in all sections of the country.

November's poor showing also affected the year-to-date Service Index, which dropped to 97.1 percent of the business recorded in the same period of 1979. The January-October service and parts business amounted to 97.8 percent of the year-ago figure.

The only indicator showing an increase during the 11-month was gross profit which just managed to stay above water at 0.5 percent.

Repair orders written during the January - November period were down 11.3 percent, followed by total labor sales, down 1.0 percent; shop parts sales, off 0.8 percent, and sales of all parts and accessories, down 0.1 percent.

SERVICE INDEX
89.7*

	Nov., '80 vs. Nov., '79	11 mos., '80 vs. 11 mos., '79
Gross Profit on All Labor and P&A Sales	−10.8%	+ 0.5%
Repair Orders Written	−21.2%	−11.3%
Total Labor Sales (Customer & Warranty)	−10.6%	− 1.0%
Shop Parts Sales (Customer & Warranty)	− 7.1%	− 0.8%
Sales of All P&A	− 4.0%	− 0.1%

*—Survey by Automotive News shows that dealers' service and parts business in Nov., 1980, was 89.7 percent of business in Nov., 1979. Service business in the 11 months of 1980 was 97.1 percent of business in the corresponding period in 1979.

Goodbye, Dodge Main

The wrecking ball tears into the south wall of the Chrysler Corp. Dodge Main plant in Detroit, as demolition crews continue the massive task of stripping the area for what will eventually be the site of a new Cadillac assembly plant.

AMC reduces prices by trimming discount

By Joseph Bohn
Marketing Editor

SOUTHFIELD, Mich.—American Motors has reduced sticker prices of its domestic Spirit, Concord and Eagle lines by 10 percent for Jan. 15 to Feb. 20.

Actual price reduction by the factory is only 7 percent. The other 3 percent comes from lower dealer discounts. AMC did not join General Motors, Ford and Chrysler in lowering its dealer discounts at the start of the '81 model year and had still been working with the older discount structures.

Earlier this month, GM raised prices an average of $149, and Ford prices went up an average of $85.

The price reductions affect only car models and equipment standard on them. They do not apply to optional equipment ordered by customers. AMC expects to sell more high-line models as a result of the move because they offer customers a bigger dollar discount, said Thomas A. Staudt, vice president of the marketing group.

Officials declined to say what kind of sales increase they expected from the price reductions, or how much of a volume increase they would need to absorb profit reductions.

Paul Tippett, AMC president, optimistically predicted AMC's profits would improve as a result of the higher volume generated.

Staudt said that even if the company broke even, it was worth the move to get production rolling again, save jobs and create a higher owner base, as well as good public relations.

AMC's Renault and Jeep lines are not included in the price reductions.

AMC has had three price increases so far in the '81 model year, totaling $572, AUTOMOTIVE NEWS records show. The company claimed its cars would be reduced an average of $644 as a result of last week's move, although part of the 3 percent dealers are giving up would have been passed along to consumers, anyway.

- Examples of the sticker price reductions are from $519 on a Spirit two-door liftback base model, $699 on a Concord Limited four-door wagon and $870 on an Eagle Limited four-door wagon.

Tippett noted, for example, that a Concord DL four-door sedan, the company's best selling model, would carry a sticker of $5,709 which, with options, put it about $1,300 below a comparable equipped Citation.

Mack Massey Jr., president of AMC's Dealer Advisory Board, said that dealers enthusiastically supported the company's pricing action.

AMC discussed the plan fully

GM recalling 320,000 trucks

DETROIT. — General Motors is recalling about 320,000 Chevrolet and GMC 1979 and 1980 model three-quarter and one-ton trucks equipped with power brakes.

GM said that when the vehicles are used in heavy-duty or off-road service, fatigue cracks may develop at the brake booster attachment. If allowed to propogate, a loss of braking action could result.

Owners will be asked to bring their vehicles to dealers for inspection and installation of an additional support. If cracks are found, the booster will be replaced. GM said there has been one minor accident as the result of this condition, and no injuries.

Domestics down 20 pct. for Jan. 1-10

Sales blues continue as '81 opens

By Jenny L. King
Staff Writer

Sales of domestic new cars started the calendar year with a daily selling rate of just 16,005, a modest beginning for a year the U. S. auto makers hope will bring a dramatic turnaround in new-car sales.

Total units sold Jan. 1-10 numbered 128,041, down 19.97 percent from 160,000 last year and lowest for the period since 1975 when they dipped to 93,235.

Once again, Chrysler Corp., as had been the pattern in December, reported a sales increase while its competitors were down. Chrysler sales of 16,179 climbed 4.66 percent above the 15,458 units sold a year ago.

General Motors sold 81,845 new cars during the period, down 17.23 percent from 98,883 last year. Ford Motor Co. sales were down 33.11 percent, to 24,930 from 37,271. Volkswagen of America reported sales of 2,487 Rabbits, down 43.32 percent from 4,388. Estimated early-January sales for American Motors were 2,600, down 35.00 percent from 4,000.

Chrysler helped itself to 12.64 percent of the market for the period, up three percentage points from 9.66 percent in 1980. GM earned 63.92 percent, up from 61.80 percent. Ford sales accounted for 19.47 percent, down from 23.30 percent. AMC's estimated share was 2.03 percent, down from 2.50 percent, and VWoA had 1.94 percent, down from 2.74 percent.

Two Chrysler makes — Plymouth and Dodge—were the only ones to report a period sales increase. Plymouth sales climbed 37.45 percent, to 7,186 from 5,228, while Dodge improved 9.33 percent, to 6,876 from 6,289. Front-wheel-drive products accounted for 94.32 percent of Plymouth sales and 81.25 percent of Dodge sales.

Chrysler sales dropped 48.44 percent. Ford sales declined 29.84 percent, Mercury was down 36.19 percent and Lincoln was down 56.65 percent.

At GM, Oldsmobile sales slipped 2.76 percent, Chevrolet was down 10.88 percent, Pontiac was down 27.36 percent, Buick was down 27.91 percent and Cadillac was down 46.15 percent.

There were eight selling days for the period this year and last. The 1981 rate of 16,005 was 19.96 percent below the 20,000 for 1980.

Oldsmobile Cutlass Supreme was the number-one selling nameplate for the period, with sales of 6,887. It was followed by Oldsmobile Cutlass at 6,706, Chevrolet Chevette at 6,431, Chevrolet Citation at 6,001 and Ford Escort at 5,074.

Tuxedo for Teague

Dick Teague, American Motors vice president of automotive design, trades a race driver's suit for a tuxedo after his final inspection of the AMC Turbo pace car during the charity preview for the 1981 Detroit Auto Show. The pace car, on display at the AMC exhibit, was designed by Teague for PPG Industries as one of four official pace vehicles to be used for the 1981 PPG Indy Car World Series.

Instant change to 2WD new option on 4WD Eagle

SOUTHFIELD, Mich. — Select Drive, a system that enables drivers to switch between two-wheel and automatic four-wheel-drive modes of operation with the flick of a finger, is now available on all 1981 American Motors Eagle models.

The option is priced at $149.

"The Select Drive option greatly enhances the versatility of the Eagle by providing the best of both worlds between four-wheel-drive traction and two-wheel-drive economy," said Thomas A. Staudt, vice president of AMC's marketing group.

"A dash-mounted switch is used to control the Select Drive system. By simply stopping the vehicle and moving the switch, the driver can select the drivetrain mode that's most appropriate for road conditions.

"For normal highway driving in dry weather, the front wheel driving mechanism can be disengaged for added energy conservation. Yet, when adverse conditions are encountered, the four-wheel-drive system can be quickly engaged for improved performance and maximum safety and security."

Since there are no wheel hubs to be engaged or disengaged, either driving mode can be activated without the driver having to get out of the vehicle.

With the vehicle stopped, the driver simply moves the dash-mounted control lever that sets a mechanical system into action to select the appropriate driving mode. A safety catch prevents accidental movement of the lever.

- AMC said Select Drive is much more versatile than part-time four-wheel-drive systems. For example, a motorist with Eagle Select Drive in the four-wheel-drive mode can drive at highway speeds over unlimited distances on dry pavement.

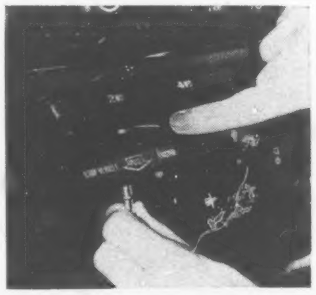
Also, Select Drive permits motorists to go from snow covered side roads onto dry main roads without ever shifting out of four-wheel drive. These practices are not recommended with traditional part-time four-wheel-drive systems, AMC said.

One of the key components of the Select Drive system is an automatic, remote-controlled front axle disconnect that, in effect, is a replacement for the manual or automatic hubs commonly used on vehicles equipped with part-time four-wheel-drive systems.

By moving the dash-mounted switch to the two-wheel-drive position, the front drivetrain is released from freely-turning front wheels by a vacuum-actuated disconnect device built into the front axle assembly.

At the same time, a mechanical shifter in the Select Drive transfer case slides a spline clutch forward to cut off power to the front drive chain sprocket.

The Select Drive option is available with all engine and transmission combinations offered on the 1981 Eagle two-door and four-door sedan, the four-door station wagon and the Eagle SX/4 and Kammback models.



Fingertop control

Switching between two-wheel and four-wheel-drive is a fingertip operation on 1981 American Motors Eagles equipped with the new Select Drive option. With the vehicle stopped, the driver simply pulls down on the release pin and then moves the dash-mounted control lever to select the appropriate driving mode.

Chrysler extends rebate linked to interest rate

Chrysler Corp.'s interest allowance rebate program has been working well enough to warrant its extension until further notice.

The program, which had been due to end Jan. 20, provides a 7 percent rebate to purchasers of all domestic cars except Imperial and covers imported Mitsubishi cars and trucks in California.

Normally, a cutoff date would have been applied to the latest extension. However, since the program is tied to high interest rates, which could change at any time, Chrysler is keeping its options open.

The company's latest rebate program is proving to be one of its most successful. Its sales have been up sharply during a time when domestic competitors had sharp sales declines. Dec. 21-30, for example, Chrysler captured 17.1 percent of the domestic market.

Consumers appear to be more price conscious than usual, and Chrysler has been uncontested by domestic competitors in offering price reductions via the rebates. General Motors and Ford Motor, in fact, have only responded by raising prices on most of their cars.

One beneficiary of Chrysler's rebates have been the dealers. One major Detroit-area Chrysler-Plymouth dealer flatly predicted that every Chrysler Corp. dealer in the metro area would make money during January, as a result of Chrysler's program.

The rebates on '81 products have slowed sales of Chrysler's carryover '80s, but these appear to be moving at a relatively fast clip, also.

Chrysler had 100,000 '80 model domestic cars and trucks in stock on Nov. 30 and moved out one-fifth, 20,000 units, by Dec. 31.

Mack accused of conspiracy to fix prices on truck parts

WASHINGTON.—A civil antitrust suit alleging price fixing has been filed against Mack Trucks, Inc. and the National Distributors Advisory Council (NDAC).

The case alleging conspiracy and violation of Section 1 of the Sherman Act was filed in U. S. District Court in Philadelphia.

Antitrust Chief Sanford M. Litwack said the complaint alleges that starting at least as early as 1978 and continuing to the present, Mack and NDAC conspired to raise, fix, stabilize and maintain prices charged truck owners and operators and service dealers for truck parts.

In commenting on the action, Alfred W. Pelletier, chairman of Mack Trucks, said, "The Department of Justice, seeking to establish an esoteric theory, today filed a noval complaint unfairly challenging Mack's methods of parts distribution.

"The Antitrust Division conducted an extensive investigation, with Mack's full cooperation, the result of which demonstrated that Mack and its distributors have not only not violated any antitrust law but have competed vigorously in a very competitive market.

- "I am advised that senior persons in the Antitrust Division have acknowledged that the facts do not necessarily establish the government's case.

"It is unfortunate that when the automotive-trucking industry is suffering from a severe economic downturn, the Department of Justice, in the last week of the current Administration, sees fit to file this unnecessary and burdensome action. I am confident that Mack will prevail."

NDAC is an unincorporated association of delegates from district council's of independently owned domestic distributors appointed by Mack to sell and service new trucks made or sold by Mack and to sell parts for these trucks.

In 1979, total sales of truck parts by Mack, distributors and service dealers exceeded $300 million.

The suit seeks to enjoin Mack and NDAC from continuing the alleged conspiracy and from providing to distributors or service dealers actual or suggested prices or discount schedules for the resale of truck parts.

Dates transposed on sales figures

In the sales tables which appeared in AUTOMOTIVE NEWS last week headed "Imported Car Sales" and "U. S. Car Sales By Marketing Units," the dates over the full-year columns were inadvertently transposed.

In both tables, the 1980 figures were in the third column, despite the dates at the top of the columns.

Olds offering option discounts, vacation trips

Oldsmobile has joined Pontiac and Chevrolet in offering special value packages and also has announced a trip contest for sales managers.

The special value packages, which may be ordered until March 31, provide discounted equipment on Omega, Cutlass and full-size Olds models.

Each base package consists of stereo AM/FM radio, power antenna, white sidewall tires, premium wheel covers, sport mirrors and deluxe seat belts. Consumers save $183 to $331, depending on the car line, from the normal price.

Oldsmobile's trip contest runs from Jan. 1 to March 20. It is called "Canadian Caper."

Apparently an unlimited number of trips are being awarded to sales managers of dealerships that subscribe to the program. Managers in the Eastern half of the U. S. get trips of five days, four nights to Montreal. Dealership managers in the Western half of the U. S. go to Vancouver for the same time frame.

Some regional managers, assistant zone managers and district managers for Oldsmobile are also eligible to win trips.

The contest has a Jan. 10-Feb. 10 fast-start provision. During that period, managers are credited with two points, or deliveries, on every Omega and Toronado, and 1½ points on every one of the other lines.

After the fast-start period, Omega and Toronado are counted for 1½ points and other lines for one point.

12-month total is off 28.6 pct. from '79

'80 sales sink to 5-year low

By Jack Walsh
Truck Editor

Retail sales of new trucks of all types in the U. S. in 1980 dropped to their lowest level in five years, and trailed the year-earlier 12-month total by almost 30 percent.

Franchised dealers and factory outlets retailed 2,483,061 units in 1980, according to preliminary reports, a decline of 28.6 percent from the 3,476,086 sold in the previous 12 months. The totals include the non-captive Japanese-built compact pickups.

Sales by domestic retailers over the 12-month span dropped to 2,231,392 units, according to preliminary figures from the Motor Vehicle Manufacturers Assn., 5 percent lower than the 2,351,057 trucks sold in 1975.

In spite of the slowdown in compact-pickup deliveries in the final quarter because of the recession and the impact of the higher import duty on the Japanese units, sales of these vehicles over the 12-month period set a record for the second straight year.

In 1980, dealers retailed 506,079 compact pickups—the Toyota, Datsun, Mazda, Ford Courier, Chevrolet LUV, Dodge Ram 50, Plymouth Arrow and Volkswagen—an increase of 8.7 percent over the year-earlier high of 465,701 units.

• In the last three months of 1980, sales of the compact pickups totaled 94,973 units, down almost 9 percent from the year-earlier 106,770. The Dodge Ram 50 and Plymouth Arrow were the only compacts to show gains in the fourth quarter over the previous year.

For the fourth consecutive year and the eighth in the last 11, Ford was No. 1 in retail truck sales over Chevrolet.

Ford dealers retailed 794,520 trucks during the year, including 78,088 Couriers, a margin of 38,029 units over Chevrolet's 756,491. The Chevrolet total included 100,192 LUVs.

Sales in 1980 were down in all three market segments, light, medium and heavy. The light-truck total was off 28.6 percent, from 3,101,305 in 1979 to 2,215,211. There were 92,427 medium sales, a decline of 40 percent from the previous year's 151,615.

Heavies were down 21,6 percent, from a record 223,166 units in 1979 to 175,423.

At the end of the year, the number of unsold trucks in retailers' hands was down 28.6

Ancient Autocar stars at opening

Cruse W. Moss, White Motor Corp. chairman, took the wheel of a 1904 Autocar during the grand opening of White's new truck branch in the Chicago suburb of Alsip. Owner of the vehicle, Dr. Milton D. Ratner, right, chairman of Rentar Industries, was one of 900 guests at the opening. His firm recently bought 11 Western Star trucks from White.

NTEA convenes Feb. 11-14 in San Diego

Planning for Profit in '80s

DETROIT. — Planning for Profit is the theme of business management sessions to be held in conjunction with the 17th annual convention and exposition of the National Truck Equipment Assn. Feb. 11-14 at the Town and Country Hotel in San Diego.

Michael G. Tolzdorf, NTEA's conventions and membership director, said all six presentations "will offer solid management advice on how to make more money now and gain even greater benefits later."

At the opening business session Feb. 12, devoted to personnel and finance, Dr. William Teague, administrative vice-president, Kerr-McGee Corp., an energy-related company with operations in oil, gas, coal, uranium and chemicals, will stress the need for communicating with personnel and motivating people to perform better and like it.

The Reindustrialization of America will be the subject of Dr. William Wolman, deputy editor, Business Week magazine, in the followup presentation.

He will discuss how the Reagan Administration will affect reindustrialization, what tax changes Americans can look for, how the reindustrialization plan will affect interest rates and the outlook for capital spending in the truck industry.

On Feb. 13, the emphasis will be on accounting and marketing. Frank Hardesty, director, Payco American Corp., will head a program on credit management, specifically how to collect delinquent dollars.

This program, according to Tolzdorf, will show how to collect more debts faster and easier without offending valued customers, and how to improve cash flow by collecting more dollars with the use of letters,

Cummins facility in N. C. chosen for new diesels

COLUMBUS, Ind. — James A. Henderson, president, Cummins Engine Co., has announced that Cummins and J I Case Co. will produce its new line of diesel engines at a plant Cummins owns near Rocky Mount, N. C., assuming agreement is reached with state and local authorities on certain details.

The advanced-design, fuel-efficient engines, ranging from 40 to 250 HP, will be used in trucks as well as agricultural, construction and industrial equipment.

The engines will be produced under a joint venture, which has been approved by directors of Cummins and of Tenneco, Inc., parent company of Case.

The existing 400,000-square-foot plant will be expanded to approximately 1.1 million square feet to accommodate the machining of engine components and engine assembly and test operations.

Two families of engines will

First Mercedes tractor offered in U. S.

The LS-1418, a single-axle city tractor designed for the U. S. market, has been announced by Mercedes-Benz of North America. It is the first tractor offered by the company in North America, and has a gross combination weight of 55,000 pounds.

City tractor is added to Mercedes U. S. line

JACKSONVILLE, Fla. — The newest model in the Mercedes-Benz truck line is a diesel-powered, single-axle city tractor designed for the U. S. market to move trailers around crowded urban areas with outstanding fuel economy and driver comfort, according to Walter Bodack, commercial vehicles vice-president, Mercedes-Benz of North America.

Called the LS-1418, the new model will be imported initially from Mercedes-Benz do Brasil, the largest manufacturing subsidiary of Daimler-Benz outside West Germany.

The LS-1418 has a capacity of 55,000 pounds gross combined weight, and Bodack said "this new tractor has considerable versatility in handling a wide range of trailers from 27-foot to 45-footers."

The truck is powered by a 180-HP Mercedes-Benz five-cylinder engine with 589-cubic-inch displacement. The LS-1418 has a ZF six-speed transmission with a two-speed splitter which provides a full range of gear selections through 12 forward speeds.

• In highlighting features among the long standard-equipment list, Bodack pointed out:

Power steering with 3.5 turns lock to lock; shock absorbers and stabilizers on front and rear axles, for a soft ride with less body roll; electrically controlled cold-weather starting aid; adjustable driver's seat plus a two-person passenger seat; tractor package with Bendix-Westinghouse components, and a 75-gallon fuel tank.

He said the engine has many features of a Class B heavy-duty power plant, including maximum horsepower at 2,200 RPM, individual cylinder heads and an exhaust brake. The LS-1418, as with all Mercedes-Benz trucks,

Mercedes again handling sale of Unimog tractors

MONTVALE, N. J.—Mercedes-Benz has resumed marketing Unimog tractors in North America following the expiration of an agreement with J I Case Co. to market the multipurpose diesel-powered off-road implement carrier.

Case has marketed more than 500 Unimog tractors built by Daimler-Benz in West Germany.

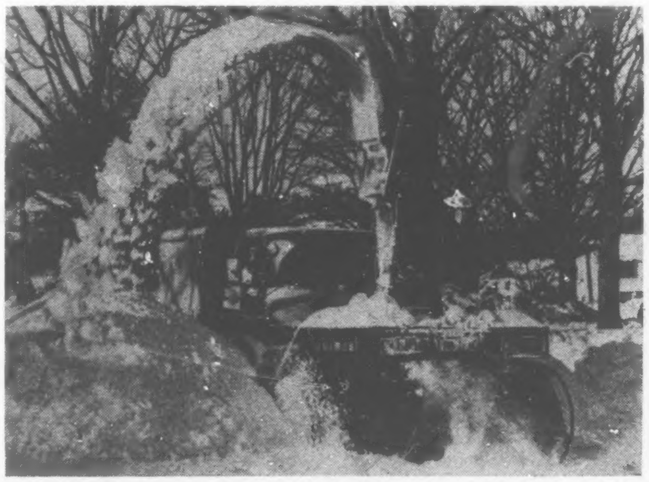
Walter Bodack, vice president, Mercedes-Benz of North America's Commercial Vehicle Division, said more than 20 dealers are being franchised to handle the Unimog.

"These dealers will provide service and parts for the more than 1,500 Unimog vehicles in North America," he added.

He also announced the establishment of Unimog support services in the Chicago area.

"We will provide parts at the Mercedes Midwest commercial vehicle parts distribution center as well as sales and service training," Bodack said.

Unimog, an acronym based on the German word meaning multipurpose implement carrier, serves as a mobile, off-road power source for use in construction, public works, industry, logging, mining, farming and other fields.



Snowfighter clears a path

The four-wheel-drive Mercedes-Benz Unimog is used widely in snowbelt areas to cut through deep snow. The diesel-powered vehicles can be equipped with a variety of attachments for use as a mobile power source in construction, public works, logging, mining, agricultural and other off-road applications.

12-month total is off 28.6 percent from 1979

1980 truck sales sink to five-year low

Continued from Page 8

percent from 1979, with appreciable declines in all three market segments.

On Jan. 1, there were 573,540 new trucks in inventory, compared with 803,363 on the same day in 1980.

Light-truck stocks at the end of the year totaled 507,694 units, down 28.6 percent from the previous year's 711,354. There were only 23,563 mediums on hand, off 41.6 percent from the year-earlier 40,379, and the heavies were down 18.1 percent from 51,630 in 1979 to 42,283.

• Big Three dealers and factory outlets retailed 1,984,612 trucks in 1980, including the imported pickups, a decline of 33.8 percent from the year-earlier 2,997,718. Sales of domestic vehicles were off 36.7 percent, from 2,772,308 units to 1,755,734.

Sales in the final month of 1980 dropped to 139,382 units, 27.1 percent below the previous year's 191,266.

During the month, Ford dealers sold 57,252 trucks, down 25.5 percent from the year-earlier 76,880. The total included 4,626 compact Courier pickups, compared with 5,914 in the same month in 1979.

Chevrolet's December sales were down 22.8 percent to 56,637 units, compared with 72,382 the year earlier. Included in the total were 4,940 compact LUV pickups, off significantly from the previous year's 7,333.

Dodge and Chrysler-Plymouth dealers sold 13,933 vehicles in the final month, a decline of 40.2 percent from the year-earlier 23,306. The 12-month total was off 35.5 percent, from 387,396 to 249,766 units.

The imported compact pickups—Dodge Ram 50 and Plymouth Arrow—accounted for 20.6 percent of the month's total and 25.2 percent of the 12-month sales.

During the month, dealers sold 2,086 Ram 50s and 779 Arrows, compared with 2,550 and 1,151, respectively, the previous year. The 12-month count was 44,640 Ram 50s and 18,416 Arrows, as against 32,233 and 14,897 in 1979.

GMC reported 11,560 retail sales during December, down 38.2 percent from the year-earlier 18,698. The January-December total was 183,835, a decline of 36.7 percent from the 290,363 units sold in the comparable 1979 period.

Twelve-month sales of Jeep four-wheel-drive vehicles were down 44.6 percent, from 140,431 units in 1979 to 77,852. In December, 5,561 units were retailed, off 48.4 percent from the previous year's 10,773.

Volkswagen dealers retailed 2,097 compact pickups during December, bringing the 12-month total to 25,532 units.

Mercedes-Benz of North America reported a 9.3 percent increase in sales of mid-range diesel trucks in 1980, from 3,708 units in 1979 to 4,051. In December, 350 units were retailed, an increase of 4.5 percent over the year-earlier 335.

Sales of the non-captive Japanese compact pickups were down in the final month of 1980, but showed a small increase over 1979.

Toyota dealers retailed 7,879 units in December, off 27.8 percent from the previous year's record 10,911 units. The 12-month total was up 1.2 percent over 1979, from 130,075 to a new alltime high of 131,648.

Datsun's December sales were down 22.7 percent, from 7,814 units a year earlier to 6,074. The January-December count was a record 111,246 units, an increase of 9.2 percent over the previous year's 101,914.

In December, 565 Mazda pickups were sold, a drop of 3.3 percent from the 584 units retailed in the same month in 1979. But the 12-month count was up 6 percent to a record 8,775 units, compared with the previous year's 8,302.

Mercedes adds city tractor to U. S. truck lineup

Continued from Page 8

has a full-range engine without warranty restrictions.

Bodack said field tests of the LS-1418 with a Texas fleet showed fuel consumption ranged between 6.3 and 6.7 MPG, compared with 3 MPG for the fleet's gasoline-powered tractor.

"This type of field experience adds reinforcement to our contention that diesel trucks in the medium and medium - heavy class are the way of the future," he said.

• Mercedes-Benz also offers five truck models in the U. S. market suited for pickup-and-delivery applications. They are the L-1013 with a 22,000-pound GVW rating; turbocharged L-1116 rated at 25,000-pounds GVW; L-1113 designed for 25,000-pounds GVW, a turbocharged L-1316 rated at 30,000-pounds GVW, and the L-1418, which is rated at 32,225-pounds GVW with an option up to 35,000 pounds.

The company completed a truck assembly plant in Hampton, Va., during the summer of 1980. In the first seven months of operation, more than 1,200 units were assembled at the Virginia faciilty. The plant has a design capacity of 6,000 trucks annually.

Cummins to build diesels in N. C.

Continued from Page 8

be produced. Family I will be available in three, four, and six-cylinder configurations in the 40-200 HP range. Family II will be six-cylinder, in-line engines covering the 150-250 HP range.

Family I engines are scheduled for market introduction starting in late 1983.

Cummins and Case will share equally the estimated $350 million investment required for the new manufacturing operation.

NTEA convenes Feb. 11 to 14 in San Francisco

Continued from Page 8

telephone and face-to-face contact.

At the second presentation, Sales Management: Being Twice as Effective with Half the Work will be the topic of Somers H. White, president, Somers H. White, Inc., a consulting firm.

On the final day of the convention the emphasis will be on economics and engineering.

The opening speaker, Dr. Gerhard N. Rostvold, economist, Urbanomics Research Associates, will discuss Future Trends in the Economy: '81 and Beyond.

He will touch on what to expect in the 1980s, President Reagan's economic programs and who will shape the new economic policies, why inflation will continue, business management strategies to cope with the new economic world of the 1980s, and personal investment strategies.

At the engineering session, there will be a roundtable discussion of current problems with representatives of truck chassis manufacturers. Panel moderator will be Mike Gnagy, Frontier, Inc.

AUTO DEALERS: SIGN UP FOR PROFITS

Maaco
AUTO
PAINTING&
BODYWORKS

A MAACO Auto Painting & Bodyworks franchise at your location means:

- You'll increase service profits *now* from people who are keeping their cars longer…
- You'll create greater loyalty as customers get used to turning to you for *all* their automotive services. This means new car sales, too, when they buy…
- Your customers will give you a more salable car at trade-in time.

If you don't have a body shop now…
Or if you have a body shop that doesn't provide the profit and service image that you want…
Consider the advantages of teaming up with the world's largest auto painting and bodyworks franchise!

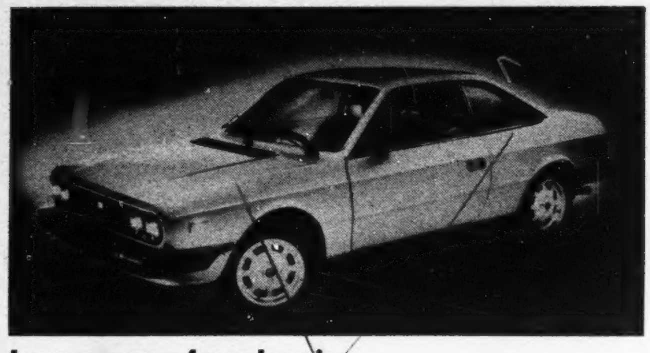
INTERNATIONAL FRANCHISE ASSOCIATION IFA



Luxury coupe from Lancia

The 1981 Lancia Coupe is fitted with aluminum alloy wheels and steel-belted radials and is offered with optional sun roof, leather upholstery and metallic paint. U. S. advertising will feature 1979 Formula One World Champion Jody Scheckter.

Lancia turns to electronics to hike performance of '81s

MONTVALE, N. J.—Lancia's 1981 models will get a 24-percent power boost with the addition of advanced electronic fuel injection.

The system will constantly monitor intake air flow, air and water temperatures, throttle position and exhaust gas oxygen content on the front-wheel drive Zagato and Lancia Coupe.

The cars are rated at 108 HP at 5,500 RPM and have EPA mileage figures of 19 MPG city, 27 MPG highway.

The new Lancias are identified by rear mounted "Fuel Injection" badges.

Both are fitted with a four-cylinder, two - liter (122 - CID) double overhead cam engine. They are equipped with five-speed overdrive transmission, all-independent suspension, rack and pinion power steering and four-wheel disk brakes.

Both are built on a 92.5-inch wheelbase. The Zagato measures 164.6 inches in length; the Coupe, 162.4 inches.

The Coupe offers as options a sun roof, leather upholstery, metallic paint, power windows and air conditioning.

The Pininfarina-styled Zagato features a top system which can be set in four different positions, with combinations of a removable front hardtop and a folding rear soft top separated by a wide Targa roll bar.

For 1981, Lancia has increased its limited warranty against corrosion to three years.

A new optional limited powertrain warranty adds 24 months or 24,000 miles to the standard 12/12,000 coverage.

NHTSA 'fails' cars that weren't tested

WASHINGTON. — Remember NHTSA's The Car Book? Well, somehow — two cars that got marked "Failed" for that 35-MPH crash into a rigid barrier were not actually tested. They are the Oldsmobile Cutlass Diesel and the Mercedes-Benz 300-D.

There are also a few mistakes in the price of parts—which the companies who are now getting their own copies can find, since the prices came from them.

U. S. makers produce 122,551 cars

Week's auto output tops last year's

By Patricia Hoffman
Staff Writer

U. S. auto production improved somewhat last week due to several plants resuming operations Jan. 12 after extended holiday closings. But the year-todate output was down from the comparable period last year.

Planned auto production last week was 122,551 units, up 32.32 percent from the 92,,619 cars completed in the comparable week last year, and up 14.75 percent from the 106,795 units built the previous week.

So far this year, the makers have assembled 229,346 units during 10 days of production, down 21.80 percent from the 293,280 units completed during 12 days of production in the comparable period last year.

Breakdown by company for year-to-date: General Motors, 74.49 percent; Ford Motor, 17.19 percent; American Motors, 2.85 percent; Volkswagen of America, 1.98 percent and Cheker Motor, 0.02 percent.

Chrysler Corp., the only company which extended downtime at all of its assembly plants had only a fraction of the year-todate output with 3.47 percent of the total.

Downtime is scheduled at four GM points this week for inventory adjustment; Norwood and Van Nuys (Camaro and Firebird) and Lakewood and Wilmington (Chevette). The Chevette points will be down for the first time since the fall of 1979. They will resume operations Feb. 2.

Downtime is scheduled for two weeks at GM's Baltimore and Pontiac points beginning Jan. 26. Also at GM, downtime is scheduled for one week at Leeds and Oklahoma City beginning Jan. 26.

GM's Tarrytown plant scheduled Saturday overtime last week.

Operations at Chrysler's Jefferson and Newark (K-car) points resumed Jan. 12, with combined line speed reduced 21 percent. The Jefferson plant has reduced production from 1,120 to 800 daily, and Newark has cut its output from 1,120 to 960.

Chrysler's Belvidere point also resumed operations Jan. 12, after closing Dec. 1 for inventory adjustment.

Also at Chrysler, St. Louis will resume production today (Jan. 19) after extended holiday downtime, and Lynch Road, also extending holiday downtime, will resume operations Jan. 26. Scattered downtime is scheduled at Lynch Road until the plant is mothballed, believed to be April 3.

Ford scheduled downtime at five plants last week: Chicago, Dearborn and, for the second straight week, at Lorain, Atlanta and San Jose.

Checker Motors resumed operations today after an extended holiday closing.

Ford of England workers OK pay hike

LONDON.—A 9.5-percent pay increase has been accepted by 20,000 Ford of England workers, although union officials had urged rejection of the offer. Ford officials said the acceptance appears to have averted a threatened strike, although some workers have not yet voted on the offer.

Datsun price hike averages $192

CARSON, Calif.—Datsun has raised U. S. prices of its cars and pickup trucks an average of $192, or 2.6 percent, effective today. The move follows a $171 boost by Toyota on cars and trucks early in January. Datsun's hike is its second of the 1981 model year. At introduction time last fall, cars went up an average of $339, and trucks rose an average of $800, due to the increase in the U. S. tariff on imported trucks. Datsun's latest boosts on cars range from $150 on the 210 and 310 models to $400 on the 810 series. Most two-wheel-drive trucks jumped $100, and 4WD models climbed $150. Datsun's price leader is the 210 standard two-door sedan which now carries a sticker of $4,449.

Datsun launches incentives on trucks

CARSON, Calif.—Datsun's "Truck Bucks" incentive during Jan. 10-March 31, pays dealers $100, $200 or $300 per pickup on all '80s and '81s sold, depending on what level of sales objective they achieve. Payments are nonretroactive.

Truck production exceeds total for year-ago week

U. S. truck production rose last week, but the year-to-date total is down considerably from last year.

During the first 10 days of production in the new year, the makers completed 62,917 trucks, a 34.85 percent decrease from the 96,584 units built during the comparable 12 days of production in 1980.

Planned output last week was 33,957 units, a 15.18 percent increase from the 29,480 trucks built in the comparable week last year, and a 17.25 percent increase from the 28,960 trucks completed in the previous week.

Chrysler Corp. will resume operations at its Warren truck plant today (Jan. 19) after closing last week for inventory adjustments.

Ford Motor Co.'s Lorain van and San Jose truck points remained down last week making it the second straight week of downtime for both plants since the holidays.

Mack Trucks, apparently due to slumping sales, will no longer report weekly production figures.

Canadian output of cars, trucks trails 1980 pace

Canadian auto production, after 10 days of assembly in 1981, was down from the 12 days of production in the comparable year-to-date period of 1980.

So far this year, the makers have completed 29,205 units, down 33.62 percent from the 44,001 units built through Jan. 19, 1980.

Planned production last week was 14,569 cars, down a fraction from 14,636 units completed the previous week, and down 9.08 percent from the 16,025 built during the comparable week last year.

Truck production so far this year is down 23.14 percent from the comparable 12 days of production in year-to-date 1980. Year-to-date 1981, the truck makers have assembled 21,883 units, a decrease from the 28,472 trucks completed during the comparable 1980 period.

Planned truck production last week was 10,900, about the same as the 10,983 units built the previous week, but up 2.38 percent from the 10,646 completed the week ended Jan. 19 last year.

Chrysler Corp. resumed operations at its Windsor truck plant today (Jan. 19) after an extended holiday closing.

Ford Motor Co.'s St. Thomas car plant, which closed Jan. 12, will not resume operations until February.

General Motors has scheduled downtime at its Oshawa and St. Therese points for the week of Jan. 26 and will resume production Feb. 2.

There was no overtime scheduled last week.

FDA signs up 100 dealers in Pittsburgh

PITTSBURGH. — Over 100 dealers of the Pittsburgh District Ford Dealers Advertising Fund voted overwhelmingly to join the Ford Dealers Alliance as a group.

The district is comprised of dealers in western Pennsylvania, eastern Ohio, northern West Virginia and western Maryland. Their move marks the first time that a group of dealers not from the East Coast has joined the FDA as a chapter.

Sources have indicated that other FDAF districts are considering this type of action.

Ed Mullane, president of the FDA, told the group of dealers meeting here that Ford management does not appear to recognize that the dealer is one of their greatest assets.

"When an entire district like yours joins us publicly as a group it has to change their thinking," he said.

He added that they've argued in the past that the Alliance was strong only in the Northeast and not typical of the rest of the nation.

"On the contrary, your action today, coupled with the support we're getting from key dealers and national dealer council chairman from all parts of the country, makes it crystal clear that the Alliance does indeed reflect the attitude of dealers nationwide," Mullane said.

- Phil Fitts, president of the Pittsburgh FDAF and a dealer here, told AUTOMOTIVE NEWS that while he could not speak for every member of the district, it was apparent to him that Ford Motor Co. has not listened to dealers for some time, but that FDA has received attention from the manufacturer.

Dealers in the district have been displeased for some time

Concord converted

Griffith Co., Ft. Lauderdale, Fla., presents the Concord convertible, with fiberglass roof panels that can be removed and stored in the trunk. The accompanying polyvinyl convertible top is then unlatched and covered with the boot for open-air comfort and fun. Dealer cost for the conversion is $2,995 and suggested retail $3,750.

U.S.-built carburetors purchased by Japan

ST. LOUIS. — Carter-Weber, Inc., has signed a three-year agreement with Fuji Heavy Industries, Ltd., to supply feedback carburetors as original equipment for Subaru automobiles to be built in Japan and sold in the U. S. and Canada.

"This agreement is evidence of the spirit of cooperation and reliance that exists between our countries," said Sadamichi Sasaki, president of Fuji.

"Carter-Weber is the first U.S. manufacturer to export carburetors to a Japanese automobile producer," said James T. Bickhaus, president of Carter-Weber. "This culmination of several years of intensive development and cooperation demonstrates that advanced carburetion is an efficient and reliable product for future automotive engines."

The three year agreement, totalling more than $10 million, calls for Carter-Weber to supply feedback carburetors for Subaru passenger cars, beginning with model year 1982.

The new compact, lightweight single-barrel feedback carburetor is equipped with a pulsing solenoid enabling it to interface with an electronic control unit designed to monitor emissions through a sensor located in the vehicle's exhaust pipe.

The rapid response of the Carter-Weber feedback carburetor to engine operating variables results in better performance, driveability and fuel economy along with more efficient operation of the catalytic converter, Carter-Weber said.

It will manufacture the carburetors in North Carolina.

Loan OK brings major change to life at Chrysler

By Jake Kelderman
Washington Staff Writer

WASHINGTON.—The Chrysler Loan Guarantee Board gave its conditional approval to the auto maker's request for another $400 million in federal loan guarantees last week, but not before exacting a price from the beleagured firm that the staff noted will "result in a company which looks much different than the corporation which first approached the U. S. Treasury in July, 1979."

For one thing, Chrysler Corp. will have to sell its corporate jet and forget about its options to purchase two more. Indeed, Chrysler will have to forego corporate aircraft altogether. The Loan Guarantee Board thought them an extravagance the company could ill afford.

Then there are other somewhat more important requirements: Chrysler will have to permanently lay off another 3,000 workers, reduce its planned expenditures during 1981 through 1985 by $1.888 billion and sell at least half of Chrysler Financial Corp.

That means the planned subcompact to replace the aging Omni/Horizon models must be scrapped. The premium two-door version of the K-car will have to be deferred by six months to mid-1982. Plans for a sporty model based on the K-series, a four-speed automatic transaxle and an additional front-wheel-drive assembly plant will have to be deferred indefinitely.

Chrysler must also convince Mitsubishi, its Japanese partner, to continue its present financing arrangement beyond the March 31 cutoff, for a savings to the company of $150 million. It must get Illinois, New York, Ohio and Missouri to loan it $76 million (Illinois signed a bill just this month). It must squeeze other of its suppliers for another $65 million in deferred payments and restructure its debt for a savings of $300 million.

- For their part, the company's workers will be asked to give up $783 million, including wages and benefit freezes.

Suppliers will be asked to put a hold on parts prices through the year and give a 5-percent discount on purchases during the first quarter of 1981, for a savings of $72 million.

Lenders will be asked to convert about $1 billion of Chrysler's longterm debt, as well as about $68 million in deferred interest notes, to preferred stock while also giving the company the option to pay off the remaining debt of approximately $500 million at 30 cents on the dollar.

The UAW general membership had only to ratify its part of the plan at press time. Suppliers were expected to go along with the plan, in part because Chrysler has promised they will

breaking news

Ford claims overseas sales lead

DEARBORN.—Ford Motor Co. said its 1980 sales outside North America led those of all other U. S.-based auto makers for the 16th consecutive year. Ford and its affiliates sold 1,982,000 cars and trucks outside North America during 1980—down 7 percent from last year's alltime high. Included in that total are a record 422,200 trucks—up 5 percent from the previous mark of 402,300 units set in 1979. Combined 1980 car and truck sales trailed only 1979's record of 2,137,100 and 1978's second-highest total of 2,034,300. Ford car sales for the year totaled 1,560,000—down 10 percent from 1979's record total of 1,734,800.

Chrysler takes aim at service

DETROIT.—Chrysler Corp. will hire 125 service development managers and assign them throughout its 20 zones, where they will serve as service consultants to dealers. The move, according to Gino J. Giocondi, director of service and parts sales, is "in line with Chrysler's policy of doing a better job in the area of customer satisfaction."

Chrysler offers sporty Misers

DETROIT.—Chrysler Corp. is offering Miser versions of the sporty Plymouth TC3 and Dodge 024 two-door hatchbacks. They are priced at $5,299, the same as the Omni and Horizon four-door Miser models. The sporty units have a 1.7-liter four-cylinder engine and 2.69 axle ratio. EPA ratings are 30 MPG city and 50 MPG highway.

Smith sees heavy spending on plants and technology

GM raises the ante to $80 billion

By Paul Lienert
Contributing Editor

General Motors has upped the ante again.

The corporation now is likely to spend an unprecedented $80 billion on new products, plants and technology during the 10-year period from 1980 to 1989, according to Roger B. Smith, GM's new chairman.

GM already has disclosed plans to spend $40 billion in the 1980-84 period, primarily to overhaul its existing product lines and assembly plants.

It now appears the corporation will spend at least another $40 billion in the latter half of the decade, according to Smith, but the money may not go for another vehicle downsizing program like the present one GM hopes to complete by 1985.

"Hopefully, when we get it (downsizing) done and if everything settles down in the world, our spending should drop," Smith told AUTOMOTIVE NEWS.

"But it probably won't," he added. "I don't want to spend another $40 billion (in the late '80s) on another round of car downsizing. But it wouldn't bother me (to spend that money) if we're doing it on new components factories, our new electric car, new microprocessor factories, new robot-producing factories, new products and all the other things I see coming down the road.

"There are going to be tremendous technological breakthroughs in our country in a lot of ways we don't even know about now . . . not only in the products, but in the factories," Smith said. "With the tremendous ability of computers now and their cost coming down, for instance, things that were dreams a few years ago will be going into production . . . things like radar brakes, which I think

It draws up contingency plan to stay in U. S. market

Mitsubishi braces for Chrysler fall

By John Hartley
Staff Correspondent

TOKYO. — Mitsubishi Motors Corp.'s latest move in its dealings with Chrysler Corp. is a contingency plan—and the contingency is Chrysler's potential bankruptcy.

Although Mitsubishi executives are putting a brave face on things, insiders say that the Japanese company does not expect Chrysler to survive the spring. And Mitsubishi is well-placed to hear of Chrysler's future sales hopes and is vulnerable to its dwindling sales in the U. S.

Because of a big buildup in stocks of Mitsubishi cars in the U. S., shipments from Japan have been cut from the usual 15,000 a month to only about 3,000.

At the same time, during the autumn, Chrysler's demand for the Mitsubishi engine used in the K-car gradually fell from the planned level of 10,000 a month to only about 5,000, whereas the volume had been expected to build up to 15,000 units a month.

To avoid excessive stocks, Chrysler asked Mitsubishi to stop shipping engines. None have been delivered this year, and a Mitsubishi spokesman said: "It is up to Chrysler to say when we should start deliveries again."

Nevertheless, this presents Mitsubishi with a problem that is all too familiar in the U. S.—declining production volumes. The reductions of 10,000 engines and 10,000 completed cars a month is a big blow to Mitsubishi.

- At the same time, the Japanese feel that if Chrysler does go bankrupt, the repercussions could be significant. For a start, all those cars waiting to be sold in the U. S. are legally the property of Chrysler, so Mitsubishi would find it difficult to regain possession.

At the same time, sales of Mitsubishi cars in the U. S. would slump since Mitsubishi has no dealer network of its own.

Therefore, Mitsubishi has drawn up a contingency plan. The reduction in shipments is but a tip of the iceberg.

It is now setting up a paper company in California which will be responsible for receiving Mitsubishi cars and then selling them to Chrysler. No doubt the aim is to retain legal possession as long as possible.

Mitsubishi also wants to set up its own network in the U. S. to sell its cars, but so far Chrysler has blocked this move, fearing its operation would be affected adversely.

In Australia, Mitsubishi, which bought Chrysler's operation there, is learning how to handle an overseas operation and how to set up a sales network.

It is certain to ensure that the new company set up in the U. S. is legally able to sell cars directly to dealers. If Chrysler goes under, Mitsubishi would be able to start selling its cars in the U. S. almost immediately.

It is also possible that Mitsubishi, part of an enormous group with more financial muscle than Toyota, could put in a bid to take over some parts of Chrysler's manufacturing operation in the event of bankruptcy.

The fact is that Mitsubishi desperately needs to sell those 180,000 odd units a year in the U. S. They represent about 60 percent of Mitsubishi exports and 30 percent of car production.

Mitsubishi is prepared to take drastic measures to protect and expand that market. However, it is very careful that these moves are not obviously damaging to Chrysler, lest public opinion in the U. S. be turned against it.

Chrysler renews plea for auto industry aid

By Edward Lapham
Financial Editor

Chrysler Corp., still tottering near the brink of a bankruptcy abyss despite the federal loan guarantee bailout, has renewed efforts to obtain industrywide relief through import limitation, tax credits and a moratorium on regulations.

The auto maker has "papered" Washington with copies of its proposal, dubbed the "National Automotive Recovery Act," sending it to new members of congress, Reagan Administration officials and the media.

It is not a new proposal.

"That's just the point," said a ranking Chrysler spokesman. "Iacocca has been talking about these things and the need for them for a long time. We think that the government people may be willing to listen now, in the face of all the problems the auto industry is facing."

In the cover letter to the proposal, mailed Jan. 12, Chrysler Chairman Lee Iacocca said "it was a good program when it was first proposed." He added: "As events have developed, it is even more critical now."

Under the program, the government would negotiate a two-year agreement with the Japanese to stop shipping vehicles built on overtime into the U. S. The government also would provide a $1,500 personal tax credit for the purchase of a new "American-built car when a pre-1976 car is traded in" and freeze all environmental and safety regulations at current levels for two years.

- Iacocca said the program would increase sales of American-built cars by one million units, save more than 300 million gallons of gasoline, put 250,000 Americans back to work, reduce the automotive balance of payments deficit and "provide the time and funds the industry needs as it converts to more fuel-efficient cars and trucks."

The Chrysler executive said the cost of the tax credit would be offset by increases in Social Security and income tax receipts and a decrease in transfer payments (Trade Readjustment Assistance, etc.) as people returned to work as a result of the program.

Wendell W. Larsen, Chrysler public affairs group vice president, said there has been "considerable interest" in the Chrysler program.

"There has been a good response now that the program has had a chance to work its way into the system," Larsen said. "We've received lots of letters from Senators and Congressmen, including some which expressed a desire to have some language for a bill."

Larsen said he believes the response in Washington is not so much due to a change in the political winds, but rather to an

Americana for East Coast

The New York-New Jersey Pontiac Dealers Assn. presents the Americana, a special edition, special price Grand Prix designed just for this area. The Americana features a custom extended elk grain vinyl landau roof, French-styled opera and rear windows and Targa band in brushed silver or anodized gold with matching jewelry and trim.

UAW Chrysler chiefs OK $622 million relief

By Marjorie Sorge
Labor Editor

ROMULUS, Mich.—The UAW put one more peg in place in Chrysler Corp.'s survival plan last week as the union's 250-member Chrysler Council voted to recommend ratification of another scaled-down contract to the membership.

In a 3½-hour meeting with some raised voices and very little cheering, the council, in a voice vote, recommended accepting further concessions amounting to $622 million by the time the contract expires Sept. 14, 1982.

The concessions will directly effect the 63,000 UAW-represented workers in the U. S. and Canada and include a freeze on the cost - of - living - allowance (COLA) and the 3 percent annual wage increase.

The only real heated objections came from the Canadian workers and those in defense-related jobs, specifically the three Chrysler tank plants.

The Canadians have indicated they resent the U. S. government, in the form of the Federal Loan Guarantee Board, telling them what to do. The tank workers say they are making money for Chrysler and work under a government contract and should not be part of further concessions. There are about 3,400 defense plant workers and about 7,400 Canadians.

- According to UAW Vice President Marc Stepp, the ratification process will begin this week with the final tally ready for Chrysler by noon on Feb. 2.

"I am now quite confident the contract will be ratified . . . the alternative is the dissolution of Chrysler Corp." said UAW President Douglas A. Fraser.

Approval of the new contract would help clear the way for

Total is 389,414 with GM taking half of market

Diesel-car sales increase 40 percent for year

By Richard A. Wright
Assistant Managing Editor

The future of the passenger-car diesel may be in doubt because of its emissions, but there is apparently no doubt among new-car buyers about its desirability as sales of diesel cars surged strongly in 1980 while overall sales fell.

Sales of new diesel cars in 1980 in the U. S. totaled 389,414, up 40.17 percent over 277,817 in 1979. Total new-car sales in the U. S. in 1980 were down 15.68 percent from the preceding year.

Sales of diesel cars accounted for 4.34 percent of the total in 1980, compared with 2.61 percent in 1979.

General Motors took the lion's share of the diesel market again in 1980, accounting for 54.27 percent of sales, a total of 211,322 units. In 1979, GM sold 147,531 diesels, 53.10 percent of all diesel sales.

Over half of the GM diesels sold last year were Oldsmobile and Olds was the leading nameplate in diesels with 126,853 sales. Next was Volkswagen, which sold 92,735 diesel Rabbits and 23,565 diesel Dashers for a total of 116,300.

- After Olds at GM were Cadillac, 38,754; Buick, 19,790; Pontiac, 13,475, and Chevrolet, 12,450.

In addition to the Rabbit and Dasher diesel sales, 8,035 diesel Audis were sold in 1980, giving Volkswagen of America total diesel deliveries of 124,335, compared with 86,005 in 1979. Of that 1980 total, 92,693 were built in the U. S., all Rabbits.

Mercedes-Benz sold 39,262 diesels in the U. S. last year, up from 35,632 the year before, and Peugeot sold 10,337 diesels, up from 8,649. Volvo introduced its diesel during 1980 and sold 4,158 units.

Thus, while sales generally were off sharply in 1980, all lines which offered diesels saw sales of that type increase over 1979.

In fact, diesel car sales seem to be limited by availability. So far, demand has outstripped production and as diesels are offered in more lines, they are quickly snapped up.

- Oldsmobile has been the primary GM division in development of the corporation's diesel car, and Oldsmobile offers the 350-cubic-inch V-8 diesel in a wide range of cars—88 and 98, Toronado and Cutlass and Supreme.

Cadillac's Seville is the only domestic nameplate with the diesel as standard engine and it is optional on all other Cadillacs.

Diesel engines are available on all Buick LeSabre, Electra and Riviera models and the division announced last week that it will offer the diesel as an option on its Century, Regal and Century wagon lines. Buick expects to have 56,000 diesls available during the '81 model run, compared with 40,000 forecast earlier.

At Pontiac and Chevrolet, diesel engines are available on all standard Catalina, Bonneville, Impala and Caprice models.

Among the imports, a five-cylinder diesel is available on the Audi 5000 and a 1.5-liter four-cylinder diesel may be had on the VW Rabbit and Dasher.

Mercedes-Benz offers 2.4 and 3-liter diesel engines in its 240-D, 300-D, 300-CD, 300-TD and 300-SD models Peugeot offers a 2.3-liter diesel on its 504 models and Volvo recently introduced a 2.4-liter diesel.

Sales of diesel-powered new cars in the U. S.

	1980 Sales	Percent Share of Market	1979 Sales	Percent Share of Market
Oldsmobile	126,853	32.58	111,240	40.04
Cadillac	38,754	9.95	29,616	10.66
Buick	19,790	5.08	2,750	0.99

9-liter orders top 10,000 in year, IH says

CHICAGO. — More than 10,000 9-liter diesel engines were ordered from International Harvester's Engine Division during the first year of the engine's availability, according to G. D. Aravosis, marketing vice president.

Aravosis said the 9-liter enbine's strongest sales performance has been in the Upper Atlantic states (New England through Virginia) and in the Great Plains.

He noted that International's Truck Group offers an optional extended warranty for the 9-liter. The extended warranty covers 100 percent parts and labor, includes a $50 deductible, and gives owners of S-Series and Cargostar medium trucks with 9-liter engines an additional 25,000 miles or one year's protection beyond the standard policy.

It is the only mid-range diesel warranty for three full years or 75,000 miles, Avarosis said.

- V. J. Spedale, the division's general manager, said the 9-liter has been approved for unlimited mileage.

"Close study of field usage and extensive laboratory tests have proven that the engine is one of the most durable, trouble-free engines we ever have offered," he said.

Spedale added that mileage restrictions on new designs are a normal practice with the Engine Division.

"We must have extensive product field use, which is the ultimate test, before making certifications for what some engine makers might consider abusive use," he explained.

He noted that one of the first 9-liter engines in service was with a major leased truck fleet based in Florida, and that the engine had logged more than 100,000 trouble-free miles in one year, which is up to two times the annual mileage recommended.

The unrestricted mileage recommendation for the 9-liter applies to the 165-HP version in single-axle straight truck applications up to 28,000 pounds GVWR.

With the 180-HP version,

'World's first 9-liter driveaway'

More than 200 drivers, representing International dealers from Ohio, Indiana, Illinois, Pennsylvania, Michigan, Kentucky and West Virginia, form a living 9-L for the "world's first 9-liter driveaway" from International's medium-truck plant in Springfield, O. The hyphen between the 9 and L is the 9-liter diesel powering the 218 S-Series trucks lined up between the drivers.

Volvo tractor joining F-6 low COE in '81

PORTLAND, Ore. — A new tractor rated at 50,000 pounds gross combination weight, the F-614T, will be added in 1981 to the Volvo diesel line marketed in the U. S. by Freightliner Corp.

Although the Swedish-built F-614T is available now in limited quantities, a Freightliner spokesman said, full production of the new tractor is expected to begin in the spring for mid-year deliveries in the U. S.

The 4x2 tractor is designed primarily for the city pickup-and-delivery market and other heavy short-haul applications, where the transition from trucks to tractors and gasoline power to diesel is particularly strong.

A member of the Volvo F-6 low cabover series, the 614T is powered by Volvo's TD60B in-line, six-cylinder engine rated at 174 HP at 2,800 RPM and 382 foot pounds of torque at 1,900 RPM. The engine is turbocharged, with direct fuel injection.

Standard specifications of the 117-inch wheelbase tractor also includes the Volvo S6-65 six-speed, fully synchronized transmission; 14-inch single plate clutch and power steering. Front axle capacity is 9,000 pounds, and the rear axle is rated at 20,000 pounds with a 4.88 ratio.

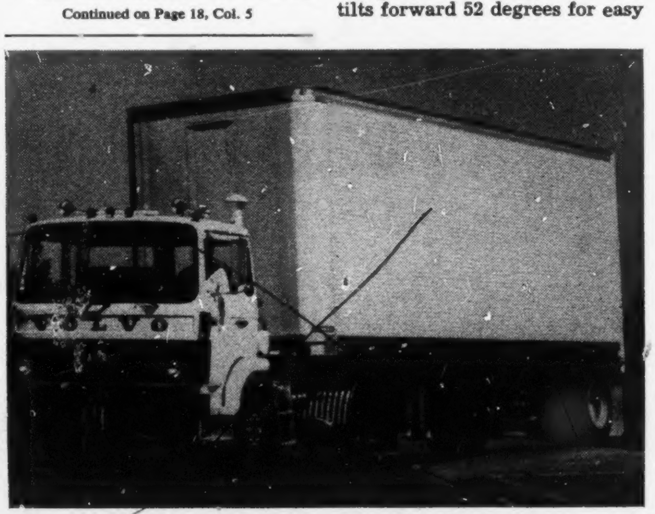
The cab, 60 inches from bumper to the back of the cab, tilts forward 52 degrees for easy access to all engine parts. Fluid reservoirs are translucent and easily accessible for quick inspection without tilting the cab, the spokesman said.

Cab equipment, he added, includes a full complement of easy-to-read instrumentation, full-flow ventilation and fully adjustable driver's seat.

The F-614T also features Volvo's 24-month/100,000-mile warranty (100 percent parts and labor) on all basic engine components, with a 36-month/300,000-mile warranty (100 percent parts) on crankshaft and block.

Volvo replacement parts, accessories and exchange components are guaranteed for 12 months, the spokesman said, regardless of mileage. Volvo Contract Maintenance also is available.

Trucks in the F-6 line include the F-611, rated at 24,500 pounds gross vehicle weight; the F-613, rated at 27,080 to 29,000 pounds GVW and the F-614, rated at 29,000 pounds GVW.



Volvo's new F-6 tractor

The new Volvo F-614T 4x2 tractor, which will be introduced in the U.S. later this year, features the Volvo TD60B in-line, turbocharged six-cylinder diesel rated at 174 HP at 2,800 RPM and 382 foot pounds of torque at 1,900 RPM.

HD registrations show small gain in December

Heavy-truck registrations in November recorded a slight increase over figures for the same month the year before to reverse the downturn that started in March.

The total for the month for Groups 7 and 8 was 14,968 units, according to R. L. Polk & Co., and was an increase of 0.6 percent over the previous year's 14,883.

February was the last month in which heavy-truck registrations showed a gain over the year-ago monthly tally.

Despite the November increase and the surge in the registrations of Group 7 trucks, heavy-duty registrations for the 11-month period of 1980 were down 8.9 percent from the year-ago level, from 195,848 units to 178,405.

Registrations of Group 7 trucks through the January-November period totaled 73,380 units, an increase of 68.9 percent over the year-ago total of 43,457 units.

Group 8 registrations for the 11-month period were 31.1 percent below the 1979 total, from 152,391 units to 105,016.

truck industry news

Month's total dips below 200,000

November registrations are lowest in 6 years

November registrations of new trucks of all types in the U. S. were the lowest for that month in six years and marked the first time since 1975 that the industry total dipped below the 200,000 mark for the month.

In November, according to R. L. Polk & Co., new-truck registrations totaled 189,785, down 23.7 percent from the 1979 total of 248,610.

In November, 1974, the registration count was 174,586 units. Last November also was the first time since 1975, when the count was 191,412, that registrations failed to top 200,000.

The 11-month total of 2,285,704 registrations was down 28.7 percent from the 1979 total of 3,206,266 units, with declines in all three market segments and in seven of the eight weight classifications.

Medium trucks continue to be hit the hardest in the 1980 tallies, suffering large losses at both the high and low ends of the market.

Registrations of medium vehicles through November, totaled 59,865, a drop of 57.2 percent from the year-ago 139,959.

The Group 4 total, because of the decline in motor-home sales, dropped to 201 units, down 95.9 percent from 1979's 4,930.

Group 5 registrations were down 18.2 percent, from 2,606 in the first 11 months of 1979 to 2,131 for the same period in 1980, while Group 6 was off 56.6 percent, from 132,423 in 1979 to 57,533.

With Group 7 showing an increase of 68.9 percent over the year-ago figure, the heavy-duty truck count was down only 8.9 percent, from 195,848 in 1979 to 178,405.

The Group 7 total was up from 43,457 in 1979 to 73,389, while Group 8 declined 31.1 percent, sinking to 105,016 units from 152,391 in 1979.

Table on Page 37

Light-truck registrations through November declined to 2,047,434, down 28.7 percent from the year-ago figure of 2,870,459.

Group 1 suffered the least decline among the light trucks, down 10.6 percent from a year ago, 1,047,226 versus 1,171,683.

Group 2 light vehicles declined 40.1 percent during the January-November period, from 1,659,901 in 1979 to 993,835. It marked the first time since 1975 that the Group 2 11-month total dipped below one million.

Largely as a result of the slump in demand for recreational vehicles, Group 3 registrations declined 83.6 percent from the 1979 total, from 38,875 to 6,373.

As loan guarantee wins OK

New time of austerity is at hand for Chrysler

Continued from Page 1

be the first to be paid once the company draws down the new loan guarantees.

Lenders were having second thoughts, some speculating Chrysler would not have the funds to buy off its debt. The loan board late in the week reassured them, indicating Chrysler will have the funds while retaining suitable cash reserves.

• The debt conversion with Chrysler's lenders would work as follows: Stock would be converted for debt at a value of 160 percent of the principal amount of debt being converted, so that for each $2,000 in debt a preferred stock share with a redemption value of $3,200 would be issued.

The stock would bear interest at 8⅛ percent, or $260 per share, but the interest would not be paid or cumulated until the federally guaranteed loans had been paid off.

Half of the conversions to preferred stock would take place when the new federal loan guarantees are issued and the remainder in 105 days—or sooner if needed to maintain the company's net worth at no less than $100 million.

The remaining long-term debt—amounting to $504.5 million if Japanese banks holding $156 million in long-term debt do not participate in the plan—could, at Chrysler's option, be purchased at 30 cents on the dollar, 380 days after the issuance of the loan guarantees.

If Chrysler does not buy it off, it will bear cash interest at 11 percent on loans from U. S. banks and insurance companies and at rates ranging from 11 to more than 18 percent during different periods for loans from European banks.

Should Chrysler buy the debt off, though, it must do so in quarters, with the first 25 percent of the total being bought within 105 days of the issuance of the new loan guarantees, the second at 197 days, the third at 288 days and the last quarter at 380 days.

By purchasing half of its debt, Chrysler would increase its cash requirements by $106 million to $116 million in 1981, but through 1985 this would reduce its cash needs by $270 to $365 million. And, if the debt which previously would have matured after 1985 is added, Chrysler's savings from the buyout would range from $1.1 billion to more than $1.3 billion, the loan board said.

• Chrysler's latest plan for survival assumes a 3.5 percent annual trend rate of growth of real gross national product after the first part of 1981.

It projects total car sales of 9.6 million units in 1981 and a market rising from 10.6 million units in 1982 to 11.8 million units in 1985. Chrysler put its share of the market at 8.9 percent in 1980, 9.1 percent in 1981, 9.7 percent in both 1982 and 1983 and 9.5 percent in 1984.

Its projections for truck sales show 2.5-million-unit years in both 1980 and 1981 and 3 million units in 1982. Sales should rise to 3.8 million units by 1985, the company says. Chrysler says it will have a 10-percent share of the truck market in 1980, 9 percent in 1981, 9.8 percent in 1982, 9.7 percent in 1983 and 12.4 percent in 1984.

If Chrysler is able to achieve its goals, its balance sheets through 1985 should read as follows, according to the loan board: Losses of $1.774 billion and $253 million in 1980 and 1981, respectively, and profits of $319 million in 1982, $587 million in 1983, $1.089 billion in 1984 and $1.273 billion in 1985. The company's worth would rise from $377 million at Dec. 31, 1980, to $4.396 billion at the end of 1985, the board says.

Pending approval of all parties involved, Chrysler intends to begin selling the $400 million in guaranteed notes on Feb. 2. These will be 10-year notes of $5,000 minimum denomination, bearing interest at rates not exceeding 1.5 percentage points above the current average on Treasury securities of comparable maturity.

The notes from Chrysler's first loan guarantee drawdown bore interest at rates 0.76 and 1.0 percentage points above the yield of Treasury notes.

A syndicate led by Salomon Brothers, Merrill Lynch, White Weld Capital Markets Group. The First Boston Corp., E. F. Hutton & Co. and Warburg Paribas Becker & Co. will underwrite the public offering.

Mullane's FDA signs Pittsburgh dealers as group

Continued from Page 1

and the latest series of price increases by Ford apparently sparked the vote. Fitts said that a poll of the dealers present was not taken. Each dealer apparently voted for his own reason.

Fitts, who recently completed a two-year term on the Ford Dealer Council, said the company does not listen to the council, either. During his tenure, he said, Ford was told many times what the dealers thought would sell and what was needed only to be given arguments for not adopting dealer suggestions.

The recent price increases were only part of the decision, Fitts implied, adding that the auto companies "think they can sell their way out of a recession by raising prices."

According to a spokesman for the FDA, Pittsburgh will have chapter status in the FDA and join other chapters in New Jersey, New York and the Boston districts with a seat on the board.

Budd names Williams chief operating officer

TROY, Mich.—Budd Co. has appointed David P. Williams, 47, senior vice president and chief operating officer. He will continue to report to James H. McNeal Jr., president and chief executive.

Williams has been senior vice president-operations, since May, 1979. He joined Budd in 1976, and served as vice-president-marketing and sales. Prior to that, he was a corporate vice president at International Telephone & Telegraph Corp. He was elected to the Budd board of directors in 1977.

world news briefs

Is this a record?

A claim has been submitted to the Guinness Book of Records for travelling the farthest in a standard road car on one tank of fuel. It has been made by two ADAC officials, who covered 1,019.5 miles in a diesel Audi 80. Consumption (in U. S. gallons) was 52.8 MPG.

Cutbacks at Volvo in Holland

Volvo Car (owned 55 percent by Volvo of Sweden, and 45 percent by the Dutch Government) is making one-fifth of its 6,000 workers redundant because of reduced demand. Output this year will fall 15 percent to 80,000.

Losses grow at Seat

Seat, of Spain, is forecasting increased trading losses for 1980 of $265 million. Early last year Fiat withdrew its offer to take over Seat, which makes Fiat designs or adaptations of them. It now comes under control of the state holding company, INI.

It's not all black in the UK

Land-Rover, one of the bright parts of a troubled BL, increased output last year by 13 percent to a record 67,000.

Big pay-off by Audi

Audi, of West Germany, has paid out a record $58,500 to an employe under the company suggestions scheme.

Slimming exercise by Daimler-Benz

The small new Mercedes-Benz 201 which is scheduled to be shown at September's Frankfurt show is said to be extremely light. Engine capacities are 1.5, 2.0 and 2.3 liters. Also imminent are coupe versions of the S-class sedan.

Talbot redundancies grow

Talbot, in the middle of integration with Peugeot, has announced cuts of 3,500 from its French workforce of 31,500. Employes at Poissy are worst hit.

Europe's economy war hots up

Two makers are currently battling for the upper hand in the contest over who makes the most economical gasoline car in Europe. Official listings for the 56 MPH/75MPH/urban cycle give the Renault 5TL 48.0/34.6/37.3 MPG (converted to U. S. gallons). BL's new Metro HLE checks in at 48.5/34.7/34.6 MPG for the same tests.

Expansion and replacement by Volkswagen

Volkswagen will introduce a notchback version of its new Passat this year to be known as Corsar. Also in the offing from VW is an updated Scirocco with more curved lines.

Daimler-Benz calls it quits

A few days after winning its first rally, on the Ivory Coast of Africa, Daimler-Benz shocked rivals by announcing its withdrawal from competition. Fiat, Renault, VW (through Audi) and Opel continue to spend lots of money on promotion through rallying.

And now the truck award . . .

We've had the Car of the Year award in Europe—the Ford Escort. Now the Truck of the Year has been chosen—Leyland's T-45, which will go on sale in Europe this year.

Component makers face up to fakes

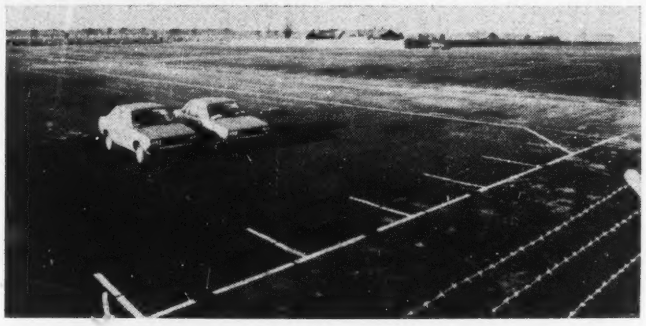
Europe's vehicle components makers met in Rome this month to discuss methods of combating the growing menace of spurious parts. They are anxious about sub-standard units from the Far East—Taiwan in particular—taking their business.

Greece joins the Market

Greece, which has the smallest national new-car market in Europe, has joined the Common Market. Sales in the first half of last year were 19,500. In the whole of 1979 they were 88,400. Fiat (12.2 percent) was market leader.

Musical chairs at Ford

Top management changes at Ford of Germany follow a few months after similar moves in the U.K. Chief executive in Germany is Daniel Goeudevert, former Renault export director, who replaces Peter Weiher. In the UK Ford recently made Sam Toy chairman in place of Sir Terry Beckett. Weiher has gone to Volkswagen of America. Beckett to the Confederation of British Industry.



What Japanese invasion?

Stocks of Toyotas were low in the UK at the end of last year after Japanese car importers had pushed their market penetration over agreed levels. This almost-empty 20-acre import site is a sharp contrast to the airfields crammed with unsold cars from European makers.

BL crews go back to work but future could be fragile

There was widespread relief when the 1,500 BL workers on official strike voted to return to work when Longbridge, near Birmingham, reopened after the Christmas break.

Austin-Morris Managing Director Harold Musgrove had warned that 50,000 jobs would be on the line within days if the men had stayed out.

The fact that they did return —pending further inquiries into the sacking of eight employes as alleged ring-leaders in the riot at the plant one day in November—offers a glimmer of hope for the future of the company. But not much.

BL management has taken a tough line since the arrival three years ago of Sir Michael Edwardes. It has generally "won" —if anyone can be said to have won—in its frequent conflicts with union representatives. The sacking of "Red Robbo," a hardline union man, and the recent 6.8-percent pay agreement are examples.

But there is no guarantee that another damaging conflict will not be thrown up next week, next month, next year. It could be the last, which is why the government's Industry Department still has BL's request for more investment cash in the pending file.

- BL wants an estimated $3 billion between now and 1984. This is for new model and plant investment, which would at least make the company potentially competitive with its opposition. But there is no suggestion of a return to profitability before 1984.

What BL wants is the money in one chunk. It is more likely to be doled out in small portions in order to achieve some sort of performance guarantees.

At the same time, most observers believe the government has little option but to keep the cash coming. In a timely report by longtime BL watcher Professor Krish Bashkar, of the University of East Anglia, an estimated 700,000 jobs, costing $5 billion in unemployment benefits, would be lost in the collapse of BL.

While the company has been split into numerous groups, no doubt with a view to possible sale, potential customers for those parts have not been falling over themselves with check books at the ready.

Most of the rest of Europe is suffering the recession as well, and industrial confidence is low. Unipart, the components division, and Land-Rover Ltd.—which managed to increase output last year—are thought to be the most attractive buys.

- Others, like the troublesome Austin-Morris volume division and prestige cars and heavy truck branches, probably could not be given away at present. They might attract a Japanese company interested in European assembly as protectionist measures grow, but such a sale would be a massive political hot potato throughout Europe.

With government dragged steadily into this can of worms, it is difficult to imagine the UK without BL. So much depends on it that the state will surely always have an involvement.

The question is which of those other two state-financed companies will BL emerge like — the confident and prosperous Renault in France or that perennial loss-maker in Italy, Alfa Romeo?

One for the price of two

In the UK, a top-model Honda Accord costs $11,900, but a customer can buy an upgraded version, the Rapport Ritz, for $25,800. Rapport uses the same components and body shell, but trims it in fine leather, lambs wool, Draylon and walnut veneer. It says the overhanging hood is an aerodynamic aid.

Major profit comeback predicted for 1983-85

Value Line forecasts auto industry rebound

NEW YORK. — The ailing American automobile industry, expected to report a $4.3 billion loss for 1980, will stage a major profit comeback in the next three to five years, according to Value Line, an investment advisory service.

Average industry profits in the 1983-85 period should soar to a record $6.2 billion, Value Line said in its weekly Investment Survey. The industry's previous high was reached in 1978, when it posted earnings of $5.2 billion.

In the 1983-85 period, Value Line believes that domestic auto makers will benefit from an expected rise in auto and truck sales and that increased production of fuel-efficient cars will enable them to recapture some of the domestic market share they have lost in recent years to foreign auto makers.

"Industry profits will then be considerably higher," Value Line said, "due to the volume gains, the full benefits of cost-cutting efforts and the stabilization of capital and tooling outlays."

Value Line gives the stocks of General Motors, Ford Motor Co., Chrysler Corp. and American Motors low marks for market performance during the coming year. However, it added:

"Most of these stocks offer a wide appreciation potential based on our belief of a return to prosperity by 1983-85."

In 1981, Value Line believes that the U. S. auto industry will start its comeback with earnings of about $1.1 billion and a modest rise in sales.

It estimates 1981 revenues for the industry at $147 billion compared with approximately $114 billion in 1980. The advisory service forsees U. S. auto maker sales rising to over $200 billion in 1983-85.

A decline in the average consumer's debt burden and increased consumer confidence in the economy should help to boost car sales this year, according to Value Line.

It predicts that demand will rise to 9.5 million cars (including imports) and 2.7 million trucks, up from about 9 million and 2.5 million in 1980.

In the next three to five years, car sales will rise to 11.5 to 12 million annually, with truck sales averaging about 3.5 million, the service predicts.

Value Line foresees a sharp profit improvement this year for both General Motors and Ford.

In 1981, General Motors should post earnings of about $890 million, or $3 a share, on estimated sales of $72 billion, Value Line said. This compares with a deficit of about $1 billion, or $3.45 a share on sales of approximately $56 billion in 1980.

In the 1983-85 period, the service foresees General Motors earnings rising to about $13 a share.

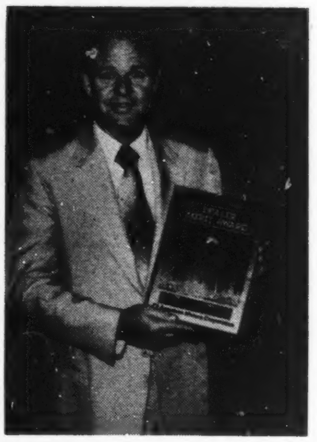
GM's financial strength and its "demonstrated development and merchandising skills put it ahead of its competitors in the race to develop fuel efficient autos," said Value Line.

"In the large worldwide vehicle market we are projecting for 1983-85, this leadership might result in much higher earnings and wider capital gains," the service said.

Value Line predicts that Ford Motor Co. will earn about $365 million, or $3 a share, this year on sales of about $48 billion. This compares with a 1980 deficit of about $1.5 billion, or $12.50 a share, on sales of about $37 billion, according to the service, which foresees $10 per share earnings for the company in the next three to five years.

Increased Ford capital spending and tooling budgets should enable Ford to capture a "larger share of a larger, worldwide vehicle market" in the next three to five years, Value Line said.

The service predicts continued deficits for Chrysler Corp. and American Motors deficits in 1981.



Distinguished

Jerry Deiterman, president, Home Acres AMC/Jeep/Renault, Grandville, Mich., holds the American Motors dealer merit award presented to him for 26 years of distinguished service.

Peugeot added

LAWRENCE, Mass. — English Chevrolet, Inc., has added Peugeot. The dealership, located on a 16-acre site, also handles Honda in addition to Chevrolet.

345,531 assembled, down 16 pct.

Auto production trails 1980 total

By Patricia Hoffman
Staff Writer

U. S. auto production for the first 24 days into the new year is moving at a slow pace with assemblies falling below year ago totals.

Planned production last week was 117,886 units, about the same as the 118,077 cars completed in the comparable week last year and down 2.45 percent from the 120,850 units completed the previous week.

So far this year, the makers have assembled 345,531 units, down 16.38 percent from the 413,228 cars completed in the comparable period last year.

Breakdown for the year-to-date by companies is: General Motors, 69.84 percent; Ford Motor Co., 17.92 percent; Chrysler Corp., 6.95 percent; American Motors, 2.84 percent; Volkswagen of America, 2.44 percent, and Checker Motors, 0.01 percent.

Downtime last week was scheduled at seven plants.

Ford's Lorain and Chicago points were closed one week for inventory adjustment, and Chrysler's Lynch Road plant was also closed for the week. GM's Van Nuys and Norwood points closed for one week and GM's Lakewood and Wilmington plants closed Jan. 19 and will be down until Feb. 2.

GM closed its Leeds and Oklahoma City points today (Jan. 26) for one week.

Also at GM, the Baltimore and Pontiac points will close today for two weeks to reduce inventory.

Ford Motor Co. said it will begin production of the Ford Fairmont and Mercury Zephyr at its Atlanta plant today (Jan. 26). The plant will continue to assemble the Ford Granada and Mercury Cougar but some of the production of those lines will be shifted to the Ford Chicago plant.

Truck production falls a bit, but tops 1980 week

For the second week in a row, U. S. truck production last week was higher than the comparable week last year, although the total units completed so far this year is down from the number built in the year-to-date period in 1980.

Planned truck production last week was 38,010 units, down 5.64 percent from the 40,281 trucks completed the previous week, but up 15.10 percent from the 33,023 units built the comparable week last year.

So far this year, the makers have assembled 107,251 units, a 16.81 percent drop from the 128,924 trucks completed during the year-to-date period in 1980.

Downtime last week was scheduled at Ford's Kentucky point.

Canadian output of cars, trucks moves upward

Canadian auto production rose last week, however the year-to-date output is below the comparable period last year.

Planned production for the auto makers last week was 14,521 units, an increase of 63.94 percent from the 8,857 units built during the comparable week last year, and an increase of 20.62 percent from the 13,748 units completed the previous week.

Year-to-date output for 1981 is 42,905, down 18.92 percent from the 52,919 cars completed in the comparable period last year.

The truck makers also fared better last week but, as with cars, output for the first three weeks of January is moving at a slower pace than last year.

Planned production last week for the truck makers was 11,930 units, a 54.61 percent increase from the 7,716 units completed in the comparable week last year, and up 17.85 percent from the 10,123 units built the previous week.

So far this year, the truck makers have assembled 33,036 trucks, down 6.30 percent from the 35,258 completed during the year-to-date in 1980.

General Motors closed its Oshawa and St. Therese points today (Jan. 26) for inventory adjustment. They will be down one week.

Ford Motor Co.'s St. Thomas point, which closed Dec. 5, ending Canadian production of the Fairmont and Zephyr, will reopen Feb. 16. The plant will build the sporty versions of the Escort and Lynx (the EXP and the LN-7.) Assembly of the Fairmont and Zephyr will begin today at Ford's Atlanta plant.

Chrysler's Windsor car plant, which closed Jan. 19, has extended downtime until Feb. 2.

Continued from Page 1

Komatsu develops multi-fuel engine

TOKYO.—Komatsu Ltd., often referred to as "the Caterpillar Tractor of Japan," has developed a multi-fuel engine capable of burning diesel fuel, gasoline, alcohol or broad-cut petroleum fuel. The engine is essentially a pre-chamber diesel to which a spark ignition system has been added.

Nissan plans slight boost in exports for 1981

TOKYO.—Plans to boost Datsun exports one percent in 1981 were announced by Nissan Motor Co. The export total will be about 1,477,000 vehicles, up from an estimated 1,463,000 in 1980.

Toyota sales contests

TORRANCE, Calif. — Toyota Motor launched a "Get in Gear" cash incentive on pickups, paying dealers up to $400 on eligible units Dec. 24-March 31; also, a "Gear to Go" trip contest on other models. Its bulging inventories are such that the five-state Cincinnati region, for example, reported a two-year high on stocks.

40 MPG CAFE expected by 1995

WASHINGTON. — The Congressional Budget Office has reported auto makers will likely reach a 40-MPG average by 1995 without CAFE rules, but suggested rules would provide a "steadying force." The report said it is unclear whether the industry can sustain its present investment rate until then.

Honda-BL hybrid named Triumph Acclaim

LONDON.—The new car to be built jointly in the UK by BL and Honda will be called the Triumph Acclaim. Previously, it had been code-named Bounty. Production is scheduled to begin in October and reach a rate of 50,000 a year.

Toyota closes U. S. plant for two weeks

TORRANCE, Calif. — Toyota will close its truck bed manufacturing plant in Long Beach, Calif., for two weeks beginning today (Jan. 26), blaming a slowdown caused by the recent tariff increase.

Escort extra

Four-door Ford mini-sedan planned

Ford Motor will likely introduce this four-door notchback sedan version of its Escort in the fall as a 1982 model. The front-drive sedan will be Ford's answer to new sedan versions of the front-drive Mazda GLC and Honda Civic.

Service Index slides to 20-year lowpoint

By Frank J. Gawronski
Service Editor

Despite a sharp increase in business in the final month of the year, new-car dealers' service and parts business for all of 1980 recorded its worst showing in the 20-year history of the AUTOMOTIVE NEWS Service Index.

Service and parts business for 1980 amounted to 98.3 percent of volume recorded for all of 1979. The previous low occurred in 1974, when shop volume amounted to 99.7 percent of that done the year before.

Table on Page 3.

Last year ended on an upswing, with December parts and service business recording the best monthly showing of the year and the biggest increase since October, 1979. Shop volume in December amounted to 108.6 percent of the business done in the same month the year before.

Four of the five indicators used in the Service Index registered gains in December. The only exception was repair orders written, which was 14.3 percent below the volume reported in the 1979 month.

The big gainer in December was gross profit on all labor, parts and P&A sales — the most important indicator from the dealer's viewpoint — which was 21.5 percent above the year-ago figure.

Sales of all parts and accessories were up 16.0 percent above the year-earlier figure, while shop parts sales (those used in customer-paid and warranty repairs) increased 10.3 percent. Total labor sales (customer-paid and warranty) advanced 6.5 percent in December.

Service Index figures are compiled from monthly reports on service and parts business from dealers in all sections of the country.

Gross profit also was the top gainer in 1980, up 2.2 percent, followed by sales of all parts and accessories which increased 1.3 percent.

Repair orders written recorded the biggest decline for the year, down 11.5 percent, followed by labor sales, down 0.4 percent, and shop parts sales, off 0.1 percent.

New DOT chief planning task force, trip to Detroit

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—The maiden press conference of Transportation Secretary Drew Lewis announced that he will be in Detroit this week to meet with auto management and labor leaders in his role as leader of a new automotive task force.

Like the one operating under the Carter Administration—also headed by the Secretary of Transportation—it is intended to focus on solutions to the industry's problems.

A report may be expected in some six weeks.

The Task Force includes the Secretaries of Treasury, Labor and Commerce as well as the U. S. Trade Representative and the chairman of the Council of Economic Advisors, Murray Weidenbaum, especially well-known for his support for a moratorium on regulation.

Presumably others, like the head of EPA, who has not been named, will be added.

Thus, the Reagan Administration has kicked off another Task Force about six months after the last one got underway in July in Detroit. The basic problems are the same — only worse. Meanwhile, the auto industry is readying new position papers and recommendations.

Before being cut off by his staff after only 15 minutes of exposure to the press, Lewis danced around a lot and came out in favor of "free trade", "safety" and aid to Chrysler if the Reagan Administration is convinced that the company is viable.

On the eighth day of the new Administration, Lewis said they were moving quickly. He promised to study carefully the recent DOT auto industry report —which did endorse temporary restraints on Japanese cars — but he shied clear of total endorsement of tripartite efforts while still supporting generally efforts from labor, management and government.

In short, Lewis seemed to be on both sides of all major issues and he even refused to confirm that Raymond Peck, now a lobbyist for the National Coal Assn., is slated to become Joan Claybrook's successor at NHTSA.

Peck, a 41-year-old lawyer, held posts for brief periods at Commerce, Treasury and Interior under the Ford Administration. In sharp contrast to Claybrook's aggressive stance, he is viewed as a deregulator. Lewis says Peck is among several names under consideration.

Although Lewis "left the door open" on restraining Japanese imports, he stated the Administration position as favoring "free trade."

He said the President did not intend to go to Congress to ask for restraints against the Japanese, but added that it was a matter for the Task Force to decide.

On that Task Force is Commerce Secretary Malcolm Baldridge, who has said he favors temporary restraints and Trade Representative William Brock, who backed playing "hard ball" with the Japanese. Soon to be scheduled, however, is a visit from Japanese Prime Minister Zenko Suzuki to Washington with President Reagan, where presumably many matters in addition to autos will be discussed.

Recently, at a White House meeting, Michigan Rep. John Dingell pointedly asked the President for some sort of voluntary agreement to restrain Japanese cars. There was no recorded response from the President.

At that same meeting, President Reagan is quoted—from a

Buyer offers carbureted '80 models to lease/rental firms

4,300 Fiats unloaded at cut rate

By Joseph Bohn
Marketing Editor

Fiat Motors of North America, in a controversial move to reduce inventories, sold about 4,300 '80 Bravas and Stradas to an Ohio firm, which dealers decribed as a "liquidator" but Fiat termed a "lease broker."

The cars are '80 models with carburetors which Fiat had apparently been unable to sell, despite hefty consumer rebates of $500 and $1,000.

Dealers are trying to block the sale to Value City and its subsidiary, M. H. Fishman, Columbus, O., which purchased the vehicles in conjunction with Consolidated International, Columbus.

Value City owns chains of drug, department and furniture stores among its many businesses. Principal behind the purchase is Jerome Schottenstein, president of Value City, and a board member of Consolidated.

The cars are being offered by Consolidated International to lease and fleet and daily rental operators, including any car dealers with such operations, regardless of the makes of cars they carry or sell.

Under terms of Consolidated's agreement with Fiat, it cannot sell the cars at retail.

"But if they are sold to a competitive (Ford, Chrysler, GM) dealer with a lease company, there's nothing to prevent our competitors from retailing them," said one Fiat dealer close to the importer's National Dealer Council.

• Fiat dealers maintain that the importer did not offer these cars to them, prior to the Consolidated International sale.

"We went into the (Fiat dealer) meeting (several were held) without being able to buy that inventory. When an outcry was made by the dealers, a few cars were made available to the dealer body," added a dealer, who wished to remain anonymous.

"If this (Consolidated International) sale is allowed to continue, it could destroy the dealer body," he added.

Fiat's National Dealer Council, along with some NADA officials, held a meeting with Fiat. Sources said "there are legal remedies that can be had," and apparently talks with Fiat are continuing.

Meanwhile, in Ohio dealers have threatened legal action against the importer.

Richard Recchia, president of Fiat Motors of North America, maintains that dealers had access to the same '80 models that Consolidated bought and at competitive purchase prices.

He acknowledged that the cars were in short supply in some of Fiat's six port areas. But he added that cars were being moved around to accommodate dealers who wished to purchase them.

Recchia added that a combination of dealer discounts gave them these cars at prices competitive with Consolidated.

Actual terms of the Consolidated sale were not disclosed by Recchia or Schottenstein, who put the sale at somewhere near $20 million.

Schottenstein's company has been offering Bravas at 22 percent below dealer cost, for example, and Stradas at 20 percent below. Additionally, an extra 5 percent discount is available on purchases of 50 units or more.

In its literature to fleet buyers, International offered a Strada with a dealer cost of $4,648 for $3,718.

Recchia pointed out that Fiat

breaking news

Japanese in UK

LONDON. — The British Government announced in Commons last week that Nissan will launch a feasibility study aimed at eventual production of Datsun cars in the UK. The study will seek a "green-field" site for a factory with a capacity of up to 200,000 vehicles a year. The announcement came a few days before scheduled talks on quotas for the UK market.

Steel at 17-year low

WASHINGTON.—Production of raw steel in the U. S. in 1980 fell to its lowest level since 1963, the American Iron and Steel Institute said. The industry poured 112 million tons last year, down from 136 million tons in 1979. The total was 109 million tons in 1963.

Floor-plan plea

BOSTON. — The Boston Zone Chevrolet Dealer Council has sent a telegram to Chevrolet urging that "to cope with the current financial emergency" floor-plan interest on all new vehicles in dealer inventories and in future shipments be set at 10.75 percent for the balance of the 1981 model year.

Approval to spend next $400 million near for Chrysler

By Edward Lapham
Financial Editor

Chrysler Corp. could begin using the next $400 million in federal loan guarantees this week, once it has secured all of the required worker, lender and supplier concessions.

Tomorrow (Feb. 3) is the end of the required 15-day waiting period, although some sources close to the Chrysler Loan Guarantee Board believe it will be later in the week or early next week before the board can give its final approval.

That approval became more certain last week as Reagan Administration officials said they intended to honor the loan guarantee commitment made in the waning days of the Carter Administration, provided the auto maker can meet the stipulated terms.

Also last week, UAW Vice President Marc Stepp said the union would have all of the local voting results by noon today on the $622 million package of concessions tentatively accepted by the UAW's leadership.

Preliminary voting last week followed the pattern anticipated by UAW President Doug Fraser, which would mean approval by a narrow margin, union sources said.

Chrysler officials met with representatives from its U. S. lenders late last week, following successful negotiations with European and Japanese banks within the preceding week.

The Loan Guarantee Board stipulated that Chrysler's U. S. lenders would have to convert about half of the $1.1 billion in outstanding debt into preferred stock and accept a 30-percent payoff on the remaining half, for an effective payment of only 15 cents on the dollar.

Chrysler asked the Japanese banks to write off 85 percent of the $156 million in debt owed them for a cash payment on the balance. The Japanese banks, which had been somewhat recalcitrant in earlier bailout talks, agreed.

- "There is less and less resistance every time the banks have to do something," said one Wall Street banking source.

"Chrysler's lenders have committed reserves to cover the outstanding loans, so it really isn't a major problem," he said.

Arvid Jouppi, John Muir & Co. auto analyst and vice president, agreed.

"The big thing that tipped the scales this time was former Treasury Secretary Miller's willingness to work on it right up to the last days of the Carter Administration," Jouppi said.

Chrysler also has been making some headway with suppliers. The auto maker has delayed some December payments and has requested additional 5-percent price reductions.

"The suppliers are generally being patient but in a lot of ways their concessions hurt more than the ones made by the banks and the workers," said an analyst. "They don't have any reserves and some are having their own cash flow problems," he said.

Said Jouppi: "Chrysler lost $200 million in the last quarter and it's still losing, although the sales picture is looking better and things should improve. But there is no doubt that without the promise of the loan guarantees Chrysler would have been in formal reorganization by now."

Any delay in final approval could make some suppliers nervous enough to "jump out of line" and take legal action which could upset the entire survival plan, although that is generally deemed unlikely.

"It's just a matter of time," said one Chrysler official. "Once we clear this hurdle, the track is clear."

SERVICE INDEX
108.6*

	Dec. '80 vs. Dec., '79	12 mos., '80 vs. 12 mos., '79
Gross Profit on All Labor and P&A Sales	+21.5%	+ 2.2%
Repair Orders Written	−14.3%	−11.5%
Total Labor Sales (Customer & Warranty)	+ 6.3%	− 0.4%
Shop Parts Sales (Customer & Warranty)	+10.3%	+ 0.1%
Sales of All P&A	+16.0%	+ 1.3%

*—Survey by Automotive News shows that dealers' service and parts business in Dec., 1980, was 108.6 percent of business in Dec., 1979. Service business in the 12 months of 1980 was 98.3 percent of business in the corresponding period in 1979.

Cook to keynote Cleveland event

CLEVELAND. — Robert J. Cook, Oldsmobile general manager, will keynote the fifth annual Automotive Recognition Luncheon in the Statler Office Tower Ballroom here at noon on Thursday (Feb. 5).

The luncheon talk, precedes the sixth annual Greater Cleveland Auto Show, which opens Saturday, Feb. 7.

Under Show Chairman E. Healy Dowd, president of Dowd Oldsmobile, the nine-day show has been expanded to include exhibits from 88 Cleveland-based auto companies.

Celica celebrates 10th U. S. birthday

Toyota Celica celebrates its 10th anniversary in the U. S. this year with a limited edition Celica GTA coupe. Only 5,000 will be built, featuring a luxurious interior, the standard overdrive transmission and a distinctive copper and beige or black and beige color scheme. Birthday package price is $990.

DeLorean given $24 million to finance inventory

LONDON. — DeLorean Motor Cars, Ltd., has negotiated a $24 million credit line with two commercial banks here in order to finance an inventory of up to 900 cars at its Northern Ireland facility.

The company, a subsidiary of DeLorean Motor Co., has commenced serial production of the stainless steel DeLorean sports car with an initial shipment to the U. S. currently scheduled for April.

The British government, through grants, loans and equity purchases, has provided three quarters of the project's $200 million capitalization.

197,750 workers idled indefinitely

Industry layoff picture is gloomy

By Marjorie Sorge
Labor Editor

From a standpoint of layoffs, there's still nothing to cheer about in the auto industry.

The number of employes idled looks like a roller-coaster ride, climbing in direct relation to the interest rates and falling as those rates slide, one observer said.

There are currently 197,750 hourly workers indefinitely laid off at four of the five U. S. auto companies, not too far from the 212,000 idled during the height of the 1974-75 recession.

During the current economic slump, the high point in layoffs came in August, 1980, when 247,296 hourly workers were off the job. The low point was in November when the total fell to 181,875, according to a UAW spokesman. Again, as the interest rates began to creep upward so did the layoff figure.

General Motors currently has 89,000 hourly workers on indefinite layoff; Ford Motor Co., 54,500; Chrysler Corp., 49,700, and American Motors, 4,550.

Volkswagen of America has not idled any workers and a VWoA spokesman said sales are currently picking up and the company does not anticipate any indefinite layoffs.

In normal times, GM has an average hourly work force of 496,000; Ford, 190,000; Chrysler, 109,000, and American Motors, 9,500.

Last week the domestic auto makers closed eight plants in the U. S. and three in Canada to balance inventories, temporarily idling 36,250. Ford's St. Thomas (Ont.) plant is down for changeover, idling 2,650.

GM closed its Baltimore and Pontiac plants for two weeks. Both build intermediates. The company's Leeds (Mo.) and Oklahoma City facilities were closed last week only.

Downtime at GM's Lakewood (Ga.) and Wilmington (Del.) plants was extended an additional week. Both were closed the weeks of Jan. 19 and Jan. 26 and are scheduled to resume operations today (Feb. 2).

In Canada, GM closed the Oshawa (Ont.) and St. Therese (Que.) plants for one week. They are also scheduled to reopen today. So is Chrysler Windsor.

At Chrysler, things have picked up a bit. The company canceled one of two down weeks originally scheduled for the weeks of Jan. 26 and Feb. 2 at its two K-car plants, Newark, Del., and Jefferson Ave. in Detroit. Those two plants will now be down only this week, temporarily idling 8,500 hourly workers.

Ford's San Jose plant also closed for two weeks beginning last Monday (Jan. 26) temporarily idling 950 hourly workers.

And AMC closed its Kenosha plant last week for one week, idling 1,400.

GM, Ford and AMC also report stable SUB funds. GM's stands at $127 million, 15.5 percent of maximum funding and Ford's at $25 million, 9 percent of maximum funding. AMC reported its Wisconsin operations at 19 percent of maximum funding and its Toledo Jeep at 50 percent.

At Chrysler, the SUB fund is $8 million, 5 percent of maximum funding and down from the $13.1 million reported last October. According to a company spokesman, workers with under 20 years' seniority drawing from that fund have had a 20 percent reduction in benefits. Those with over 20 years are getting full benefits.

It's Benton for Bidwell; Lataif heads Ford Div.

Philip E. Benton Jr. has been named to succeed Bennett E. Bidwell as vice president of the Car and Truck Group, Ford North American Automotive Operations, Ford Motor Co.

Bidwell, 53, joined Hertz Corp. as president and chief executive officer. Benton, 52, has been general manager of Ford Division.

Benton will be succeeded in the Ford Division post by Louis E. Lataif, 42, who has been general marketing manager at the division.

The car and truck group includes the Ford and Lincoln-Mercury divisions, Truck Operations, Ford Parts and Service Division and Ford of Canada, Ltd.

Personnel changes at the top at Ford attract special attention these days. One reason is that the company is seen as being in a shaky financial position. Also, Lee A. Iacocca, who left Ford in mid-1979 to head Chrysler Corp., was followed quickly by a stream of top-flight Ford executive talent.

Benton, who joined Ford in 1953 as a cost analyst on the Finance Staff, became executive director of Ford North American Marketing Operations in late 1974 and general manager of Ford Parts and Service Division in 1975.

Philip E. Benton

Louis E. Lataif

He was elected to a vice presidency in May, 1977, and appointed vice president for Truck Operations for Ford of Europe in July of '77.

Benton has led Ford Division since November, 1979.

- Lataif, when elected a vice president by the board as expected, will be the youngest person in such a position at Ford.

He joined the company in 1964 as a Ford Division marketing analyst. In announcing his most recent promotion, the company said Lataif, while working in that post, gained first-hand retail experience at a Dearborn Ford dealership as a part-time salesman.

A graduate of Dartmouth College, Lataif has been general marketing manager at Ford Division since December, 1978.

Lataif was a special studies analyst and district sales representative in the division's Philadelphia district sales office from 1966 to 1968, when he was assigned to the Corporate Marketing Staff in Dearborn.

He rejoined Ford Division in 1969, and served in marketing and sales posts, including car sales training manager, custom car/light-truck marketing plans manager and Detroit district assistant sales manager.

In 1973, Lataif was appointed executive assistant to the vice president, sales group, and in 1975 was named marketing studies manager. He became California marketing director for Ford Division in 1975, Chicago district sales manager in 1976, Midwest region regional sales manager in 1977 and assistant general marketing manager in 1978.

Yesterday and today

Bob Yasso, Yorba Linda, Calif., believes in the future of Chrysler Corp. He also believes in the auto maker's past. Yasso, who is Chrysler's assistant Los Angeles zone manager for parts and service, has two Dodge cars that are separated by 50 years of motoring history. For personal transportation, he drives a 1981 Dodge Aries. In the background is a 1931 Dodge, which has been restored by Yasso to its original condition.

Chrysler and VWoA escape mid-January sales decline

By Jenny L. King
Staff Writer

U. S. auto makers suffered a combined 9 percent sales drop in mid-January, with Chrysler Corp. and Volkswagen of America the only ones to post gains over year-ago figures.

The domestic industry had 136,524 new-car deliveries for the period, down 9.18 percent from 150,326 in 1980 and lowest since the 131,132 sold in 1975.

Chrysler sales climbed 13.32 percent, to 16,398 from 14,470. VWoA reported sales of 4,142 Rabbits, up 6.70 percent from 3,882.

General Motors sales dropped 10.79 percent, to 82,976 from 93,017. Ford recorded a 13.79-percent decline to 30,308 from 35,157, while estimated sales of American Motors passenger cars numbered 2,700, down 28.95 percent from the year-ago estimate of 3,800.

Accordingly, Chrysler and VWoA increased their shares of the market during the period, Chrysler going to 12.01 percent from 9.63 percent, VWoA climbing to 3.03 percent from 2.58 percent. GM earned 60.78 percent, down from 61.87 percent. Ford Motor Co. slipped to 22.20 percent from 23.39 percent, and AMC was down to 1.98 percent from 2.53 percent.

Plymouth, Dodge and VW were the only makes with improved mid-January sales. Plymouth was up 20.62 percent, to 6,605 from 5,476; Dodge was up 14.85 percent, to 6,798 from 5,919, and VW was up 6.70 percent, to 4,142 from 3,882.

On the minus side of the ledger, Chrysler was down 5.82 percent, Ford was down 11.39 percent, Mercury was down 13.54 percent and Lincoln was down 42.55 percent. All GM makes missed year-ago sales levels: Buick was down 32.96 percent, Cadillac was down 8.23 percent, Chevrolet was down 1.95 percent, Oldsmobile was down 7.87 percent and Pontiac was down 6.83 percent.

Chevrolet Chevette was the top-selling nameplate in mid-January, with sales of 8,686 units. It was followed by Chevrolet Citation at 6,946, Ford Escort at 6,640, Chevrolet Malibu at 5,555 and Oldsmobile Cutlass Supreme at 5,218. Year-ago bestsellers were Chevette, Citation, Ford Fairmont, standard Chevrolet and Cutlass Supreme.

The daily selling rate for the period was 17,066, down 9.18 percent from 18,791 in 1980. There were eight days both years.

Year-to-date sales totaled 264,565, down 14.75 percent from 310,326 for the year-ago period.

AMC revises its contribution to price cut

American Motors changed its contribution to the current 10 percent reductions.

Essentially, its contribution to the price reduction was 6⅔ percent, based on the wholesale price of the vehicle. Dealers contributed 3⅓ percent, which was figured on the retail price.

AMC changed its accounting so that its 6⅔ percent share is now based on the retail sticker price.

"It increased our contribution and decreased the dealer's share," a spokesman said.

Meanwhile, Volkswagen, responding to an Automotive News story, noted that its current dealer cash incentives on Rabbits, Dashers and Sciroccos covered only '80 models—not '80 and '81s' as had been reported.

He strives to make this 'Year of the Dealer'

Miller sees an exciting era at hand

By Robert M. Lienert
Editor

Probably nobody envies Wendell H. Miller as he prepares to take over as president of NADA.

His turn in office comes at a time when the domestic auto industry is in deep, deep difficulty and domestic-line dealerships are dropping by the wayside.

Miller, 58, isn't looking for sympathy. And though he admits that the retail auto business is mired in a critical period, he thinks he's lucky to be in the driver's seat at a time which he says promises to be "exciting, profitable and innovative."

The Binghamton (N. Y.) Dodge - Honda - Lincoln - Mercury dealer plans to move smartly ahead with the organization, once he is sworn in next week at the NADA convention.

"I don't like being the caretaker of anything," he said. "I like having a job to do and getting it done."

Miller summed up that job in one word: Survival. That's not for himself, but for all of the nation's retail auto dealers.

"My specific goal is survival," he told Automotive News. "We lost 1,600 dealers last year.

"And those dealers who made it last year could die this year," he warned. "Attrition could be worse next year."

That, he said, is the reason he is so involved in NADA.

"My main thrust as I prepare to take office," he said, "is that I would like this to be 'the year of the dealer.'

"I would like dealers to understand the benefits of NADA and realize that NADA provides the services that a dealer needs to stay in business in normal times as well as in these traumatic times.

"I think this is going to be an exciting, profitable, innovative period and, by year-end, dealers will be taking advantage of this."

• Miller said he plans to institute no great changes in NADA—"You don't rearrange the deck chairs in 20-foot seas"—but that if there is an upturn in the next three or four months, NADA can help to make things much, much better.

"I'm active in NADA for one reason," Miller said. "Without NADA, the average auto dealer is dead.

"If I went back over the years and subtracted all the things NADA has done, I'd be out of business."

Miller termed NADA "the only possible saviour" of the nation's dealers. The average dealer doesn't have the time or expertise to defend himself against those who have been trying to destroy him, Miller said.

"Those 1,600 (who failed in 1980) weren't dumb," Miller said. "They failed because of factors beyond their control.

"I doubt we could have done anything for the 1,600 that we didn't do," he said. "All we can do is try to minimize the losses.

"When the smoke clears, I want to make sure all dealers know what NADA is and what it does for them. We'll try to do it with education and public relations.

"I want them excited and willing to do something about it."

• Miller pointed out that there is a 300-person staff at NADA working for the benefit of dealers.

"I don't think the membership realizes this," he said.

The big threat to dealers, he said, is no longer the factory, but rather interest rates, imports, government and regulation.

Miller, who is a tennis fan, said, "I can remember when we played singles with the factory. Now, we are on the same side of the net."

Miller, assessing his industry's difficulties and the rocky road that looms ahead, said, somewhat sadly:

"The industry is not as much fun any more and the reasons bug me: Mainly, it's government regulation that affects me and government regulation that affects the industry itself.

"For many years," said Miller, "there were no problems that couldn't be fixed. Now, with the mandated engine controls, we have cars that just can't be fixed and they are destined to run forever unsatisfactorily. And I know I can't solve the problems of unhappy customers."

• One of the difficulties, Miller said, is that rising expenses are coupled with an inability to grow to neutralize them.

"But I like the fact that this requires sophisticated management," he said. "And the customers are more knowledgeable and more intelligent. I like today's customers better than those of 10 years ago. They are better for our business."

Miller mourns the change he said he has seen come to factory relations. There are fewer personal relationships, he said, and fewer things a dealer can depend on. The long-term factory-dealer partnership is being replaced by a "today" relationship, he fears.

Miller, whose family has been selling Dodge since 1948, says he thinks Chrysler Corp. "will make it, although it may not be able to do so without a partner."

He would like to see such a partnership develop soon, Miller said, and he believes it will involve either Peugeot or Mitsubishi. Chrysler holds an interest in both firms.

Volkswagen has been men-

Continued on Page 26, Col. 3

Dealer strike is possible in the 1980s, Miller says

As a successful dealer, Wendell H. Miller is no fire-breathing radical.

At the same time, he says that a dealer strike against the manufacturers is "absolutely possible within 10 years."

Miller sees the mobilization of a strike threat as the only way dealers can marshal any clout in negotiations with auto makers.

"Our problem has been that we don't have any leverage," said the incoming NADA president. "We're like the UAW would be if it had no strike threat."

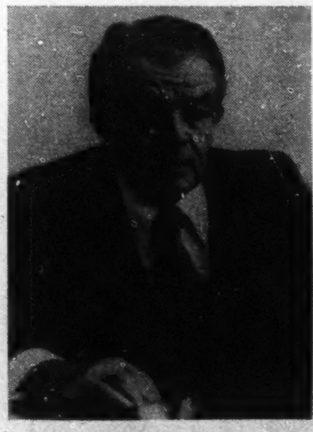
Miller said dealers probably aren't ready for such action and he said nobody has ever mentioned a strike threat at any NADA meeting.

The idea is strictly Miller's.

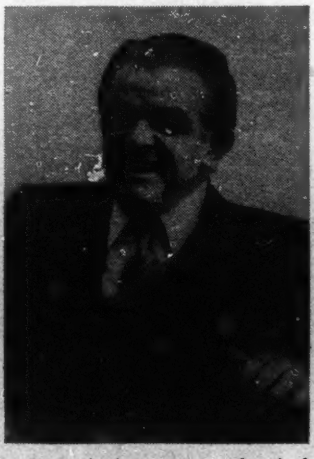
"As long as we have no leverage, we will never get anything that doesn't coincide with factory interest," Miller said. "I don't remember anything we ever got as a sheer gift. When the chips are down, the factories are out for No. One.

"Factories and dealers are natural partners. But they also are natural adversaries. And there's the conflict."

Wendell H. Miller—Man on the spot



"I don't like being a caretaker . . . I like having a job to do and getting it done."



"You don't rearrange the deck chairs in 20-foot seas."

"I doubt we could have done anything for the 1,600 (who failed) that we didn't do."

October total off 6 pct. from year ago

Import registrations slip from record pace

By Richard A. Wright
Assistant Managing Editor

Registrations of new imported cars in October slipped from the record pace of the preceding couple of months, according to figures compiled by R. L. Polk & Co., but it was far from a slump even though market penetration of imports fell to the lowest point of the year.

New import registrations in October totaled 196,107, down 6.41 percent from the record for the month set a year earlier of 209,543. The latest October figure is the second highest import total for that month.

Import penetration of the October new-car market slipped from record levels—it had been over 30 percent in July, August and September — to 26.25 percent, but that was the highest ever for an October. A year earlier, imports accounted for 23.54 percent of total registrations for October.

Import registrations for the year, however, continued to run ahead of 1979. For the first 10 months of 1980, import registrations totaled 2,094,566, up 5.63 percent from 1,982,851 in 1979.

Imports accounted for 28.61 percent of U. S. new-car registrations in the first 10 months, compared with 22.55 percent in 1979.

• For the second straight month, Subaru posted the biggest gain of any nameplate in share of import registrations compared with a year earlier. Its any-month record total of 12,596 boosted its share 2.63 percentage points to 6.42 percent.

Other gainers were Honda, up 0.91 of a point to 14.58 percent; Mazda, up 0.41 of a point to 6.99 percent; Volvo, up 0.20 of a point to 2.72 percent; Fiesta, up 0.18 of a point to 3.00 percent, and Mercedes-Benz, up 0.09 of a point to 2.39 percent.

The two leaders, Toyota and Datsun, both lost in market shares in October, compared with a year earlier. Toyota dipped 0.76 of a point to 20.12 percent, while Datsun fell 1.46 points to 19.11 percent. Volkswagen was off 0.68 of a point to 10.61 percent.

Rounding out the top 10 imports was Audi, which accounted for 2.02 percent of October import registrations. It was not among the top 10 a year earlier.

The top 10 imports accounted for 87.96 percent of total import registrations in October, up from 86.72 percent a year earlier. For the first 10 months of 1980, the top 10 accounted for 88.48 percent, compared with 86.16 percent the year before.

October registrations of imported cars by country of origin, with year-earlier figures in parentheses, were: Japan, 139,998 (147,565); West Germany, 39,753 (43,676); Sweden, 6,478 (6,651); United Kingdom, 3,597 (3,885); Italy, 3,239 (5,010), and France, 3,042 (2,756).

Registrations of imported cars by country of origin for the first 10 months of 1980, with year-earlier figures in parentheses, were: Japan, 1,553,497 (1,374,647); West Germany, 389,911 (430,235); Sweden, 55,790 (58,927); Italy, 37,286 (56,520); France, 30,009 (24,763); UK, 28,065 (37,738), and others, 8 (1).

Registrations of imported trucks in October totaled 43,265, up 0.82 percent from 42,915 a year earlier.

Registrations of imported trucks in October, with year-earlier figures in parentheses, were: Toyota, 10,777 (14,526); Datsun, 8,859 (5,362); Chevrolet LUV, 6,835 (8,401); Ford Courier, 6,532 (7,014), and others, 10,262 (7,612).

The truck import total for the first 10 months of 1980 was 451,188, up 11.73 percent from 403,803 in 1979.

Registrations of trucks in the first 10 months, with year-earlier figures in parentheses, were: Toyota, 117,656 (108,330); Datsun, 93,748 (82,570); Chevrolet LUV, 72,319 (81,761); Ford Courier, 64,204 (63,793), and others, 103,261 (67,349).

FTC amends Regulation Z; finds wide noncompliance

WASHINGTON. — Many advertisers of automobile financing continue to advertise the "add-on" credit rate rather than the annual percentage rate, the board of governors of the Federal Reserve System said in its annual report to Congress on the Truth in Lending Act.

The FTC obtained this information, the report said, in the course of an industrywide investigation to see whether creditors under its jurisdiction are charging customers correctly for credit and making all disclosures required by truth in lending.

Many creditors persist in failing to disclose clearly when applicable that credit insurance in closed-end credit transactions is voluntary, the FTC told the Federal Reserve, and also in failing to make required disclosures before consummation of transactions.

Consumer complaints and inquiries suggest widespread noncompliance with the Fair Credit Billing Act and Regulation Z, the FTC added, particularly in regard to procedures for resolving errors in consumer accounts.

The report also touched on legislative simplification of the Truth in Lending Act, which Congress enacted last year with the approval of the Federal Reserve Board. The simplification act amends the Truth in Lending Act "to provide consumers with simpler and more meaningful disclosures, ease creditor compliance, strengthen enforcement, and limit creditor civil liability to substantive violations," the report said.

In addition, the Board adopted four simplification amendments to Regulation Z. They were:

1. Simplification of rules for the calculation and disclosure of the annual percentage rate and other credit terms.

2. Extension of the effective date of the revocation of an amendment exempting open-end credit arrangements from certain recision requirements.

3. Exemption of agricultural credit from truth in lending requirements, and the elimination of disclosure requirements for periodic statements for closed-end transactions.

4. Increase in the tolerance for annual percentage rates in irregular mortgage transactions.

Nose count of robots shows Japan in lead

MONTREAL. — Japanese manufacturers are employing robots at a rate that puts them well ahead of their counterparts in the U. S., according to James R. Rinehart, president of General Motors of Canada. Robots often are called keys to high productivity.

The Japanese have a significant lead and now have 10,000 robots in their manufacturing facilities. The entire U. S. has just 3,200 installed. In Western Europe, there are 2,800. Currently GM has 425 robots working or on order. By 1985, GM foresees 5,000 robots in use in its facilities, and by 1990, probably 14,000, Rinehart said.

IMPORT REGISTRATION SHARES IN U. S.

OCTOBER

	Regis., Oct., 1980	Percent Share of Market	Regis., Oct., 1979	Percent Share of Market	Pct. Pt. Change '80 vs. '79

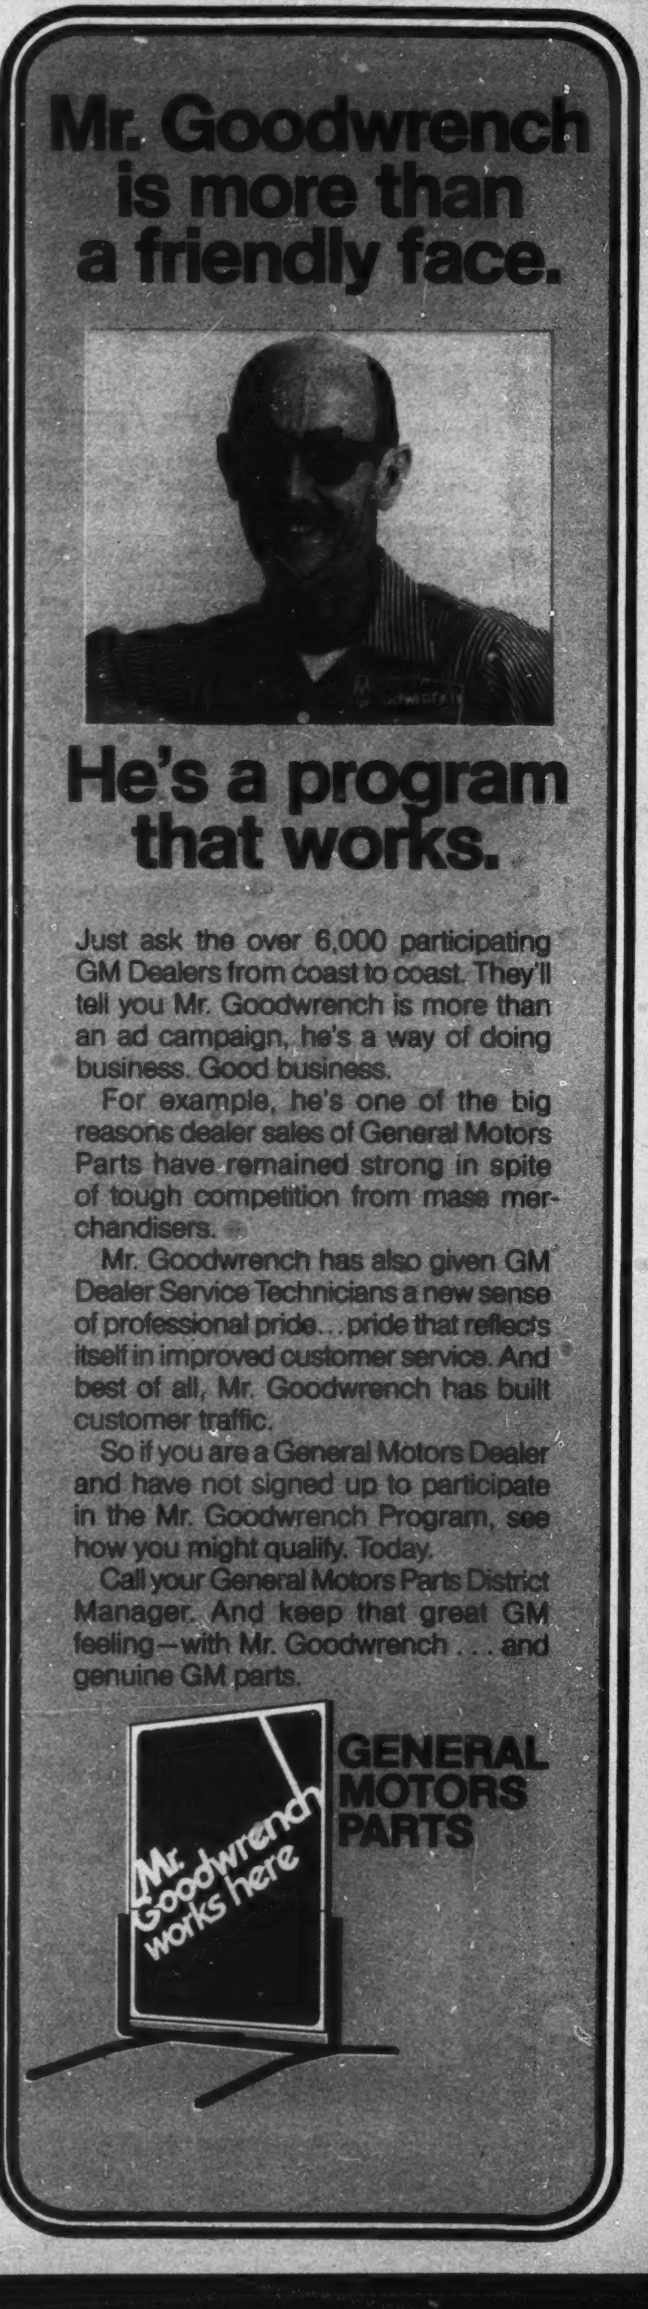
Registrations not available for Oklahoma, delayed for Kentucky.



Mr. Goodwrench is more than a friendly face.

He's a program that works.

Just ask the over 6,000 participating GM Dealers from coast to coast. They'll tell you Mr. Goodwrench is more than an ad campaign, he's a way of doing business. Good business.

For example, he's one of the big reasons dealer sales of General Motors Parts have remained strong in spite of tough competition from mass merchandisers.

Mr. Goodwrench has also given GM Dealer Service Technicians a new sense of professional pride... pride that reflects itself in improved customer service. And best of all, Mr. Goodwrench has built customer traffic.

So if you are a General Motors Dealer and have not signed up to participate in the Mr. Goodwrench Program, see how you might qualify. Today.

Call your General Motors Parts District Manager. And keep that great GM feeling—with Mr. Goodwrench . . . and genuine GM parts.

Two-seaters for U. S.

GTBi, GTSi to return as Ferrari's '81 lineup

MONTVALE, N. J. — Ferrari will again offer the Pininfarina-styled 308GTBi and 308GTSi in 1981.

Both two-seaters share in the same chassis, with a racing-type tubular space frame, transversely mounted 178-CID V-8 engine ahead of the rear axle, five-speed transmission and cast alloy Speedline wheels with Michelin TRX tires.

The cast aluminum-block engine with cast iron cylinder liners and aluminum heads is fuel injected with the Bosch K-Jetronic CIS system.

A Marelli Digiplex electronic ignition system varies the ignition advance curve depending on load and speed for optimum fuel economy and lowest emissions. Both models are certified for California sale.

With the standard final drive ratio of 3.71:1; both Ferraris can top 140 MPH. Acceleration from zero to 60 is put at less than 8 seconds. EPA fuel economy rating is 11 MPG city, 19 MPG highway.

Both models have a low-profile tire and wheel system. They are built on a 92-inch wheelbase. The Pininfarina-styled body is built by Scaglietti, Ferrari's principal coachbuilder for three decades.

Ferrari's are equipped with air conditioning, electric windows, tinted glass, heated rear window, quartz clock, limited-slip differential, power radio antenna, stereo speakers and leather interior. The only options are metallic paint and the choice of radio.

Performance by Ferrari

The mid-engined 308 GTBi is one of two Ferrari offerings that return throughout the U. S. for 1981. Equipped with electronic fuel injection, the 3-liter aluminum V-8 turns out 205 HP at 6,600 RPM.

GM diesel facility to make fuel injectors

GRAND RAPIDS, Mich. — Diesel Equipment Division of General Motors announced that its plant in Coopersville, Mich., will be used for the manufacture of engine fuel injectors.

Initial employment at Coopersville will begin during the fall of 1981 and rise gradually to about 650 persons by the middle of 1982, the division said.

Use Automotive News Classified Section

Final outcome: Average $21 reduction

Chrysler lists changes in options and prices

Chrysler Corp. revised its prices last week, but the action turned out to be more concerned with equipment additions than with sticker alterations.

The company upgraded all of its front-wheel-drive subcompact and compact models by adding standard equipment. On some cars, prices were reduced or were unchanged. On others, prices rose less than the value of the new equipment.

On the slower-selling intermediate and full-sized cars, Chrysler raised prices an average of 2.2 percent. Chrysler is holding the line on prices of domestic truck and vans.

When all the changes were put together, Chrysler said the price of the average-equipped domestic passenger car was reduced $21.

There were no changes in optional equipment prices or in destination charges. Also, there were no changes in dealer discounts, so the price cuts and the hold-the-line actions did not change the dealer's potential profit margin.

Automotive News learned that there will be rebates to dealers on models on which the sticker price has been reduced. But there will be no rebates in cases where dealers have paid for equipment which is now standard.

Early in January, Chrysler declined to follow General Motors and Ford Motor Co., which hiked prices an average of $149 and $85, respectively.

Last week's action makes Chrysler's small cars considerably more competitive with their GM and Ford rivals, and with imports. The continuing 7-percent rebate of sticker prices to the buyer is another plus for Chrysler.

All of Chrysler's domestic small cars figured in last week's action—the subcompact Omni and Horizon four-door sedans, the sporty Plymouth TC3 and Dodge 024 hatchback coupes and the compact Reliant and Aries K-cars.

On the base Omni and Horizon Miser sedans, interior trim was upgraded and the price stayed at $5,299.

The regular Omni and Horizon sedans went up $146 to $5,836, but Chrysler said $317 worth of standard equipment has been added.

The company said this has the net effect of reducing the price $171. That's true for buyers who wanted the extra items. For those who could get along without the "extras," it's a price hike of $146.

New Omni-Horizon standard equipment is premium trim, sport steering wheel, color-keyed seat belts, woodgrain instrument panel and 2.2-liter four-cylinder engine. The 1.7-liter engine is available as a no-cost option.

- The price of the TC3 and 024 hatchbacks has been reduced $211. It is now $5,938. New standard equipment includes premium bucket seats and door trim panels, color-keyed seat belts and the 2.2-liter engine.

Several additional items will be standard on TC3 and 024 units sold in Alaska, Arizona, California, Hawaii, Nevada, Oregon and Washington. The features are power steering, power brakes, power hatch release, AM/FM stereo radio and deluxe sound insulation.

K-car prices remain unchanged on all models, but all have more standard equipment. On the base series, luxury steering wheel, woodgrain instrument panel and vinyl trim have been added. Chrysler put the value at $111. Prices continue at $5,880 for the two-door and $5,980 for the four-door.

On the Reliant Custom and Aries Custom, new standard equipment is luxury steering wheel, digital clock, halogen headlamps and upper door frame and belt moldings. Chrysler said the value of the items is $211. Custom K-car prices remain at $6,315 for the two-door, $6,448 for the four-door and $6,721 for the wagon.

Chrysler said $408 worth of options have been made standard on Reliant SE and Aries SE two-door and four-door sedans. The items are power steering, power brakes, digital clock, halogen headlamps and trunk dress-up kit.

The same equipment, with the exception of power brakes (already standard) and the trunk dress-up kit, is now standard on SE wagons. Sticker prices for the SE models continue at $6,789 for the two-door, $6,933 for the four-door and $7,254 for the wagon.

As noted, Chrysler's intermediate and full-sized cars went up an average of 2.2 percent. A few examples:

The Dodge St. Regis four-door sedan now is $7,737, up $63, and the Dodge Mirada coupe is $7,899, up $199.

The Chryselr LeBaron Special four-door sedan and the Dodge Diplomat Sport two-door each rose $177. Both are priced at $6,672.

The Imperial coupe went up $379. It now is $18,600.

The hold-the-line action on trucks and vans applies to prices of Dodge Ram Wagons and Ram Vans, the Plymouth Voyager, the Dodge Ramcharger and Plymouth Trail Duster sport-utility vehicles and light-duty trucks.

IH introduces two new heavy cab-over models

Continued from Page 8

in both 6x4 and 4x2 configurations.

The riveted aluminum cab features flat sides and thinner door construction of high tensile strength aluminum. Weight-saving options include all-aluminum frame and cross members, taper leaf frame section, tubular aluminum engine tunnel, aluminum front and rear axles and aluminum wheels.

About 30 engines are available in the new models, along with 16 transmissions, five axles with two front-suspension packages, 12 frames—in one-half or one-quarter inch steel as well as aluminun and three different types of cross members.

Also available are 10 6x4 rear axles with three different rear suspensions (multileaf, taper leaf and air), seven 4x2 rear axles and three rear suspensions, 12 different wheels, three bumpers, six alternators, 10 batteries and three radiators—1,200, 1,500 and 1,800 square inches.

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report. Registrations not available for Oklahoma, delayed for Kentucky.

But total is lowest for October since 1974

Month's registrations edge upward

By Richard A. Wright
Assistant Managing Editor

U. S. new-car registrations picked up slightly in October after a summer of discontent, but the total was lowest for the month since 1974, according to figures compiled by R. L. Polk & Co.

New-car registrations in October totaled 747,080, down 16.09 percent from 890,344 a year earlier. But the October showing was up 6.40 percent from 702,111 in September and was the best monthly showing since April. The record for October is 922,273, set in 1971.

Both domestic and imported car lines were down in October compared with a year earlier, but domestics were off much more sharply. Registrations of new domestic cars in October totaled 550,973, down 19.07 percent from a year earlier, while the import total of 196,107 was off 6.41 percent.

Table on Page 40.

Registrations of new cars in the U. S. for the first 10 months of 1980 totaled 7,320,397, down 16 74 percent from 8,791,715 last year.

- While import registrations were down in October from a year earlier, they still increased their share of the total market, enough so that General Motors was the only U. S. maker which managed to boost its share.

GM took 49.30 percent of total U. S. new-car registrations in October, up 3.93 percentage points from a year earlier, while imports accounted for 26.25 percent, up 2.71 points.

Biggest loser was Ford Motor Co., which dropped 4.55 points to 15.58 percent. Chrysler Corp. fell 2.05 points to 6.97 percent and American Motors was off 0.05 of a point to 1.85 percent. Miscellaneous domestic lines accounted for 0.05 percent of October registrations, up 0.01 of a point.

Excluding imports, domestic-only registrations in October were divided this way: GM, 66.86 percent; Ford Motor Co., 21.13 percent; Chrysler Corp., 9.44 percent; AMC, 2.51 percent, and miscellaneous, 0.06 percent.

A year earlier, domestic-only registrations were divided as follows: GM, 59.34 percent; Ford Motor Co., 26.33 percent; Chrysler Corp., 11.80 percent; AMC, 2.48 percent, and miscellaneous, 0.05 percent.

By size segments, only subcompacts improved their market share over the preceding October among domestic cars. Subcompacts accounted for 14.52 percent of October registrations, up 4.62 percentage points.

Automotive News anaylsis of new-car registrations based on R. L. Polk & Co. statistical report.
Copywright, 1981, Automtive News

Standards suffered the biggest loss, down 3.81 points to 10.62 percent. Also down were intermediates, off 1.59 points to 23.61 percent; luxury cars, down 0.79 of a point to 4.76 percent, and compacts, off 0.52 of a point to 20.24 percent.

Registrations by size class in October were: Subcompact, 108,508; compact, 151,219; intermediate, 176,351; standard, 79,362; luxury, 35,533, and import, 196,107.

Excluding imports, domestic registrations in October were divided this way: Subcompact, 19.69 percent; compact, 27.45 percent; intermediate, 32.01 percent; standard, 14.40 percent, and luxury 6.45 percent.

The top 20 domestic nameplates in new-car registrations in October were:

1—Chevrolet Chevette	33,614
2—Chevrolet Citation	29,596

EPA planning to simplify certification of compliance

By Roger Rowand
Engineering Editor

ANN ARBOR, Mich. — The taxpayer is expected to be the beneficiary as the EPA ends its practice of issuing certificates covering vehicles meeting its exhaust and evaporative emission standards.

Until now, the certification process for each of hundreds of engine families each model year ended with the issuance of a colored-paper certificate. Paper color varied with the type of vehicle—motorcycle, car, heavy-duty truck, for example—and model year.

From now on, the EPA said, a computer printout will do the job.

"We've been spending resources on making sure the certificate has everything the computer has. Now, we're just going to let the computer generate the certificates," said Robert Maxwell, director of the EPA's Certification Division.

"We asked the manufacturers if it made any difference to them. They told us: 'We'll take it on toilet paper as long as it's signed.' "

Maxwell indicated the switch to computer printout will save at least the equivalent of one job. The work now occupies a fraction of time of many government workers totaling, in government lingo "one or more person year."

He urges controls on government spending

GM's Smith sees year of recovery

DALLAS. — The year 1981 is likely to be recorded as a year of recovery for the nation's economy, General Motors Chairman Roger B. Smith said in an address concluding the Dallas/Fort Worth Economic Outlook Conference.

"As far as 1981 is concerned," he said, "we don't think it's going to go down in history as a great or even outstanding year. But it won't be a bad year, either. Far from it. It promises to be a year of improvement from the disappointing performance of 1980, and, most importantly, it promises to be a year of learning from past mistakes.

"If during 1981, we adopt programs that support private initiative by curtailing the upward spiral in government spending and regulation, we will succeed in setting the foundation of a revitalized economy," Smith said.

Smith expressed his belief that the adoption of more-enlightened economic policies will result in an extremely bright long-term outlook for the economy.

"By controlling government spending and by adopting sound regulatory and energy policies, we will lay the foundation for our country to assume once again its preeminent position in the global economy," he said.

- The GM chairman said it is inflation—both current inflation and the expectation of future inflation — that is the principal factor underlying the unprecedented surges in interest rates.

The Federal Reserve's task of controlling the money supply, he said, has been seriously complicated by the federal government's continuing insistence on running up huge budget deficits.

"The highest priority must be given to keeping the budget in balance over the business cycle —with surpluses in years of expansion and deficits in years of recession," he said.

Smith went on to emphasize that this does not rule out the advisability of reducing taxes this year.

"Various tax-reduction plans have been proposed," he said. "Properly handled, we believe the best of them can be implemented without adding significantly to the budget deficit or putting inordinate pressure on interest rates. The trick is to cut taxes in unison with cuts in government spending."

Smith reiterated GM's position that a tax cut is needed, especially one that provides substantial capital spending incentives retroactive to Jan. 1 of this year.

"Our corporation is committed to a $40-billion investment program through 1984—an awesome sum," he said. "The tax policies adopted this year will be an important factor in our ability to meet this challenge on schedule. And, in turn, our ability to meet our investment schedules will decide GM's ability to compete effectively here and abroad."

Continuing his look at the prospects for 1981, Smith said: "Given the expectation of a more stable Federal Reserve policy; given comparatively modest economic growth; and given a slight improvement in inflationary expectations, interest rates are likely to descend further this year.

"With the underlying inflation rate likely to remain close to 10 percent, interest rates will be high in a purely historical context, yes — but they'll ease significantly to allow business activity to expand moderately."

He also discussed the effect that interest rates have on new-car sales. The greatest strain, he said, is being felt by new-car dealers rather than the retail customer.

"In fact," he noted, "the average monthly payment customers make rose about $20 between December of 1979, and December of 1980. Thus, even with higher finance costs and higher vehicle prices, these average monthly payments represent about the same proportion of family income as they did a year ago—and if you go back three years, you'll find that today's car payment takes less of a bite out of family income than it did then."

UAW loses again in vote at GM Alabama plant

DECATUR, Ala. — A third UAW bid to organize the General Motors Saginaw Steering Gear plant here was defeated last week by a vote of 721 to 659.

The union has tried to organize the 1,400 workers at the plant over the last two years but has met with strong opposition from the local community and a group of anti-union workers called the Saginaw Steering Gear Employees for Free Enterprise.

The UAW lost elections in June and November, which were set aside by the National Labor Relations Board after the union filed objections charging both GM and employe interference in the election.

The union will have five working days to challenge the results but if it goes unchallenged, the UAW will have to wait at least a year before another election can be held.

And ditto for February estimate

January output lowest since 1975

By Patricia Hoffman
Staff Writer

There appears to be a long road to recovery for U. S. auto makers with the production figures for the first two months of 1981 looking anything but favorable.

Estimated production for January is the lowest since the recession year of 1975, and the February forecast is also the lowest since 1975.

The auto makers built an estimated 458,888 units in January, down 13.76 percent from the 531,584 cars completed in the comparable month last year. In 1975, the makers assembled 441,010 units in January.

The forecast for February is 477,820 units, down 23.46 percent from the 624,346 cars completed in February, 1980. In 1975, the makers built 369,486 units in February.

Production last week was planned at 119,713 cars, down 16.31 percent from the 143,044 units completed in the comparable week last year, but up 7.33 percent from the 111,530 units built the previous week.

Breakdown by companies for January is: General Motors, 64.16 percent; Ford Motor, 21.18 percent; Chrysler Corp., 9.08 percent; American Motors, 2.85 percent; Volkswagen of America, 2.71 percent, and Checker Motors, 0.02 percent.

Due to a steady increase in sales of the Chrysler K-cars, the Chrysler Jefferson and Newark points, which tentatively scheduled downtime for two weeks beginning Jan. 26, have reduced downtime to just one week beginning today (Feb. 2).

And due to an increase in sales of Omni and Horizon, Chrysler has canceled previously scheduled downtime at its Belvidere plant, which was to go down today.

GM's Baltimore and Pontiac points, both down the week of Jan. 26, will continue downtime this week.

Also at GM, the Leeds and Oklahoma City points will reopen today after closing for one week. Lakewood and Wilmington, both down since Jan. 19, will resume operations today.

Downtime is scheduled this week at Ford's Lorain point, with operations resuming Feb. 23. Also at Ford, the Chicago and Dearborn points closed today for two weeks, and San Jose, which was down the week of Jan. 26, has scheduled downtime for its second straight week.

Checker Motors closed today for one week, and has tentatively scheduled downtime for the week of Feb. 16.

Truck production down for month; Feb. dip seen, too

U. S. truck production for January is estimated as the lowest since 1965, and the projected output for February is the lowest since 1975.

The truck makers assembled an estimated 145,731 units in January, down 16.25 percent from the 165,590 trucks completed the same month last year, and the lowest since the 144,759 trucks assembled in January of 1965.

The February forecast shows only a slight improvement with projected output of 164,020 trucks, down 6.64 percent from the 175,701 units completed in February of 1980.

Planned production last week was 36,846 trucks, a 13.38 percent drop from the 42,538 units completed in the comparable week last year and also down 7.05 percent from the 39,644 completed the week ended Jan. 24, 1981.

Breakdown by companies for January is: General Motors, 80,819 trucks, up 3.30 percent from the 77,654 units completed in January, 1980; Ford Motor Co., 39,781 units, down 28.96 percent from 56,000; Chrysler Corp., with plants having resumed operations late in January, built 5,112 units, down 61.86 percent from the 13,406 in 1980; American Motors Jeep, 6,960, down 28.63 percent from the 9,752 in 1980; AM Corp., 340, down 63.63 percent from 935, and miscellaneous, 3,450, down 44.23 percent from 6,187 trucks in 1980.

International Harvester produced 6,877 units in January. There is no comparison figure for January last year due to a strike which closed International until April, 1980.

Downtime last week was scheduled at Ford's Kentucky plant.

Downtime is scheduled this week at Ford's Norfolk and Twin Cities plants, resuming operations Feb. 16. Also at Ford, Louisville will be down for one week.

January output of cars in Canada lowest since 1962

Canadian auto production for January is estimated as the lowest in 19 years, and planned production last week fell more than 80 percent with four plants down and only three plants working.

January output for 1981 is estimated at 45,822 cars, down 30.34 percent from the 65,781 units completed in the comparable month last year, and the lowest output since the 34,877 built in 1962.

Planned output last week was 2,825 units, down 82.98 percent from the 16,601 cars completed in the comparable week last year and down 80.66 percent from the 14,613 units built the previous week.

Canadian truck production for January was slightly higher than the comparable month last year, and planned production last week was also above that of the year-ago period.

January output for the truck makers is estimated at 45,574 units, a 2.40 percent increase from the 44,502 trucks completed in January, 1980.

Planned production last week was 11,876, up 5.51 percent from the 11,255 trucks built the week ended Feb. 2, 1980, but down 5.68 percent from the 12,592 units completed in the previous week of this year.

Downtime was scheduled last week at four car plants: Ford St. Thomas, General Motors Oshawa and St. Therese and Chrysler Windsor. All are scheduled to reopen today (Feb. 2).

breaking news

Continued from Page 1

No small cars wanted for ex-hostages

NEW YORK.—Nothing but gas guzzlers was good enough for the Manhattan ticker-tape parade which honored the former hostages last week. Five Toyota Sunchasers—convertibles prepared by Griffith Co.—were being driven to New York City from five dealerships in surrounding states when the company got word to pull them back. "Too small," the mayor's Special Events Committee said.

Ford lists sales incentives

DETROIT.—Ford Division's new incentive program offers salesmen $50-$75 for each Bronco, Courier or F-100-300 truck they sell from Jan. 26 to March 20. Sales managers can earn a flat $500, $1,000 or $1,500, depending on their category on an all-truck objective Jan. 21-March 31.

Dealers receive $200-$400 per '80 Fiesta Jan. 26-March 31 and can boost awards to $300 and $500 by hitting an Escort objective. Also, they can earn payments of $150 or $350 on '80-'81 Couriers Jan. 29-March 31. Ford is also doing a massive direct mailing on discounted Explorer packages for dealers, offering option discounts of up to $600.

NADA convention opens; survival is the watchword

By Robert M. Lienert
Editor

LOS ANGELES. — NADA members, gathered here for the association's 64th convention and exposition, are taking another crack at discussing and attempting to solve myriad problems that have bedeviled the industry in recent years.

The dominant thrust of this convention is simple: Survival. But the issues refuse to go away.

The import dilemma, which exploded so dramatically at last year's convention, continues to seethe like an angry undercurrent.

In most dealer conversations, however, the No. 1 topic concerns the high interest rate and the business hurdles that spring from it.

All the other prickly problems also remain unresolved. The energy crunch continues unabated and gasoline prices climb ever upward. Inflation grinds onward unchecked despite those high interest rates, which would have shamed a loan shark only a few years ago.

All of these contribute to the retail industry's basic difficulty: Anemic sales.

As one dealer said: "This isn't Las Vegas but we're all playing in the high-low game. High costs and low sales, and the winners are few and far between."

Los Angeles, as he so correctly pointed out, is not Las Vegas. But Southern California and its charms do seem a long way away from high heating bills, empty showrooms and anxious hometown bankers. This is the first year that NADA has convened in Los Angeles, a city obviously sprawled out on the premise that the private automobile will always be with us.

- Early registrations indicate that attendance—not surprisingly—may trail last year's turnout in New Orleans. Mid-week preregistrations last week numbered 2,100 dealers, compared with 2,800 a year earlier.

An NADA spokesman pointed out that there are some 850 dealers in Los Angeles and its environs and that many of these are expected to show up as over-the-counter registrants.

Las year's final count was 12,000 to 13,000 over-all.

"We expect to reach 10,000 this year—and we may go over it," the NADA spokesman said.

George S. Irvin, who will turn over the president's duties to Wendell H. Miller on Tuesday afternoon, is expected to summarize the year's achievements by NADA and its members.

"We have accomplished some steps forward in some areas although this has been a tough year," Irvin told AUTOMOTIVE NEWS as the convention prepared to open. Irvin is a Chevrolet-Subara-BMW and Mercedes-Benz dealer in Denver.

Irvin held out as one of the

Coming from GM

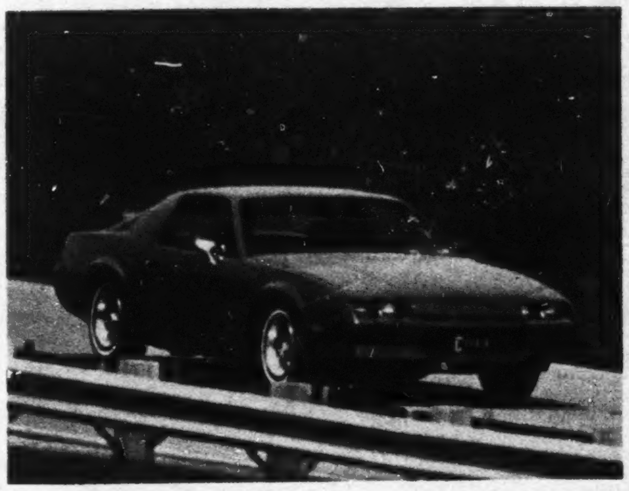
Spring intro for GM J-cars

The first of GM's new front-drive J-car subcompacts—Chevy Cavalier, above, Pontiac J-2000 and Cadillac Cimarron—bow in early May. Sized below the compact X-cars, the J-bodies will be powered by a new 1.8-liter four, with body styles ranging from a coupe and hatchback to a sedan and wagon. Oldsmobile and Buick versions debut as '82½ models.

Pontiac P-car for 82½

Pontiac is wrapping up development work on the sporty mid-engine P-car (pictured here in prototype form), a fiberglass two-seater powered by the 2.5-liter four from the X-cars. Introduction has been moved up six months to mid-1982, according to sources. A new name, possibly Sunfire, will be used on the actual production car.

Due in '82



Camaro revamped for '82

Chevy Camaro, above, and Pontiac Firebird get all-new designs this fall—the first major overhaul for the sporty F-cars since 1970. A rear-wheel drivetrain is carried over, but sheet metal and mechanicals are brand new. Base engine is a 2.5-liter four, with optional V-6 and V-8 engines available.

FWD Cutlass replacement for '82

Sneak photo of the '82 front-drive replacement for the Oldsmobile Cutlass gives an idea of the wedge-shaped styling theme on GM's new mid-size A-cars which bow in November. Coupes and sedans are downsized and share mechanicals with the X-cars, including the base 2.5-liter four. A new Oldsmobile 3.2-liter V-6 diesel will be optional. Some new names, including Chevy Celebrity and Pontiac A-6000, will replace existing badges on the cars.

He is National Representative for Time winners

Shepherd heads Quality Dealers

LOS ANGELES. — Ray Shepherd, president of Ray Shepherd Motors, Inc., Fort Scott, Kans., has been selected as the 1981 National Representative of the Time Magazine Quality Dealer Award (TMQDA) program.

Shepherd handles Ford, Lincoln, Mercury, Chrysler, Plymouth and Dodge.

He will serve as official spokesman throughout the year for all 64 winners of 1981 TMQDA honors. A year ago, 70 dealers were TMQDA winners.

Shepherd's award was announced by Michael N. Carey, director of the TMQDA program for Time. Shepherd and the other winners received their awards at the opening business meeting of the NADA convention here.

The TMQDA program is sponsored by Time in cooperation with NADA. Each year, it honors outstanding new-car dealers for "exceptional performance in their dealerships combined with distinguished community service." This is the 12th year of Time's sponsorship of the program.

The winners were chosen by a panel of judges from the University of Michigan Graduate School of Business Administration.

This same panel of judges named Shepherd as the National Representative from among a group of 11 Regional Representatives selected on the basis of "qualities considered to be most typical of the 64 winners."

The 10 other Regional Representatives are:

C. William Briggs, president and chief executive officer of Anderson Cadillac, Inc., Minneapolis.

Bob Eagle, president of Eagle Lincoln-Mercury/Honda, Inc., Dallas.

Tom Helms, president of Strieter Motor Co. (Lincoln-Mercury), Davenport, Ia.

Howard Johnson, president of E. O. Johnson Motor Co. (Cadillac-Datsun-Oldsmobile), Aberdeen, S. D.

Robert S. (Bobby) Jones, president of Fletcher Motor Co. (Lincoln-Mercury-GMC), Columbus, Miss.

Robert B. Melland, president of Melland, Inc. (Pontiac-GMC-International Harvester), Jamestown, N. D.

Garland G. Powell, president of Brennecke Chevrolet Co., Inc., Jackson, Mo.

Jack L. Rivers, president of Rivers Ford, Inc., Monroe, La.

George Selover, president and general manager of Selover Buick, Inc., (Buick - Honda - Jeep, and Mercedes-Benz), Billings, Mont.

Earl Tindol, president of Earl Tindol Ford, Inc., Gastonia, N.C.,

Few auto regulations affected

Little help seen in 60-day freeze

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—An auto industry looking for relief from the burden of federal regulation will be hard pressed to find any under the 60-day freeze in regulations ordered by President Reagan.

An Automotive News analysis of the freeze order indicates few auto regulations were caught by it and that those that were are of the type that could be exempted.

At EPA, new emission standards for light and heavy-duty trucks and particulate standards for diesel passenger cars do not take effect until future model years well beyond the 60-day freeze termination date of March 23.

Only three EPA actions might be caught by the freeze, but as mentioned earlier they will probably fall in the exempted category. They are: Waiver from the 1982 carbon monoxide standard for certain General Motors, Ford and Volkswagen vehicles, oxides of nitrogen waivers for certain 1982 Nissan diesel models, and state implementation plans for pollution control (some of which might call for auto inspection and maintenance programs).

According to the memorandum accompanied President Reagan's freeze order, Office of Management and Budget Director David Stockman has the power to grant emergency exemptions to the freeze.

• At presstime, a meeting was being convened at NHTSA to find out exactly what effect the 60-day freeze has on auto regulations coming out of NHTSA. The tentative reading is virtually none.

Responses to petitions from companies that provided relief from nonconsequential compliance would be affected except they are exempt because they give relief rather than add regulation. Generic changes—for example, and changes in tire tables—might also be wiped out but could be reinstated by the agency.

A denial for rulemaking—the IIHS petition for governors on trucks and buses—would be classified as deregulation while a granting of petition—the Nader petition to raise crashworthiness levels in the future—might be affected, but it is essentially meaningless anyway. Even while it appears that petitions for consideration or noncompliance are affected, it is not clear that petitions for rulemaking are.

In any case, most of the so-called "midnight" regulations signed by Joan Claybrook, former NHTSA head, were advanced notices or notices of proposed rules and they are unaffected and can always be merely abandoned by the incoming Administration.

But the important point is that major NHTSA standards (both for safety and for fuel economy) are geared to the model year—Sept. 1—and are consequently not caught in the net.

In any case, it will probably take several months—except possibly in the passive restraint area and bumpers, where the industry wants action and Stockman is sympathetic—to get a handle on where incoming NHTSA head Raymond Peck, who is reputed to be bright and knowledgeable about government, is headed.

• At OSHA, officials are doing their best to fulfill their duties, despite the freeze and the confusion it has caused them.

"OSHA is in a unique position," an OSHA spokesman said. "Currently there is no secretary or head of OSHA (Eule Bingham, the former administrator, went out with the rest of the Carter Administration appointees). Right now we're carrying on normal business, but what will happen to frozen standards, or standards scheduled to come in after the freeze, will be up to the new administrator, whenever he or she is appointed."

Currently, the only new stand-

Continued on Page 180, Col. 2

Peck succeeds Claybrook as head of NHTSA

WASHINGTON.—Raymond A. Peck, Jr. is President Reagan's choice as head of NHTSA.

Although no hearing has yet been scheduled by the Senate Commerce Committee, there is no doubt he will become the successor to Joan Claybrook.

The 41-year-old lawyer has been, since 1978, vice president and director of regulatory affairs for the National Coal Assn. Before that he was a partner in the Washington firm of Cotten, Day and Doyle, litigating energy and environmental matters before the federal bar.

Diane Steed is expected to be named by DOT Secretary Lewis as assistant administrator for NHTSA.

Steed, an administrative specialist out of the Office of Management and Budget, will act as the administrator of NHTSA pending confirmation of Peck.

During the Ford Administration, Peck was deputy assistant secretary for energy and minerals at the Interior Department. In 1974-75, he was at the Treasury Department as director of the Office of Energy Regulatory and Legislative Policy and in 1971-74 he was environmental counsel at the Commerce Department.

After graduation from the College of the Holy Cross, he became a Root-Tilden Scholar at New York University School of Law. From 1964 to 1971 he practiced law with two New York firms—Casey, Lane, and Mittendorf and Norton, Sachs, Molineaux and Pastore.

Peck is married and has one daughter.

Cabriolet for a K

Roman's Chariot Shop, Cleveland, now offers a K-car cabriolet package which includes a vinyl landau roof, a wide brushed stainless band and special "K" and cabriolet emblems. Cost to the dealer is $295. It is also marketed through body and trim shops.

Chrysler workers OK further concessions

By Marjorie Sorge
Labor Editor

DETROIT. — Chrysler Corp. workers have agreed to further concessions which will enable the company to get $400 million more in federal loan guarantees.

Last week, UAW Vice President Marc Stepp, director of the union's Chrysler Department, said the workers ratified the tentative agreement revising the current contracts in effect between the UAW and Chrysler.

The total vote was 26,942 for ratification and 18,859 against, or 58.82 percent agreement. Acceptance of this contract was much slimmer than for the previous two a year ago.

Only 38 percent of the Chrysler workers voted, and Stepp blamed the poor turnout partially on layoffs and the inability to get workers together to vote.

"We think we have negotiated a viable contract with Chrysler Corp.," he said. "It is not the best agreement we have ever negotiated. It was based on the survival of jobs in this corporation."

Stepp said "we did what we did at Chrysler because Chrysler was on the brink of bankruptcy." He warned other corporations not to try to make the situation work for them to get concessions from the union.

"If any corporations think they can take advantage of the situation and of the UAW workers to get concessions they have a shock coming," he said.

Both Ford Motor Co. and General Motors officials have indicated they will demand concessions from the union because they feel Chrysler now has an unfair labor cost advantage.

Now that the UAW portion of the Chrysler survival pact is in place, Stepp said he is confident the banks and the suppliers will move quickly to get their acts together.

Chrysler has another $300 million in federal loan guarantees which it has not drawn down. The UAW had pressed the company to ask for the entire $700 million remaining in the original $1.5 billion package but the Loan Guarantee Board only approved $400 million.

Stepp said it is his impression the board held back the $300

Union protesters mar ground-breaking

Tennessee buzz-saw rips Datsun

By Jim Plegue
Staff Writer

Groundbreaking ceremonies for Nissan's $300 million truck plant in Smyrna, Tenn., last week were marred by hundreds of protesting building-trade union members who taunted officials during speeches, threw rocks at vehicles and vandalized Datsun trucks at the site.

The protesters, who comprised about half of the 1,200 people attending the event, were condemning Nissan for its selection of an out-of-state "open-shop" contractor to build the plant. The contractor is Daniel Construction Co., Greenville, S. C., which reportedly hires both union and non-union workers.

Boos and cries of "Go Home, Japs," greeted the three principal speakers—Masataka Okuma, executive vice president, Nissan Motor Co., Ltd.; Marvin T. Runyon, president, Nissan Motor Manufacturing Corp., U.S.A., and Lamar Alexander, state governor — as they opened the ceremony with short speeches.

Overhead, an airplane trailed a banner urging, "Boycott Datsun. Put Tennesseans back to work." Union members flaunted signs, saying, "Boycott Datsun." During the governor's speech, the protesters yelled, "Sit down, Rat!"

The schedule called for Okuma to drive a snowplow-equipped Datsun 4x4 to turn the first earth at the site. Instead, Runyon did the driving. A Datsun official said Okuma didn't seem to mind giving up the job.

"When they got outside, the union people just swarmed around the truck—not physically on it—but 10 to 12 deep all around it," said one witness. "They couldn't move the truck more than three or four inches in either direction. State troopers moved them back just a bit and the truck moved about six inches, and that was the groundbreaking."

The groundbreaking vehicle

Questions and protests

Answering questions following the Nissan groundbreaking were, from left, Masataka Okuma, executive vice president, Nissan Motor Co. Ltd.; Marvin T. Runyon, president, Nissan Motor Mfg. Corp., U.S.A., and Tennessee Gov. Lamar Alexander. The ceremony was marred by union construction workers protesting Nissan's selection of an "open-shop" contractor.

Chrysler works on compromise with Canada

WINDSOR. — Chrysler Corp. and Canadian officials last week continued to negotiate a compromise which would allow the auto maker to trim part of its $850 million spending commitment here yet keep $170 million in Canadian loan guarantees.

The Canadian arrangement is necessary to the total package required for Chrysler to draw down $400 million in U. S. federal loan guarantees.

Canadian Industry Minister Herb Gray last week indicated he wanted Chrysler to restore small-car output at the Windsor plant. Chrysler had planned to produce only vans in Windsor as part of a manufacturing and

Month's registrations scrape past 1979 level

By Richard A. Wright
Assistant Managing Editor

U. S. new-car registrations in November topped the year-earlier total—not by much, but it was the first month of 1980 that the count exceeded the year-earlier tally—according to figures compiled by R. L. Polk & Co.

New-car registrations in November totaled 729,719, up 0.08 percent from 729,160 a year earlier. It was the first month in which the preceeding year's count for that month was exceeded since October, 1979.

Although the November total was up from a year earlier, it was not one of the industry's better Novembers. Record for the month is 946,917, posted in 1972.

Pushing the registration total above the year-ago November figure was the import total of 186,869, a record for November and an increase of 10.33 percent over 169,369 a year earlier, the previous record.

Domestic registrations were off 1.47 percent from a year earlier, totaling 542,850, compared with 559,791.

Table on Page 150.

Registrations of new cars in the U. S. for the first 11 months of 1980 totaled 8,050,116, down 15.45 percent from 9,520,682 in 1979.

• Compared with November a year earlier, General Motors and Chrysler Corp. both registered market share gains, albeit tiny.

GM accounted for 48.23 percent of November new-car registrations, up 0.62 of a percentage point, while Chrysler Corp.'s share was up 0.01 of a point to 7.26 percent.

Biggest gain was logged by the imports, which accounted for 25.61 percent of the November market, up 2.38 points from a year earlier.

Ford Motor Co. accounted for 17.11 percent of November registrations, down 2.73 points. American Motors was off 0.28 of a point to 1.75 percent. Miscellaneous lines took 0.04 percent, unchanged from a year earlier.

Excluding imports, domestic-only registrations in November were divided this way: GM, 64.84 percent; Ford Motor Co., 23.00 percent; Chrysler Corp., 9.75 percent; AMC, 2.35 percent, and miscellaneous, 0.06 percent.

A year earlier, domestic-only registrations were divided as follows: GM, 62.01 percent; Ford Motor Co., 25.85 percent; Chrysler Corp., 9.44 percent; AMC, 2.65 percent, and miscellaneous, 0.05 percent.

• By size segments, subcompacts and compacts improved their market share over the preceding November among domestic cars. Subcompacts accounted for 14.06 percent of the total, up 3.84 percent, while compacts took 21.21 percent of the market, up 0.71 of a point.

Standards suffered the biggest decline, down 3.25 points to 10.92 percent. Also down were intermediates, of 1.61 points to 23.16 percent, and luxury cars, off 1.42 points to 5.04 percent.

Registrations by size class in September were: Subcompact, 102,630; compact, 154,740; intermediate, 169,014; standard, 79,689; luxury, 36,777, and import, 186,869.

Ford's Escort quickly moved into the top 20 nameplates in registrations, moving into the 11th slot. Standard Ford moved back into the top 20, while Chrysler Corp. found itself again without an entry as Plymouth Horizon was displaced, along with Ford Pinto.

The top 20 domestic nameplates in registration during November were:

1—Chevrolet Chevette	29,218
2—Chevrolet Citation	28,585
3—Chevrolet Malibu	23,889
4—Ford Fairmont	23,664
5—Olds Cutlass Supreme	22,332

GM will seek wage break from UAW, McDonald says

DETROIT. — General Motors will seek wage concessions from the UAW before the contract expires in September, 1982, according to F. James McDonald, GM president.

In an interview with the Associated Press, McDonald said, "We don't see how you can have a two-tier or a three-tier wage program in the automotive industry."

He did not say when GM would be talking to the union or what areas would be part of any concession discussions.

McDonald's statement came after the UAW negotiated further concessions with Chrysler Corp., amounting to $622 million. Those concessions will help clear the way for approval of an additional $400 million in federal loan guarantees for Chrysler.

According to some analysts, the cuts in wages and benefits at Chrysler would give the company a $200 a car labor-cost advantage over GM and Ford Motor Co.

Ford has already said it would be very interested in talking with the union about concessions in its contract but has not put the discussions in any time frame.

"Those concessions could lead to a form of union busting," said one UAW official. "People are going to say 'why should I join a union when they can't keep my wages and benefits intact'?"

A UAW spokesman said GM has not contacted the union and "we aren't volunteering for anything. GM's not exactly in the bread line and can't be compared with Chrysler."

He said if GM does seek concessions from the union, the corporation should be prepared to talk about "all the things we got at Chrysler" including profit sharing, open books and a UAW member on the board of directors.

AC-Delco adds 27 new models to fuel pump line

DETROIT. — AC-Delco Division has expanded its AC fuel pump line with the addition of 27 fuel pumps covering late model import and domestic vehicle applications.

Among these are 1980 applications for the Volkswagen Rabbit and Ford Bronco, Fairmont and Mercury models, as well as 1981 applications for GMC trucks, Chevrolet Blazer and all 4.1-liter-engine 1981 GM E-body cars.

The new coverage for foreign-built vehicles also includes applications for Plymouth Arrow and Sapporo models, Dodge Colt, Honda Civic, Toyota Corolla and Land Cruiser models and Datsun.

Other new units cover the Ford Granada and Allis Chalmers 3500 series diesel engine vehicles.

These newest additions, coupled with earlier introductions, including the EP42 universal electric AC fuel pump, have broadened AC-Delco's coverage of replacement units for American passenger cars, import cars, trucks, tractors, commercial and industrial engines and marine engines.

Cash payments and 'free' equipment

Ford Division adds new round of incentives

By Joseph Bohn
Marketing Editor

Ford Division launched a second incentive contest, covering Mustang, Fairmont, Thunderbird and Granada, to go with its previously announced contest on trucks, Escort and Fiesta.

The Mustang, Fairmont, Thunderbird, Granada incentive runs from Jan. 20-March 21. It provides non-retroactive cash payments to dealers for achieving a combined sales objective on these cars. Sales managers also get a retroactive cash payment.

Dealer payoffs are in the following amounts: 0-19 percent pays nothing; 20-59 percent pays $300 per car; 60 percent and over pays $400 per car.

Furthermore, Ford said that any orders written before March 1, but where the car is delivered after March 21, are eligible for the highest payoff level the dealer achieves during the contest.

In the sales manager's portion, managers are assigned a total car objective. If they hit it, they get $10 per car, retroactively, for everything they've sold.

Ford is also giving $300 extra to fleet buyers (daily rental, state and local government purchases, etc.) during the Jan. 30-April 15 period.

Even though dealers don't earn extra money from the fleet provision, they can count the first 10 fleet sales toward attaining their own cash incentive quotas.

Ford is also offering consumers a special value package on Granada which provides $400 worth of "free" equipment when ordered in conjunction with other optional equipment.

Ford is running intermittent advertising on the incentives on radio during the contest period.

The factory ads said: "Special cash incentives to dealers enable you to save hundreds of dollars on any new 1981 Mustang, Fairmont, Thunderbird or Granada."

Its truck incentives, and Fiesta/Escort incentives break down into four different programs, plus a massive direct mailing.

A Jan. 26-March 20 program offers such incentives to salesmen on Bronco, Courier and light-duty trucks from F-100 to F-300 series.

Salesmen must sell one unit to qualify. They receive $50 for each of the second and third units they sell and $75 for the fourth-and-over units.

There's also a Jan. 21-March 31 cash incentive for sales managers, covering all 1980 and 1981 Ford trucks.

Sales managers are grouped into three categories. Category one is made up of those with unit objectives of 1 to 20 units. Managers get $500 for hitting their objective. Group two managers, those with objectives of 21 to 40 units, receive $1,000 for attaining their objective, and group three managers, with unit objectives of 41 and over, receive $1,500.

There is also a Jan. 26-March 31 incentive for dealers on 1980 Fiesta models. Dealers receive no payment on the first unit, $200 for the second and $400 for the third and additional units they sell.

An Escort objective is tied in. If dealers hit their Escort objective, they receive a $100 bonus in each category. Thus, they get $100 for the first Fiesta they sell, $300 for the second and $500 for the third and over.

Another Courier contest for dealers, covering '80s and '81s, runs from Jan. 29 to March 31. Dealers receive nothing for 0-39.9 percent of objective; $150 per vehicle for 40-99 percent and $350 per vehicle for 100 percent and over.

Ford is also making a massive direct mailing for dealers, highlighting a number of Explorer packages, which offer certain options at discounts, ranging up to $600.

Dealer moves six 'clunkers' by sealed bids

ALBUQUERQUE.—On a December Saturday, Ed Black's Chevrolet Center sold by sealed bid six automobiles it advertised as clunkers. Minimum bid for the cars was 98 cents. The highest bidder in attendance bought the car.

Each car sold as a clunker was guaranteed to get off the lot under its own power. After that, the owners were responsible for keeping the cars moving. A tool kit was thrown in with each car to help keep them running.

Sixty bids were received for the six cars. The lowest winning bid was $30 for a 1973 Dodge Polara.

Also sold that day through sealed bids were a 1969 Rambler American, a 1971 Oldsmobile, a 1965 Oldsmobile 98, a 1969 Plymouth station wagon and a 1964 Ford Falcon station wagon. Average selling price for the cars was about $103.

"I think we'll have another such sale in January," said Glenn Fox, used-car sales manager. He added, "Contrary to what people think, it's not that easy to find clunkers for a sale like this."

Have any of the people who bought the clunkers come back with complaints?

"We haven't really heard from any of them," Fox said. "I think all of them were happy."

Honda Accord second, Datsun 210 third in 1980

Toyota Corolla tops import sales

By Richard A. Wright
Assistant Managing Editor

The Toyota Corolla was again the top-selling import model in the U. S. during 1980, an AUTOMOTIVE NEWS survey of imported-car sales by model shows.

Corolla sales of 257,315 were little changed from 257,096 in 1979. Overall Toyota sales surged strongly to a record 582,204 during 1980, compared with the previous record of 507,816 the year before. The gain came from increased sales of the Tercel to 99,067, compared with 17,838 in 1979, and the new Starlet, which sold 6,195 units.

Datsun also had record sales in 1980 of 516,890, up from 472,252 the previous year. Biggest gainer among Datsun models was the 200-SX, with sales of 92,514, up from 30,214. Sales of the 310 were also up to 96,204 from 75,466. Datsun's biggest seller was the 210, but its total was down to 180,220 from 216,812 the year before.

Topping the 210 to take second place among all import models was the Honda Accord, with a total of 185,977, up from 157,919. Honda also sold 138,735 Civics, down from 155,541 the previous year. Prelude sales were up to 50,676 from 39,831. Total Honda sales were a record 375,388, up from 353,291.

In fourth place was another Toyota model, the Celica, with sales of 162,476, down from 172,815 in 1979.

Mazda's record sales total of 161,623, compared with 156,535 in 1979, was spearheaded by its 626 model, sales of which almost doubled to 55,281 compared with 28,684 the preceding year. Mazda GLC sales dipped from 72,601 to 62,593 and RX-7 from 54,853 to 43,743.

The growing popularity of diesel engines was reflected in Mercedes-Benz, Peugeot, Audi and Volvo sales. Mercedes-Benz sold a total of 53,790 new cars in 1980, of which 39,262, or 72.99 percent, were diesel-powered. In the preceding year, 67.46 percent of Mercedes-Benz's 52,819 sales were diesels.

Of Peugeot's 12,930 sales in 1980, diesels accounted for 10,337, or 79.95 percent. Peugeot diesel sales included 623 turbo diesels.

Audi sold 8,035 diesels, 18.91 percent of its 42,843 total, compared with 2,200 in 1979. Volvo unveiled its diesel in 1980 and sold 4,158 diesels, 7.29 percent of its 56,999 total.

Diesel growth was not reflected in Volkswagen import figures because all but 34 Rabbit diesels sold in 1980 were built in the U. S., while in the preceding year 47,996 were imported. As a result, VW diesel import figures for 1980 and 1979 were 23,599 vs. 58,408. However, total VW diesel figures, including import and U. S.-built, were 116,300 vs. 86,005, a 35.22 percent gain. Diesels accounted for 43.38 percent of total U. S. and import VW sales in 1980.

Sales of turbocharged imports in 1980 were up 71.75 percent, totaling 13,852, compared with 8,065 in 1979.

Turbo sales in 1980, with year-earlier figures in parentheses, were: Saab 900 Turbo, 4,537 (4,328); Mercedes 300-TD, 2,803 (2,450); Audi 5000 Turbo, 3,767 (0); Porsche 924 Turbo, 1,925 (635); Peugeot 505 Turbo Diesel, 623 (0), and Porsche 930 Turbo, 197 (652).

Milwaukee's leadership

New officers of the New Car Dealers of Greater Milwaukee are, from left: Walter H. Mossner, Mossner Motors, Inc., vice president; Robert W. Braeger, Braeger Chevrolet, Inc., president, and James E. Renner, Renner Oldsmobile, secretary. Al Padek, NorthShore Dodge, will serve as treasurer.

Reductions only in areas with inspections

Emission systems being violated

WASHINGTON.—Car owners are continuing to tamper with emission control devices at about the same rate as in previous years, but in areas where inspection and maintenance programs are in effect the rate of occurrence is declining, according to a new EPA report.

EPA reported the rate of tampering with the emission control systems on 1973 through 1979 models was 18 percent, essentially the same as the 19 percent tampering rate found in a 1978 survey.

Tampering can cause emissions to increase nearly fourfold. The Clean Air Act prohibits auto makers, new-car dealers, commercial repair facilities and fleet operators from meddling with emission control systems. Maximum fine is $10,000.

EPA recently adopted regulations aimed at making emission controls more tamper resistant but these do not apply to pre-1981 models.

The EPA report also found that fuel switching (using leaded gasoline in cars requiring unleaded) was occurring in 9 percent of the vehicle fleet. It said that figure is close to the 8-percent fuel switching rate EPA has estimated from other ongoing programs.

Fuel switching renders the catalytic converter on an automobile useless and results in eight-fold increases in hydrocarbon and carbon monoxide emissions.

The 1979 survey checked cars in eight geographic areas of the country.

According to the EPA, the level of tampering in areas with inspection and maintenance programs was 13.2 percent, substantially lower than the 19.7 percent tampering level observed in areas without the inspections.

Fuel switching in areas which have inspection and maintenance programs in place occurred on only 2 percent of the cars. The rate compared to 9 percent in non-inspection areas.

The tampering found in the study included exhaust gas recirculation systems, disabled catalysts, filler neck inlets altered to permit the use of leaded gas in cars requiring unleaded, vacuum spark retard disabled.

Only 8 percent of the imported cars showed evidence of tampering, compared with a 20-percent tampering rate seen among domestic vehicles, the EPA said. It said older cars were much more likely to be tampered with than vehicles only one or two years old.

GM's Guide Division names Torrey, Althaus

ANDERSON, Ind. — Norman F. Torrey has been appointed manufacturing manager and Frederick C. Althaus has been named director of production engineering for Guide Division of General Motors.

Torrey formerly was general superintendent of standards and methods for GMC Truck & Coach Division, and Althaus was general superintendent, manufacturing engineering, for Chevrolet's Detroit Gear & Axle Plant.

U.S., import sales dip for January

By Jenny L. King
Staff Writer

January new-car sales suffered a severe decline as domestic and import auto makers reported precipitous drops. Total retail sales numbered 647,197, down 19.65 percent from 805,431 in January, 1980.

The five U. S. auto makers sold 469,832 units, down 20.06 percent from 587,741 a year earlier. It was their lowest total since the 462,691 posted in 1975. Imported-car sales numbered 177,365, down 18.52 percent from 217,690 in 1980. Imports accounted for 27.41 percent of the January market.

Chrysler Corp. was the only domestic car maker to beat last year's sales. Chrysler was up 2.02 percent, to 55,452 from 54,355, with improvements during two of the three January selling periods. General Motors reported the biggest drop, its sales tumbling 23.01 percent to 293,219 from 380,848 last year.

Ford Motor Co. sales were down 22.86 percent, to 97,969 from 127,000. Volkswagen of America sold 12,473 new Rabbits, down 8.50 percent from 13,634 a year ago, while American Motors reported sales of 10,719, down 9.95 percent from 11,904.

Chrysler helped itself to 11.81 percent of the domestic market in January, up from 9.25 percent last year. GM earned 62.41 percent, down from 64.80 percent. Ford sales accounted for 20.85 percent, down from 21.61 percent. VWoA earned 2.65 percent, up from 2.32 percent, and AMC had 2.28 percent, up from 2.02 percent.

Domestic daily selling rate averaged 18,070, down 20.06 percent from 22,605 in 1980. There were 26 selling days both years.

- Of the 14 U. S. makes, only two improved on year-ago sales: Plymouth was up 19.40 percent and Dodge was up 6.16 percent. Lincoln took the biggest slide, down 48.98 percent.

Of the 28 makes included in the Automotive News import sales total, five showed improved sales. Honda was the only Japanese make among them, its sales up a modest 2.16 percent over last January. Toyota sales dropped 15.91 percent, Datsun was down 29.66 percent, Mazda was down 6.22 percent and Subaru dropped 16.48 percent.

Volvo was the biggest European import in January, pushing ahead of Fiesta and Volkswagen.

In the total January market, imports accounted for 27.41 percent. U. S. subcompacts were 16.42 percent; compacts were 19.68 percent, intermediates were 21.49 percent, standards were 10.41 percent, and luxury models were 4.59 percent.

Domestic new-car sales during the final 10 days of the month dropped 26.62 percent, to 205,692 from 280,309 a year ago. It was the lowest total for the period since the 203,962 posted in 1967. The daily selling rate was 20,569, down 26.62 percent from 28,031 a year ago.

Top-selling U. S. nameplates in January were Chevrolet Chevette at 28,135, Chevrolet Citation at 23,075, Ford Escort at 21,628, Oldsmobile Cutlass Supreme at 20,443 and Chevrolet Malibu at 18,519.

Tennessee buzz-saw rips Datsun at groundbreaking

Continued from Page 3

had three flat tires and "Boycott Datsun" bumper stickers plastered on its windshield. Other Datsun trucks on display had slashed tires and scratched paint. One Rutherford County police officer was hurt when he was struck in the head by a rock. No arrests were reported.

"I don't think the Datsun officials had any idea what they were getting into," said a reporter at the site. "I don't think anybody . . . expected that many people to come out and be that loud and that disruptive."

A Datsun spokesman said the company had been warned of a possible protest "but they had no idea how big it would be." Security had been beefed up for the event.

"I'll say this about Mr. Okuma," the spokesman added, "he sure played it cool."

Despite the violent protest, Okuma said later he had "no second thoughts at all" about building the plant. "This is the ideal location for Nissan."

The plant, Datsun's largest assembly venture outside Japan, is expected to employ 2,200 workers and build 10,000 Datsun trucks per month (the entire U.S. truck line) when it opens on a one-shift schedule in August, 1983. Another 6,800 local jobs will be created, Datsun said, through support operations. Annual plant payroll is estimated at $40 million.

- Okuma said the recent decline in small truck sales is due to the 25-percent duty and noted that import sales on a whole are suffering because of the troubled U.S. economy. He did not rule out the possibility of building Datsun cars at the Smyrna plant.

"However, as far as cars go, it really depends on the future market situation," Okuma said. "In fact, before cars would ever be produced here, we would probably first consider building other commercial vehicles."

During his speech, Runyon assured the audience that Daniel would employ large numbers of Tennesseans during the construction. Runyon said Daniel was selected for the job because it is reliable and "stood out among its competitors."

"People just don't believe that," a source said. "They're convinced that Daniel is going to come in and hire nothing but non-union people and bring in about 70 percent of their own people in."

The building tradesmen — about a dozen unions in all — reportedly may attempt to block, through state lobbyists, certain proposals aimed at helping Nissan locate in the area. Among them is a tax break proposal and the establishment of a duty-free trade zone.

The Nissan spokesman said it is "very unlikely" that the proposal for a duty-free trade zone "would be put in jeopardy."

Steel fabrication and foundation work at the plant will begin around April 1. Steel erection will begin in early summer. Smyrna is about 15 miles southeast of downtown Nashville.

Richardson president of Pennsylvania group

WILKES-BARRE, Pa.—James Richardson, president of L. L. Richardson Dodge here, has been installed as president of the Wyoming Valley New Car Dealers Assn. He succeeds Joseph Bonomo, of Barber Ford.

Other officers are Gene Gabor, of Gabes Motors, vice president, and Carl Kasper, of M. E. Moore & Son, secretary-treasurer.

California hearing set to consider eased diesel rules

WASHINGTON.—EPA says it will hold a hearing March 5 in San Francisco to consider the State of California's request to ease slightly its 1982 emission standards for diesel-powered passenger cars.

California wants to adopt the federal diesel particulate standard of —.6 grams per mile, change one of its optional 1982 model year oxides of nitrogen (NOx) emission standards to 1.5 grams per mile for 100,000 miles diesel passenger car certification and eliminate the hydrocarbon exhaust emissions allowance granted vehicles with low evaporation emissions for 1982 and later model years.

EPA must determine, under provisions of the Clean Air Act, that these actions will be as protective of public health and welfare as applicable federal standards, which for diesel powered cars will be .41 gpm HC, 3.4 CO, 1.0 NOx and 0.6 particulate.

But week's total is 13 pct. below last year's

Auto production shows slight gain

By Patricia Hoffman
Staff Writer

U.S. auto production last week showed an improvement over the previous week's output, but it still trailed the year-ago week.

Last week's output was planned at 122,345 units, an increase of 3.81 percent from the 117,851 units completed the previous week, but down 13.75 percent from the 141,860 cars built in the comparable week of 1980.

The January total was 432,284 units, down 18.68 percent from the 531,584 cars completed in January, 1980, and the lowest total for the month since the 416,111 units assembled in January, 1961.

So far this year, the auto makers have completed 554,629 units, a decrease of 21.04 percent from the 702,471 units built through Feb. 9, 1980.

General Motors accounted for 66.18 percent of last week's total. American Motors trailed farther behind than usual with just 0.39 percent.

The other companies' shares for the week were: Chrysler Corp, 12.38 percent; Ford Motor, 17.26 percent; Volkswagen of America, 3.72 percent, and Checker Motors, 0.07 percent.

Downtime was scheduled last week at 6 plants. GM's Wilmington and Lakewood points were down for one week. GM's Pontiac plant, which closed Jan. 26, will continue down this week making it the third week of downtime.

Ford's Lorain and Chicago points, both down since Feb. 2, will continue down this week, resuming operations Feb. 23.

Ford's Dearborn point, also down last week, will remain idle until Feb. 16, and Ford Kansas City goes down today for two weeks.

GM's Baltimore point has scheduled downtime for two weeks beginning Feb. 16, and GM's Janesville point will close Feb. 16 for one week.

Chrysler Corp. has scheduled a week of downtime for Lynch Rd. beginning today.

Chrysler, Canada work deal

Continued from Page 3

assembly operations consolidation.

Chrysler officials also continued to discuss the possible sale of part of its Chrysler Financial Corp. unit last week.

Chrysler Treasurer Robert Miller said the company had completed all of the necessary paperwork with its banks concerning their part in the current drawdown proposal. He said 100-page "final documents" were couriered to 150 banks last Wednesday.

Miller said he expects all the banks to respond by today (Feb. 9). "No bank has told me they will not participate," he said.

Miller said the Canadian situation could be settled quickly. He also said the company's cash flow has stabilized and he expected it to remain stable until the company can draw down the loan guarantees.

"We hope then to pay our suppliers and get on an even keel with them," Miller said.

breaking news

Continued from Page 1

Mitsubishi boosts output for Chrysler

TOKYO.—Mitsubishi Motors Corp. has scheduled March assembly of about 9,000 cars and trucks for sale by Chrysler Corp. in the U.S. Output had been curtailed due to rising inventories in the U.S. About 4,000 units are due to arrive in the U.S. in March. Future shipment schedules will depend on sales and inventory levels, Mitsubishi said.

Renault names Hanon director-general

PARIS.—Bernard Hanon, 48, has been promoted to director-general of Renault of France, the No. 2 post in the company.

Truck production falls 19 pct. from previous week

U.S. truck production last week trailed the previous week's level. It was the largest week-to-week drop this year, and the total was also below the comparable week of 1980.

Planned production last week was 31,396 units, a 19.31 percent drop from the previous week's 38,825 trucks, and down 10.28 percent from the 34,994 units built in the comparable week last year.

In January, truck production totaled 144,284 units, down 12.87 percent from the 165,590 trucks assembled in 1980, and the lowest output for the month since the 140,170 units completed in January, 1964.

Downtime is continuing at the Ford Norfolk and Twin Cities plants. Both went down Feb. 2, and are scheduled to resume operations Feb. 16.

Ford's Louisville point, also down last week, resumes operations today (Feb. 9).

General Motors has scheduled downtime at its St. Louis and Flint points for the week of Feb. 16.

No overtime was scheduled last week.

Canadian output climbs for week as 3 plants return

Canadian auto production increased substantially last week over the previous week's output as all but one assembly plant were working. Four plants were down and only three were working the previous week.

Resuming operations last week were General Motors Oshawa and St. Therese and Chrysler Windsor. Ford St. Thomas is still down for changeover.

Planned output last week was 16,609 units, up considerably from the 3,461 cars built the previous week, but down 7.18 percent from the 17,871 units completed in the comparable week last year.

In January, the auto makers completed 46,423 units, a 29.42 percent drop from the January, 1980, output of 65,781. It was the lowest total for the month since the 34,877 cars built in 1962.

Canadian truck production dropped again last week with a planned output of 8,244 units, down 30.73 percent from the 11,902 trucks built the previous week and off 34.83 percent from the 12,651 units assembled in the comparable week last year.

For January, the truck makers assembled 43,620 units, a 1.98 percent decrease from the 44,502 trucks assembled in the comparable month last year. It was the lowest output for the month since the 38,454 units completed in January, 1976.

Year-to-date output for the truck makers is 51,864 units, down 12.68 percent from the 59,396 trucks completed in the comparable period last year.

Downtime was scheduled last week at Ford Motor's Oakville truck and Chrysler's Pillette plant, with operations resuming today (Feb. 9).

Ford St. Thomas will resume operations today with assembly of the sporty versions of the Escort and Lynx, (the EXP and the LN7). The plant closed last Dec. 5 for the changeover from Fairmont and Zephyr.

Downtime is scheduled this week at General Motors' Oshawa car point, with operations resuming Feb. 16. Also down this week is Chrysler's Windsor car plant, scheduled to resume operations Feb. 23.

Toyo Kogyo set to build front-wheel-drive model for its U. S. partner

Ford Motor plans to import new minicar from Japan in '84

By Paul Lienert
Contributing Editor

DEARBORN. — Ford Motor Co., the most strident of the domestic auto makers in calling for tough new anti-import curbs, has enlisted two major Japanese auto firms, Toyota Motor Co. and Toyo Kogyo, to help it develop small, fuel-efficient vehicles for the American market in the mid-1980s.

Despite repeated calls by Ford's top officials for stricter sanctions on Japanese imports, the No. 2 U. S. auto maker now plans to import a high-mileage, front-drive minicar from Toyo Kogyo, its Japanese affiliate, in 1984. Ford also plans to jointly produce a minivan in the U. S., in conjunction with Toyota, using some parts imported from Japan.

Harold A. Poling, executive vice president of Ford's North American Automotive Operations, did not deny the minicar report, but said:

"Obviously, I am not going to comment on speculation regarding our future products. I will say that Ford, which has a 25-percent equity interest in Toyo Kogyo, is discussing a number of projects with Toyo Kogyo, both for our overseas and North American operations . . .

"How Toyo Kogyo could be involved in . . . future product plans has not been established or decided, in spite of any rumors. And since discussions with Toyo Kogyo are ongoing, I don't want to speculate as to whether it would wind up playing a role."

Even as Ford Chairman Philip Caldwell was decrying the flood of Japanese imports in the U. S. in his NADA keynote address, Ford President Donald Petersen confirmed his company's plans to set up a joint manufacturing venture in this country with

'A' bodies shrink again

FWD, new names for '82 GM intermediates

General Motors' regular A-body intermediates—Malibu, Century, LeMans and Cutlass—will shrink again in '82, sporting front-drive and new nameplates when they bow this fall. Drivetrain will be the 2.5-liter four and four-speed gearbox from GM's front-drive X-body compacts. Here are the Olds Cutlass (it will have a new name), above, and the Buick Century replacement. The new Chevy intermediate will be called the Celebrity, and the Pontiac LeMans will be renamed the A-6000.

U.S. new-car inventory trimmed to 78½ days

By Richard A. Wright
Assistant Managing Editor

The domestic auto makers continued to carry a heavy stockpile of new cars into February, although the inventory was down slightly from Jan. 1.

The industry opened February with 1,421,023 new cars in stock, a 78½-day supply, compared with 1,448,450 on Jan. 1, an 80-day supply. A year ago, the industry had 1,598,548 cars in inventory, a 71-day supply.

All the U. S. makers trimmed their unit counts during January except General Motors. But because of an improved selling rate, GM's days-supply figure dropped to 72 from 77 a month earlier.

Ford Motor Co. had a 93-day supply Feb. 1, compared with an 82-day supply a month earlier. Ford was the only maker to in-

'White-knuckle' dealers seek rollback of prices

By Robert M. Lienert
Editor

LOS ANGELES.—Drew Lewis, newly named Transportation Secretary, told the 64th NADA convention here he considers the health of the auto industry to be the single most pressing problem in transportation.

Dealers attending this subdued and somber convention, drew a somewhat finer bead. They zeroed in on high prices and high interest rates as the two demons that have thrown the retail industry into a tailspin.

The import issue, which exploded to dominate last year's meeting, was downplayed considerably here in Southern California, where the usual sunny weather turned cheerless and damp as the dealers arrived.

Attendance was down about 25 percent this year, with 2,500 dealers and a total turnout of about 10,000, according to NADA.

Lewis, while telling dealers he realized they had tough problems, admitted he didn't have any ready solutions. At the same time, he assured dealers they had his "concern, attention and support," as well as the realization that past government efforts "to reverse the misfortunes of the automobile industry have been slow and have not come to grips with the crucial issues."

Lewis said he realized that when Americans defer new-car purchases it is bad for labor, bad for the manufacturers, bad for auto dealers and very bad for the economy in general.

Throughout most of the convention, the price issue was paramount.

It clearly split dealers and manufacturers, with dealers calling for a rollback and spokesmen for the makers replying that such a move would patently be impossible.

Both the incoming NADA president, Wendell H. Miller, and the retiring president, George S. Irvin, identified high prices and high interest rates as the two most pressing problems dealers currently face.

Wendell H. Miller

George S. Irvin

All the other problems stem directly from those two vexations, they said.

They blamed the two issues for a dealer situation which Irvin described as "white-knuckle" and Miller called "marginal."

At the convention's start, NADA directors unanimously passed a resolution calling on auto makers to roll back prices to levels of last October when '81 models were introduced.

"That created tremendous controversy," Miller said, but he added that dealers have been concerned over high prices and regular hikes for a considerable period of time.

"The rapid series of price rises since last fall in the face of a declining market and rising interest rates doesn't make economic sense," he told AUTOMOTIVE NEWS.

"Dealers feel incentives by manufacturers in the range of $500 to $600 have proved this amount of money can move a stagnant market," Miller said.

"Manufacturers must understand that this request for a price reduction is a reflection of the opinion of all dealers, not just of 57 guys (NADA directors) gathered in a room."

The directors' plea for a rollback was termed as "unreason-

Hoglund: 'What the hell did we do in the '70s to get it all screwed up?'

Pontiac seeks market clout with small, sporty cars

By Robert M. Lienert
Editor

LOS ANGELES. — Pontiac is in the throes of building a new identity in the market—an identity that has its roots based in the sort of cars that led to the division's glory years in the 1960s.

William E. Hoglund, Pontiac's freshman general manager, examined in some detail Pontiac's concept of its automotive mission and at the same time analyzed what had dropped Pontiac out of its onetime lofty No. 3 ranking in sales.

As Hoglund put it so bluntly: "What the hell did we do in the '70s to get it all screwed up?"

Hoglund is doing his best to get it un-screwed and he is convinced that Pontiac still enjoys the market strengths of innovation, excitement and value . . . "the things we had when we were strong."

Hoglund told a group of auto writers here that Pontiac's major entries for the year ahead are firmly positioned in the small and sporty segment of the market.

He mentioned the T-1000 (a "graphics version" of the Chevette), the J-2000 (Pontiac's subcompact J-car, due to arrive this spring) and the A-6000 (the Bonneville replacment which will be sized in the intermediate field). He declined to discuss the sporty P-car, but that obviously will play a major role.

These cars will have the formidable task of restoring Pontiac's market clout.

Hoglund said that Pontiac people started talking about "what we really wanted to be" about two weeks after the introduction of the 1981 models, which, in turn, was about two weeks after Hoglund came aboard as general manager of the division from his previous position as corporate comptroller.

"We got all the people involved—development, engineering, marketing, advertising and promotion—to make sure that we all understood what we were going to do," he said.

At key discussions in January, he said, "we talked about where we had been and what the market looked like and what kind of cars people bought."

After examining and classifying cars and buyers, Hoglund said, it was determined that Pontiac's image was still "youth, performance and style."

"Nobody is going to sell cars in the '80s without quality and fuel economy," he said, "but the market wants the kinds of things we have . . . where we

Avoid trade restraints, Import dealers urge

By John A. Russell
New York Staff Writer

LOS ANGELES. — Charging that the problems of the U. S. auto industry are self inflicted rather than caused by outside forces, the American International Automobile Dealers Assn. called for abandonment of a trend toward trade restrictions and the adoption of a cooperative policy between government and industry to cure the industry's ills.

Robert McElwaine, president of the organization, told the annual meeting of members that any consideration of trade restrictions would be a "patchwork" approach to solving the industry's problems and not attack what he claimed were the deep structural difficulties the domestic auto industry faces.

While the AIADA won an important battle before the International Trade Commission late last year when that agency declared imports were not the cause of the domestic auto industry's sales problems, the AIADA president told the gathering of imported auto dealers and manufacturers that the threat of trade restrictions has not diminished. Instead, it has become stronger and more pervasive.

Legislation introduced recently by Senators John Danforth and Lloyd Bentsen backed up his point. This bill proposes to restrict Japanese imports to the 1.6-million level.

McElwaine said, "The domestic industry problems stem from decades of neglect of capital investment requirements that have led to an industry that is non competitive in terms of technology, product and productivity. The solution to the industry's problems can be found in the acquisition of needed capital and the investment of that capital within the borders of the United States."

McElwaine went on to cite what he considered examples of this neglect by the domestic industry.

He said more than $1 million was paid in salaries to executives instead of investing in new factories. He went on to attack the wage structure of the domestic industry, the dividends paid to shareholders and the fact that U. S. car makers have invested heavily in factories overseas instead of modernizing old or building new facilities in the U. S.

"Now, the U. S. manufacturers are forced to make a decade's worth of capital investment in a few years to make up for their past profligacy," he said.

Last month, the AIADA made a proposal to the Senate Finance Committee and while McElwaine did not go into depth on this proposal, he did make several references to it during the course of his address.

This was a seven-point proposal calling on the committee to provide direct assistance to the domestic industry through the tax system and increased assistance to unemployed auto workers.

AIADA's proposal included: A special refundable 10 percent investment tax credit for investments by auto manufacturers for investments in new plants and equipment, research and development within the U. S.

It also called for the extension of the 10 percent energy tax credit to investments by auto makers in energy related capital equipment.

The plan also suggested faster depreciation for investments in new plants and equipment; temporary tax moratoriums on federal income taxes for foreign earnings repatriated to the U. S.; specific reduction of regulatory burdens on U. S. auto makers, and, direct assistance to unemployed auto workers.

Finally, the plan also included a proposal to increase the scrappage rate of old cars on the road today.

But the proposal all boiled down to an alternative to trade restrictions now being considered in Washington. McElwaine termed any type of restrictions as "cosmetic."

McElwaine added that the association has called on President Reagan to convene an automotive summit conference.

Allard begins its 'J' series

Allard Motor Co., Ltd., Mississauga, Ont., plans production of 250 "J" series two-seaters, the Allard J2X2. In its standard form, the J2X2 will be powered by a 318-CID V-8 with a four-speed transmission. A turbocharger will be offered as an option. Standard features include an aluminum and reinforced-plastic body, leather interior, full instrumentation and five knock-off wire wheels.

14 cars will debut at Chicago auto show

By Nancy I. Phillips
Staff Correspondent

CHICAGO. — Fourteen cars will make their public debut when the Chicago Auto Show opens Saturday (Feb. 21) for a nine-day run at McCormick Place here.

The Ford EXP and Mercury LN7, Ford Motor Co.'s first two-seater sporty coupes since the 1955 Thunderbird, will be previewed for the press on Thursday, Feb. 19, when Harold A. Poling, executive vice president —Ford North American Automotive Operations, will talk with the automotive press corps.

The cars are built on the Escort-Lynx platform, but there are technical differences in the suspension and driveline which are significant enough to make them different cars, a company spokesman told AUTOMOTIVE NEWS.

Ford representatives said they expect the cars to capture the magic of the '55 Thunderbird with the affordability of the original Mustang.

They are designed to appeal to the growing singles market, including both men and women as car purchasers, that Ford's researchers found.

Pontiac will debut its T-1000 —the division's entry into the subcompact field—at the show. The T-1000 is a remake of the Chevrolet Chevette.

Targeted at the price-conscious family in need of a fuel-efficient second car or the young single buyer in need of inexpensive, entry-level transportation, the T-1000 models will be available as three-door and five-door hatchbacks.

The three-door model is built on a 94.3-inch wheelbase; the five-door's wheelbase is four inches longer. Both models are accented with black rocker moldings, black upper-door and window frames and a wide body side molding.

Standard powerplant for Pontiac T-1000 models is a 1.6-liter four-cylinder engine with two-barrel carburetor and four-speed manual transmission. A three-speed automatic is optional. A 3.70 axle ratio is standard with either transmission.

Datsun's first diesel-powered vehicles in the U. S. versions of its minipickup trucks—will be previewed at the show.

The four-cylinder diesel engine has a displacement of 2,164cc and produces 61 HP. The EPA mileage estimates for the pickups are 33 MPG city, 41 MPG highway.

Other cars to bow at the show include the Datsun 280 Z Turbo; Chevy's prototype Turbo Corvette; Saab 900 two-door hatchback; Jeep Scrambler; Renault five-door LeCar; York; Dodge Aries limousine and convertible, and two new Toyotas, a diesel pickup and the Corolla hardtop sedan.

The show usually attracts more than 900,000 persons. It is sponsored by the 700-member Chicago Automobile Trade Assn. Some 700 vehicles are scheduled to be shown.

Show chairman is David Rick, a Volkswagen dealer.

On the committee are Al Adduci, Chrysler-Plymouth Everette Ahlgrim, Cadillac, Joe Bidro, Ford; Robert Foley, Buick; John Gerald, Lincoln-Mercury, James McInerney, Chevrolet, Clyde Metzley, American Motors, John Weinberger, imports, and John Wright, Oldsmobile.

Russia granted U.S. patent on 1-rotor Wankel

WASHINGTON. — The U. S. Patent Office has granted a patent (4,237,848) to a group of Russian engineers covering a 1-rotor Wankel type engine claimed to be of a unique design.

The granting of this patent came shortly after news of field testing of 1-rotor Wankel-powered cars which started last year.

About 200 of these cars are said to be in the field test stage and, if successful, will be released to production which is expected to begin in about 1½ years.

According to Robert Brooks, U. S. representative for Wankel Entwicklugen GmbH, the patent granted to Russia appears to cover only a certain arrangement of the engine accessories and the separate shaft arrangement that drives the lubrication system.

There is no way, Brooks said, that a patent could be granted on the idea of a 1-rotor Wankel since engines of this type were first produced for use in cars in the early 1960s.

The first Wankel-powered car ever made was the NSU Spider which had a 1-rotor engine, Brooks said. Other of his company's licensees have designed and built 1-rotor engines for a variety of uses, he said.

Chrysler boosts import-car prices; trucks unchanged

DETROIT. — Chrysler Corp. last week announced a price increase of $53 on its average-equipped imported passenger cars. Imported pickup truck prices are unchanged.

Prices of optional equipment were not changed except for a $6 boost on a Dodge Colt and Plymouth Champ trim package.

There were no changes in destination charges.

On the imported cars, increases ranged from $65 to $72.

New prices are: Plymouth Champ and Dodge Colt — Two-door hatchback, $5,053 (up $65); Deluxe two-door hatchback, $5,339 (up $68); Custom two-door hatchback, $5,591 (up $72).

Plymouth Sapporo coupe, $7,314 (up $65); Dodge Challenger coupe, $7,397 (up $66).

Pickup truck prices are: Plymouth Arrow and Dodge Ram 50 Custom, $6,145; Arrow Custom and Ram 50 Royal, $6,550; Arrow Sport and Ram 50 Sport, $7,022.

January's total of 166,698 units is lowest since 1975

Truck sales down for 23rd month

Continued from Page 6

percent from the year-earlier 728,838. Unsold mediums were off 32 percent, from 33,277 on Feb. 1, 1980, to 22,622, and the heavies were down 20.5 percent to 43,250 units, compared with 54,411 at the end of January a year ago.

• January sales by Big Three dealers totaled only 130,878 units, a decline of 30.5 percent from last year's 188,331 and the lowest count for the month since 1975, when 126,834 vehicles were retailed.

Chevrolet was No. 1 in sales in January, outselling Ford by almost 6,000 units. It marked the first time since last September that Chevrolet's monthly sales exceeded the Ford total.

During the month, Chevrolet dealers retailed 54,580 vehicles, down 27 percent from the year-earlier 74,761. The total included 6,366 LUV pickups, off almost 33 percent from last year's 9,487.

Ford reported that its dealers sold 48,846 trucks in January, a decline of 34.4 percent from the year-ago 74,419. Courier sales were down 40.2 percent, from 7,791 last year to 4,659.

Chrysler-Plymouth and Dodge dealers retailed only 12,201 trucks during the month, off 40.4 percent from last year's 20,477. Sales of the imported compacts—the Dodge Ram 50 and the Plymouth Arrow—declined 45.1 percent to 2,902 units, compared with 5,287 in the first month of 1980.

GMC's January sales were down the least of any of the Big Three producers from a percentage standpoint. Dealers sold 15,251 trucks during the month, off 18.3 percent from the 18,674 retailed in the same month in 1980.

American Motors reported that sales of Jeep four-wheel-drive vehicles in January were 51.6 percent lower than a year ago. Dealers sold 4,437 units, compared with 9,171 in January, 1980.

Sales of Mercedes-Benz medium and light-heavy mid-range diesel trucks in January totaled 273 units, an increase of 21.9 percent over the 224 retailed in the first month a year ago.

Volkswagen of America reported that dealers sold 2,049 compact pickups during the month, compared with 954 in the same month a year ago. January 1980 was the first month of volume sales of the vehicle, which is manufactured in the U. S.

All three distributors of the non-captive Japanese-built compact pickups reported lower sales in January than a year ago.

Toyota dealers retailed 9,658 units during the month, down 26 percent from the year-earlier 12,894, the alltime January high.

Datsun sales plunged 31 percent in January, from the record 10,503 retailed in the first month of 1980 to 7,250 units.

Mazda dealers sold 690 pickups during the month, a decline of 17 percent from the 830 retailed in January a year ago.

Soft U.S. market to bring slight dip in Japan's exports

TOKYO. — The Japanese government said auto exports to the U. S. in the first quarter of 1981 will drop under 450,000 units, compared with the 461,000 units of a year before.

Trade officials also said Japanese companies will more than double their purchases of parts from U. S. firms this year. That will move total purchases of parts to about $300 million, they said.

The falloff in exports to the U. S. is being caused by a drop in U. S. sales and not by any type of voluntary restraint, the officials said.

More increases in levies expected

40 states consider fuel tax boosts

WASHINGTON. — Bucking what some call a national tax-cutting trend, 40 states are expected to seek ways to raise motor fuel taxes this year to keep pace with the mounting costs of road work, according to information compiled by the Highway Users Federation.

The only states not seeking to boost motor fuel taxes are Alabama, Delaware, Georgia, Kentucky, Louisiana, Nebraska, South Dakota, Tennessee, Texas and Virginia.

Of the 40 other states, 26 are expected to consider legislation to hike the cents-per-gallon tax on gasoline and diesel fuel. Bills will be introduced in the legislatures of 35 states to impose a variable or percentage tax on motor fuel or to increase existing variable taxes. Sixteen of the 40 will consider both cents-per-gallon and variable tax increases.

Additionally, Vermont is expected to consider including diesel fuel for the first time in a variable percentage tax and a cents-per-gallon tax. Arkansas, Florida, Utah and Wyoming will consider legislation to repeal their fuel sales tax exemptions.

This 1981 legislative projection is based on information gathered by the Highway Users Federation's 22 regional directors located around the country. Their sources are legislative pre-filing statements, press reports, discussions with state officials and proposals already made by legislators and governors.

• Nearly half the states have increased motor fuel taxes in the last three years alone. In 1980, at least 31 state legislatures considered bills to raise the state motor fuel tax, and 10 states—Alabama, Indiana, Kentucky, Massachusetts, Minnesota, Nebraska, South Carolina, South Dakota, Virginia and Wisconsin—actually raised them. In 1979, 10 states hiked motor fuel taxes compared to four in 1978.

A variable tax rate pegs the tax-per-gallon to a percentage of the average wholesale or retail sales price, which may be adjusted periodically within limits prescribed by law. Six states — Washington, New Mexico, Massachusetts, Kentucky, Indiana and Nebraska—currently use the variable tax.

Eight states currently place a sales tax on motor fuel in addition to a cents-per-gallon or variable tax. They are Mississippi, California, Hawaii, Illinois, Michigan, Georgia, New York and Indiana.

The remaining states impose the cents-per-gallon tax, ranging from a high of 12 cents in South Dakota to a low of 5 cents in Texas.

By calculating the cents-per-gallon tax, variable rates and retail sales tax rates on the average retail price of gasoline, an effective state gas tax can be determined for each state.

The following state-by-state effective tax rates were based on the national average price of $1.068 for a gallon of regular gasoline, exclusive of taxes, as of the end of 1980. The calculations were made by the North Carolina Blue Ribbon Study Commission on Transportation Needs and Financing.

Michigan	15.3
Mississippi	14.3
Nebraska	13.6
Hawaii	12.8
Indiana	12.8
New York	12.3

In the area of highway-related energy legislation, 17 states will grapple with gasohol tax proposals, four will consider bills to impose a state tax on gasohol, while exemptions from current state taxes will be sought in 13 states.

Legislation on the 55-MPH speed limit is expected to come up for action in several states, with 8 expected to consider bills which would strengthen enforcement.

Half a dozen states—Colorado, Delaware, Indiana, Iowa, Nebraska and Wyoming—will see legislative attempts to weaken enforcement of the 55-MPH national speed limit.

Hovell appointed head of Leyland Australia

LIVERPOOL, NSW, Australia. — Leyland Australia has appointed Philip C. Hovell managing director, effective from February 7th, 1981.

He replaces Ron Hancock, who has returned to England to head the Commercial Vehicles Division of BL Ltd., Leyland Vehicles, Ltd., as chairman.

As good as your Oakleaf

You already know some of the reasons that make Oakleaf the #1 Automotive Dealership Computer in America… versatility, accuracy, speed and complete capability. But there is another important reason you should have an Oakleaf.

The software is eminently dependable.

You may have heard through the media that the soft spot in computer ownership is the software. They're right. Perfecting the program is always one of the most difficult problems of developing a system.

Should you worry about it? Not with an Oakleaf. Oakleaf software is every bit as good as the Oakleaf computer.

The basic Dealership program was perfected years ago. Timely improvements have increased its ultra-fine performance levels. Oakleaf software is the most reliable, most accurate programming available. And every individual program for your dealership is carefully tested before your people ever see it.

Is software important? As important as your P.L. statement.

At Oakleaf's Software Engineering division, we know how crucial every deal is. With Oakleaf programming, you know that you can close the maximum possible deals and maximize your profits at the same time. You will have a one-person profit center.

Call us today and see how easy it is to have an Oakleaf in your dealership. If you already own an Oakleaf, call to find out about Oakleaf's new traffic-building Sales Prospecting Program.

For the number of your local Oakleaf representative, call Barbara Jennings, National Marketing Department, (800) 423-3681, or in California, (213) 989-5989 collect.

Month's registrations reach 186,869

Another record for imported cars

By Richard A. Wright
Assistant Managing Editor

Registrations of new imported cars set a record for November, the sixth month in 1980 in which a new high was logged, according to figures compiled by R. L. Polk & Co.

New import registrations in November totaled 186,869, off a bit from the October tally of 196,107, but up 10.33 percent from the previous November high of 169,369 in 1979.

Despite the record-breaking pace, the share of total registrations taken by imports continued to slide. Import penetration was 25.61 percent, compared with 26.25 percent in October and over 30 percent in July, August and September. But it was still above the year-earlier level of 23.23 percent in November.

Import registrations for the first 11 months of 1980 totaled a record 2,281,435, up 6.01 percent from 2,152,027 in 1979. This indicates a 1980 total of close to 2.5 million. The any-year record, set in 1979, is 2,339,004.

Imports accounted for 28.34 percent of U. S. new-car registrations in the first 11 months, compared with 22.60 percent in 1979.

- For the third consecutive month, Subaru achieved the largest gain of any nameplate in share of import registrations compared with a year earlier. Subaru accounted for 5.88 percent of import registrations in November, up 2.10 percentage points from the year-ago month.

Front-running Toyota also improved its share, taking 20.68 percent, up 1.17 points. Other gainers were Honda, up 1.38 points to 15.40 percent; Mazda, up 0.32 of a point to 8.12 percent, and Volvo, up 0.65 of a point to 2.65 percent.

Datsun, which took the top spot in November import registrations a year earlier, suffered the biggest decline, down 2.55 points to 19.24 percent and second place.

Volkswagen dropped 0.95 of a point to 10.87 percent, while Fiesta was off 0.21 of a point to 2.79 percent and Mercedes-Benz dipped 0.07 of a point to 2.09 percent.

Rounding out the top 10 was Audi, which took 1.88 percent of the November market. It was not among the top 10 a year earlier.

The top 10 imports accounted for 89.60 percent of import registrations in November, up from 87.88 percent a year earlier. For the first 11 months, the top 10 accounted for 88.51 percent, compared with 86.27 percent the year before.

November registrations of imported cars by country of origin, with year-earlier figures in parentheses, were: Japan, 136,818 (120,966); West Germany, 36,782 (35,670); Sweden, 6,118 (4,612); France, 2,687 (2,096); Italy, 2,587 (3,503), and United Kingdom, 1,877 (2,522).

Registrations of imported cars by country of origin for the first 11 months of 1980, with year-earlier figures in parentheses, were: Japan, 1,690,315 (1,495,420); West Germany, 426,693 (465,905); Sweden, 61,908 (63,539); Italy, 39,873 (60,023); France, 32,696 (26,879); UK, 29,942 (40,260), and others, 8 (1).

Registrations of imported trucks in November totaled 38,548, up 4.38 percent from 36,931 a year earlier.

Registrations of imported trucks in November, with year-earlier figures in parentheses, were: Chevrolet LUV, 8,677 (7,122); Toyota, 7,703 (10,228); Datsun, 7,574 (8,443); Ford Courier, 5,285 (5,244), and others, 9,309 (5,894).

The truck import total for the first 11 months of 1980 was 489,736, up 11.12 percent from 440,734 in 1979.

Registrations of imported trucks in the first 11 months, with year-earlier figures in parentheses, were: Toyota, 125,359 (118,558); Datsun, 101,322 (91,013); Chevrolet LUV, 80,996 (88,883); Ford Courier, 69,489 (69,037), and others, 112,570 (73,243).

Chrysler, states discuss workmen's comp coverage

DETROIT. — Chrysler Corp. says its insurance unit is financially sound, but several states with heavy Chrysler work forces want assurance the company can continue to be self-insured for workmen's compensation claims.

Currently, Chrysler insures itself through Chrysler Insurance Co., a unit of Chrysler Financial Corp., an unconsolidated Chrysler subsidiary. Some states are worried the company won't be able to continue to pay its workers for job-related injuries and illnesses and in the past few weeks have threatened to make Chrysler buy expensive commercial insurance.

In Michigan, alone, buying such insurance would cost Chrysler $50 million to $100 million a year, a lot more than the $35 million a year in actual claims currently being paid.

Chrysler has agreed to create a trust fund in Michigan amounting to $5 million over the next 12 months which will cover future liabilities. The same agreement is currently under discussion in Delaware and Illinois.

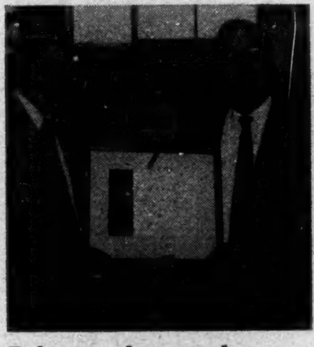
Missouri wants Chrysler to buy excess insurance to cover claims over a certain amount and to boost its surety bond from $50,000, but officials would not say how much.

According to a Chrysler spokesman, discussions are still underway with Delaware, Illinois and Missouri and until a decision is reached Chrysler will not have any report to make.

In a hearing in Ohio recently, state commission officials said they were pleased with the financial situation of Chrysler Insurance Co. Chrysler said the insurance unit's net worth was $29.3 million at the end of 1979 and would be higher for 1980.

The board gave the company until Feb. 28 to turn in the unit's 1980 financial statement and give assurance it would not be tied up in any bankruptcy proceedings.

A Chrysler spokesman said there have been no conversations with officials in Indiana or New York, which also have many Chrysler workers.



Fuhrman honored

Kenneth A. Fuhrman, right, president, Fuhrman's Ford Sales, Inc., West Salem, O., receives a plaque from Richard L. Fenstermacher, Cleveland Ford district sales manager, honoring the dealership's 25th anniversary.

In which industry likes rules

Book of regulations gets another odd tale

WASHINGTON. — A strange thing is happening with the Noise Control Act, according to Senator Robert Stafford, Vermont Republican: The businesses being regulated — not the public, environmental or consumer groups—are fighting against repeal.

Speaking before the annual meeting of the Society of the Plastics Industry at the Mayflower Hotel here, Stafford said that regulatory programs "are likely to remain a part of the national fabric, not just because of public support for them, but because of significant industry support."

"It is my experience that some of the most vigorous and vocal opponents of attempts to eliminate regulation are the industries that are regulated," Stafford added.

As an example, Stafford talked about the Noise Control Act, which Congress enacted several years ago to regulate noise from garbage trucks and other heavy-duty trucks, trains and other sources.

A few years after enactment, Stafford said, a federal court ruled that the Noise Control Act was preemptive, meaning that the federal government alone has the right to make noise-control standards.

"If the federal government is . . . actively regulating an activity, an argument can be made that preemption isn't that bad an idea," Stafford said.

"In the case of the Noise Control Act, however, the federal government was doing virtually nothing at the time. The result was a situation that defies logic —but is all too characteristic of regulatory laws."

Eventually, Stafford added, industry became so content with the lethargic movement of federal noise-control laws that they fought against any changes.

Stafford told of one senator who received complaints from constituents about the noise from a railroad switching station in one town.

"I am not exaggerating when I tell you the local citizens were so enraged that some of them tried to sabotage some trains," he said.

The senator suggested that, since the Noise Control Act was doing no good, perhaps it should be repealed to allow the states to act.

"Within 48 hours . . . the senator was engulfed by tidal waves of protest," Stafford said. "The opposition was not from environmentalists. Nor was it from his suffering constituents. The protests came from the railroad industry."

Since Stafford's speech, EPA has ruled that federal noise standards for heavy-duty trucks should be delayed one year.

Saab adopts 'beauty' theme for 1981 ads

Beauty is the theme of Saab's '81 ad campaign which emphasizes the Saab 900 notchback.

"From 0-115 MPH, it's one of the most beautiful cars in the world," proclaims copy headline for the new 900 model.

Two-page advertising spreads have been running in some 24 publications, with strong positive response in dealerships, according to Peter A. Berla, ad manager for Saab-Scania of America.

Berla noted that Saab's traditional hatchback styling "has been less than acceptable . . . to many Americans."

But with the new four-door notchback, "Saab now has a product which is instantly more acceptable to the American eye," he said.

And because Saab's reputation has been that it is an "unusual car," he added, the new appearance has become the focus of the '81 campaign's headlines which draw attention to beauty in various ways and conclude:

"When you consider what you get in a Saab, its price may be the most beautiful thing about it."

The '81 effort also extends last year's "intelligent car" theme. It emphasizes Saab's performance, comfort, safety, quality and economy characteristics, with the appearance element added.

The '81 media emphasis has shifted from local newspapers to a full schedule of national magazines, including major news weeklies, business and financial publications and a number of special interest publications.

Ally & Gargaro Advertising, New York, is Saab's agency.

A BANKER'S GUIDE ON AUTOMOBILE DEALERSHIPS

by Bill Duke

Bill knows dealers' problems along with the ways and means to correct them. For this reason, the book "A Banker's Guide On Automobile Dealerships" is an essential tool in the area of automobile financing. The book is written with a two-fold purpose. First, to allow the lending institution to obtain a more knowledgeable insight and understanding of the dealer's financial operations and, secondly, to equip the dealership owner with the necessary tools to better evaluate and operate his business for control and profit. The reader will find sound advice, valuable information, workable guidelines, budgets and control forms to assist the dealers in achieving success while protecting the lending institution. This book has been written by an automobile person in easy to understand language. The author is confident that any person who reads it thoroughly and applies himself to its contents can help his dealer and himself return a better profit on his investment of time and money. Contents include: Part One-The Financial Statement; Part Two-Selling Expenses and Parts and Service Department; Part Three-Check Points for a Padded Statement: Part Four-Show Your Dealers What It Costs To Sell A Unit In Their Dealership; Part Five-Help Your Dealers Guard Against Embezzlement.

With 22-percent share for imports

Datsun VP sees 10-million year

LOS ANGELES. — Combined U. S. and imported new-car sales should hit 10 million in 1981, with imports accounting for 2.2 million units, or 22 percent of the market, Robert Kent, Datsun vice president of marketing, told the Newspaper Advertising Sales Assn. here.

The 22 percent import share reflects a drop from 26.7 percent in 1980, Kent said.

Kent said it was not fair to blame imports for the decline in Detroit's market share last year.

He noted that import sales "were up barely 80,000 units in 1980 versus 1979," while Detroit's sales falloff totaled about 1,700,000 units in 1980.

While 10 million new-car sales for 1981 may sound good, "for an industry that's geared to break even on 12 million (it) is nearly disastrous," he added.

Kent said that the imported-car industry was important to holding down car prices to consumers and providing jobs to the U. S. economy.

Import distributors and dealers, for example, employ more than 150,000 people and their total assets are over $5 billion, he said.

Kent predicted that limiting imports, as has been proposed, would drive up "the price of all cars . . . substantially. Our estimate is that small cars could increase in price by as much as $800 dollars."

He added that the car market has changed in recent months so that "interest in fuel economy, which is still strong, is no longer the key to the buying decision."

"Front-wheel-drive, diesel engines, choice of models, price and quality have all become major purchasing factors," Kent said. "And these are no longer the exclusive domain of imports. Detroit is making incredible inroads into these areas."

He predicted "the next five years are going to be hard ones for Detroit . . . (but) imports will still be here when Detroit gets back on its feet . . . We'll be standing there eyeball to eyeball fighting for sales just like we always have."

Group holds first meeting

NAMAD works for minority dealers

By John A. Russell
New York Staff Writer

LOS ANGELES. — More than $21 million in federal direct loans has been funneled to minority dealers throughout the nation through the efforts of an infant dealer organization which held its first general meeting here last week.

The National Assn. of Minority Auto Dealers was formed last May to meet the specific needs of black, Hispanic, American Indian and other minority dealers throughout the country.

Charles Patrick, executive director of the Detroit-based association stressed it is not a "splinter" or "radical" group. Rather, it was founded to address the specific problems of minority dealers.

All of its members, he noted, are also members of NADA. While some of the problems faced by minority dealers in the current economic downturn are the same as those faced by others, many are not.

There are 65 NAMAD members from approximately 250 identified minority dealers in the U. S. Members represent all makes, according to Patrick.

The organization was founded with a grant from the U. S. Department of Commerce. Patrick said it set to work immediately to streamline procedures and expedite the process for minority dealers to obtain direct federal financial assistance.

- To date, nearly 100 minority dealers have obtained either direct assistance or federal loan guarantees which "kept them in business," Patrick said.

Jesse Jones, a Dodge dealer from the Detroit area and a director of the association, said that 60 percent of all minority business is auto-related. Minority dealers make up less than 1 percent of the dealer total.

These dealers, for the most part, are new in business and don't have the capital necessary to withstand a severe economic downturn.

According to a report prepared for the Department of Commerce, minority dealers face "unique" situations.

Insufficient equity capital and greater reliance on loans is typical of most minority dealers, particularly in periods of economic decline, according to the report. The erosion of sales causes more of the dealer's profits to be consumed by interest expenses.

Also, most minority dealerships have been in operation for a limited amount of time. This means minority dealers couldn't set aside profits from past good sales years to weather the current storm.

Because of their limited time in business and their lack of capital, minority dealers are perceived by the lending community as being at the high end of the risk spectrum. They are charged the highest interest rates, the report stated.

- Minority dealers are forced to use financial avenues other than commercial banks. Only by paying higher interest rates can these dealers stay in business.

The final disadvantage found in the report is the location of minority dealer points. Most tend to be in urban areas, usually in deprived sectors, which are the hardest hit during an economic recession through high unemployment and curtailment of retail credit.

Bill Schach, a Ford dealer from California and a director of the association, noted that minority dealer clientele is the first hurt by a recession.

But the problem of location goes deeper than that. Usually, because of their lack of capital, minority dealers are forced to obtain points that no one else wants. Many of these points were bankrupt at the time of purchase and the minority dealer has the job of turning the business around.

Rarely, because of the cost, does the minority dealer have the ability to obtain an on-going established point that may come on the market.

- This first general meeting, Schach said, had a threefold purpose. Basically, the directors wanted to get the members together, as well as solicit new members and emphasize why the organization exists.

All three directors, throughout the interview with AUTOMOTIVE NEWS, stressed this was not a splinter, faction organization but rather one founded to meet the particular needs of the minority dealer.

A three-point plan to meet the immediate needs of the minority dealer has been developed. This includes federal economic assistance through long-term, low-interest loans to supplement capital needs; cash flow aids from the manufacturers, and cash flow help through better business practices.

The association is working through the Department of Commerce, the Small Business Administration and the Minority Business Development Agency to obtain federal loans.

The association proposed that manufacturers put a moratorium on dealer development debt, to expire at the end of a transition period (target October, 1982). It also asked for warranty payment and increased management assistance, from the manufacturers at the point of sale.

For the dealer, the plan aims at better business practices, stronger inventory controls and a better overall approach to the business.

Patrick said that since the organization is still young, it has attacked the federal financial assistance first. Later, the association will move into the other areas, including management training assistance and business practices.

Schach said the goals are to improve the quality and quantity of minority dealers in the nation.

Chrysler expects loan OK, but suppliers get restless

By Edward Lapham
Financial Editor

DETROIT. — Chrysler Corp. officials last week expected to receive final, formal approval for $400 million in new federal loan guarantees this Wednesday, Feb. 18, barring any last-minute difficulties.

Late last week the auto maker was still collecting various documents from many of its lenders as well as seeking required approval from the Canadian Government to reduce its Canadian spending plans without forfeiting $200 million in loans. An agreement is necessary to win federal loan guarantee board approval of the drawdown request.

A Chrysler Canada spokesman in Windsor said he expected the company and the government to reach agreement by the Wednesday target.

Elsewhere, however, there seemed to be some financial backsliding by parties already involved in the latest drawdown plan.

Following a meeting with securities analysts in Chicago, Borg-Warner Corp. chairman James Bere told reporters his company is not acquiescing to Chrysler's demands for a price cut from its suppliers, and was in fact "strategically withdrawing" as a supplier to the beleagured auto maker.

Bere said his company "would not be the one to put Chrysler under" but that a price cut would be unfair to other customers. He said Borg-Warner is continuing to ship components to Chrysler but will not increase the present level of Chrysler's receivables.

Bere's comments were the first public utterings of this type by a supplier, although privately some have been skeptical since Chrysler Chairman Lee Iacocca announced his price-cut, delayed-payment plan in December.

Other suppliers began to grumble louder following Bere's comments.

"There is no doubt the suppliers are becoming more and more sullen every day," said John Muir & Co. vice president and auto analyst Arvid Jouppi. "The loan guarantee board must act quickly to keep the deal from falling apart."

A Chrysler official here said Bere's remarks were a rather isolated incident. "We've seen no sign of a supplier insurgency," he said.

Meanwhile in Washington, Treasury Secretary Donald T. Regan told the National Press Club that while the Reagan Administration does not look with favor on subsidies to weak companies, it does acknowledge the existence of the Chrysler aid law.

Regan, the new chairman of the Chrysler Loan Guarantee Board, said he will certify the current $400-million drawdown request once Chrysler has met all of the specified conditions.

He added, however, that this does not bind the Administration to any additional drawdowns ($300 million would be left of the authorized $1.5 billion total) or anything beyond that amount if it is totally used.

1,421,023 units in Feb. 1 domestic inventory

New-car stock slips to 78½ days

Continued from Page 1

crease its days-supply figure during the month.

Chrysler Corp. opened February with an 81-day supply, compared with an 83-day stockpile on Jan. 1.

American Motors whittled its inventory from a 108-day supply to 88 days. Volkswagen of America had a 76-day stock Feb. 1, down from 95 days.

The Feb. 1 domestic new-car inventory was divided this way: GM, 57.43 percent; Ford Motor Co., 24.62 percent; Chrysler Corp., 12.82 percent; VWoA, 2.58 percent, and AMC, 2.55 percent.

A month earlier, the new-car inventory was divided as follows: GM, 55.75 percent; Ford Motor Co., 24.72 percent; Chrysler Corp., 13.95 percent; VWoA, 2.81 percent, and AMC, 2.77 percent.

- By size class, stocks of subcompacts and intermediates declined during January, while other segments grew. Small cars were still in heavier supply than big cars.

The industry had a 71½-day supply of subcompacts and an 86-day stock of compacts Feb. 1, compared with an 83-day supply of subcompacts and an 81-day stock of compacts a month earlier.

The supply of intermediates dipped from 91½ days to 86 days, while the inventory of standards rose from 65 to 68½ days and the supply of luxury cars jumped from 44 to 61 days.

The Feb. 1 inventory was divided this way by market class: Subcompact, 20.60 percent; compact, 29.65 percent; intermediate, 32.32 percent; standard, 12.50 percent, and luxury, 4.93 percent.

A month earlier, the inventory was divided this way by size class: Subcompact, 22.26 percent; compact, 29.82 percent; intermediate, 31.90 percent; standard, 11.76 percent, and luxury, 4.26 percent.

The Feb. 1 days-supply figures by market class were:

Subcompact—Monza, 32; Sunbird, 47; Escort, 58; Bobcat, 59; Pinto, 68; Rabbit, 76; Lynx, 76; Chevette, 81; Horizon, 91½; Omni, 91½, and Spirit, 95.

Compact—Reliant, 50½; Skylark, 53; Omega, 59; Aries, 68; Volare, 82; Eagle, 85; Concord, 86; Aspen, 87; Phoenix, 92; Zephyr, 93; Camaro, 95; Citation, 98; Fairmont, 101; Capri, 107; Mustang, 110, and Firebird, 114.

Intermediate — Cutlass, 47; Century, 65; Supreme, 66; Regal, 70½; Malibu, 87½; LeMans, 94; LeBaron, 97; Diplomat, 102; Grand Prix, 103; Cordoba, 107; Thunderbird, 107; XR-7, 111; Monte Carlo, 117½; Cougar, 118; Granada, 135, and Mirada, 142.

Standard — Olds 98, 40; Olds 88, 42; LeSabre, 57; Electra, 61; Chrysler, 70; Gran Fury, 106; Mercury, 77; Chevrolet, 79½; Pontiac, 87; St. Regis, 94, and Ford, 100.

Luxury—Toronado, 44; Cadillac, 47; Riviera, 48½; Eldorado, 50; Seville, 69½; Corvette, 85; Lincoln, 94; Mark VI, 106 and Imperial, 213.

Week's output sags to 101,054 units

Car production slump continues

By Patricia Hoffman
Staff Writer

U. S. auto production last week was still trailing far behind year-ago levels as many of the auto makers continue to feel the sting of slumping sales in the 1981 recession period.

Production last week was slated at 101,054 units, a 28.40 percent drop from the 141,153 cars assembled in the year-ago week and a decrease of 16.25 percent from the 120,670 units built in the previous week this year.

So far this year, the auto makers have completed 654,008 units, down 22.28 percent from the 841,413 cars built in the comparable period last year.

Breakdown by companies for the year-to-date total is: General Motors, 67.92 percent; Ford Motor, 16.43 percent; Chrysler Corp., 10.79 percent; American Motors, 1.59 percent; Volkswagen of America, 3.24 percent, and Checker Motor, 0.03 percent.

Downtime was scheduled last week at five assembly points.

Ford Motor's Chicago and Dearborn points, both down since Feb. 2, continued down last week. They are slated to resume operations today (Feb. 16).

Ford's Lorain plant, down since Feb. 2, and Ford's Kansas City plant, down since Feb. 9, will both remain idle through the week beginning Feb. 23.

Chrysler Corp.'s Lynch Road facility, also down last week, will resume operations today. It will work at full schedule for the remainder of February and through March, Chrysler said. Due to a heavy increase in fleet orders for the Plymouth Gran Fury, Dodge St. Regis and Chrysler Newport, Chrysler has canceled its scheduled down periods for the weeks of Feb. 16 and March 23.

General Motors has scheduled downtime for two weeks at Baltimore, beginning today, and for one week at Janesville.

Also at GM, the Leeds plant will be down for one week beginning Feb. 23.

Saturday overtime was slated last week at GM's Tarrytown facility.

Conference slated March 6

Lemon law parley set

WASHINGTON. — A March 6 "Lemon Law Conference," sponsored by the Center for Auto Safety, will feature a keynote address by FTC's Michael Pertschuk.

In a session called "Point/Counterpoint," Irving J. Rubin, of Ford Motor Co.'s Government Affairs Planning, will debate Herbert Denenberg, a consumer advocate and journalist.

Other sessions for lawyers include individual plaintiff actions (Mark Silber, discussing his litigation against Ford and Chrysler Corp.): joinder actions (including successful actions against BL and Ford and the piston-scuffing case) and class actions (including Firestone 500 and General Motors automatic transmission cases).

The NHTSA defect and recall program will also be discussed. The public interest movement will be covered by Joyce Kinnard, of the Center for Auto Safety, and Archie Richardson, of the Automobile Owners Action Council.

The concluding address will be given by Harry M. Philo, president of Association of Trial Lawyers of America.

The meeting is scheduled for the New Sheraton Washington Hotel.

sold in the UK — Lada, Polski-Fiat and Skoda — saw their market share decline last year.

VW rocks with Santana

WOLFSBURG, West Germany.—Scuttlebutt here is that Volkswagen will introduce a new two-door notchback sedan this fall called Santana. Developed under the codename Korsar, the car is based on the new Passat/Dasher and is to be positioned as an up-market model for VW. Santana, like Scirocco and Passat, is another "wind" name. But it's also the name of one of America's top rock groups, posing a potential identity problem if the car is exported to the U. S.

Truck production rises for week; 33,085 assembled

U. S. truck production last week jumped ahead of the previous week's total, and the output for the week showed only a slight decrease from the comparable week in 1980.

Planned truck production last week was 33,085 units, an increase of 10.07 percent from the 30,058 units assembled in the previous week, and down 1.25 percent from the 33,505 trucks built in the week ended Feb. 16, 1980.

So far this year, the truck makers have completed 207,427 units, down 15.37 percent from the 245,101 trucks built in the comparable period last year.

Downtime was scheduled last week at five plants.

Ford's Kansas City and San Jose points were down for one week. Ford's Norfolk and Twin Cities plants were closed last week for the second week of downtime. All are scheduled to resume operations today (Feb. 16).

American Motors scheduled downtime last week at its Jeep facility due to a suppliers strike.

Downtime is scheduled this week at General Motors' St. Louis point. It is slated to reopen Feb. 23.

Also down this week are General Motors Flint (light-truck, Blazer and Suburban lines) and the GMC plant in Pontiac. The Flint point will remain idle through the week of Feb. 23.

Canadian output cut in half by plant closings

Because of plant closings, Canadian auto production last week was less than half of the previous week's output, and the week's total plunged far below the comparable 1980 week.

General Motors' Oshawa car point, which closed last week for inventory adjustment, will resume operations today (Feb. 16).

Chrysler's Windsor car point, also down the week ended Feb. 14, will continue downtime this week, resuming operations Feb. 23.

Planned production last week for the auto makers was 6,569 units, a 59.82 percent decrease from the previous week's output of 16,351 units, and down 48.10 percent from the 12,659 cars completed in the week ended Feb. 16, 1980.

The year-to-date output is 69,343 units, down 30.68 percent from the 100,045 units assembled in the comparable period in 1980.

Canadian truck production last week took a turn for the better as the planned output rose far above the comparable 1980 week and the previous week's totals.

Truck assembly was planned at 11,507 units last week, an increase of 46.97 percent from the 7,829 trucks completed the previous week, and up 34.20 percent from the 8,574 units built in the comparable week last year.

So far this year the truck makers have completed 62,956 units, a decrease of 7.16 percent from the 67,818 trucks completed through Feb. 16, 1980.

1,607 U. S.-line dealerships vanish in 1980

By John K. Teahen Jr.
Managing Editor

Added to the many problems of the auto industry in 1980 was a startling decline in the number of dealerships handling domestic makes of passenger cars.

The annual AUTOMOTIVE NEWS census found 21,772 outlets in operation on Jan. 1 of this year, a decline of 1,607 from the 23,379 counted at the beginning of 1980.

The 1979 loss was 672 dealerships, and 1978's was only 96.

The 1981 drop was the steepest since 1966 when 1,856 establishments departed. But 1966 is one of those years that is marked with an asterisk in the record books—it saw the end of Studebaker as an auto maker and some 1,300 of the 1,856 were Studebaker outlets.

Except for that situation, the 1980 downturn was the worst since 1958, which saw a loss of 2,111 outlets.

The 1980 dip was severe for each of the Big Three (if the domestic auto industry still has a "Big Three").

Chrysler Corp. suffered a dip of 596 car dealers, which was 13.5 percent of its total, and Ford Motor Co.'s fall was 553, a slip of 8.5 percent. The General Motors drop was 365 outlets, 3.2 percent.

U. S. CAR OUTLETS

	Jan. 1, 1981	Jan. 1, 1980
American Motors	1,663	1,701
Chrysler Corp.	3,823	4,419
Ford Motor Co.	5,961	6,514
General Motors	11,060	11,425
TOTALS	22,507	24,059
Minus Intercorporate Duals	735	680
NET OUTLETS	21,772	23,379

Copyright, 1981, Automotive News

American Motors fared better, going down 38 outlets. AMC also increased its dualing with GM-Ford-Chrysler stores, so the AMC contribution to the industry's decline was really greater than 38. When AMC adds a dual, it does not increase the industry's count. There are fewer AMC-only points than there were a year ago.

• The aggregate loss for the four companies was 1,552 outlets. A change in the number of intercorporate duals raised the overall falloff to 1,607.

All figures in this article and in the accompanying tables refer to the net change in the dealership population, both for the individual corporations and car lines and for the industry as a whole.

That means that a lot more than 1,607 domestic dealerships left the business last year, since some of those departing were replaced by the manufacturers. The 1,607 is the number which faded away and had not been replaced at the end of 1980.

Imports are much maligned in the domestic industry these days, but import franchises probably kept the 1980 dealership decline from being even worse. An estimated 12,000 of the 21,779 domestic outlets also carry an import, and the foreign-car portion of the business may well have helped some of them keep their heads above water.

Last year was the 25th con-

Spying on Ranger

First look at Ford's '82½ mini-truck

Here's an early look at Ford's new Ranger mini-pickup, which will replace the Toyo Kogyo-built Courier as a mid-1982 model. The rear-drive Ranger, to be built at Ford's Louisville truck plant, will be offered initially with a Ford four-cylinder engine and four-speed transmission. An optional Toyo Kogyo diesel and five-speed gearbox, as well as a 4WD version, will be added later. The Ranger will debut six months after GM's S-10 mini-pickup is introduced.

Reagan tax cut-budget plan contains goodies for Detroit

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—The auto industry got a large measure of what it wanted in the first phase of President Reagan's proposed tax cuts and budget reductions.

But it did not get special treatment in terms of tax credits made refundable to help firms that are losing money, or separate treatment for special tools, or the extension of energy tax credits to cover equipment for making more-fuel-efficient cars. Nor did the industry get any reduction in the corporate tax rate.

Wiped out from the budget are the entire electric and hybrid car programs along with the Stirling and Brayton engine programs. The cooperative Auto Research Program, a shared program dealing with basic research, was also scrubbed.

Other areas of interest tangentially affecting the auto industry are cuts being proposed in federal highway aid, mass transit, synthetic fuels, alcohol fuels, vocational education, highway safety programs and changes in unemployment benefits and trade readjustment assistance.

Further recommendations from the White House are expected by March 10. These follow earlier actions involving a 60-day freeze on pending and new regulations that barely touched the auto industry.

But two administrative initiatives did—one from the Transportation Department stalling passive restraints on 1982 large cars while the entire questions of air bags and automatic belts is reconsidered, and one from EPA to reconsider noise standards for garbage trucks.

• The President's comprehensive economic program includes a three-year program to reduce personal income taxes by 30 percent (starting July 1, 1981), an Accelerated Cost Recovery System for business (a variation of the popular 10-5-3 bill with wide support in Congress), a "new" commitment to stable monetary policy and wide cuts in the budget to reduce the fiscal '82 budget by $41.4 billion.

Another $6 billion is expected to be lopped off when full details of the fiscal '82 and '83 budgets are sent to Congress in March. These do not include another $2.0 billion in fees being returned to the users and $5.7 billion in cuts in off-budget outlays.

Separate and in addition to taxes and budget items is the Reagan Administration plan to get a handle on regulation. Specifically noted in one fact sheet is that "at least five Federal agencies directly regulate the auto industry and these five agencies are now considering more than 50 significant new auto rules."

The recovery of investment or what can be written off taxes is the approach taken by the new Administration to spur recovery of business.

The three-year class includes autos and light trucks and machinery and equipment used for R&D — an item which should improve vehicle sales for com-

breaking news

More aluminum usage due at GM

DETROIT.—General Motors will be using an aluminum tailpipe on some 1982 Chevrolet trucks, according to sources. Also, there will be aluminum cross supports in GM's S-10 mini-pickup truck due to arrive in 1982. One supplier, Reynolds Metals Co., has developed a new aluminum alloy for automotive body sheet applications. According to sources, the alloy will be used in some Oldsmobile inner and outer hoods and will be introduced soon as a running change, replacing current aluminum and steel hoods.

New Ford due in Brazil

SAO PAULO, Brazil.—A new Ford model, known as "Del Rey," will go into production in Brazil in May. The body shell was designed and engineered by Chausson Carrosserie

Hard times set mood at SAE show

By Roger Rowand
Engineering Editor

Hard times, such as those in which the industry finds itself today, normally bring two reactions at industrial shows, conventions and seminars.

One: Attendance doesn't skyrocket. Two: A lean, down-to-earth, value-for-the-money ambience becomes apparent.

That is expected to hold true this week as the Society of Automotive Engineers' International Congress and Exposition runs its course at Detroit's riverfront Cobo Hall.

Attendance should be in the range of 30,000 compared with registered attendance in 1980 of 30,548. It should be a no-nonsense crowd although one tinged, to be sure, with the usual hail-fellow-well-met approach that's the usual at such affairs.

No segment of the automotive industry is exempt from problems in these times, and one would be hard put to find any segment not eager for some of the technological treasure to be found at any SAE Show—and this year's in particular.

Internationalism is the overriding theme of the show even as it probably is the most important overriding factor in the automotive world at large.

SAE has designated 1981 as an international year. That means technical sessions and educational exhibits have been beefed up with material from Europe and Japan. Also, exhibition material from U. S. firms has more international flavor than in some other years.

The auto industry has been an international one for decades, of course, and for years the SAE has given internationalism the recognition it deserves. With an official designation, however, the international flavor gains a bit of formality and added attention.

In the realm of international business, few firms can hold a candle to General Motors, and that company's new president, F. James McDonald, will be the speaker at the sold-out banquet.

The Wednesday night banquet

Ford offers plan; Chrysler, AMC extend theirs

GM touches off round of rebates

By Joseph Bohn
Marketing Editor

General Motors ended several weeks of rumor in announcing a fairly extensive consumer rebate of $500 and $700 on '81 small and medium-sized cars.

The cars involved have accounted for almost 50 percent of GM's total calendar year-to-date sales.

GM's action triggered a round of reciprocal moves by domestic competitors.

Ford announced its own 10 percent price reduction, or rebate program, which replaces a $300-$400 cash incentive on car lines involved, if dealers opt for it. However, Ford's previously announced Fiesta, truck and salesperson incentive programs all continue, along with the new rebates.

Meanwhile, American Motors and Chrysler Corp. both announced extensions of their previous price reduction and rebate program, respectively.

All in all, Detroit is giving away quite a chunk of cash to move merchandise. And, if no strong spring upturn develops, they could see a sales falloff after March, when the new programs end.

Under the GM program, being promoted as "Let's Get America Rolling" in corporate advertising (and backed by divisional ads), a customer must take delivery of the rebate-eligible vehicle during the Feb. 18-March 19 period to get the discount.

Cars ordered, but not delivered, during the rebate period don't qualify for the factory program.

Essentially, customers get $700 rebates on Chevrolet Camaro and Monte Carlo, Pontiac Firebird and Grand Prix, Oldsmobile Cutlass Supreme and Buick Regal.

GM pays $400 of that and dealers $300 to make up the $700.

Additionally, the program provides $500 rebates on Chevrolet Chevette, Pontiac Phoenix, Oldsmobile Omega and Buick Skylark. Again, the factory pays $300 of the cost, the dealers $200.

However, on any orders written prior to Feb. 18, where a customer takes delivery during the rebate period, the factory picks up the full cost of the rebate, a GM spokesman said.

Thus, dealers who participate in the rebate program are price-protected.

GM's spokesman expected the majority of company dealers to participate. Competitive pressures are likely to leave dealers little choice.

NADA said the GM and Ford rebate programs will stimulate sales in a market that has been extremely price resistant.

NADA President Wendell H. Miller said, however, that dealers are upset about the rebate programs' requirement that dealers assume part of the rebates' cost, particularly since dealers already took a substantial reduction in dealer markup at the time of new-model introduction and many dealers are in a precarious financial position because of continuing inflation and abnormally high interest rates.

Because of dealers' cash flow problems, Miller said, dealers also are unhappy that they have to put the manufacturers' share of the rebates up front if the rebate is used for a downpayment.

GM fleet buyers will get the GM portion of the discounts, i.e., $400 on mid-size and $300 on smaller models.

GM's program covers only '81

Premier Laser produced in Australia

The first regular production front-wheel-drive Ford Laser was given an international welcome when it rolled off the assembly line at Ford Australia's Homebush assembly plant in Sydney. Production start-up marks the successful completion of a $13.1 million retooling program at the facility. The Laser goes on sale in late March.

118,686 total is lowest for period since 1961

Feb. 1-10 new-car sales slump

By Jenny L. King
Staff Writer

Early February domestic new-car sales dipped 7.69 percent to their lowest total since the 118,686 units sold back in 1961. Feb. 1-10, sales this year numbered 135,554, down from last year's 146,847.

Ford Motor Co. and Volkswagen of America reported sales increases for the period, while General Motors, Chrysler Corp. and American Motors suffered setbacks.

Ford sales were up 25.97 percent, to 35,294 from 28,018 last year. VWoA reported sales of 3,345 U. S.-built Rabbits, up 72.25 percent from 1,942. Ford attributed its success to the "excellent consumer benefits of our new incentive programs."

GM sales plunged 19.15 percent, to 78,674 from 97,303 a year ago. Chrysler was down 8.65 percent, to 15,241 from 16,684, and estimated AMC sales numbered 3,000, down 3.33 percent from 2,900.

Ford's sales gain was GM's loss in terms of market share. GM slipped to 58.04 percent from 66.26 percent a year ago and Ford climbed to 26.04 percent from 19.08 percent. Chrysler sales accounted for 11.24 percent, down from 11.36 percent; VWoA had 2.47 percent, up from 1.32 percent, and AMC earned 2.21 percent, up from 1.98 percent.

Daily selling rate for the period was 16,944, down 7.69 percent from 18,356. There were eight selling days this year and last.

- Four U. S. makes were up from year-ago levels. Mercury recorded a 39.25-percent increase, Ford was up 24.42 percent, Plymouth was up 1.75 percent and VW was up 72.25 percent.

Chrysler sales fell 40.25 percent and Dodge missed its 1980 mark by 1.99 percent. Lincoln sales were down 8.20 percent.

Buick, GM's most successful division in 1980 in keeping its sales on an even keel, reported the corporation's worst early-February drop. Buick sales were down 33.53 percent from last year; Chevrolet was down 23.26 percent; Pontiac was down 12.16 percent; Oldsmobile was down 9.14 percent, and Cadillac was down 2.56 percent.

Top-selling nameplates for the Feb. 1-10 period were: Ford Escort, 9,080; Chevrolet Chevette, 8,128; Oldsmobile Cutlass Supreme, 6,314; Chevrolet Citation, 5,412, and Oldsmobile Cutlass, 5,327.

Year-to-date sales through Feb. 10 totaled 605,386, down 17.59 percent from 734,586 last year.

Don't participate, Ford, Chevy alliances urge

Rebate plans irk dealer groups

By John A. Russell
New York Staff Writer

NEW YORK. — Strong protests against the General Motors and Ford Motor Co. rebate programs have been lodged by the Ford Dealers Alliance and Chevrolet Dealer Alliance.

The groups urged dealers not to participate, calling the programs not a true factory rebate.

Ed Mullane, president of the Ford Dealers Alliance, in a telegram to Ford Chairman Philip Caldwell, noted that the Ford rebate of 10 percent includes a $200 participation by the dealer.

"Such a stipulation would mean that instead of a honest sale, we would end up with a phony program," Mullane said. "In the real world the dealer, out of economic necessity with his markup already cut to the bone, is going to add the $200 back into the deal he negotiates with his customer."

For the Chevrolet dealers, this was also a sore point. Jack Mark, director of the Chevrolet Dealers Alliance, said this represents an additional cost to the dealer and is not a true factory rebate.

The GM program calls for $500 to $700 rebates on selected models with the dealer contributing $200 and $300, respectively.

Mark said this means the cost to the dealer for the vehicle has been increased.

The CDA, in a telegram to both GM and Chevrolet executives, outlined several other objections to the GM program.

The CDA said that the time frame, Feb. 18 to March 19 is not long enough. He noted that any cars ordered during this period, but not delivered, would not be included in the rebate program. The rebate should cover orders during this period, Mark said, and he added that cars ordered before the rebate went into effect and delivered during the rebate period are included in the program.

- The CDA said the factory's theory was to have customers buy out of stock, but on certain models there is little inventory. Also, he said, dealers have been cutting their inventories because of high floor-planning costs, and the rebate program does not address this problem.

Another point the CDA called to the attention of GM was the method of payment to the customers. The CDA feels the check should come directly from GM to the customer within a reasonable amount of time.

But Mark said under the GM program the customer can put the rebate toward the downpayment which will create a negative cash flow situation for the dealer since GM has not said when the dealer would be paid.

He added that the CDA called for the program to cover all cars

Automatic transaxles, diesel engines ordered

Ford to buy more from Toyo Kogyo

By John Hartley
Staff Correspondent

TOKYO.—Ford is to buy more transaxles from Toyo Kogyo, in which it has a 25-percent stake.

The announcement came after John McDougall, executive vice president of International Automotive Operations, and Harold A. Poling, executive vice president of North American Automotive Operations, met Toyo Kogyo executives in Hiroshima.

TK is already supplying manual four-speed transaxles—MTX—to Ford for the Escort and Lynx built in the U. S.

Although based on the design of the GLC transaxle, this unit has very wide ratios and is built in a separate plant.

Industry sources say volume is about 300,000 units a year, about 10 percent lower than the production rate of TK's own transaxle which is also being fitted to the Ford Laser, which is sold in eastern markets.

Under the new deal, TK is to supply an automatic transaxle—ATX—also at about 300,000 units a year, while the two companies are negotiating over a second manual transaxle.

Finally, Ford has asked TK to supply it with diesels in the 1.0 to 2.0-liter (60 to 121-CID) class, a field in which the Japanese company has no experience.

- It has been confirmed that the new MTX will be larger than the Escort unit, so it is presumably intended for one of Ford's cars in the 1.6 to 2.0 liter (97 to 121-CID) class. It has not been confirmed that the MTX will be used in the U. S., and it could in fact be destined for Europe.

However, the ATX will go into production this summer, with deliveries to the U. S. due to start in the autumn. This also is presumably larger than the Escort unit, now made in an ultra-modern plant at Battavia.

In view of this investment, and the fact that TK does not make its own ATXs, this move is surprising. In fact, it is likely that the torque converters, controls and gear sets will be made by JATCO, the company which started off with a Ford license, and in which Ford has a stake until recently. Now the equity is split between Nissan and TK.

Ford's aim in this move is clearly to cut costs and its investment in new plant.

Ford's motives in asking TK to supply small diesels—there is already a deal for TK to supply 2.2-liter (134-CID) units — are also to cut costs.

TK's diesels are all based on designs of Perkins Co., of England, with whom TK has a license. However, TK also supplies Perkins with some diesels.

Currently, TK is making diesels in small volume—about 5,000 a month. So if it is to supply Ford, it will need to invest in a new plant.

Kelsey acquires engine maker

ROMULUS, Mich. — Kelsey-Hayes Co., a subsidiary of Fruehauf Corp., has acquired Clifford Mfg. Co. of Marlette, Mich.

Clifford produces four-, six- and eight-cylinder engines and engine components for the industrial market and the automotive aftermarket. Ford Motor Co. is its largest customer.

But some holes remain

Reagan economic plan plays well in Detroit

By Edward Lapham
Financial Editor

Auto industry reaction to President Reagan's economic package last week was generally favorable, although there was less than total enthusiasm in some sectors of the industry.

The President's program, which did not include a tax credit plan for purchase of U. S.-built autos or any mention of other specific industry benefits, was called "constructive" by General Motors Chairman Roger B. Smith, "balanced" by Ford Motor Co. President Donald E. Petersen and "needed" by NADA President Wendell Miller.

Spokesmen for American Motors, Chrysler Corp. and Volkswagen of America said their companies had no immediate public reaction.

Privately, one auto official told AUTOMOTIVE NEWS he thought auto executives would discuss the "missing" programs with Transportation Secretary Drew Lewis, who was due to make a whirlwind tour of Detroit late last week.

"President Reagan presented Congress and the American public with the details of a constructive, comprehensive program for dealing with the twin problems facing our economy—high inflation and economic stagnation," Smith said.

"I think he caught the mood of the country," said Petersen. "We need confidence to get the economy back on track."

NADA's Miller was a bit more specific. "President Reagan's endorsement of the NADA-backed 10-5-3 accelerated depreciation program and the proposed spending cuts should strengthen the economy and boost the automotive industry," he said. He also said NADA supports the budget program and "applauds cutbacks in unnecessary regulations."

Wall Street analysts were generally favorable, although some suggested President Reagan's program did not do enough.

Arthur Davis, Prescott, Ball & Turben auto analyst, said the exclusion of the tax credit and import restrictions was proper.

"If the program had offered a plum to just the auto industry then there is no credibility to supply-side economics," Davis said. "What Reagan has to do is use Nixon-Eisenhower big-stick foreign policy to get the Japanese to increase their local content and/or build plants here."

The UAW will take "great exception" to any reduction in Trade Readjustment Assistance benefits which Reagan recommended be cut by $1.1 billion. In testimony in Washington last Thursday before the House Ways and Means Committee, the union called for a continuance of "adequate funding" and a resumption of training and job search and relocation, which have been suspended since March, 1980.

"Without TRA, the economies

'Competition' Porsche 928 bows

Porsche's flagship model, the 928, is available with a new "Competition Package" option for 1981. It features front and rear spoilers, leather seats, forged alloy wheels and sport shock absorbers. The 928 is powered by a 4.5-liter (273-CID) overhead-cam V-8 engine.

Dealer incentives stress non-rebate models

Chevy, Pontiac offer vacation trips

By Joseph Bohn
Marketing Editor

Chevrolet and Pontiac have launched major dealer trip incentives partially designed to help promote sales of models ineligible for rebates.

The divisions are pushing non-rebate cars and trucks by offering double points toward attainment of the trips during a fast-start period that coincides with the General Motors rebate period.

Chevrolet calls its contest "Let's Get America Rolling" (the same as the GM rebate theme). It runs from Feb. 18 to May 24.

The number of trips to be awarded is highly tentative, due to dealers competing in open and grouped competition. But Chevrolet projects that as many as 1,500 of its 5,600 dealers will win one of the three major destination awards.

There is an enrollment fee of $465 for the larger dealers who compete against a total unit objective and a fee of $265 for smaller dealers who compete in groups.

Dealers have a choice of an eight-days/seven night safari in Kenya, Africa, or an eight-day/seven-night Paris trip with a choice of Dublin, Munich, Paris, Amsterdam, etc., as part of the excursion; or seven days/six nights in Maui, Hawaii.

The fast-start double credit period runs from Feb. 18 to March 19, and bonus points are awarded on Impala/Caprice, Malibu, Corvette and all truck sales.

The contest itself is based on a total car/truck combined unit objective.

Dealers can also purchase prize-point certificates for salespeople or "All American holidays" for destinations within the U. S.

• Pontiac's contest is called "Winning Combination." It runs from Feb. 17 to June 3. Eligible units include all 1980 and 1981 cars.

There is a special fast-start emphasis from Feb. 17 to March 18 on 1981 LeMans, Catalina and Bonneville models and the 1980 Sunbird. Dealers selling these cars during this time period get double credit toward completion of their objectives.

Pontiac projects a total of 350 trips being awarded to dealers and 305 to sales managers of winning dealerships.

Dealers compete against objectives (if they're a larger dealer) or in groups for trips of eight days/seven nights to Europe, eight days/seven nights to Hawaii or five days/four nights to Vancouver or Montreal.

The destinations are awarded depending on high achievement over objective. A dealer who hits his objective, for example, may be automatically guaranteed a trip if he's a large dealer. But then, depending on how high he ends up in his zone, he

Service gripe program established by VWoA

ENGLEWOOD CLIFFS, N. J. —Volkswagen, Porsche and Audi owners who have unresolvable differences with their dealers in service matters will be able to submit them to binding arbitration under a plan announced by Volkswagen of America.

According to Hans-Joerg Hungerland, general manager, corporate services, the arbitration program, which has already proved successful in eight test areas, will be under the auspices of the Council of Better Business Bureaus in Washington, which coordinates it with the BBBs in dealership communities.

VWoA has tested the program in Minnesota, Des Moines, Milwaukee, Colorado, Houston, Kentucky and in regions of Southern and Northern California. On March 1, VWoA will expand the program to Oregon and Washington.

VWoA joins General Motors Co., Ford Motor Co., and Chrysler Corp. in offering customer third-party arbitration in disputes involving service.

With the addition of the New Orleans metropolitan area, this week, GM has the program in 17 major areas, Ford has programs in seven areas, and Chrysler's program is active in 45 states.

Franz Doerr, VWoA customer assistance manager, said, "Most questions between customers and dealers are settled amicably right in the dealership. But there are times when the two parties reach an impasse and it can be beneficial to have an impartial third party weigh the merits of the arguments."

Under the VWoA plan, when the two parties agree to arbitration, each is given a list of independent area residents from which to select a trained, volunteer arbitrator.

Before going to the final step in the process—binding arbitration—the BBB tries mediation—to get the two to talk out their differences and reach a mutually satisfactory solution. If they say they cannot, the arbitrator makes a ruling by which both parties are bound.

Doerr said VWoA has had

Kit car from Hathaway

The all-fiberglass body of the Hathaway is designed to be built on chassis of Triumphs manufactured from 1954 to 1976. According to the kit manufacturer, neither the stripping of the Triumph nor the assembling of the fiberglass body requires torch cutting or welding. The kit alone is $5,989; fully assembled and trimmed. Hathaways have a base of $17,890, from Hathaway Motor Co., Santee, Calif.

Fiat unveils Turbo Spider at NADA show

LOS ANGELES. — Fiat unveiled its Turbo Spider at the NADA convention here.

The Turbo Spider 2000 is expected to be available at dealers by April 1, according to a spokesman for Fiat Motors of North America.

One unusual aspect is that the Japanese - made turbocharger will be installed at the port of entry rather than at the factory. Fiat executives decided it was simpler and less expensive to install the unit in the U. S. rather than in Italy.

The system will be instaled by Legend Industries, of New York, at the three Fiat ports of Jacksonville, Fla.; Long Beach, Calif., and Wilmington, Del. According to Fiat, the company will build or lease facilities at the ports for the installations.

A Fiat spokesman said installations by Legend Industries will enable quick reactions to demands of the marketplace. The sourcing method will give customers the option of a turbocharger without the customary pipeline delays.

The first delivery to dealers will be in the 1,200 range, according to the Fiat spokesman. Price of the Turbo Spider will be around $13,000.

The unit, manufactured by I.H.I. in Japan, was made to Legend specifications for the Spider. The Fiat spokesman said offerings of six firms were studied before the decision was made to install the units at the port.

Legend did development work for the unit. The company is active in the auto aftermarket, and this is one of its first ventures into the OFM sector.

Fiat noted that the unit will be covered under the standard of Fiat warranty. Legend is now training Fiat service personnel who will train dealership personnel.

The goal in developing the unit was to eliminate turbo lag. It is connected to the Bosch L-Jetronic fuel injection system and develops 6 PSI of pressure.

The turbo unit begins to provide boost at 1,400 RPM and develops peak compressor efficiency of 73 percent at 3,000 RPM while maintaining 60 percent efficiency at 6,000 RPM.

At its peak, the turbocharged engine delivers approximately 120 HP (at 6,000 RPM) and 130 pounds of torque (at 3,600 RPM). According to Fiat this is an 18-percent gain in power.

Legend will be responsible for putting the new Spider through emission and durability tests required by the federal government.

Fiat's turbocharging of the Spider is part of its recent move to stress its sports-car image. The company spokesman noted that once this project is off the ground, there is thought of turbocharging the X 1/9 model.

The car will be sold only in the U. S.

Spiders — even normally aspirated versions—have been developed solely for the U. S. market.

The engine is the standard 2-liter, but the turbo model will be equipped with Pirelli P6 radials and Cromodora alloy wheels. Power windows, leather seats and an automatic transmission will be offered as options.

Continued from Page 1

secutive year that the domestic dealer count has declined. During that period, the total has dived from 41,018 to the current 21,772, a dip of 47 percent.

The most significant thing about those numbers is the continuing drop, not the totals themselves. The industry was vastly different in the mid-1950s. There were more makes of cars, and there thousands of the so-called "mom 'n' pop shops" — the trend toward fewer but larger dealerships hadn't begun.

Also, many feel that the industry was overdealered a quarter-century ago as the result of extensive signings after World War II. Overdealering is not prevalent today—just the opposite.

As bad as 1980 was, there was a bright spot: The fourth quarter of the year was not as awful as the first three.

The industry lost 173 dealerships in the October-December period, following plunges of 258 in the first quarter, a staggering 672 in the second and 504 in the third.

The fourth quarter was the least horrendous of the year for Chrysler and Ford, while AMC showed a slight upturn.

Here are the AUTOMOTIVE NEWS quarterly census figures for 1980:

Jan. 1, 1980	23,379
April 1, 1980	23,121
July 1, 1980	22,449
Oct. 1, 1980	21,945
Jan. 1, 1981	21,772

- Franchise totals were down for all GM, Ford Motor and Chrysler Corp. makes.

Biggest dip was at Ford Division, which has 417 fewer car franchises than a year ago. Mercury is off 219, and Lincoln is down 135.

At Chrysler Corp., Chrysler was hardest hit with a loss of 403 points. There were downturns of 311 for Plymouth and 293 for Dodge. Imperial, which rejoined the corporation's family as a separate franchise, had 411 agreements in effect on Jan. 1.

Chevrolet, down 200 franchises, was the biggest loser at GM. Pontiac has 105 fewer points than it had a year ago, and there were dips of 65 apiece for Buick and Oldsmobile and 25 for Cadillac.

Chevrolet has the most franchises, with 5,675. Ford Division is next with 5,070.

In dealership totals, 1980 was an up-and-down year for American Motors, while each quarter saw a downturn for the other three corporations.

AMC added 36 outlets in the first quarter, lost 42 and 43 in the next two periods, then added 11 in the fourth quarter for a net drop of 38. AMC had 1,663 dealers on Jan. 1, compared with 1,701 a year earlier. In 1979, AMC showed a gain of 40 outlets, so it has just two less than it had two years ago.

AMC's duals with GM - Ford-Chrysler rose by the same number that its overall total declined—38. The company has 706 such duals, up from 668 a year ago.

As noted, the rise in AMC's intercorporate duals doesn't enhance the industry's overall dealership total. The point was already in operation before taking on AMC. The company's current total was 706 duals in its highest since July, 1971, when it had 708.

- Chrysler Corp. ended 1980 with 3,823 passenger-car outlets, a drop of 596 from the 4,419 it had a year ago. By quarters, Chrysler's dips were 152-261-135-48. The reduced rate in the fourth quarter is a hopeful sign. The year's loss of 596 followed a 1979 decline of 367.

The corporation's Jan. 1 franchise totals were: Chrysler, 2,668; Plymouth, 2,482; Dodge, 2,351, and Imperial, 411.

In addition to its 3,823 car outlets, Chysler Corp. has 11 that handle only Dodge trucks. They are not included in the corporate car-dealer total or the Dodge car-franchise total.

Ford Motor Co. had a difficult year in every respect—including dealership totals. Its count slipped to 5,961, down 553 from the beginning of 1980. That compares with a loss of 125 in 1979.

By quarters, Ford Motor's 1980 drops were 97-234-181-41. As with Chrysler, the fourth-quarter moderation supplies hope that stability may be returning.

The company's franchise counts at the beginning of this year were Ford, 5,070; Mercury, 2,716, and Lincoln, 1,477.

Ford Motor has 92 dealerships that handle only the company's heavy-duty trucks. They are not included in the corporate car-dealer total or the Ford Division car-franchise total.

At GM, the year's loss of 365 car outlets was 30-155-105-75 on a quarterly basis. GM wound up 1980 with 11,060 car dealers, down from 11,425 a year earlier. In 1979, GM's drop was 140.

Franchise totals on Jan. 1, 1981 were: Chevrolet, 5,675; Oldsmobile, 3,250; Pontiac, 3,115; Buick, 2,985, and Cadillac, 1,605.

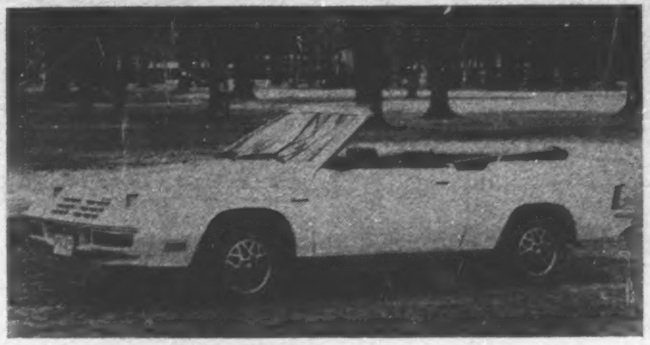
Boston Ford dealer switching to Datsun

BOSTON. — Another Boston-area Ford dealership is closing, but its owner is not giving up the retail auto business.

Richard Goode, who has operated a Ford outlet in Dedham for 25 years, will shift his allegiance to Datsun and be in business with his new line by late March.



Soft top for a fastback

A.H.A. Mfg. Co. Ltd., Mississauga, Ont., now offers the Pony convertible conversion on the Plymouth TC3 and Dodge 024. It is designed to retain the cars' original lines and is fully warranted by A.H.A. There is no loss of seating front and rear and no loss of storage, the company said. A.H.A. said the car can be sold for the same price as a VW Rabbit.

Ford updates and expands video program for dealers

By Joseph Bohn
Marketing Editor

Ford Motor is planning to update its dealers' video systems with a new video disk that does everything from helping to prescreen and pre-sell customers on product to training service technicians.

About 3,100-3,200 Ford and Lincoln - Mercury dealers now use video tape players that were introduced in 1973.

The new systems have a greater flexibiilty to help qualify customers, for example, on the specific product (car line) they may be interested in and provide detailed information to help sell the product.

Beginning with '82 introductions, there will be special two-minute tapes on each of the company's car lines, specially geared to customers.

Of course, the video disk systems also have a greater flexibility in their function of training sales and service people within dealerships. For example, they have the capability of freezing specific frames that explain complicated service repair procedures, thus allowing technicians to go through a step-by-step learning process.

- The video disk systems are comparable to those already in use by General Motors dealers but have more up-to-date state-of-the-art features, such as a superior memory bank, quicker braking, etc.

The systems, designed by Sony specifically for Ford, will also carry Ford's private name label, rather than the Sony name.

Ford is hopeful that as many as 4,000 dealers will subscribe to the new systems, said James Miller, manager of training and communications department, merchandising office, Ford Division.

The video disk systems will be competitively priced with those at General Motors.

To make them more affordable, Ford is offering a five-year lease option on all the hardware. With the previous video tape units, dealers were required to purchase part of the equipment, a TV and stand and were given the option of leasing only the video tape player itself.

Meanwhile, Ford will sell dealers for $1 the older video tape players they had been leasing. Dealers can still use them to rerun commercials and for other internal purposes since they will own all the older equipment outright.

None of the new tapes being developed by Ford is adaptable to it, however.

Hard times set no-nonsense mood at SAE show

Continued from Page 1

is a traditional highlight of the society's meeting. All seats are reserved and, as usual, were sold out well in advance.

The SAE Show keynote session today, titled The '80s—Decisive Decade for Global Automotive Technology—Are World Cars the Answer? clearly is in tune with the show's theme.

The keynote session will include looks at things from the standpoints of purchasing and manufacturing and from the suppliers' point of view.

Some one-third of the 150 technical sessions at this year's event will be international in subject matter or author participation.

At least 25 percent of the space occupied by the approximately 275 exhibitors will include products and services from countries other than the U. S.

New Oshkosh snow blower

A new generation high-speed rotary snow-removal vehicle being built by Oshkosh Truck Corp. for highway and airport-runway use has an output capacity of 40 tons of snow a minute at 20 MPH. The Model H-2218 chassis is powered by the Detroit Diesel 8.2-liter naturally aspirated engine rated at 165 HP and is equipped with the Allison AT-545 four-speed automatic transmission.

1980 was a tough year for most truck points

With sales of new trucks last year down almost 30 percent from 1979 and used trucks soft in many markets throughout the U. S., it isn't surprising that most dealers had a tough time making ends meet in 1980.

A few dealers, according to an AUTOMOTIVE NEWS survey, made more money in 1980 than the previous year, but far more said their profits had slumped drastically and many of them were in the red at the end of the year.

Only 7.35 percent of the survey respondents reported an increase in profits and the majority were in areas least affected by the slump in the economy or whose customers are in thriving industries, like energy-related projects, electronics and aerospace.

The overwhelming majority, 85.3 percent, said their profits were lower in 1980 than the year earlier, while the remainder, another 7.35 percent, reported little or no difference in profits for the two years.

One dealer, who handles the International line in a small Midwest city said he had a profit of about $50,000 in 1979 and end-1980 with a loss of $60,000. He called the outlook for the first six months of 1981 "bad."

- He was just one of many dealers who expect prospects to be grim in the first half. A decline in profits from a year ago is anticipated by 57.4 percent of the survey respondents.

"We'll be lucky to break even," said a Midwest dealer who reported a 70 percent drop in profits in 1980. Another dealer in the same section of the country, who was in the red last year, noted that "a break-even would be an accomplishment."

A first-half improvement is expected by 20.6 percent of the dealers responding to the questionnaire, while the remaining 22 percent look for the six-month results to be about the same as last year.

A Rocky Mountain Ford dealer, who reported his profits were 25 percent higher in 1980, said the six-month outlook is "fair, with profits coming mostly from sales of mid-range diesels."

Commented a Southern-based Chevrolet-GMC-Mercedes dealer who reported a profits increase of 20 percent in 1980: "Any profits (in the first half) will come from used trucks and special allowances on new ones."

A decline in interest rates would help most in turning the market around, the dealers agreed.

"The prime rate must go down to build confidence among truck buyers," said a Northeast GMC dealer who reported that 1980 profits were down 70 percent.

"President Reagan has a golden opportunity to instill confidence in the public," he continued, "but action must come soon

Firm that woos White reports drop in earnings

SAN FRANCISCO.—Consolidated Freightways, Inc., which recently terminated talks with Daimler-Benz AG over sale of its Freightliner Corp. and then began bidding for most of the U. S. and Canadian truck assets of White Motor Corp., has reported a drop in both earnings and revenues for 1980.

Raymond F. O'Brien, chairman, said net income for the year plunged from $65.9 million in 1979 to $9.8 million, while revenues and sales for the year totaled $1.85 billion, down 4 percent from the year-earlier $1.72 billion.

He blamed the huge drop in net earnings on the recession and high interest rates, as well as a $32 million write-off of its U. S. motor-carrier operating rights resulting from the federal government's deregulation of the trucking industry.

O'Brien noted fourth-quarter volume improvements and a return to profitability by the company's manufacturing units, notably Freightliner. Operating earnings, he said, were the highest of any quarter of the year. Fourth-quarter net income totaled $14.6 million, he added, down from $18.2 million in 1979.

O'Brien said 1980 "proved even more difficult than we had expected, as North American heavy-truck factory sales fell an estimated 41 percent." The company had anticipated a decline of 25 percent.

But he said Freightliner improved its market share during the year, holding the factory-sales decline to 34 percent, from 16,336 units sold in 1979 to 10,724 in 1980.

truck industry news

Non-captive imports, Group 7 units only gainers

Registrations dip in 1980

Registrations of new trucks of all types in the U. S. in 1980 slumped to their lowest mark since 1975, with losses in all three market segments.

During the year, according to R. L. Polk & Co. statistics, 2,476,777 trucks were registered in the 49 states which report the figures, a decline of 28.7 percent from the previous year's 3,472,209. In 1975, the 12-month total was 2,397,417.

Non-captive imports and Group 7 heavy trucks were the only gainers in 1980, but the increase for the latter is somewhat tainted since it came at the expense of Group 6, which lost significant ground due to reclassification of vehicles previously registered as Group 6 units.

Because of this reclassification and the continued slump in production and sales of recreation vehicles, the medium-truck market was the biggest loser in 1980 from a percentage standpoint.

The 12-month registrations of Groups 4-through-6 trucks totaled only 66,282 units, down 56.3 percent from the year-earlier 151,527.

Reflecting the RV slump, only 203 Group 4 vehicles were registered in the last year, off 95.9 percent from the previous year's 4,942. The Group 6 count dropped 55.6 percent, from 143,724 in 1979 to 63,790. Group 5 had 2,289 tallies, down 20 percent from the year-earlier 2,861.

- Light-truck registrations dropped 28.7 percent, from 3,107,415 in 1979 to 2,217,085, and the count would have been lower had it not been for the increase in non-captive import tallies.

The total for Group 1, where the imports are positioned, was 1,130,942, a decline of 11.3 percent from the previous year's 1,275,531. The light imports were up 14 percent, from 258,003 in 1979 to 294,199. Across the board, the import total was 298,932, a gain of 13.5 percent over the year-earlier 263,322.

Group 2 tallies dropped 39.9 percent to 1,078,067 units, compared with 1,792,546 in 1979. The Group 3 count was only 8,076, a decrease of 79.5 percent from the year-earlier 39,338. The heavy losses were due mainly to the RV slump and the public's reluctance to buy the less fuel-efficient pickups, vans and sports utility vehicles.

Group 7 was the only one of the eight weight classes to show a gain in registrations during the year. The total soared to 79,719 units, an increase of 68.3 percent over the previous year's 47,358.

The Group 8 total was down 31.5 percent, from a record 165,909 units in 1979 to 113,691. It was the lowest count for this group since 1976, when only 91,973 vehicles were registered.

- In the final month of 1980, registrations totaled 191,073 units, a decline of 28.2 percent from the 266,020 tallied in December 1979.

Ford, which was No. 1 in retail truck sales in 1980, also was the winner in registrations. It marked the fourth consecutive year that Ford has been No. 1 in truck tallies.

Over the 12-month span, 784,132 Ford trucks were registered, compared with 737,788 for second-place Chevrolet. Both lost penetration during the year, however.

Ford's share of the industry total dropped from 32.36 percent in 1979 to 31.66 percent, a decline of 0.70 points. Chevrolet's penetration slipped 1.48 points, from 31.27 percent in the previous year to 29.79.

The biggest increase in penetration during the year was scored by the miscellaneous group, which includes the imports. The total for this group was 301,223 units, an increase of 13.5 percent over the year-earlier 265,445.

The miscellaneous group's share of the industry total was up 4.51 percentage points to 12.16 percent, compared with 7.65 percent in 1979.

Group 7 trucks registered in '80 hit alltime high

Heavy-truck registrations in 1980 dropped below the previous year's record level, but the number of Group 7 vehicles registered during the year soared to an alltime high.

R. L. Polk & Co. reported that 193,410 Groups 7 and 8 trucks were tallied in the last year, a decline of 9.3 percent from the year-earlier 213,267. The Group 7 count, however, was up 68.3 percent, from 47,358 in 1979 to 79,719 last year.

At the start of 1980, Ford,

Dealer charges IH with fraud in Scout closeout

CAMDEN, N. J.—An exclusive Scout dealer in nearby Hopewell Township has filed suit against International Harvester charging that the company "materially and fraudulently misrepresented its intentions and its activities and facts" relating to its plans to discontinue that vehicle.

The suit, asking for $1 million in damages, interest and costs, was filed in U. S. District Court here by John Montana, individually, and for Montana Motors.

Montana said he entered into an agreement with IH in 1977 to market exclusively the four-wheel drive Scout. Montana Motors was limited to the sale of the Scout, even though other Scout dealers had the right to market other vehicles.

In order to conclude the

*—Breakout of 1979 registrations do not include 93 units registered in Hawaii in December, 1979.

Will export engines in exchange for other components

New field for Australian auto firms

By Pedr Davis
Staff Correspondent

MELBOURNE, Australia.—At a time when most auto firms are battling to protect their home markets, the Australian industry is spending heavily to pioneer a new kind of market.

Thanks to an "Export Complementation Scheme" agreed to by the federal government, the industry is geared to export large numbers of engines in exchange for components not produced here.

To this end, Australia-based companies will spend $750 million on expansion plans over the next three years.

The five major manufacturers — General Motors-Holden's Ford, Toyota, Mitsubishi and Nissan—have announced major projects, all based on world-car concepts.

Each firm is to produce components (mainly engines) for use in Australia and in similar vehicles produced by associated firms overseas.

The biggest plan involves a $236 million dollar investment by Holden's to manufacture engines for the new GM world car, the J-car.

Announced last year, the plan takes the local industry into a completely new direction. Holden's sought government approval to offset the value of components exported against imports.

The company successfully argued the case for an equivalent value of components to be shipped here duty-free.

Holden's has since confirmed that it will build 300,000 J-car engines a year, starting in mid-1981. One third will be used in a new locally made car, two thirds will be exported.

Ford has announced that it is converting its V-8 engine plant in Geelong to manufacture a new engine for the replacement Cortina.

The four-cylinder unit can be built in capacities between 1.5 and 2.0 liters and will be suitable for front and rear-wheel drive. Annual production will be 90,000 units, of which about half will be exported. Meanwhile, engines for the new front-drive Laser will be imported from Japan and Taiwan.

Toyota, which has the controlling interest in Australian Motor Industries, is to spend $140 million on a new engine and body component facilities. A new plant will make aluminum cylinder heads, half of which will go to Holden's. The remainder will probably be exported to Japan.

Nissan, too, is to manufacture and export a new front-drive engine at its plant in Clayton, Victoria.

Mitsubishi Motors, which has taken over Chrysler Australia, is committed to a $160 million plan to build new front-drive models in Australia. The South Australian firm expects to export some of the components back to Japan.

Group 7 trucks registered in '80 hit alltime high

Continued from Page 12

GMC and Chevrolet reclassified many of their trucks that previously were Group 6 vehicles, moving them into Group 7 and causing the total to soar. International Harvester made a similar move in 1979, so Ford and General Motors were playing catchup in 1980.

As a result of the mass reclassification, the number of Group 6 registrations in 1980 plunged 55.6 percent, from a healthy 143,274 units in 1979 to only 63,790.

It was the significant increase in Group 7 tallies which kept the heavy-truck decline in 1980 at a respectable level of less than 10 percent. The Group 8 count was down 31.5 percent, from an alltime high of 165,909 in 1979 to 113,691.

- For the first time in years, International wasn't No. 1 in Groups 7 and 8 registrations. Ford took over leadership in February while IH operations were idle because of a six-month UAW strike which was not settled until April.

Ford had 46,199 heavy-truck tallies during the year, accounting for 23.89 percent of the industry total. Its market share was up 6.20 percentage points, rising from 17.69 percent of the total in 1979, when 37,706 Ford heavies were registered.

At the same time, International's share dropped a whopping 10.13 points during the year, from 30.91 percent of the 1979 total on 65,894 tallies to 20.78 percent in 1980 on 40,180 registrations.

But International was No. 1 in Group 8 registrations with a total of 21,686, compared with 21,055 for Mack and 13,685 for Ford.

Ford was the leader in Group 7 tallies with 32,514 units, while International won runnerup honors with 18,494.

Second-generation dealer

Robert Franchini signs with Chevrolet to become dealer-operator of Franchini Chevrolet, Inc., Garfield, N. J. At the signing were Julius Franchini, left, whose dealership is in Kearny, N. J., and Gardner Glenn, Chevrolet's Newark zone manager.

Trips and merchandise are offered

– Datsun, GMC staging incentives

By Joseph Bohn
Marketing Editor

Datsun launched a retail sale trip incentive contest for dealers and sales managers, and GMC Truck & Coach is halfway through a contest on which the division has maintained a low profile.

The Datsun contest is called "Quest for Excellence." It runs from Jan. 21 to April 30. The sales manager's portion runs from Jan. 21 to March 31. And the contest also had a Jan. 21-28 fast start provision.

Essentially, dealerships compete in open or group competition. Group competition dealers (there are about 100 groups) must achieve at least 100 percent of objective to win a trip, and trips go to those that are highest over objective.

The contest covers all '80 and '81 cars and trucks.

Dealers have a choice of 10 days/nine nights in Athens, or nine days/eight nights in Costa del Sol, or nine days/eight nights in Egypt. As an alternative, dealers can take equivalent amounts of merchandise prizes.

Sales managers have a choice of five-day/four-night trips to Vancouver, or five days/four nights in San Francisco or five days/four nights in Washington, D. C. Or they can take equivalent amounts of merchandise prizes.

If a dealership hits its fast-start objective, it is credited with five additional points toward its objective. Also, both dealers and sales managers get five additional points toward their objectives if they hit 60 percent of a separate "Datsun Truck Bucks" contest by Feb. 28.

- The GMC Truck & Coach contest is called "You have got what it takes." It runs from Nov. 1 to April 30, and covers all '80 and '81 trucks.

There are awards for dealers, sales managers and salesmen.

Each dealer has separate sales objectives for light, medium and heavy-duty trucks and can win trips in each of the categories. If a dealer hits all three objectives, he receives a trip to Munich or Hawaii, plus a "marathon of merchandise" plus a recognition award of a Texas Instruments home computer.

The top five dealers, nationally, in the light-duty category win trips and the "marathon of merchandise" prizes.

The top 10 dealers in each competition nationally receive three-day/two-night extensions of their trips to San Francisco/Lake Tahoe, Paris/Switzerland or Japan and Honolulu.

There are other prizes for the top dealer nationally, and the top three dealers in the medium-duty truck category and the heavy-duty truck category.

Recycling for savings

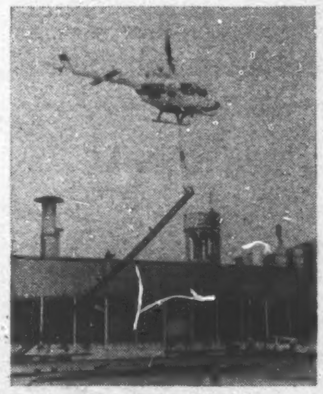
John Richards, right, and Barbara Richards, owners of Richards Chevrolet-Olds, Inc., New Freedom, Pa., discuss the merits of their petroleum recycling program with Clifton E. Disharoon, assistant vice president, Commonwealth National Bank, the organization that financed a $12,000 Dravo Furnace which burns oil drained from cars during maintenance and repairs. The Richards' claim they are heating their 8,400-square-foot facility entirely with recycled oil.

GM plant funds OK'd for Detroit

WASHINGTON.—The City of Detroit will get its $30 million grant to prepare the site for the General Motors assembly plant on the Detroit-Hamtramck border.

There had been doubt about the funds in view of the Reagan Administration's proposed cutbacks in money for the Urban Development Action Grant program. However the Reagan Administration has approved the grant.

The GM project still faces a court challenge from residents of the Poletown area who will be displaced by the plant. The plant will be built on a 465-acre site, will employ about 6,000 and will assemble Cadillacs.



Chopper job

Ford Australia is using helicopters to help install vital equipment at its Sydney-based Homebush assembly plant, where the new FWD Laser is being produced. Ford said helicopters are faster than heavy cranes when raising equipment to rooftops.

Saab will pay freight to U.S. on tourist cars

ORANGE, Conn. — Saab cars now are available for purchase by American tourists in Europe at savings ranging from $305 for a Saab 900 three-door to $1,705 for the Saab Turbo three-door hatchback and four-door sedan.

In addition, Saab will ship tourist-delivery cars back from Europe free of charge.

This will save a customer about $1,000 in addition to the saving in the purchase price, according to Sten O. Helling, sales and marketing vice president for Saab-Scania of America.

Americans visiting Europe can pick up their new 1981 Saabs in Goteberg, Sweden, without any delivery charges; in Stockholm and Malmo, Sweden; and in major cities in Denmark, Norway, England, Holland, Germany or Switzerland.

For free return shipments to the U. S., cars can be dropped off at a number of cities. They are then shipped from Goteborg, Sweden, or Bremerhaven, Germany, to East, West or Gulf ports, where customs duties and clearance charges are handled by Saab.

The catalytic converter required in the U. S. is retrofitted, free of charge, before return shipment to the U. S.

world news briefs

Revised Lada at last?

The overdue Lada 2105—it was originally scheduled for 1979—is expected to make its west European debut this year. It is a revised version of the current model, and not the front-drive, which will probably not appear until 1983.

French investigate alcohol fuel

In an attempt to reduce the country's dependence on imported oil by up to 50 percent over the next decade, France is to investigate biomass-derived fuels.

More cutbacks in Belgium

BL has decided to close its Seneffe assembly plant near Mons, Belgium, with the loss of some 2,200 jobs. It follows a factory closure at Brussels by Citroen a few weeks earlier, making 900 people redundant.

When a Mazda is not a Rolls

Rolls-Royce Motors has been awarded $12,000 damages following an advertising campaign by the Swedish Mazda importer, who described one of its new cars as "the new Rolls in the family." Rolls-Royce zealously protects its reputation by dealing with around 500 trademark infringements each year.

Audi sales fall . . .

Sales of Audis fell by around 9.1 percent worldwide to 365,500 during 1980. The main drop was in the home country, West Germany, where the decline was by more than 14 percent to 208,900. However, Audi increased investment by nearly a third to $169 million.

. . . but BMW and Daimler-Benz expand

BMW, the Munich-based car maker, sold 339,000 cars last year, an increase of 1.2 percent over the previous year. And the company that Audi and BMW try to emulate, Daimler-Benz in Stuttgart, reported an improvement in car output of 1.6 percent to 429,000 last year.

Citroen reaches a diesel milestone

Citroen's factory at Aulnay-sous-Bois has built its 200,000th version of the CX diesel. These engines provide the power for 46 percent of all CX production. The company has also confirmed its trading loss for last year—$167 million.

Daimler-Benz backs truck ABS

Daimler-Benz is to equip production trucks and buses with the advanced ABS anti-lock braking system. It is believed to be the first truck maker to offer it as original equipment.

Hanon heads for the top

Bernard Hanon, head of Renault's car division, has been made director general of the company. He is widely tipped as heir-apparent to Chairman Bernard Vernier-Palliez, who is due to retire at the end of the year.

Cutbacks at Seddon

Seddon Atkinson, the International Harvester subsidiary, has been crippled by the collapse of UK heavy-truck market—down from some 2,700 monthly to 1,600. As a result it is making some 45 percent of its 1,800 workforce redundant.

Hold-ups for the Japanese in France

Japanese car makers Toyo Kogyo and Daihatsu are reportedly having trouble obtaining type approval for some of their cars in France. Last year, Japanese sales slipped over France's 3 percent limitation. They went over UK agreements too (to 11.9 percent), and JAMA has agreed to "even more prudent" marketing following tallies in Lisbon with the SMMT.

Fiat's diesels get smaller

Fiat in Italy is expected to introduce a diesel version of its 127 hatchback shortly. This could make it the world's smallest diesel production car.

Low price Lotus on the way?

Rumors persist that the English specialist car firm Lotus is developing a less-expensive open top two-seater to broaden its range. Engines and transmissions are said to be from Toyota.

In the middle

Hennig Gold, a West German professor, has converted a Ford Fiesta to have the driving position in the center of the car. Steering, pedals and instruments have been moved. Gold believes a central driving position will improve overall car control.

Boosts sales, profit and moves to top in Europe

Renault does well in spotty year

Continued from Page 14

tions. First was pure economy and the second—because in most countries it was not possible to drive so quickly—was the pleasure derived from driving a car."

There is no doubt that Renault's reputation for making very economical cars has won it many friends. Pierre Tiberghien, director of research and development, says it is the main reason for the good sales results.

"For 1980 our fleet average fuel consumption — a sort of CAFE rating—will be 7.5 liters per 100 kilometers. That is the best in Europe by about 0.5 liters."

In U. S. miles per gallon, then, Renault's model weighted fleet average was 31.4. According to Renault calculations, its nearest rival was Fiat with an equivalent of 26.7 MPG. (The claims were made before details of VW's new Formula E packages were known.)

- Now Renault is aiming at a 30 percent improvement by the end of the decade, which would suggest an average in excess of 40 MPG. This will be achieved, according to Tiberghien, by reducing power, reducing weight and improving the drag co-efficients.

Tiberghien heads a department comprising 3,500 personnel and with an annual budget in the region of $40 million. Not all of this effort goes into improving fuel consumption—but all at Renault recognize that it will be an ever-increasing element in future car sales.

"The main thing is to have a justification — and the justification is the cost of oil," explains a Renault executive.

Other reasons for the good results, says Lamirault, were the strengths of the dealer networks and the large, integrated model line up. "The network's capacity to deal with a crisis is better than any others. In 1974-75, when there was a market drop, we went up. It was the same last year," he said.

"Our objective in the EEC in 1981 is to have 14.5 percent. We made 14.4 percent last year." He thinks the European market will sink in the first four to six months, but the remainder of the year will show a slight increase. By the end of the year the company anticipates slightly lower sales than last year.

"The price of oil has an importance," says Lamirault, "but a very significant factor is the cost of borrowing money.

"It plays both ways, on the customer and also on the cash flow for the dealers in their stocks.

"Everywhere the cost of money has doubled in two years. It may be cheaper in Switzerland than in the United Kingdom, but it has doubled."

While Renault keeps a close eye on its dealers' performances, it is still looking at ways of improving its network. It has picked up several key locations as BL shed dealers in the UK and across Europe, and is taking a very close interest in the fusion of the Peugeot and Talbot chains. So has Volkswagen.

"I am just wondering why Opel has not been doing the same," Lamirault said. "The impression I have is that the order has not been coming from Detroit.

"I'm thinking mainly of France, where Opel penetration is very, very low. With the back-up of General Motors we imagined they would have taken more opportunities to make things better."

Certainly Renault has been keeping the customer's attention with a chain of new product launches. The Fuego coupe, diesel versions of the 18 and 20, the 18 Turbo and five-door 5 have all been added within recent months.

There will be a pause now, though it will broaden its well-rounded line by starting to sell American Motors Jeeps in France and Belgium in one year's time. The Jeep, it seems, will be a diesel engine version of the CJ7.

Observers are also left wondering when Renault will have a diesel to compete with the successful Golf and Ritmo models. A Renault executive says: "There may still be problems with small diesels—owners revving them a bit too fast and their life not being quite enough."

In other respects, though, the Renault line-up is neatly dovetailed. From the basic 4 to the top model 20/30, from gasoline to diesels and turbo gasoline models, from sedans to hatchbacks, station wagons and coupes. It has successfully managed to shake its cheap and cheerful image.

"Once upon a time you would never have seen a Renault in the 16th arondissement (the fashionable place to live in Paris). Now every other car is a Renault 5," reports a Renault man.

- It has helped change its image through motor sport. In Europe wins in such prestigious events as Le Mans, Grands Prix and the Monte Carlo Rally add up to as much as an Indianapolis win, a victory in the Super Bowl and a handful of gold medals at the expense of the Russians in the Winter Olympics to U. S. buyers.

In France there is only one sporting event more important to win—the Tour de France cycle race.

And Renault bicycles have won that too!

European sales results by country:

	1980	1979
Austria	231,000	214,000
Belgium	401,000	423,000
France	1,873,000	1,976,000
Holland	448,000	571,000
Italy	1,720,000	1,441,000
Spain	517,000	574,000
Sweden	192,000	215,000
Switzerland	286,000	279,000
United Kingdom	1,514,000	1,716,000
West Germany	2,432,000	2,623,000

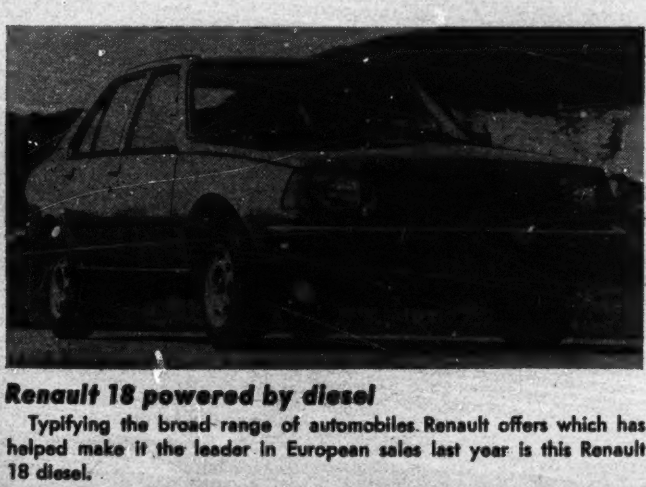
Renault 14

Renault 14 is a French answer to the Golf-Omni/Horizon-Strada type of car. It is an economical and technically progressive car, the maker says.



Renault 18 powered by diesel

Typifying the broad range of automobiles Renault offers which has helped make it the leader in European sales last year is this Renault 18 diesel.

Hino Diesels to be built by Moroccan company

The Moroccan corporation, Saida, of Casablanca, has concluded an agreement for technical cooperation with Hino Motors, of Tokyo, in which Toyota Motor Co. holds a 9.6-percent interest.

Saida will begin assembly of 5-ton Hino Diesel trucks in short order, at an initial rate of 500 units a year.

Making the Rover rarer

The sky's the limit when Wood & Pickett, of England, begins converting one of Rover's SD1 sedans. Its catalog ranges from turbocharging ($3,450) to chromed wire wheels ($3,000) and walnut fascia ($1,550). Cars are built to customer's individual specifications.

Plans for UK Nissan plant draws fire from the French

Prime Minister Margaret Thatcher's approval of Nissan's project for an assembly plant in South Wales with capacity for 200,000 cars a year is drawing fire from French sources.

An official communique from the Chambre Syndicale des Constructeurs d'Automobiles (France's equivalent to the MVMA), maintains that the proposed local content of 50 to 60 percent is totally insufficient.

"France's car makers have no objection, in principle, to the production of Japanese cars in Europe, but on condition that they are really produced on equal terms, with a local content of or close to 100 percent," it said.

The communique cites the American example as a model for the Japanese to follow. Ford and General Motors have important parts manufacturing plants in France, but no final assembly of complete vehicles.

According to the terms of Nissan't agreement, there is no linkage between the 200,000 cars to be built in South Wales and the number of built-up cars brought into Europe. The French do not accept an addition of 200,000 Japanese cars to the present import flood, but want them to replace 200,000 built-up Nissans.

In conclusion, the French express their concern over the apparent lack of wisdom in setting up a plant of this type and importance, adding to Europe's overall capacity, at a time when French, Italian and German factories are running short shifts and adding closing days to keep from stockpiling new cars.

"Nissan's implantation in the United Kingdom can only aggravate the difficulties of the European industry. A limit on Japanese car imports is indispensable," the statement insists.

Auto makers will be asked to moderate exports

Japan-Europe trade deal toothless

By John Hartley
Staff Correspondent

TOKYO. — Japan's booming exports of autos bring many visitors to Tokyo. Recently the European Economic Community delegation and Lane Kirkland, president of the AFL-CIO, were here at the same time. A long-range blast from William Brock, trade representative of the new Reagan Administration came in the same week.

At the end of the week, the Americans felt the EEC had won a few points, the Japanese felt that they had made some concessions, while the EEC leader, Roy Denman, felt Japan had won—and was intent on winning unless forced to do otherwise.

Denman was heading a delegation aimed at warning Japan about excessive exports of cars — especially to Benelux countries and Germany — and color television sets. Just as he arrived, Brock was reported to have said that if Japan agrees to curb exports to the EEC, it will face protectionist measures in the U. S.

This situation caused some embarrassment to the Japanese, who wanted to pretend they knew nothing of the matter, nor of the fact that the U. S. had sent a letter to the EEC Commission about it.

In any event, Kiyoaki Kikuchi, deputy foreign minister, said Japan has accepted it should avoid concentrating on very high shares of certain markets. Therefore, the government would request the auto companies to export in a product manner to Germany and the Benelux countries, he said. He expected that any increase in sales would be "modest."

At the same time, he protested against "unilateral" limits imposed on imports of Japanese cars in France and Italy.

In other words, Japan promised to ask the auto makers to moderate exports—just as it has asked them to moderate exports to the U. S. It was pointed out that these talks were not government-to-government negotiations, but merely exchanges of views.

- When the AFL-CIO's Kirkland heard of the news, he admitted to being puzzled about the difference between Japan-U. S. and Japan-Europe relations when it comes to trade friction, indicating he did not understand the deal between the EEC and Japan.

Like many observers, he assumed this was a hard commitment, whereas it is just a few words—and there is no certainty that one of the auto makers will adhere to it.

In any event, Kirkland laid the blame for Detroit's troubles on bad management, oil prices and import penetration. He also said that despite being free traders at heart, the AFL-CIO had to change its tune with the times.

"OPEC is a complete contradiction of free trade," Kirkland said. "We have been overtaken by events. Steel, glass and auto workers have all been put out of work. Our change of view on free trade has been forced upon us.

"Are we to be the last to go down? I think not. For the most practical reasons, the auto industry should be protected. It should be an element of strength in the U. S. economy."

Kirkland emphasized that one in seven U. S. jobs is related to the auto industry, and that two of every three workers laid off in the crisis were outside the UAW.

He insisted Japanese imports must be limited—but would not give a figure—and that the Reagan Administration will have to respond to the problem in due course.

- Kirkland also said it is time the U. S. government insists that imported products be produced in plants with safety standards similar to those in force domestically.

He cited the example of laws governing asbestos in manufacturing. He claimed one company had just moved its plant over the border into Mexico and continues to operate with practices that could seriously endanger health.

Japan's safety record is good, but not all its regulations and practices would be acceptable in the U. S.

The AFL-CIO should find a ready ally in the British Trades Union Congress, which has long been critical of what it considers are unacceptable safety practices in Europe.

Kirkland said the President should negotiate quotas with Japan. If he had been asked to negotiate on this trip, he would have been able to do so, Kirkland said, because the Japanese have a "keen sense of the long run—the long run survival of industry."

They would be happy to maintain sales at a realistic level, rather than face the possibility of a really substantial loss in the market through protectionism, he said.

Finally, Kirkland blasted those who advise Japanese companies which operate in the U. S.

"The use of non-union labor by Japanese companies is a continuing problem," he said. "There are systematic campaigns to interfere with the rights of workers. The Japanese are the victims of the worst elements in the U. S. scene. These advisers and consultants tell them how to break the law and get away with it."

Although the Japanese listened politely to Kirkland and the EEC delegation, no significant changes can be expected.

Importers add their endorsement to AUTOCAP

WASHINGTON.—AUTOCAP, the consumer action program started by NADA, has been endorsed by the Automobile Importers of America.

AIA speaks for 16 import companies—all U. S. importers except Volkswagen of America and Mercedes-Benz.

Miller said the endorsement not only strengthens the AUTOCAP program but shows the importers' commitment to customer satisfaction.

Millet added the "wholehearted support" of AUTOCAP's mediation of product and warranty complaints and the support of all import dealers, even those who are not members of NADA.

AUTOCAP, sponsored by NADA, is operated voluntarily by state and local dealer associations. At present there are 29 AUTOCAP units using consumer-dealer panels to mediate disputes, usually those brought against dealerships but sometimes with manufacturers.

Domestic workers react favorably to Reagan plan

Continued from Page 3

of the Midwest and automotive states in other parts of the country would have reached depression levels last year," said Leonard R. Page, UAW associate general counsel.

"Without this program, most of our members would have exhausted state and unemployment and supplemental unemployment benefits last fall. By now, these hundreds of thousands of workers and their families would have been forced onto already swamped state welfare rolls."

Page said TRA costs should return to past levels of less than $300 million per year by 1982 and warned against making a budget cut decision in the program "based upon current costs."

VWoA sets up arbitration plan on service gripes

Continued from Page 3

test programs operating in the areas since the fall of 1979.

"Dealers and customers agree that in some cases binding arbitration is the fairest way to resolve tangled differences of opinion," he said. "We've found that both parties feel they've had their 'day in court' regardless of who prevailed in the end. The tests have proven to be a convincing success."

The test plan involved 280 franchised VW and Porsche-Audi dealers. In about 90 percent of the cases, the BBBs were able to settle matters through mediation, rather than binding arbitration, Doerr said.

Doerr estimated that nearly all 1,442 franchised dealers will participate in the arbitration program, but it may take 2½ years before it is available in remote areas.

Doerr said VWoA will expand the program gradually "to make sure they are all capable of doing the mediation and arbitration customers and dealers expect of the program."

Chevy, Pontiac offer incentives

could go to Europe or Hawaii.

The sales managers of dealerships that win trips—350—will also win their own trips of three days/two nights to Pontiac's full-line announcement show on '82 models next August. It is currently pegged for Las Vegas, but the site could change.

Salespeople are also eligible to win prize-point certificates for merchandise.

There is no enrollment fee for dealers to get into the contest.

U. S. makers gain 38 percent

Week's auto output advances to 133,543

By Patricia Hoffman
Staff Writer

The U. S. auto makers last week showed definite signs of improvement as production rose considerably above the previous week's output.

Production last week was planned at 133,543 units, up 38.34 percent from the 96,531 cars completed the previous week, but down 18.96 percent from the 164,799 assembled in the week ended Feb. 23, 1980.

Breakdown for last week by companies was: General Motors, 83,042 cars, up 38.10 percent from the 60,131 completed the previous week; Ford Motor Co., 28,360, a 57.23 percent increase from the 18,037 of the previous week; Chrysler Corp., 17,430, up 26.68 percent from 13,758, and Volkswagen of America, 4,160, a 0.72 percent increase from the 4,130 cars assembled the week ended Feb. 14.

There is no exact comparison for American Motors because weekly figures are estimated.

Checker Motors built 76 cars last week and none the previous week.

So far this year, the auto makers have assembled 783,028 units, down 22.16 percent from the 1,005,946 units completed the comparable period last year.

Breakdown by companies for the year-to-date is: GM, 66.78 percent; Ford, 17.29 percent; Chrysler, 11.27 percent; American Motors, 1.39 percent; Volkswagen, 3.24 percent, and Checker Motors, 0.03 percent.

GM scheduled Saturday overtime last week at Linden and Tarrytown.

Downtime is slated this week at GM's Baltimore and Leeds plants. Both are scheduled to resume operations March 2.

GM's Janesville plant, down the week of Feb. 16, will resume operations today (Feb. 23).

Ford's Lorain point, down since Feb. 2, will remain idle this week, and Ford's Kansas City point, down since Feb. 9, will also continue downtime this week. Both plants are slated to resume operations March 2.

Mercedes-Benz names Faber vice president

MONTVALE, N.J.—Mercedes-Benz of North America has named Karl-Heinz Faber vice president, product compliance and service administration. He succeeds Heinz W. Gerth, who has retired.

Faber joined Daimler-Benz AG in 1956 and moved to Mercedes-Benz of North America in 1965.

MODENA, Italy.—De Tomaso has come to terms with Daihatsu Motor Co. for the supply of engines for a new model Innocenti that will supplement or replace the Mini.

$1,000 rebate offered on '80 Spitfires

NEW YORK. — Jaguar Rover Triumph has announced that beginning today (Feb. 23) it will rebate $1,000 on 1980 Triumph Spitfires. The program will run through June 30. The rebate does not apply in California (the 1980 Spitfire was not sold there). Base price of the 1980 Spitfire is $7,365. JRT said the rebate may be applied to the downpayment.

Truck production for year trails 1980 by 16 pct.

U. S. truck production last week trailed the previous week's output and was 25 percent below that of the comparable 1980 week.

Last week, truck production was slated at 32,725 units, down 1.73 percent from the 33,302 trucks assembled the previous week, and down 25.38 percent from the 43,860 completed in the week ended Feb. 23, 1980.

So far this year, the truck makers have assembled 240,369 units, a 16.87 percent drop from the 289,158 trucks completed in the comparable period last year.

Downtime was slated last week at General Motors' Flint and St. Louis points. St. Louis returns today (Feb. 23). At Flint, Line No. 1 returns March 2 and Line No. 2 returns March 9.

Auto production rises in Canada as Oshawa works

Canadian auto production last week rose substantially from the previous week's output as operations resumed at General Motors' Oshawa car plant. The plant was down the week of Feb. 9 for inventory adjustments. Oshawa, however, will be down this week.

The planned output last week was 15,244 units, more than double the 6,439 completed in the previous week, but down 20.40 percent from the 19,156 cars assembled in the comparable week last year.

So far this year, the auto makers have built 84,457 units, down 29.42 percent from the 119,663 cars assembled in the year-ago period.

Canadian truck production, with all assembly plants working last week, rose above the previous week's output and the comparable 1980 week.

Truck production last week was slated at 12,223 units, up 3.90 percent from the 11,764 truck assembled in the previous week, and an increase of 3.59 percent from the 11,799 units completed in the comparable week last year.

The year-to-date output for the truck makers is 75,436 units, down 4.79 percent from the 79,234 trucks completed in the comparable period last year.

Downtime was scheduled last week at Volvo's Halifax car point and Chrysler's Windsor car plant. Both are slated to resume operations today (Feb. 23).

U.S.-Japan pact on auto exports is expected soon

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Japan and the United States will likely reach a negotiated agreement on auto exports to the U. S. sometime within the next two months, much as the two countries did previously on steel, color television sets and textiles.

That is the feeling at least of Japanese Minister for External Economic Affairs Saburo Okita after a round of meetings here with high Reagan Administration officials on the subject of U. S.-Japan trade issues.

Meeting with reporters, Okita said that given the importance of U. S.-Japan relations and the importance of the auto industries to both countries, it was his feeling that "an agreement will be reached before Prime Minister Zenko Suzuki comes to the U. S. in May."

Okita said the nature of the agreement had not been formalized, but he alluded to previous agreements reached between the two countries on textile, color television and steel imports.

He said, however, that it would certainly not be announced before Transportation Secretary Drew Lewis concludes his task force report on the auto industry, scheduled for mid-March.

Okita said he had tried to impress on the Reagan Administration the importance of exports to Japan but also that it was not Japan's intention to "disturb the industries of its trading partners to a unwarranted extent."

"As a trading nation, we value ou relations with our trading partners and I therefore expect that the auto issue will be satisfactorily resolved just as previous issues have," he said.

"It is in everyone's interest to avoid import quotas because it will be very difficult to keep them from spreading," he said.

Japanese imports rose by approximately 300,000 units from 1979 to 1980 but their share of the market increased from 15 percent to 22 percent largely because U. S.-made car sales fell by nearly two million last year.

On Capitol Hill, meanwhile, Senator John Danforth, Missouri Republican, has agreed to an Administration request to postpone hearings on his and Senator Lloyd Bentsen's measure to restrict Japanese imports to 1.6 million units pending the completion of the Reagan Administration's Auto Task Force.

And Special Trade Representative William Brock told the Joint Economic Committee that the Reagan Administration is not protectionist and that it favors looking at the whole auto picture.

Brock stopped short of endorsing the Danforth - Bentsen bill to impose quotas of 1.6 million Japanese imports for three years, saying he would rather the U. S. negotiate with the Japanese to resolve the import problem.

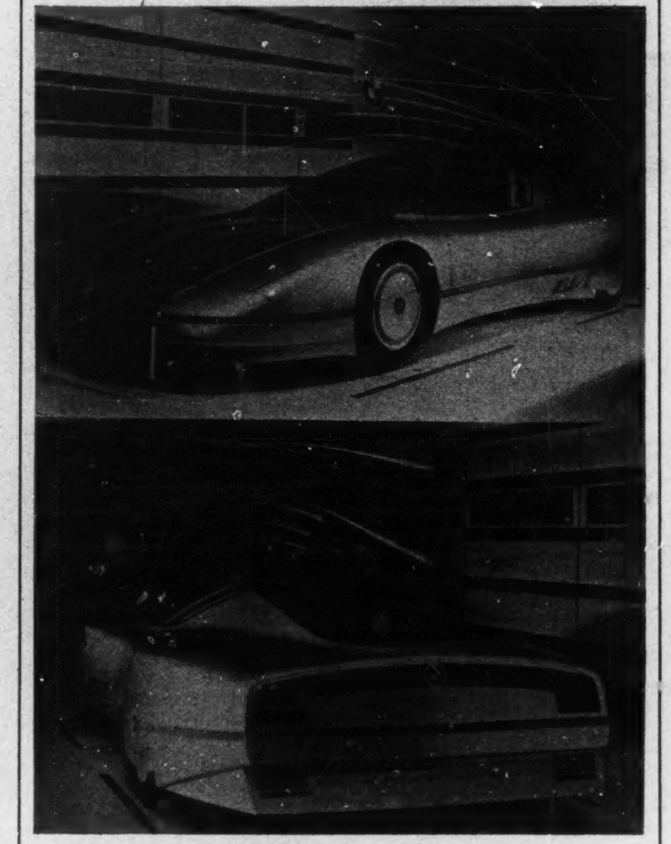
The domestic industry would have problems now even if there were no imports at all, he told the committee, but at the same time "we have a right to expect understanding and restraint from our trading partners."

The auto industry has strategic and national security importance and the American people "would not, should not and will not" allow the auto industry to be demolished, he said.

In Toyko, meanwhile, Japan's foreign trade administrator, Rokusuke Tanaka, said he plans to invite Brock to come to Japan to discuss the auto trade situation after the Auto Task Force issues its report in mid-March.

Tanaka told reporters he wants to see what Japan can do to help the ailing U. S. auto industry.

Slippery



BMW's vision of the future

An aerodynamic research vehicle undergoes testing in BMW's newly commissioned wind tunnel complex near Munich. This mockup vehicle has a drag factor of 0.19. BMW revealed details of its new facilities (built at a cost of $215 million) and technical studies (electronics, weight reduction, cylinder cutouts and advanced automatic transmissions) at an engineering conference last month.

Average drops to 276 sales per dealer; Chevy leads

By Jenny L. King
Staff Writer

Even though the domestic dealer population dropped alarmingly throughout 1980, the hefty 21-percent decline in sales brought the average sales per dealer down to 276, the annual AUTOMOTIVE NEWS analysis disclosed. The average per outlet was 333 in 1979 and 337 in 1978.

The industry's alltime high was reached in 1973 with an average of 380 sales per dealer.

General Motors dealers sold an average 367 units per outlet in 1980, down from 426 in 1979. Its record of 464 was established in 1978.

Ford Motor Co. recorded 237 sales per dealer, down sharply from 322 the preceding year. In 1978, its dealers averaged 389 sales per outlet.

Chrysler Corp. dealers sold an average of 163 new cars per outlet in 1980, down from 202 in 1979.

American Motors, whose dealer network and sales remained relatively stable in 1980, slipped to 88 sales per outlet, down from 97 in 1979.

Imperial joined the ranks of U. S. new-car makes in the fourth quarter of 1980, bringing the total to 13. Volkswagen of America sales per dealer are included in the AUTOMOTIVE NEWS tally of import sales per outlet.

- None of the 13 U. S. makes matched or broke sales-per-dealer records last year. None had increases over 1979 averages. In fact, any "records" would be at the bottom end of the scale, with several makes having averages similar to those in the 1960s.

For example, Ford's 204 was its lowest sales-per-dealer figure since the 199 recorded in 1961; Plymouth, at 97, resembled

NADA leaders meet with Secretary Lewis

Survival petition carried to top

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — If you are going to have a recovery in the auto industry you had better have auto dealers around to lead the way, NADA told the Reagan Administration last week.

The way to do that, NADA said, is to get interest rates down to reasonable levels.

At a luncheon meeting with Transportation Secretary Drew Lewis, who is also heading up the Reagan Administration Auto Task Force, NADA President Wendell Miller, First Vice President George W. Lyles and Executive Director Frank McCarthy said "excessively high interest rates are dwarfing all the other problems of the auto industry."

They are the leading cause of dealer attrition (1,600 this year); driving inventory carrying costs to excessive levels; creating a tremendous psychological barrier to buying; substantially increasing monthly payments, and reducing credit availability by driving up financial institutions' rejection rates, they said.

High interest rates are wiping us out, they told Lewis, and if that continues it means real trouble for all the auto industry.

"Even if everything is right within our industry — product, productivity, quality and price —nothing will happen until a car or truck dealer unplugs the pipeline at the retail end," they said. "A viable dealer distribution and servicing network must be the cutting edge to restore vitality to our industry and our economy."

To that end, the NADA asked Lewis to consider the following recommendations as his Task Force develops its plan to aid, if not rescue, the auto industry:

A temporary tax credit of $500 to the purchaser of a new automobile. Such a tax credit would provide an immediate stimulus to retail sales of new automobiles, increase vehicle production and serve as the first step toward recovery of the industry, they said.

Accelerated recovery of capital cost expenditures: Specifically, accelerated depreciation for the costs of machinery and equipment as well as certain commercial and industrial buildings over a period of three, five or 10 years, so long as existing

breaking news

Ford to cut T-Bird, XR-7 output at Ohio plant

LORAIN, O. — Ford Motor Co. will cut production of Thunderbird and XR-7 here to 40 units an hour from 57 March 30. The slowdown will mean the layoff of about 1,000 more hourly workers. The cutback will bring to 2,000 the number laid off at Ford passenger-car facilities here where good-times employment has been 4,000. The latest force reduction does not affect the Ohio truck plant, the sole source of Econoline vehicles.

Revitalized Panther eyes U. S.

BYFLEET, England. — Panther Car Co., Ltd., back in production at an annual rate of 250 cars, is now evaluating the U. S. market. The company said production for the U. S. market is expected to resume later this year, probably on a direct export basis. Current UK delivered prices are Lima, $20,000; J-72, $52,000, and V-12 DeVille limousine, $127,000. Panther's U. S. potential is extremely limited.

A blunt warning from GM's McDonald at SAE banquet

Improve it or lose it, industry told

By Roger Rowand
Engineering Editor

DETROIT. — The U. S. auto industry has to improve its quality and cost-competitiveness —"or go off-shore, or go down the drain," said F. James McDonald, president of General Motors.

He told a banquet meeting in connection with the Society of Automotive Engineers Show it is essential labor understands what is at stake.

"I know that labor's leaders are too sharp not to understand the choices," he said.

The GM official did not discuss the wage and benefits situation that exists in the industry. However, he did say local plant agreements have built into them "some cumbersome and bad practices that affect both cost and quality."

"We don't have to spend one second on who is to blame for these problems," McDonald said. "Management or aggressive unions — it doesn't matter. The problems are there and they must be fixed."

He beckoned to labor's leadership.

"Recognizing the political environment in which a labor leader must operate, it would seem this will be a grand opportunity for someone to say: 'Our union will lead in the quality and productivity efforts. We'll work diligently with management in these areas. And, we'll still reserve our rights to tough bargaining because we are all in this together," McDonald said.

"Management will have to be ready to support such a pronouncement. And, speaking for GM, I say we are ready."

• McDonald had some criticism of some members of the GM dealer body for failing in the area of customer satisfaction.

"Sure, I understand the manufacturers' responsibility—to furnish a high-quality product so the dealers will have a half a chance to do their job. We at GM are committed to that.

"But, a dealer can't shirk dealer responsibility just because we haven't yet accomplished all we have to do," he said.

"Comeback — that is, customers taking their cars back to the dealer more than once for the same problem — is the highest single reason for customer dissatisfaction. We can help the dealer technician find and fix the problem the first time, through better diagnostics. That's an engineering responsibility — we must and will improve diagnostic capability of our vehicles," he said.

"About 18 months ago, we started sending questionnaires to owners of GM products who had owned the vehicle for over one year. The survey has many questions regarding dealer performance. Would you believe we get back about 51 percent — amazing.

"Now we have a computer file of the customer satisfaction performance of 2,000 of our largest dealers. We intend to expand the survey to include many, many more dealers.

"We'll help those who need help in this area, and we intend to do what we must about those who don't perform," the GM president said.

• He told his audience, composed largely of engineers, that engineering plays an important role in the move towards improved quality and productivity.

"You in the engineering profession of our industry have a major responsibility for getting the industry where it needs to be in these two important areas.

"We simply have to put quality into the product right from the beginning; design it in and build it in. That's true whether you're producing cars, carburetors or cotter pins," he said.

McDonald said labor unions are among groups shaken by events that have taken place

Service Index shows gain over year ago

By Francis J. Gawronski
Service Editor

Service and parts business in new-car dealerships across the country opened 1981 on a good note, with January's volume amounting to 101.8 percent of the business recorded in the same month a year ago.

According to the AUTOMOTIVE NEWS Service Index, January was the second consecutive month to show a gain over the year-earlier parts and service volume. It also marked the third time in the last 15 months that parts and service volume recorded back-to-back monthly gains.

Three of the five indicators used in the Service Index showed relatively good advances in January, with gross profit on all labor, parts and P&A sales—the most important barometer from a dealer's standpoint—leading the advances. It was up 10.6 percent above that of a year ago.

Sales of all parts and accessories, those used in the shop plus wholesale and counter sales, were up 8.6 percent, while shop parts sales—those used in both customer-paid and warranty work—were up 3.8 percent.

Indicators registering declines were led by repair orders written which dropped 14.2 percent from the year-ago volume. The other indicator on the downside was total labor sales (customer-paid and warranty), down 3 percent.

Service Index figures are compiled from monthly reports on service and parts business from new-car dealers in all sections of the nation.

SERVICE INDEX
101.8*

	Jan., '81 vs. Jan., '80
Gross Profit on All Labor and P&A Sales	+10.6%
Repair Orders Written	−14.2%
Total Labor Sales (Customer & Warranty)	− 3.0%
Shop Parts Sales (Customer & Warranty)	+ 3.8%
Sales of all P&A	+ 8.6%

*—Survey by Automotive News shows that dealers' service and parts business in January, 1981, was 101.8 percent of business in January, 1980.

Recchia resigns at Fiat; Ferrari to succeed him

MONTVALE, N. J. — Richard Recchia, president of Fiat Motors of North America, announced last week that he was resigning his position to pursue other interests.

According to a company spokesman, the duties of president will be assumed by Claudio Ferrari, chairman of the board of Fiat North America. Ferrari formerly had been president for two years.

No permanent decision has been made on a replacement for Recchia, the spokesman said.

Recchia held the position of president for nearly two years. Prior to that he had been executive vice president of the company in charge of operations since 1978. He came to Fiat from Chrysler Corp.

Ferrari held the post of president from 1977 to 1979, when he assumed his current position. He has been with Fiat since 1957, when he joined the parent company in Turin, Italy.

The change is to take effect April 1.

President reviews

Ford Motor Co. President Donald E. Petersen inspects a development prototype of the U. S. Army's 40mm Division Air Defense Gun System (DIVAD) during a visit to Ford Aerospace & Communications Corp., a Ford subsidiary.

Convertible from Contec

Contec, Lake Geneva, Wis., offers convertible packages on the Ford Mustang, GM F-bodies (like this Pontiac Trans Am), GM A-bodies, Chrysler K-cars and the Honda Prelude. A typical conversion includes a styled vinyl reinforced top in standard (black, white or tan) or special colors, re-engineered body subframe, reinforced windshield header, custom-designed top mechanism and custom top boot.

Holdouts compromise; Chrysler to get cash

By Richard A. Wright
Assistant Managing Editor

DETROIT. — A "breakthrough" compromise agreement was reached early last week between Chrysler Corp. and a group of holdout bankers, a Chrysler spokesman said.

As a result, Chrysler's pockets were scheduled to be filled with cash — briefly, at least — and the corporation once more pulled back from the financial abyss.

The breakthrough came last Monday during intense negotiations between Chrysler and uneasy lenders. The Federal Loan Guarantee Board approved the agreement later in the day.

Last Friday, the board was scheduled to give final approval for the $400 million in loan guarantees. Once this was done, underwriters in New York would give Chrysler a check and put the notes on the market.

Under the compromise agreement with the banks, led by Citibank and Irving Trust Co., Chrysler will make an early payment of $68 million to its roughly 150 lenders within 30 days of the Loan Board's final approval.

The banks had demanded such payment because of Chrysler Corp.'s tight financial position. The arrangement also calls for a "Christmas Club" account into which Chrysler will deposit cash out of operations during March. If Chrysler fails to make a deposit, it would be in default.

Treasury Secretary Donald Regan and Federal Reserve Chairman Paul Volcker had blocked an earlier plan under which Chrysler would make an early payment out of its new rescue funds. The two, both members of the Loan Guarantee Board, said the funds should be used for purposes critical to Chrysler's survival and that repayments should come from operating funds.

The compromise agreement last week broke a logjam which had developed after some lenders objected to an earlier agreement which was a condition for the Loan Guarantee Board to issue any more guarantees.

Under this original agreement, the banks would exchange half of their $1.1 billion in outstanding loans for Chrysler preferred stock and allow the corporation to pay off the other half at the rate of about 30 cents on the dollar.

Chrysler was to make the payments in four quarterly installments, beginning 90 days after guarantee approval. But about 30 of the banks did not like the idea of waiting three months for the first payment. The latest agreement appeared to satisfy the banks' objections and still meet the Loan Guarantee Board's conditions.

CHICAGO.—Ford's Escort and Lynx received the Car & Driver Reader's Choice award.

Most completely equipped new car in firm's history

Chevy Cavalier to come loaded

DETROIT. — When the Chevrolet Cavalier — that division's version of the General Motors J-car—bows in May, it will be merchandised as "the most completely equipped new car in Chevrolet history."

The Cavalier boasts an impressive list of standard features, although not all are standard on all four models—coupe, hatchback, sedan and wagon.

Ordering information received by dealers lists the following as standard equipment: Power brakes, AM radio, quartz digital clock, full floor console, rally wheel trim, rear-window defogger, side-window defogger ducts, trip odometer, remote trunk/hatch tailgate release, reclining front bucket seats, deluxe interior trim, body side moldings, bright side-window moldings, locking fuel-filler door, ashtray light, passenger assist handles, glove-compartment lock, color-keyed carpets and seat belts, bumper rub strips, fold - down rear seat and special instrumentation.

An early decision to make white-stripe tires standard has been reversed; blackwalls will be standard.

The high-line Cavalier CL model will offer such additional standard features as halogen headlights, AM/FM radio, tinted glass, gauge package, sport wheel covers, intermittent windshield wipers, rear-window wiper/washer, rocker-panel moldings, dual sport mirrors, leather-wrapped steering wheel, rear stabilizer bar, auxiliary lighting package and custom interior.

Worst year since going public

Ford reports '80 loss surpassed $1.5 billion

By Edward Lapham
Financial Editor

Ford Motor Co. followed in the footsteps of General Motors and reported its worst year since the company went public in 1956.

Ford said it lost $316 million ($2.63 a share) in the fourth quarter of 1980 on sales of $10.2 billion. In the comparable 1979 period Ford reported a net loss of $41 million (35 cents a share) on sales of $10.0 billion.

The October-December period capped a year in which Ford reported a net loss of $1.545 billion ($12.83 a share) on sales of $37.1 billion. The preceding year Ford had net earnings of $1.169 billion ($9.75 a share) on sales of $43.5 billion.

A statement by Ford Chairman Philip Caldwell and President Donald E. Petersen said the "profit deterioration" reflected a "lower level of industry sales in the United States and in Europe and a lower share of the U. S. car market, offset in part by cost-reduction programs."

The auto maker said its fourth-quarter after-tax losses from U. S. operations totalled $241 million compared with $569 million in the preceding three-month period and $273 million in the October-December, 1979, period.

Ford, which had been using its overseas operations to offset North American losses the last several years, said its after-tax losses from operations outside the U. S. were $75 million in the final 1980 quarter compared with after-tax earnings of $232 million in the comparable 1979 period.

"What Ford now needs most is what America needs most: A strong and confident economy," the statement said.

- Caldwell and Petersen said Ford's worldwide capital expenditures for facilities and tools totaled $2.8 billion in 1980 and are projected at $3.3 billion in 1981.

Ford's working capital decreased $1.8 billion during the year to a Dec. 31 total of $487 million. The year earlier the total was $2.3 billion.

The company listed depreciation at $1.057 billion for the year compared with $895.9 million the preceding year. Ford said amortization of special tools totaled $912.1 million during a year compared with $708.5 million in 1979.

Ford's current ratio (current assets to current liabilities) dropped to 1.04 to one at Dec. 31 compared to 1.25 to one a year earlier.

The company said its North American car and truck factory sales total for 1980 was 2,422,208, off 33.2 percent from 3,624,074 in 1979.

Total car and truck factory sales outside the U. S. and Canada declined 12.8 percent to 1,906,242 from 2,186,230 the preceding year.

Worldwide tractor factory sales fell 26.9 percent to 97,701 from 133,628.

Total worldwide vehicle factory sales were off 25.5 percent to 4,426,151 in 1980 from 5,943,932 in 1979.

Customer retention more than a phrase

GOLDEN BEACH, Fla.—W. M. Wickam recently purchased his 33rd Cadillac from Massey Motor Co., Kinston, N. C.

Wickam purchased his first Fleetwood Brougham from Dealer Eward W. Massey in 1941.

AMC changes its fiscal year; loses $29 million in quarter

By Edward Lapham
Financial Editor

American Motors marked its conversion to a January-December fiscal year by reporting a fourth-quarter net loss of $29 million (89 cents a share) on sales of $658 million.

The preceding year, when the comparable three-month period was the first quarter of fiscal 1980 under the old October-September system, the company had net earnings of $12.8 million (37 cents a share) on sales of $789 million.

For the entire January-December period of 1980, AMC had a net loss of $197.5 million ($6.00 a share) on sales of $2.6 billion compared with year-earlier net earnings of $76.0 million ($2.24 a share) on sales of $3.2 billion.

AMC Chairman Gerald C. Meyers said the company's financial performance "is to be viewed against the background of a most difficult period in the history of the U. S. auto industry."

Like other industry executives, Meyers blamed "interest rates, recession, fuel costs and Japanese imports" for much of the industry's 1980 difficulties.

Meyers said there were bright spots in the year.

"For example," he said, "Sales and earnings of our international operations continued to be strong for the fourth year in a row.

"And AM General Corp.—our major subsidiary — had pre-tax earnings of $19.1 million for the 1980 calendar year, a 16 percent increase over the $16.5 million it earned in 1979."

AMC said its combined worldwide automobile and Jeep factory sales in 1980 declined 22 percent to 327,808 from 418,214 in 1979.

Automobile factory sales rose 1.0 percent to 228,937 in 1980 from 227,032 in 1979. Included are wholesale sales of imported Renault cars, up 87 percent to 37,792 from 20,178 in 1979. Jeep factory sales declined 48 percent to 98,871 from 191,172.

In the October-December period, AMC said its worldwide factory sales total for all vehicles fell 24.6 percent to 77,994 from 103,372. Total automobile sales fell 19.6 percent to 52,859 from 65,772 the year earlier. Renault wholesale sales rose 36 percent to 9,138 from 6,718. Jeep factory sales were off 33.2 percent to 25,135 from 37,600.

Porsche-Audi dealer council officers

Officers for 1981-82 of the Porsche-Audi 13-member National Dealer Advisory Council met recently with Porsche-Audi staff. Seated are, from left: James R. Fuller, vice president in charge of Porsche-Audi Division; James Traynor, Traynor Porsche-Audi, Fairfield, Conn., council chairman, and Arthur Ross, manager, dealer and industry relations, Volkswagen of America. Standing are Pete Smith, left, Bob Smith Porsche-Audi, Inc., Hollywood, Calif., vice chairman of the council, and Doug Sylvester, University Porsche-Audi, Seattle, council secretary.

Mid-February domestic sales plunge 22 pct. from last year

By Jenny L. King
Staff Writer

Mid-February domestic new-car sales plummeted 22.87 percent, making it five consecutive periods—every period this year—that sales have trailed 1980.

Feb. 11-20 sales numbered 168,787, down from 218,840 a year ago and the lowest for the period since 162,963 in 1967.

There were nine selling days this year, yielding a 18,754 daily selling rate. The year-ago rate of 24,316 was also based on nine days.

Year-to-date sales through Feb. 20 stood at 774,173, down 18.80 percent from 953,426 for the corresponding 1980 period. Two years ago, the year-to-date total was 1,074,550, a difference of 27.95 percent compared with 1981.

Only Chrysler Corp. and Volkswagen of America reported sales increases for mid-February. Chrysler sales were up 4.48 percent, to 19,294 from 18,467 last year. VWoA reported sales of 5,472 U. S.-built Rabbit sedans, up 1.31 percent over 5,401.

General Motors plunged 27.39 percent, to 99,853 from 137,517 last year. Ford Motor Co. sales dropped 23.77 percent, to 40,368 from 52,955, while American Motors estimated sales were 3,800, down 15.56 percent from 4,500.

GM's share of the mid-February market slipped to 59.16 percent from 62.84 percent in 1980. Ford earned 23.92 percent, down from 24.20 percent. Chrysler sales accounted for 11.43 percent, up three percentage points from 8.44 percent. VWoA cornered 3.24 percent, up from 2.46 percent, and AMC went to 2.25 percent from 2.06 percent.

VW, Plymouth, Dodge and Lincoln found themselves on the plus side on the sales sheet for mid-February. Plymouth sales zoomed 26.79 percent, to 8,979 from 7,082 last year. Dodge was up 4.39 percent, to 7,885 from 7,554, and Lincoln inched up 0.60 percent, to 1,663 from 1,653. VW was up 1.31 percent, to 5,472 from 5,401.

Chrysler and Chevrolet each reported 38-percent sales decreases for the period, the largest declines among the U. S. makes. Ford sales were down 26.38 percent, Mercury was down 19.04 percent, Cadillac was down 10.70 percent, Buick was down 16.77 percent, Oldsmobile was down 15.20 percent and Pontiac was down 22.52 percent.

Chevrolet Chevette was the best-selling nameplate in mid-February. Its 12,680 figure was followed by Ford Escort at 10,698, Chevrolet Citation at 8,059, Oldsmobile Cutlass Supreme at 6,800 and Buick Regal at 5,775. The top five a year ago were Chevette, standard Chevrolet, Citation, Ford Fairmont and Chevrolet Malibu.

Deputy named to NHTSA post

WASHINGTON. — Diane K. Steed, the chief of the Regulatory Policy Division in the Office of Management and Budget, has been appointed Deputy Administrator of NHTSA.

The 35-year-old Steed has been in government service since 1967. She joined OMB in 1973 and has been responsible for the management-by-objectives programs for the Department of Transportation and the General Services Administration and the drafting of legislation to deregulate the airlines, railroads and trucking industries.

Most recently, she designed a system for improving the management of the regulatory process and reducing the burden of government regulations and paperwork.

Flint workers refusing to pay U.S. income tax

FLINT.—About 3,500 workers here, most employed by General Motors, say they aren't going to pay any more federal income taxes.

The group of protesters, called We the People - American Citizens Tribunal and The Michigan Citizens Tax Caucus, are against the present tax system. They call it unconstitutional and unrepresentative.

Workers have been claiming up to 99 deductions on their W-4 form or filing W-4E forms for low-income seasonal workers who don't make enough to pay income taxes. In both cases, no taxes are deducted.

The Internal Revenue Service has numerous methods of retaliation including wage garnishments and criminal prosecution of individuals and organizations. However, organizers of the groups say there is safety in numbers and the IRS couldn't handle such a large number of cases and would not prosecute.

A UAW spokesman said the union has made no formal comment on the move to stop paying taxes but said if workers ask for advice "we tell them to be careful. Fraudulent and willing avoidance of tax paying can put you in jail and make your lawyer very rich."

Other UAW officials are warning members not to be conned by groups or organizations selling literature on stopping tax payments, [illegible] some fear it is a scam set [illegible] swindle the auto workers.

According to one observer, the significant thing is that the auto workers are frustrated by inflation, high taxes and severe layoffs and are grasping at anything to find a way out.

Reagan selects Denver attorney to head EPA

WASHINGTON. — A conservative attorney from Denver, Anne M. Gorsuch, has been nominated by President Reagan to be the new administrator of EPA.

Gorsuch, 38, and with limited experience in the environmental field, was reportedly recommended for the job by James Watt, the controversial new Secretary of the Interior and also a Colorado native.

She served in the Colorado Legislature from 1976 through 1980 and served on the Reagan transition team in the area of intergovernmental relations.

In an interview with the Washington Post, she said, "EPA is the one spot where I think the most can be done to effect real change in the way we conduct business, without making any sacrifice to the objectives of the agency: Clean air and water."

Meanwhile, John Hernandez, the former dean of the College of Engineering at New Mexico State University and himself a candidate for the head of EPA, was named deputy administrator of the agency.

Hernandez, who is also the co-director of the New Mexico Environmental Institute, lost out to Gorsuch on the Reagan Administration's ideological purity Rorschach test.

4th Ralph Lane Polk heads data-gathering firm

DETROIT.—Ralph L. Polk Jr., 40, has been elected president and chief executive of R. L. Polk & Co. He is the fourth Ralph Lane Polk to serve as president of the company founded in 1870 by his great-grandfather, Ralph Lane Polk.

The new president has been with the firm since 1961, most recently as vice president and chief financial officer. As president, he succeeds Walter J. Gardner, 68, who was elected vice chairman. Gardner had been president since 1933.

SEPAC offers finance plan for California dealers

WESTLAKE VILLAGE, Calif. —SEPAC Acceptance and Lease Services, Inc., has introduced a simple interest, through-the-dealer financing program for buyers of new and used cars and trucks.

The program of non-recourse, simple interest financing is the first of its kind offered in California, according to Robert Monteith, president of SEPAC.

"This plan combines two important functions of automobile financing programs—simple interest and no dealer liability for the loan—to produce a new kind of conditional sale financing package for the California market," Monteith said. "Dealers will have this financing available, giving their customers a convenient and easy-to-understand auto loan at the dealership."

Monteith said SEPAC's non-recourse, simple interest plan was developed as an alternative to traditional auto financing, with the intent to provide a constant source of funds for auto loans when money markets change.

SEPAC Acceptance and Leasing Services is a subsidiary of Security Pacific National Bank, Los Angeles. SEPAC provides automobile dealers with lease and financing services.

AUTOMOTIVE NEWS CLASSIFIED ADS
PRODUCE EXCELLENT RESULTS

A blunt warning from GM's McDonald at SAE banquet

Improve it or lose it, industry told

Continued from Page 2

since the successful Iranian revolt of 1979.

"Thoses events have had a drastic effect on the domestic automobile markets. They have made permanent changes in the mix of our market and America's competitors have found themselves in an advantageous position," he said.

- McDonald's references to the worldwide nature of today's automotive trade was precisely appropriate in light of the international aura that blanketed the SAE Show.

Foreign firms were represented in record numbers in both technical sessions and in commercial exhibits.

Of the 284 exhibits, 104, or 36 percent, were from foreign companies, groups of companies and nations.

An hour before the exhibit area opened on the first morning, a crowd of those waiting to get in started to build. Almost all of those eager early birds were from Japan. One security worker said, "They're the first in every day and there's a lot of them."

Conspicuous by its absence was Mexico, one of the strongest and fastest-growing of supplying and consuming countries. That nation participates in some shows, its consul in Detroit said, but was not invited to take part in the Cobo Hall event.

- Foreign visitors were highly visible in Detroit all week, at the airport, in hotel lobbies and night spots. Cameras were part of the uniform of the day, of course, for the Japanese.

Also conspicuous for not being in the show were robots. In other years, the humanoid machines have been crowd pullers. In this year's show robots were represented in a model of an advanced assembly line technique called Robogate. Otherwise, however, they were absent.

A representative of one of the major makers of robots said other trade expositions appealing more directly to robot buyers are being used these days.

In most instances, foreign firms' exhibits were clustered in national groupings.

The French, for example, grouped the displays of nine firms. Their wares ranged from brake pistons, radiators and oil coolers to plastic and real wood steering wheels.

Nine firms from the Seoul, Korea, area were in one corner of the vast exhibition floor. Their goods are being moved in the U. S. aftermarket but they'd like a share of original equipment sales. Korean products shown included batteries, castings, clutches, mufflers and spring and wire goods.

The Japan Auto Parts Industries Assn. (JAPIA) display covered a sizeable area as well as a wide variety of products. They included instruments, pumps and switches as well as the to-be-expected electronics and lighting items.

There seemed to be more cars than usual at this year's show, many of them exercises of various sorts in improving economy. A number of universities had exhibits in one corner of the hall where they were showing various high-mileage car concepts, including ultra-lightweight vehicles and cars with radical streamlining.

One student-built car, featuring both extensive use of aluminum and a great deal of streamlining, was the Viking IV at the Aluminum Assn. exhibit.

Built by students at Western Washington University's Vehicle Research Institute, the Viking IV averaged 87.5 MPG in a 4,050-mile cross-country trip.

It weighs 1,305 pounds, including 500 pounds of aluminum. Powered by a Mazda rotary engine, it is said to have a top speed of 166.9 MPH.

Jim Hall's Chaparral which Johnny Rutherford drove to victory in the 1980 Indianapolis 500 race was featured at the GKN Group exhibit. It is perhaps symbolic of the international flavor of the show—and of the auto industry—that this most American of cars had constant velocity joints, engine bearings, connecting rods and crankshaft supplied by the British GKN.

- Two vehicles were displayed by the U. S. Department of Energy to draw attention to electric vehicles, which have been hot items at previous SAE shows but not in a great deal of evidence this year.

The cars were the EVcort, a Ford Escort station wagon converted to electric power by Electric Vehicle Associates, Cleveland, and a battery-powered van powered by zinc-chloride batteries outfitted by Gulf & Western's Energy Development Associates.

The EVcort is a production vehicle with a 60-mile range at an average 40 MPH. It has a top speed of more than 70. It is rechargeable by plugging it into a household 110 or 220-volt outlet.

The Gulf & Western system is unusual in that the chlorine reactant is stored separately from the electrodes in the form of solid chlorine hydrate. During charge, a centrifugal pump circulates aqueous zinc chloride electrolyte between the sump and the stack. Zinc metal is electro-deposited on the negative electrode plates as a uniform solid, while chlorine gas is liberated at the counter electrodes.

Chlorine is drawn from the stack to the store by a gas pump. Electrolyte from the sump and the store is circulated through a chiller into the pump, where it is mixed with gas to form solid chlorine hydrate. The hydrate is filtered out within the store and the cycle continues until the system is fully charged.

Discharge is controlled by transferring the warm electrolyte in the sump to the store to decompose the hydrate into a mixture of electrolyte and gas. The mixture is circulated to the stack where the plated zinc and chlorine recombine electrochemically to form zinc-chloride and permit current to be withdrawn from the system.

The system is said to provide a range of more than 200 miles between charges and expected cell life of 100,000 miles.

The first item seen by the visitor, if he looked up when approaching the entrance to the show, was the duPont Solar Challenger, the first solar-powered aircraft to fly a long distance carrying a pilot (Janice Brown, an 89-pound school teacher from Bakersfield, Calif., who appeared at the show).

The plane, made of largely transparent duPont plastics, was designed by Dr. Paul MacReady, who also designed the Gossamer Albatross, pedal-powered aircraft which was flown across the English Channel and was displayed last year by duPont at the SAE show.

SAE changes name but stays the same

DETROIT.—The SAE after April 1 won't be known as the Society of Automotive Engineers any longer. The new name is simply SAE and the logo has been modernized.

Leaders of the 76-year-old, 40,000-member group said membership increasingly is made up of engineers engaged in non-passenger-car activities and the word "automotive" carries a car connotation.

Technologies of various self-propelled land, sea, air and space vehicles are overlapping frequently these days, they said.

Ray appointed

RALEIGH, N. C.—Dan C. Ray, executive director of the National Independent Automobile Dealers Assn., has been appointed to the Small Business Administration's Regulatory Flexibility Task Force.

Chevrolet leads domestic makes with 303

U.S. sales per dealer drop to 276

Continued from Page 1

the 96 per dealer of 1962; AMC, at 88, was at its lowest in 20 years, and Dodge, at 108, had its poorest average per outlet since 96 in 1962.

Chevrolet led the domestics last year with 303 sales per dealer, followed by Oldsmobile at 251. They also ranked 1-2 in 1979.

Buick leapfrogged over Pontiac and Ford to land in third place with an average of 239 sales per dealer. Chrysler squeezed past Lincoln to the No. 11 spot. Otherwise, the make sales per outlet lineup remained unchanged from 1979.

Oldsmobile Cutlass Supreme won honors as the highest selling nameplate per dealer; its average was 79. Standard Cadillac relinquished its first place, after two years on top, narrowly missing it with a 78 average. In 1979, standard Cadillac had a 126 average, while Cutlass Supreme had 121.

Third place was taken by Buick Regal, at 66, and three nameplates tied for the fourth slot: Chevrolet Citation, Chevrolet Chevette and Oldsmobile Cutlass, each at 65 sales per outlet in 1980.

Third, fourth and fifth places in 1979 belonged to Buick Regal, at 81, standard Chevrolet, at 76, and Oldsmobile 88, at 68.

- In market class categories, Chevette topped the U. S. subcompacts with 65 sales per outlet. Plymouth Horizon and Dodge Omni held on to second and third place, respectively.

Pontiac Sunbird edged past AMC Spirit into fourth place, yielding sixth place to Pinto.

Top-average compact nameplate was Chevrolet Citation, at 65, moving up from fourth place in 1979. Buick Skylark improved its lot considerably, going to second place from eighth. Ford Fairmont slipped to third from first and Ford Mustang was pushed back to fourth from third.

Cutlass Supreme and Regal again were first and second among the intermediates. Oldsmobile Cutlass climbed to third place from ninth and Buick Century grabbed fourth, moving up from the No. 11 spot.

Oldsmobile 88 and standard Chevrolet shared first place atop the standard-size market class, each with 45 sales per dealer. Cadillac continued its leadership of the luxury nameplates, although its average plunged to 78 per outlet from 126 in 1979. Eldorado was second, again, while Lincoln dropped to fifth from third place.

Diesel for 127

Fiat has begun production of a diesel 127. The engine is based on the Brazilian-made 64-cubic-inch gasoline engine enlarged to 79 CID. With a single overhead cam, aluminum cylinder head and indirect injection by distributor-type pump, its maximum output is about 40 HP at 4,500 RPM. It will be the world's smallest car-diesel produced in big numbers.

But total is well below year-ago period

Auto output edges ahead for week

By Patricia Hoffman
Staff Writer

Although U. S. auto production continues to trail the 1980 figures, last week's output was slightly above the previous week's total.

Auto production last week was slated at 132,947 units, a decrease of 12.23 percent from the 151,474 units completed in the comparable week last year, but an increase of 1.48 percent from the 131,003 units built in the previous week.

The auto makers built an estimated 481,151 units in February, down 22.93 percent from the 624,346 units completed the same month last year.

The year-to-date output for the auto makers is 913,435 units, down 20.96 percent from the 1,155,681 cars assembled through March 1, 1980.

Breakdown for last week by companies is: General Motors, 59.44 percent of the total output; Ford Motor, 22.44 percent; Chrysler Corp., 13.14 percent; American Motors, 1.79 percent; Volkswagen of America, 3.13 percent, and Checker Motors, 0.06 percent.

General Motors was forced to halt production at its Willow Run point last Monday (Feb. 23) and worked only the afternoon shift Tuesday due to a fire in the painting facility.

The fire, which broke out Friday afternoon (Feb. 20), resulted in a production loss of 1,700 units. The plant builds X-cars at the rate of 70 an hour.

Saturday overtime was slated last week at GM's Flint and Willow Run points. Willow Run worked two shifts Saturday to make up production lost due because of the fire.

GM will increase production beginning March 9 at its Linden and Lansing points.

Assembly at the Linden plant will be increased from two shifts with an output of 46 cars an hour to two shifts and 56 cars an hour.

Production at Lansing will be increased on the Cutlass and Cutlass Supreme lines, going from one shift at 55 an hour to one shift at 60 an hour.

Upp heads dealer group

LOS ANGELES.—James Upp, retired Ford Motor Co. executive, has been named executive secretary-manager of the Orange County Motor Car Dealers Assn. in southern California.

Truck production rises for week but trails 1980

U. S. truck production last week was down from the comparable 1980 week's total, but the planned output was higher than that of the previous week.

Truck production last week was slated at 35,332 units, down 27.86 percent from the 48,978 trucks completed in the comparable week last year, but up 8.05 percent from the 32,701 units assembled in the previous week.

February output for the truck makers is estimated at 131,393 units, a drop of 25.55 percent from the 176,489 trucks completed in the same month last year.

Ford Motor Co., halted production of vans at its Oakville plant in Canada on Feb. 27, making Ford Lorain the only source of vans in the U. S. and Canada. The rate of 49 vans per hour at the Lorain point will not be changed.

General Motors has scheduled downtime at its Flint truck point for the third week in a row. Operations will resume March 9.

Canadian output continues its up-down cycle

With downtime slated at General Motors' Oshawa car plant, Canadian auto production last week fell below the previous week's output and the comparable 1980 week. Two weeks ago, Oshawa worked and Canadian output rose.

Planned production last week was 14,121 units, down 3.85 percent from the 14,687 units completed the previous week and down 26.73 percent from the 19,273 cars assembled in the comparable week last year.

The estimate for February is 51,598 cars, down 27.62 percent from the 71,293 units completed in February, 1980.

So far this year, the auto makers have completed 98,021 units, a decrease of 28.62 percent from the 137,329 units built in the comparable period last year.

Canadian truck production last week, although down from the previous week's output, fared slightly better from the comparable 1980 week's total.

Truck production last week was slated at 12,475 units, down 1.77 percent from the 12,700 trucks built in the previous week, but an increase of 1.22 percent from the 12,324 units completed in the week ended March 1, 1980.

The February total for the truck makers is estimated at 44,768 units, virtually the same as the 44,849 trucks completed in February, 1980.

The year-to-date output is 88,388 trucks, down 2.06 percent from the 90,254 units built in the comparable period last year.

Downtime was scheduled last week at General Motors' Oshawa car plant. Operations are slated to resume today (March 2).

Chrysler Corp.'s Windsor car plant will close today for two weeks.

Ford Motor's Oakville point shut down today for one week for retooling. Ford plans to end production of vans at its Oakville plant, which has been assembling 20 vans hourly. Oakville will then become the only source of Ford LTDs, and the Lorain point in the U. S. will become the sole source of van production in the U. S. and Canada.

breaking news

New sporty Datsun rumored

TOKYO. — Nissan Motor Co. reportedly is working on a new sports car, presumably a small, front-drive two-seater resembling the Honda Prelude. It is said to be quite different from the current Z-car. Nissan also is said to be developing a front-drive minicar, similar to those already in the works at Toyota, Honda and Toyo Kogyo.

DeLorean Motor Co. to go public

DUNMURRY, Ireland. — DeLorean Motor Co. plans to make a public stock offering "within 90 days," Chairman John Z. DeLorean told AUTOMOTIVE NEWS late last week. "We are negotiating with an investment banker right now," he said. This prospectus will not be limited to new-car dealers, DeLorean said.

VW do Brasil to export more

BELO HORIZONTE, Brazil. — Volkswagen do Brasil has earmarked $250 million for plant improvements this year. It will shortly have to sign an agreement with the federal government which will commit the Volkswagen subsidiary to raise its car exports from 80,000 in 1980 to 125,000 in 1981 and bring its total exports to a value of $5 billion a year by 1988. VW do Brasil now sends components and CKD kits to West Germany, the U. S., Argentina, Algeria and Nigeria.

Lancia prototype

New lines for Delta

This Lancia Delta prototype features notchback styling and small trunk. Its predecessor, the Delta hatchback, was introduced in 1979. A version is sold in Sweden by Saab. The new style Delta is not scheduled to be sold in the U. S., and is not yet in production.

Daimler-Benz agrees to acquire Freightliner

A surprise agreement announced last week will expand Daimler-Benz's truck-manufacturing foothold in North America.

In San Francisco, Consolidated Freightways, Inc., said it had reached agreement in principle with the West German vehicle manufacturer to sell virtually all of its U. S. and Canadian manufacturing assets to Daimler-Benz.

Consolidated Freightways is basically a truck transportation firm, but it manufactures Freightliner trucks, and it is the Freightliner manufacturing facilities which Daimler-Benz has agreed to purchase.

CF at one time marketed Freightliner through White Motor Corp., but took back distribution rights several years ago.

There were unconfirmed reports as AUTOMOTIVE NEWS went to press that Daimler-Benz was near a second agreement by which it would acquire White, which has been operating under a Chapter II reorganization.

Daimler-Benz and Consolidated Freightways reached agreement on a second effort. Negotiations between the two firms were terminated with no agreement being reached in early January of this year.

Negotiations were resumed late in February upon the initiative of Daimler-Benz, Consolidated Freightways said.

Raymond F. O'Brien, chairman of Consolidated, jointly announced last week that the agreement in principle would be followed by negotiations leading to a definitive agreement.

O'Brien said that the agreement contained provisions for cash payments to Consolidated Freightways in excess of $225 million within the first 12 months after consummation of the sale, as well as additional monetary considerations after that time.

He went on to say that Consolidated Freightways' long-range goal is an aggressive and continued expansion of its existing transportation businesses and funds received would be used to accelerate progress toward that goal.

Purchase of White by Daimler-Benz would not surprise truck-industry observers.

The Daimler-Benz agreement with Consolidated Freightways added fuel to that speculation for, as recently as January, it was announced that Consolidated itself had made "a firm proposal" to acquire White.

Mercedes-Benz now assembles medium-duty trucks in Hampton, Va.

Easing of emission rules urged by air-quality unit

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — As expected, the National Commission on Air Quality charged with assessing the workings of the Clean Air Act, came out for a slight easing of auto and truck emission standards last week.

The recommendations, in line with others made by the commission regarding stationary sources of air pollution, represent the coming together of the diverse interests of business, government and citizens groups, said Senator Gary Hart, Colorado Democrat.

"It (the commission's recommendations) preserves the best aspects of the law, streamlines other parts to make them more effective, eliminates those not working and addresses new issues which have been discovered since the act was adopted," he said.

On auto emissions the commission said that the statutory hydrocarbon (HC) standard of .41 grams per mile and the oxides of nitrogen standard of 1.0 gpm should be retained, but that the standard for carbon monoxide should be eased to 7 gpm from 3.4 gpm.

The commission's reasoning on this point is based on a report from the National Academy of Sciences indicating that a 7 gpm CO standard would not result in "significant" or "any" increase in CO emissions but would save the automakers from $30 to $60 per vehicle and improve fuel economy up to one percent.

Further, the commission said that while typical in-use CO emissions of pre-1981 cars are approximately 2 times the CO standard, inspection and maintenance programs in force in those areas of the country with severe CO emission problems and more stringent CO standards for 1984 and later model year light and heavy trucks should result in all but two areas meeting the ambient air quality standard for CO pollution by 1988 or 1989.

- Currently, about 30 percent of the 1981 and 1982 vehicle fleet is operating with an EPA-granted 7 gpm waiver from the CO standard.

The commission also recommended that the 1 gpm NOx standard be retained for gasoline-powered automobiles, but that diesels be allowed to meet a 1.5 gpm NOx standard through 1984.

It said that by 1985 technology should be available to permit the larger diesels to meet the 1.0 gpm level and the smaller ones to meet a 0.4 gpm level.

Currently, diesel makers are operating under waivers from the NOx standard from 1.25 gpm to 1.5 gpm depending upon the size of the engine. These waivers expire with the 1983 models.

Keeping the 1 gpm standard for gasoline powered cars and enforcing the more stringent NOx standards for light and heavy trucks should result in all but one area of the country meeting the nitrogen dioxide

Chrysler accelerates FWD shift for '82

DETROIT. — Chrysler Corp. station wagons will all be front-wheel drive in '82. The company will drop its rear-wheel-drive LeBaron and Diplomat wagons and two-door versions of those cars. Only four-door LeBarons and Diplomats will be offered in '82. Chrysler, however, will have a new premium line of front-drive Super K two-door and four-door models this fall, with a new Super K wagon, like the LeBaron Town and Country, due after January, 1982, along with a new convertible version of the Super K.

J-cars may be scarce for intro

DETROIT.—A General Motors spokesman hedged on responding to reports that GM will experience some delay on start-up of production for its J-cars. He said the company "may" yet hit its mid-March start-up date. But advertising for the public intro date of May 14 is still set to go. If GM misses on the start-up, it may simply mean fewer cars in dealers' hands by public intro day.

FDA organizes Charlotte chapter

Initial shipment to U. S. leaves Belfast March 20

First DeLoreans roll off Irish assembly line

By Edward Lapham
Financial Editor

DUNMURRY, Northern Ireland.—The DeLorean sports car is in production.

After eight years of planning, $200 million in financing plus record levels of promotion, hype, skepticism and controversy, the stainless steel sports car with gullwing doors is actually coming off the assembly line here at the rate of 12 a day, with the first shipment to the U.S. scheduled to leave Belfast harbor by March 20.

John Z. DeLorean, DeLorean Motor Co. chairman, and his colleagues are so confident of the car's success when it goes on sale in the U. S. in late April, they plan to make a general public stock offering in the U. S. in order to finance the next project, a four- or five-seat version of the car.

They are, however, very mindful of the conditions: Poor quality, less than perfect fit and finish or a safety recall could mean marketplace failure, which in turn would likely cause the collapse of the company.

There seem to be no such problems.

An AUTOMOTIVE NEWS reporter who toured and inspected the plant 10 days ago found some seemingly minor obvious start-up problems, but nothing major or unsolvable.

Donald H. Lander, president and managing director of the subsidiary DeLorean Motor Cars, Ltd., which is building the cars, said the early production difficulties were nothing more than ordinary startup problems.

"The major problems have all been solved or sorted or identified," Lander said. "This is a quality product."

His claim was chorused by all of the top management, which insisted the workforce itself is committed to producing a "quality" product.

"We're getting a helluva response and cooperation from the people," DMC President Eugene Cafiero said.

"Just go out and mention the Japanese to these people. They'll say, 'Godammit, we're going to demonstrate that Irish Ulstermen can build a car better than the Japanese'."

The startup problems in the plant did seem rather normal, and in large part, due to the adaptation of a basically low-volume Lotus production system into something more like mass production.

"We did have a very serious problem in translating their mentality into the higher production processes that we use," DeLorean said. "Our guys have probably spent more time on that one aspect than on anything else," he said.

DeLorean and Cafiero said the company "is still making product refinements" to get up to 80 (cars) a day, the rate they want to reach by "late May or early June," according to George

Domestic-only total is lowest since 1961

1980 registrations decline 15 pct.

By Richard A. Wright
Assistant Managing Editor

New-car registrations in 1980 were down more than 15 percent from 1979 and were the lowest since 1975, but that doesn't begin to give a picture of the severe plight of the domestic auto industry.

Domestic - only registrations were the lowest since 1961, while registrations of new imported cars were the highest in history.

New-car registrations in the U. S. during 1980 totaled 8,760,937, according to figures compiled by R. L. Polk & Co., down 15.41 percent from 10,356,695 in 1979.

The 1980 total included a record 2,469,180 imported cars, which exceeded the previous record of 2,351,053 in 1979 by 5.02 percent.

The domestic total, however, of 6,291,757 was the lowest since 1961, when domestic registrations totaled 5,476,125.

Because of Federal Government policies designed to encourage industrial growth, introduction of the '62 models in late 1961 touched off the longest boom in automobile history which lasted through the '60s and, with a few relatively small dips and temporary rough spots, came to an apparent end only last year.

Table on Page 29.

• New-car registrations in December totaled 710,821, down 14.97 percent from 836,013 a year earlier. It was the lowest total since 1975, when 820,873 new cars were registered. Record for December is 989,114, set in 1972.

Only one corporate maker—American Motors—and two car divisions, Buick and Chevrolet, managed to increase their share of the much smaller market in 1980 compared with 1979.

AMC accounted for 1.72 percent of 1980 registrations, up from 1.52 percent in 1979. But the other makers were all down in market share, with imports gaining at all their expense.

Imports accounted for 28.18 percent of the 1980 registrations, up 5.48 percentage points from its 1979 penetration.

Biggest loser was Ford Motor Co., which saw its share of the market drop 3.78 points to 16.51 percent. Chrysler Corp. was down 1.88 points to 7.14 percent, while General Motors was off a miniscule 0.01 of a point to 46.41 percent. Miscellaneous domestic nameplates accounted for 0.04 percent of the total, down 0.01 of a point.

Excluding imports, domestic-only registrations in 1980 were divided this way: GM, 64.62 percent; Ford Motor Co., 22.98 percent; Chrysler Corp., 9.94 percent; AMC, 2.40 percent, and miscellaneous, 0.06 percent.

A year earlier, domestic - only registrations were divided as follows: GM, 60.06 percent; Ford Motor Co., 26.25 percent; Chrysler Corp., 11.67 percent; AMC, 1.96 percent, and miscellaneous, 0.06 percent.

• By size segments, subcompacts and compacts increased their market shares in 1980 compared with 1979, but not by as much as the imports. Subcompacts accounted for 13.37 percent of 1980 registrations, up 2.05 points and subcompacts gained 1.12 points to 21.12 percent.

Standards lost the most, dropping 4.11 points to 11.20 percent of registrations, while intermediates fell 2.63 percent to 21.54 percent and the luxury segment dipped 0.93 of a point to 4.59 percent.

The top 20 domestic nameplates in registrations for 1980 were:

1—Chevrolet Citation	370,605
2—Chevrolet Chevette	369,180
3—Ford Fairmont	277,421
4—Chevrolet Malibu	262,605
5—Olds Cutlass Supreme	258,134
6—Standard Chevrolet	257,948
7—Ford Mustang	222,549
8—Standard Oldsmobile	217,407
9—Olds Cutlass	203,095
10—Buick Regal	195,624
11—Buick Skylark	174,150
12—Chevrolet Monte Carlo	163,097
13—Chevrolet Monza	148,867
14—Standard Buick	148,257
15—Ford Pinto	144,245
16—Buick Century	141,559
17—Standard Ford	140,610
18—Pontiac Sunbird	129,312
19—Ford Thunderbird	128,903
20—Plymouth Horizon	128,225

• In December, Chrysler Corp. pushed its market share up 1.95 points compared with the year-earlier month to 8.95 percent of registration. All other U. S. makers were down.

Ford Motor Co. accounted for 17.32 percent of December registrations, off 3.70 points, while General Motors was down 0.61 points to 45.59 percent and AMC dipped 0.22 of a point to 1.70 percent. Miscellaneous makes accounted for 0.03 percent, down 0.02 of a point.

Imports accounted for 26.41 percent of December registrations, up 2.60 points from a year earlier.

Excluding imports, domestic-only registrations in December were divided this way: GM, 61.95 percent; Ford Motor Co., 23.53 percent; Chrysler Corp., 12.17 percent; AMC, 2.31 percent, and miscellaneous, 0.04 percent.

A year earlier, domestic-only registrations in December were divided as follows: GM, 60.64 percent; Ford Motor Co., 27.58 percent; Chrysler Corp., 9.20 percent; AMC, 2.51 percent, and miscellaneous, 0.06 percent.

• By size segments, subcompacts gained more in market share in December compared with a year earlier than did imports, the first time that has happened. Subcompacts were up 3.66 points to 13.79 percent, while imports gained 2.60 points to 26.41 percent. Compacts also gained, up 0.34 of a point to 21.94 percent.

Standards dropped 3.23 points to 11.01 percent, while intermediates were off 1.48 points to 21.69 percent and luxury units dipped 1.13 points to 5.16 percent.

Chrysler Corp.'s K-cars, Dodge Aries and Plymouth Reliant, broke into the top 20 nameplates for the first time in December, while Ford Escort jumped from 11th place to fourth, quickly establishing itself as Ford's top-selling line.

The top 20 domestic nameplates in registrations during December were:

1—Chevrolet Citation	28,585
2—Chevrolet Chevette	24,793
3—Chevrolet Malibu	22,[illegible]11
4—Ford Escort	20,944
5—Ford Fairmont	20,530
6—Standard Oldsmobile	20,251
7—Olds Cutlass Supreme	20,125
8—Standard Chevrolet	19,752
9—Olds Cutlass	16,577
10—Buick Regal	16,450
11—Buick Skylark	15,422
12—Chevrolet Monte Carlo	14,299
13—Ford Mustang	13,498
14—Plymouth Reliant	13,488
15—Standard Buick	11,989
16—Buick Century	11,471
17—Cadillac	11,064
18—Pontiac Grand Prix	10,719
19—Dodge Aries	10,255
20—Standard Ford	9,842

Porsche holds 924 price; Turbo model up $625

TROY, Mich. — Porsche-Audi Division of Volkswagen of America has held the line on the price of its 924 coupe for 1981 and has raised the price of the 924 Turbo coupe $625. The regular 924 remains at $16,770, and the Turbo is $21,500.

The regular 924 has an improved ignition system and halogen headlights for 1981. Horsepower of the Turbo has been increased 11 to 154. Four-wheel power disk brakes, air conditioning, power windows and electronic ignition are standard equipment on the 924 Turbo.

Bandit brings 'em in

Letsch Pontiac-Buick, Inc., Covington, La., outfitted itself for a special Smokey and the Bandit promotion, complete with six black Special Edition Trans Ams for sale and a 1977 Pontiac LeMans former police car. Burt Reynolds posters stared out from the showroom on the deroofed and doorless LeMans, while Trans Am Bandit racing jackets went with each car purchase.

'Good' fourth-quarter results fail to 'rescue' Chrysler

By Edward Lapham
Financial Editor

Chrysler Corp. reported a net loss of $1.71 billion ($26.00 a share) for 1980, thereby setting a new U. S. industrial record, despite a fourth - quarter performance that was not as bad as some analysts had forecast.

In the October-December period the company incurred a net loss of $235 million ($3.61 a share) on sales of $2.8 billion. The preceding year, the company lost $376 million ($5.77 a share) on sales of $3.1 billion.

For the year, the $1.71 billion net loss on sales of $9.2 billion compared with a 1979 net loss of $1.1 billion ($17.18 a share) on sales of $12.0 billion. The 1980 loss also topped the previous record for a U. S. industrial concern set just days earlier when Ford Motor Co. announced a $1.5 billion net loss.

Chrysler Chairman Lee Iacocca said the company showed a profit in October but that in November and December "high prime interest rates, a 13.5 percent inflation rate and consumer confidence index dip of 12 points devastated the U. S. car market."

He said the operating loss of $157 million in the fourth quarter, although "substantial," was evidence of the "progress the company has made in reducing costs and improving efficiency, even in this depressed market."

• Chrysler listed depreciation of plant and equipment at $261.5 million for 1980 compared with $180.6 million in 1979 and $154.0 million in 1978. The company said amortization of special tools was $305.8 million in 1980 compared with $220.0 million in 1979 and $198.2 million in 1978.

The auto maker said retained net earnings at year's end equaled a negative $1.2 billion compared with $496.3 million one year earlier and $1.6 billion at Dec. 31, 1978, as a result of the back-to-back billion-dollar-plus losses.

However, Chrysler's report showed that the 1980 decrease in working capital was just $57.2 million despite the losses because of the $1.2 billion in federally guaranteed loans and other related financial restructurings during the year.

In 1979, working capital decreased $1.2 billion. In 1978 working capital increased $13.1 million.

Chrysler's balance sheet, which should show a marked improvement at the end of the first quarter this year because of additional debt restructuring, deteriorated further in 1980.

Long-term debt increased to $2.48 billion in the year compared with $976.7 million one year earlier.

The current ratio (current assets as a percent of current liabilities) went from a slightly illiquid 96.6 percent to a more illiquid 94.5 percent.

Despite the dire financial situation of the company, Iacocca said the auto maker's current operating plan "is designed to restore Chrysler to profitability with a 9.1 percent share of a U. S. car market of 9.6 million cars and a 9.0 percent share of a U. S. market of 2.5 million trucks."

Peugeot faces dwindling market with excess capacity

Behind Talbot closing in Scotland

By Richard Feast
European Editor

LONDON. — No amount of money could persuade Peugeot SA to keep open its Talbot car plant at Linwood, Scotland.

With excess capacity at its Poissy factory in France and with a dwindling share of the European market the announcement of the closure was only a matter of timing.

Jean-Paul Parayre, president of PSA, held secret talks with British government officials under Industry Secretary Sir Keith Joseph Feb. 9. No word of the one-hour discussions leaked until Peugeot's announcement in Paris two days later.

The British Government had offered plenty in the way of financial inducements (thought to be up to $95 million) for Peugeot to produce its small front-drive replacement for the 104—code-numbered C15 — at Linwood.

But Talbot UK Managing Director George Turnbull said, "If the government gave us as much as 100 percent (towards the cost of keeping the plant open) Linwood would still not make a profit."

Talbot UK lost $44 million in the first half of 1980. The French operation lost $90 million, and the group as a whole is believed to be bracing itself for losses of up to $450 million for the whole year.

- Closure means the loss of 4,800 jobs, and leaves Talbot's assembly in the UK concentrated around Coventry. It will have a ripple effect throughout Talbot (workforce 16,000) and industry as a whole.

Ryton, Coventry, assembles Alpine hatchbacks and Solara sedans from French kits. The Linwood models, the geriatric Avenger and slightly more modern Sunbeam, will be finished by the middle of the year.

Deletion of the Sunbeam model will also affect Lotus, which supplies engines for some high performance models. Lotus's contract for development of the DeLorean sports car has now been completed as well.

Linwood opened in 1963 after Rootes, the original name for what is now Talbot, was persuaded by the government to open a factory in a depressed area away from the Midlands. The same policy resulted in Ford opening at Halewood and Vauxhall at Ellesmere Port in what is now known as Merseyside.

Linwood was geared to produce up to 145,000 Hillman Imps each year. It never hit targets. Last year it made 54,000 Avengers and Sunbeams—nowhere near enough to make the plant viable.

Chrysler, which took full control of Rootes in 1969, never made a go of Linwood either. Despite sizeable financial inducements from the UK Government, Chrysler sold out to the Peugeot-Citroen group in 1978.

Peugeot was offered money to stay, but eventually decided to do what Chrysler was reluctant to a few years earlier: Close the troublesome Scottish factory and keep Coventry for assembly of imported parts.

At the same time, it has ended with what was probably the most valuable asset when it took over Chrysler's European interests — an extensive dealer network.

Talbot trims time at Poissy plant

PARIS.—Eliminating the night shift at Talbot's Poissy plant is being studied by Peugeot as a means of finding a more durable solution than the short work weeks exercised up to now.

The Poissy plant has a work force of 21,000. The schedule announced for March has cut back the monthly work time from 173 hours to 93, which is practically equivalent to doing away with one shift.

Two for Peugeot

LYNDHURST, N. J.—Peugeot has added two dealers. They are Art Mele Buick, Inc., Yuba City, Calif., headed by Arthur J. Mele, and Autohaus, Inc., Thiensville, Wis., headed by Gerhard Krause.

Historic gift

Don Reid, left, president, Don Reid Ford, Orlando, Fla., presented a dozen sets of famous Presidential speeches on cassette tapes to each of the school boards of Orange and Seminole Counties. Accepting the educational gift is J. Donald Shaw, Orange County deputy superintendent of instruction.

Imports set record; domestics strong in last period

New-car sales drop in February

Continued from Page 3

percent from 1,616,170 last year. Domestic year-to-date sales stood at 1,013,425, down 14.04 percent from 1,178,996. Import sales for the first two months of 1981 numbered 398,435, which was 8.86 percent lower than 437,174 a year ago.

The sparkling third-period performance by the domestic auto makers brought their earlier depression-level sales to a more respectable standing for the month. Chrysler reported a healthy 10.12-percent gain, to 63,225 from 57,413 last year. AMC sales were stable, up 1.44 percent to [illegible],743 from 12,562. Volkswagen of America sold 15,496 U. S.-built Rabbits, up 0.45 percent from 15,426.

GM sales for the month fell 10.99 percent, to 330,957 from 371,833 in 1980, and Ford reported a sales decline of 9.59 percent, to 121,172 from 134,024.

GM's share of the February domestic market was 60.88 percent, down from 62.89 percent. Ford earned 22.29 percent compared with 22.67 percent in 1980. Chrysler sales accounted for 11.63 percent, up from 9.71 percent. AMC earned 2.35 percent, up from 2.12 percent, and VWoA had 2.85 percent, up from 2.61 percent.

AMC and VW were joined by Plymouth, Dodge and Lincoln as new-car makes with sales increases in February. Plymouth sales were up 28.34 percent over last year, Dodge was up 13.25 percent and Lincoln climbed 7.08 percent.

Chrysler sales dropped 31.98 percent from a year ago, Ford was down 12.23 percent, Mercury was down 4.11 percent, Buick was down 4.89 percent, Cadillac was down 12.64 percent, Chevrolet was down 15.47 percent, Oldsmobile was down 5.47 percent and Pontiac was down 11.17 percent.

Daily selling rate for the domestic auto makers averaged 22,650 for the month, with 24 selling days. It was down 4.23 percent from the year-ago average of 23,650 based on 25 days.

Top-selling U. S. nameplates for the month lined up behind Chevrolet Corvette, which had any-month record sales of 47,213. Chevrolet Citation was second at 29,608, followed by Ford Escort, 29,256, Oldsmobile Cutlass Supreme, 24,202, and Buick Skylark, 18,943.

In the domestic market, 26.13 percent of February sales were subcompacts, 28.70 percent were compacts, 27.27 percent were intermediates, 12.09 percent were full-size models and 5.81 percent were luxury cars.

Of the total market, 18.59 percent were U. S. subcompacts, 20.43 percent were compacts, 19.41 percent were intermediates, 8.61 percent were standards, 4.14 percent were luxury models and 28.82 percent were imports.

Third-period sales included 152,430 for GM, 45,510 for Ford, 28,690 for Chrysler, 6,679 for VWoA and an estimated 4,700 for AMC. GM earned 64.04 percent of the market, Ford had 19.12 percent, Chrysler cornered 12.05 percent, VWoA had 2.81 percent and AMC earned 1.98 percent.

Hand-made Porsche replicas roll from N. Carolina point

HICKORY, N. C. — Carrera Motorsport, Inc., a firm formed last November in Cleveland County near here to build hand-made reproductions of Porsches, has produced and sold eight of the special-order cars, and 20 more are on order.

Its president, Tim Herman, said prices which range up to $38,950 for a Porsche Spyder are not scaring away potential customers.

"We're about three months behind in our work," he said. "We've been in this building for only two months and already we've outgrown it."

The firm is working in a 11,000-square-foot factory, and he foresees expansion in the near future. He says it already needs another 20,000 feet of space.

Herman, 31, resigned as a bank vice president to take up racing and car-building full time. It was a profitable move, he said. His partner is Wilhelm Cashen, 28. Both are old hands at building and racing sports cars.

For seven years Herman has been restoring and racing Porsches. Cashen was with Mercedes-Benz in Indiana and designed his own cars before coming to North Carolina.

Nine employes do all the hand work on the cars made here except the fiberglass body work, which is contracted out to a Moorseville (N. C.) body shop.

Engines and parts come out of the company's collection of Porsche engines. Each engine is valued at about $10,000, Herman said.

"We are qualified as a manufacturer, so we don't have to meet all EPA or DOT standards," he said. "But even if we did I don't believe we would have any problems. The only thing we were worried about at all was California emission standards, which are tough and hard to figure out. But our engine is so clean and efficient that the emissions hardly registered."

Most of Carrera's sales have been to Californians.

The company plans to begin turning out reproductions of the classic Porsche 904 with price tags of about $40,000. There are also plans to begin manufacturing one-of-a-kind specialty cars "for people who have enough money and want a car of their very own."

Herman said he and Cashen have been preparing two Porsches to drive in March in a vintage-car race in Sebring, Fla.

Chevette sales set records for 10 days, month

DETROIT.—Dealer deliveries of Chevettes set 10-day and monthly records in February, according to Robert D. Lund, Chevrolet general manager.

"Customers purchased 26,225 Chevettes in the Feb. 21-28 period, topping the previous record of 19,593 delivered in the last 10 days of January, 1980," Lund said.

"For the month, Chevrolet dealers sold 47,213 Chevettes, exceeding the previous high of 44,442 set in March, 1980," he said.

General Motors cut the sticker price of all Chevettes by $100 in January. Chevette also is included in the GM customer rebate program which began Feb. 18. The Chevette rebate is $500 with GM paying $300 and the dealer paying $200.

But it's two weeks behind 1980 pace

Makers build millionth car of year

By Patricia Hoffman
Staff Writer

U. S. auto production hit the million mark last Thursday, (March 5,) about two weeks later than in 1980. Last year, the auto makers completed their millionth unit on Feb. 22.

So far this year, the auto makers have built 1,077,944 units, down 18.1 percent from the 1,316,180 completed in the comparable period in 1980.

The February total was 482,074 units, a drop of 22.79 percent from the 624,346 cars completed in the same month last year, and the lowest output for the month since the 369,486 cars assembled in February, 1975.

Breakdown for February by companies was: General Motors, 61.81 percent of the month's total; Ford Motor Co., 20.23 percent; Chrysler Corp., 13.28 percent; American Motors, 1.19 percent; Volkswagen of America, 3.44 percent, and Checker Motors, 0.05 percent.

Production last week was slated at 134,625 units, up 1.35 percent from the 132,831 cars completed the previous week but down 15.89 percent from the 160,067 units built in the comparable week last year.

Overtime was scheduled last week at Chrysler Corp.'s Belvidere point. Chrysler said that due to an increase in dealer orders, it will progressively increase its daily straight-time production rate at Belvidere on the Dodge Omni, Plymouth Horizon, Dodge 024 and Plymouth TC3 lines. Two nine-hour shifts were scheduled last week, and Chrysler said that within the next three weeks it plans to increase production at Belvidere from a rate of 960 units per day to 1,072 units per day.

Chrysler also announced that all of its assembly plants are scheduled to operate this week. It is the fourth consecutive week of full production at Chrysler's U. S. assembly plants.

breaking news

Continued from Page 1

fayette Ford, as chairman and representative to the FDA board. Purvis, twice a national dealer council chairman, said the Alliance already represented one-third of Charlotte District Ford dealers and that full district participation would be only a matter of time, once the organization was set in place and the dealers had a chance to canvass their zones.

New Jaguar is due in 1984

LONDON.—A new Jaguar, code-named XJ-40, is scheduled to be introduced in 1984 as a replacement for the XJ-6 and XJ-12. It is believed that the XJ-40 will be powered by new lightweight engines displacing 2.2 and 2.8 liters. The BL board has approved an investment of about $160 million in the new car, which is considered vital if BL is to continue marketing in the U. S.

Fiat's Recchia forms new company

MONTVALE, N. J.—Richard Recchia, who winds up his duties this month as president of Fiat Motors of North America, has organized a new company. Named R.D.R. Services, Inc., it will act as a manufacturer's representative and will be based in Los Angeles. It will begin operations early in April.

Soft-top Mustang from Ford in '82

DEARBORN. — Ford Motor Co. is rumored to have tapped an outside supplier to build a convertible conversion of the Mustang for '82. The company previously discussed doing a soft-top version of the new EXP/LN7 models, but decided the convertible treatment could best help spur Mustang sales.

Opel Junior bows as first S-car

RUSSELSHEIM, West Germany. — The Opel Junior, scheduled for introduction in Europe in late 1982, will be the first edition of the new General Motors S-car minicompact. GM's world car will be assembled in a new plant in Zaragoza, Spain, with the engine coming from a new plant in Austria. The U.S. version of the S-car will bow a year later as an '84 model. Chevrolet is the lead division on the American S-car.

Truck production for February is lowest since '65

February output for the U. S. truck makers was the lowest for the month in 16 years and was down considerably from the February, 1980, total.

Truck production in February totaled 132,921 units, down 24.68 percent from the 176,489 units completed in the same month last year, and the lowest for the month since the 131,409 units built in February, 1965.

Production last week was slated at 35,285 trucks, up 2.80 percent from the 34,321 units completed in the comparable week last year, but down 0.35 percent from the 35,412 trucks built the previous week.

So far this year, the truck makers have completed 211,042 units, down 16.35 percent from the 371,851 trucks assembled in the comparable period last year.

Canadian cars in February fell to 13-year low

Canadian auto production for February was the lowest for the month in 13 years, and the total fell 9.92 percent below the comparable month's total last year.

The auto makers completed 64,220 units in February, down from the 71,293 built in 1980, and the lowest for the month since the 47,317 units completed in February, 1968.

The planned output last week was 16,513 cars, an increase of 13.40 percent from the 14,562 built in the previous week, but down 13.89 percent from the 19,177 units completed in the comparable week last year.

So far this year the auto makers have assembled 114,975 units, down 26.44 percent from 156,295 in the comparable period last year.

The truck makers produced 44,765 units in February, down 0.18 percent from the 44,849 trucks completed in the comparable month last year, and the lowest output for the month since the 40,530 built in 1976.

Truck production last week was planned at 11,675, down 8.66 percent from the 12,782 trucks built the previous week, and down 3.03 percent from the 12,041 units assembled the week ended March 8, 1980.

The year-to-date output for the truck makers is 100,370, down 1.49 percent from the 101,892 completed through March 8, last year.

Downtime was scheduled for one week at the Ford Oakville car plant beginning March 2.

Also down last week was Chrysler's Windsor car point. The plant will remain idle this week with operations slated to resume March 16.

Viva Geneva!

Eye-catching AC-Ghia

An otherwise standard AC car was fitted with a sleek, all-steel body by Ghia for display at the Geneva Auto Show. The 3000-ME model features a Ford Essex V-6 mounted crossways in the middle of the chassis, behind the driver. Show story on Page 6.

A new wrap for Audi

Pininfarina displayed this version of the four-wheel-drive Audi Quattro at the Geneva Auto Show. Called the Quartz, it features a new type of headlamp, equal to a halogen lamp in intensity despite its small size.

New-car stock is trimmed to 59 days; rebates help

By Richard A. Wright
Assistant Managing Editor

February proved to the auto makers that there is nothing like a price cut to get things moving. The result was a dramatic slash in the domestic new-car inventory, from a heavy 78½-day supply on Feb. 1 to a 59-day stockpile March 1 which was beginning to show signs of developing shortages.

In fact, should a spring sales boom develop this year, stocks of a number of lines could quickly be pared away.

It wasn't just the extensive rebate programs, of course, that ate away the mountainous inventory during February. Production has been running at a low level for some time. But the dramatic drop in the days-supply figure was certainly spurred by a stronger sales pace.

The industry opened March with 1,334,919 U. S.-built cars in inventory, a 59-day supply, compared with 1,421,023 new cars in stock a month earlier, which was a 78½-day supply. A year ago, the industry had 1,610,544 new cars in stock, a 68-day supply.

- All the domestic manufacturers opened March with lower inventories in terms of days-supply than they had a month earlier, and all except Volkswagen of America trimmed their unit counts during February.

General Motors had a 56-day supply of new cars March 1, down from a 72-day stock Feb. 1. GM's inventory was short of Chevettes and Sunbirds, and car lines which boasted $700 rebates—Camaro, Firebird and the intermediate "A specials"—were cut back sharply.

Ford Motor Co. had a 63-day supply March 1, compared with a 93-day stock a month earlier.

Table on Page 56.

Ford pared prices by 10 percent on some models resulting in sharp inventory reductions for Fairmont/Zephyr, Mustang/Capri, Granada/Cougar, Thunderbird/XR-7 and Lincoln and Mark VI.

In addition, rebates of $600 to $1,000 on carryover '80 models helped thin Ford's stocks.

Chrysler Corp., which extended its rebate program, cut its inventory from an 81-day supply Feb. 1 to a 67½-day stockpile March 1. The finance rebate, based on the prime rate, applied to all lines and all lines dipped in inventory. Chrysler's stock numbers looked better than they have in many months.

American Motors opened March with a well-balanced 55-day supply, down from 88 days a month earlier. AMC extended its 10 percent price reduction to March 15.

VWoA had a 58-day supply March 1, down from 76 days a month earlier.

The March 1 domestic new-car inventory was divided this way: GM, 58.12 percent; Ford Motor Co., 23.82 percent; Chrysler Corp. 13.05 percent; VWoA, 2.81 percent, and AMC, 2.20 percent.

A month earlier, the new-car inventory was divided as follows: GM, 57.43 percent; Ford Motor Co., 24.62 percent; Chrysler Corp., 12.82 percent; VWoA, 2.58 percent, and AMC, 2.55 percent.

By size class, the most dramatic slash in inventory came in the subcompact segment. The

Datsun 280 to use Goodyear tires

AKRON. — Goodyear Tire & Rubber Co. will supply tires to Nissan Motor Co., Ltd., as original equipment on the 1982 Datsun 280-ZX GL sold in the U. S. The contract will be worth about $300,000 a month in the 1982 model year. Goodyear previously had supplied about 13,000 U. S.-made Wingfoot tires for a limited-edition Datsun. It also supplies solid tires for Datsun lift trucks sold in the U. S.

Lataif elected a Ford vice-president

DEARBORN.—Louis E. Lataif, 42, was elected vice-president of Ford Motor Co. Lataif was appointed general manager of Ford Division in January. He had been the division's general marketing manager since December, 1978.

VW's U. S. losses last year: $30 to $40 million

TROY, Mich.—Volkswagen of America last week confirmed its 1980 net loss ranged between $30 and $40 million. The company said it does not usually delineate its results from the parent VW Group, but President James McLernon disclosed

EPA budget cut is only 2 pct.

Reagan chops NHTSA funds in half

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Budget cuts for NHTSA are slated to total $187 million in fiscal 1982.

No changes are planned for the current fiscal year, which ends next October.

In other words, come next year, NHTSA, under the Reagan Administration and the stewardship of Raymond Peck, will be operating with less than half the money planned for Joan Claybrook under the Carter Administration.

Instead of the planned $357 million, the Reagan budget — subject to Congressional decision—is a mere $170 million.

Although the general intention of the Reagan Administration is clear, the cuts are not specifically identified in many instances and there is no information whatsoever available from NHTSA itself.

Quite possibly, this is because the White House is said to have lost the paperwork on the incoming Administration and in any case, Peck's nomination—at press time—had not yet been sent to the Hill. What work is going on is being handled by Acting Administrator Diane Steed, who will become Peck's deputy once he gets his own go-ahead.

- The biggest cut—about $40 million—is to wipe out enforcement of the national 55-MPH speed limit. (Congress is preparing to do that legislatively.) In other areas of federal grants to states—which the Transportation Secretary called either useless or the proper domain of the states—another $53 million will be cut.

These cuts include $4 million for driver licensing, $10 million for driver education, $12 million for emergency medical services (except for training personnel), $17 million for field offices, and $10 million which the House ordered NHTSA to use along with money from the Urban Mass Transit Administration and the Federal Highway Administration to conserve energy and improve air quality under the 1975 Energy Policy and Conservation Act.

Lewis explained that federal

X-car spinoffs debut in November

GM to rename new intermediates

General Motors will boast at least three new names in its '82 passenger-car lineup this fall—Chevrolet Celebrity, Pontiac A6000 and Oldsmobile Cutlass Cierra.

Celebrity, A6000 and Cierra are names that will be used on GM's new line of front-drive intermediates that are scheduled to debut in November. The Buick version will be called Century.

The new mid-size cars, which eventually replace the present A-body line of intermediates at GM, share most major components, including engines and drivetrains, with the compact X-cars. Both the new A-cars and the X-cars will be built on the same 104.9-inch wheelbase, but the '82 intermediates will be several inches longer overall and a couple hundred pounds heavier than the compacts.

A 2-5-liter four is standard in Celebrity, A6000, Cierra and Century; optional engines include a 2.8-liter V-6 and a new 3.2-liter V-6 diesel designed and built by Olds. A 3.8-liter V-6 gas engine also may be available.

GM won't phase out the existing A-body line entirely in '82. The new front-drive A-cars will be offered in two-door and four-door models only. The two-door versions of the older, rear-drive A-cars will be dropped, but the four-doors and wagons will be carried over this fall.

Chevy and Olds will keep the Malibu and Cutlass names, respectively, on their '82 mid-size sedans and wagons, which retain a 108-inch wheelbase. Pontiac is discarding the LeMans name, and will use the Bonneville name on its carryover sedan and wagon, while the present Buick Century sedan and wagon will go into the Regal line in '82.

It's a turbo truck from IVECO

At long last, heavy trucks built in Europe by IVECO are available with turbocharged diesel engines. This Magirus-Deutz 290 M 19 Turbo is powered by the F8L 413 air-cooled Deutz V-8 engine and the lettering on the front panel above the grille lets people know it's a turbo.

Fiat now turbocharging biggest truck engine

By Jan P. Norbye

TURIN. — Fiat has launched a turbocharged version of its biggest truck engine, the 17.2-liter (1,048 cubic inches) V-8 for installation in its 170/190 series of highway haulers.

After stubbornly resisting the use of turbochargers while the rest of the industry rushed to embrace it, Fiat has come up with its third IVECO engine to be turbocharged in six months. The first was a German-made, air-cooled Deutz V-8 of 11.3 liters (690 cubic inches), and the second was a water-cooled Fiat in-line six of 13.8 liters (841.7 cubic inches).

All three have been in production in atmospherically aspirated form for years. They use different turbocharger suppliers for each: KKK for the Deutz, Holset for the big six, and AiResearch for the water-cooled V-8.

Led by MAN and Volvo, all other major truck manufacturers in Europe turbocharged their diesel engines between 1958 and 1975. Until now, Magirus-Deutz, Unic and Fiat/OM (IVECO's makes) have been the lone holdouts against what everybody's technical brains said was progress.

Why did it take so long? Did Fiat lack the technology? Was there an engineering philosophy that kept the turbo out of Fiat?

"On the contrary," said Dr. Heinz W. Hahn, technical director of IVECO. "All our engines, though created years ago, were designed with turbocharging in mind.

"We knew what we wanted to achieve with turbocharging, and we built enough strength into the basic engines, so that no in-

Turbo under test

Fiat's water-cooled 8280 17.2-liter V-8 diesel undergoes a test in the dyno room at the company's plant in Turin, Italy. The engine features individual cylinder heads with four valves, and the deep block has wet liners and a five-bearing crankshaft.

China to purchase GM diesels with value of $800,000

DETROIT. — Motors Trading Corp. (MTC), a wholly owned subsidiary of General Motors, has concluded an initial trade agreement with the China National Machinery and Equipment Import and Export Corp. (EQUIMPEX), it was announced by David H. Hill, MTC president.

EQUIMPEX is operated by the First Ministry of Machine Building, one of the People's Republic of China's largest ministries.

The trade agreement, called an evidence account protocol, is the first such counter-trade agreement of this type between a trading corporation of China and General Motors.

EQUIMPEX will arrange, under the terms of this agreement, to purchase diesel engines from Detroit Diesel Allison Division. The value is approximately $800,000. GM is to purchase cutting tools and other products manufactured in China in the near future.

Additional counter-trade programs in China are being explored by MTC with other trading corporations and provinces, Hill said.

MTC was formed in 1979 to assist GM in international trade, especially in nations experiencing a lack of hard currency, and serves GM's divisions and plants worldwide.

truck industry news

Rate of decline is lowest since last June

Truck sales sag eases in February

Retail sales of new trucks of all types in the U. S. were down again in February—for the 24th straight month—but the rate of decline was the lowest since last June, and the second-lowest since September, 1979.

During the month, according to preliminary figures, franchised dealers and factory outlets retailed 184,793 trucks, a decline of 18.9 percent from the 227,749 units sold in the same month a year ago. Totals include domestic and non-captive imported trucks.

Table on Page 52.

Last June, the industry sold 230,120 vehicles, off 17.4 percent from the 278,514 moved in June, 1979.

For the first two months of 1981, however, retail sales were down 24.1 percent from a year ago. The total through February was an estimated 351,372 units, compared with 462,732 in the like period last year.

Sales of the compact pickups, still hurting as a result of the tariff increase on the imports as well as the slump in the economy, were down in February for the fifth consecutive month.

The total for the month was 43,263 units, a drop of 15.6 percent from last year's 51,283. The two-month count was down 22.4 percent, from 99,022 units in 1980 to 76,837 this year.

- February sales of the Volkswagen, Datsun and Mazda pickups were higher than a year ago, but Volkswagen was the only one of the eight nameplates in this market segment to show an increase for the first two months.

Sales of light trucks during the month, including the non-captive Japanese pickups, were off 18 percent from a year ago. The count was 167,972, compared with 204,747 in 1980.

Retailers moved 5,490 medium trucks in February, a decline of 34.6 percent from the year-earlier 8,395. Sales of heavy vehicles were down 22.4 percent, from 14,607 units in 1980 to 11,331.

In a preliminary report, the Motor Vehicle Manufacturers Assn. said its members reported 162,300 retail sales in February, off 18.8 percent from the previous year's 199,966. The two-month total of 311,281 units was down 24.4 percent from the year-earlier 411,729.

The number of unsold vehicles in retailers' hands at the end of the month was down 28.6 percent from a year ago, with significant drops in the light and medium-truck segments. The overall total was 579,678, compared with 811,962 a year ago.

Light trucks in stock on March 1 totaled 512,525, down 29.7 percent from last year's 729,276. Mediums were off 28.9 percent, from 30,938 in 1980 to 21,998, while the heavies were

Cummins 270 woos cost-conscious fleets

By Jack Walsh
Truck Editor

LOUISVILLE.—Cummins Engine Co. has introduced what it describes as the most fuel-efficient diesel on the market today — the Fleet 270 — but cautions that it's not for everyone.

An extension of the family of Formula engines designed to improve fuel economy, the Fleet 270 is intended for line-haul applications calling for the best possible fuel efficiency where 270 HP is adequate to maintain cruise speeds in the 53.57 MPH range, according to George Fauerbach, vice president, Cummins North American automotive business.

"It represents a tradeoff between fuel economy and higher trip time, so it will be ideal only for the operator who wants to save on fuel costs and can live with the higher trip time," he said.

The Fleet 270 is rated at 270 HP at 1,600 RPM with a peak torque of 1,020 foot pounds at 1,100 RPM. The engine operates over a 500-RPM range with a 15 percent torque range. An alternate 250-HP rating at 1,600 RPM also is available.

Fauerbach said the Fleet 270 incorporates all of the improvements in Cummins Big Cam II units, such as the pulse exhaust manifold, aftercooler, and Demand Flow and Cooling (DFC) lube system.

- Exclusive features of the new power plant include a specially modified Cummins T-46 turbocharger, a higher compression piston, retarded injection timing calibrated for the low governed RPM and a lightweight vibration damper.

Fauerbach said tests indicated that the Fleet 270 is 12.7 percent more fuel efficient than the Formula 300 Big Cam II, of which it is a derivative.

"On a level route," he said, "tests showed that a truck powered by a Fleet 270 and with a 3.70 axle ratio would use 15,504 gallons of fuel to cover 100,000 miles. One with the Formula 300 and the same axle ratio would consume 17,762 gallons.

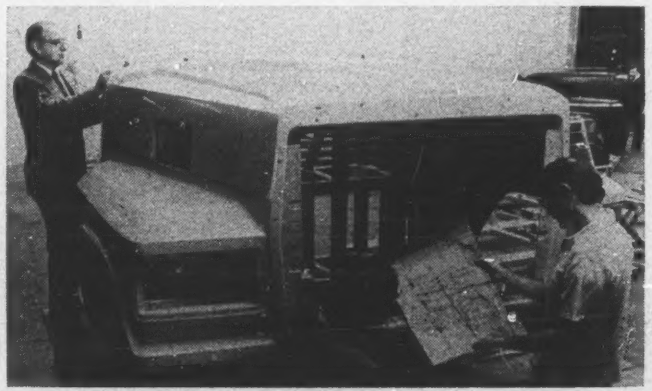
"Based on fuel at $1.25 a gallon, the operator of the truck with the Fleet 270 would realize fuel savings of about $2,800 over the user of the Formula 300 engine," he added.

"So if you can work or live with the higher trip times, you can save money on fuel with the Fleet 270," Fauerbach said. "It's the fleet's choice; it's not for everyone. But it will be a big help for fleets having trouble controlling driver speed."

A version of the Fleet 270 has been in road tests with selected fleet operators for about 10 months, and a "good feedback" was reported, with some adverse driver reaction because of the trip-time disadvantage.

The company said it has initiated programs to win driver acceptance of the Fleet 270.

Fauerbach said Cummins recommends use of 7 to 10-speed transmissions—and no overdrive—with the Fleet 270. The engine is not available at this time in California.



Ford hood-fender assembly by Goodyear

A fiberglass truck hood-assembly, up to 120 pounds lighter than metal counterparts for greater fuel savings, is inspected by workers at a Goodyear plant in Jackson, O. Produced for Ford's new LTL-9000 conventional model, the assembly is constructed from 30 plastic components.

Rockwell thinks Hungarian firm is dumping parts

WASHINGTON. — Rockwell International Corp. thinks truck-trailer axle-and-brake assemblies are being dumped in the U. S., and it's looking to have the practice stopped.

On behalf of itself and the domestic industry producing similar products, it has asked the International Trade Commission to begin an investigation to determine whether truck trailer axle-and-brake assemblies and parts produced by the Hungarian RADA firm and imported by Eaton Corp. are being sold here at alleged less than fair value.

Rockwell says the alleged dumping has depressed sales in the domestic industry, and resulted in less than a fair return on investment.

The petition was filed Feb. 12. The ITC has 45 days in which to make a finding.

NEW DATSUN "200 SX" CONVERTIBLES

"Newest and Fastest Selling Roadster"

Datsun Dealers' answer to the Mercedes 450 SL—a high quality convertible for 1981 at less than ⅓ the price. This fine showroom traffic builder is superbly engineered and styled for the '80s. Base units can be drop-shipped to American Custom Coachworks, Ltd. plants, or sometimes there are some open factory (pool cars) presently in build that are available.

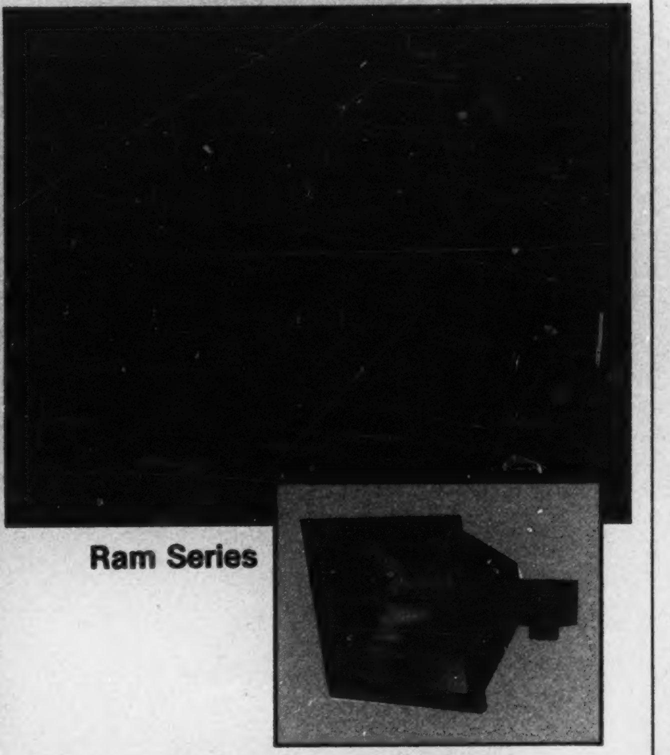
Lighting With Quartz?
Here's A Better Way:
METAL HALIDE.



Ram Series

Quartz lighting was popular when energy was inexpensive, and it performed well. But aggressive dealers know that the only outdoor light sources made for today's realities are **Metal Halide**.

Let's compare your quartz to the LSI Metal Halide Ram Series. On a fixture to fixture basis you'll find the Ram will:

- reduce energy operating costs by 70%
- increase your lighting output by 38%
- cut your lamp replacement cost with lamps that last *six times* longer than quartz!

LSI Metal Halide Ram fixtures were designed for economically replacing your old quartz unit using existing poles, brackets and wiring. Instead of paying more and more to operate an obsolete light source, find out how you can enjoy a 2-4 year payback on an energy efficient system from LSI.

Stop paying overhead on your overhead.

For more information, write or call for a full color brochure describing our energy saving systems.

Frost & Sullivan study sees 12-pct. annual gains

Auto aftermarket growth predicted

Contineud from Page 14

tools and cataloging and packaging.

Shock absorbers — Introduction of MacPherson struts, with their lighter weight, should have a decided impact on the market, probably spelling a decline in DIY replacement of shock absorbers.

The study also predicts that 94.8 billion gallons of gasoline will be sold at an average price of $2.31 per gallon in 1985 for total sales of $219.1 billion.

The latter projection, according to F&S, anticipates an average annual decline of 0.5 percent in the use of gasoline and an increase of 10.7 percent in its price. The possibility also is held out that the price could rise to a level between $2.50 and $2.80 per gallon.

Consumption of motor oils and lubricants is expected to show little growth during the period because of the shift to the newer smaller cars that have smaller crankcase capacities and the use of new oils that permit longer drain intervals. Hence, most of the expansion in lubricant sales will reflect price boosts averaging 9 percent per annum.

- An emergent marketing trend in the 1981-1985 period, F&S said, will be the reentry of some gasoline marketers as serious competitors for auto service, parts and accessories, although not on the scale of the 1960s.

Motor - fuel sales will be the largest component of the auto aftermarket, with annual volume predicted by the study to rise 9 percent yearly, from $106.5 billion in 1981 to $150.5 billion in 1985. Five-year volume will reach $637 billion.

F&S said the 1981-1985 span will increase pressure on crude-poor oil companies because rising wholesale and retail prices will not keep pace with higher costs.

This will continue the elimination of unprofitable territories and outlets, with an emphasis on company-owned-and-managed retail operations in high-traffic metropolitan locations, according to F&S.

Simultaneously, according to the report, weaker oil jobbers will be eliminated, paving the way for super jobbers. They also should inherit large networks of gas stations surrendered by the oil companies.

TBA and chemical products, according to the study, will represent a five - year market of $140 billion, growing at an annual rate of 11.6 percent, from $22.4 billion in 1981 to $34.1 billion in 1985.

The outlook in this segment is for decreasing sales of such items as radial tires and batteries, because of longer product life. However, F&S said this will be more than offset by higher raw material and manufacturing costs.

Where Auto Market was in February

Chain of auto prep centers launched by Polyglycoat

Contineud from Page 14

the new-car customer through his dealer. We won't change that.

"But if the dealer wants to use our center as his aftermarket car service and accessorizing center, so that he can reduce his overhead and labor costs, then we'd have a mutually rewarding relationship," Fiveson said.

The various Polyglycoat chemical protections — paint sealant, rust shield, fabric and vinyl care and sound shield — are available only through new-car dealers, Fiveson said.

More recently, Polyglycoat has introduced mobile units or Polyglycoat vans that dealers can contact to provide the labor required for various programs and services.

"Our mobile units and the established Polyglycoat programs have already proved their worth in the field," Fiveson said.

"By expanding into the prep-center concept we are relieving the new-car dealer of a heavy financial and labor burden, providing quality guaranteed service and improving the participating dealer's image with his customer.

"It's a win-win situation for customer and dealer alike," he said.

According to Fiveson, approximately 10,000 automobile dealers in 50 states and seven foreign countries are selling and applying the Polyglycoat products.

Ford launches service promotion for dealerships

Contineud from Page 14

ials offered by participating dealers."

The mailing for the sweepstakes includes an official entry form, which pictures an oldtime safe. Inside a pop-open panel on the safe are three "gold bars." When scratched, the bars reveal the "secret winning combination." At a dealership, the customer can dial the combination on the display vault on the sweepstakes display and know immediately which prize he or she has won.

The sweepstakes is part of the division's Response '81 program, which consists of six direct - mail merchandising programs to owners of 1975-1980 Ford-built vehicles.

More than 4,200 participating Ford and L-M dealerships throughout the U. S. are offering service specials.

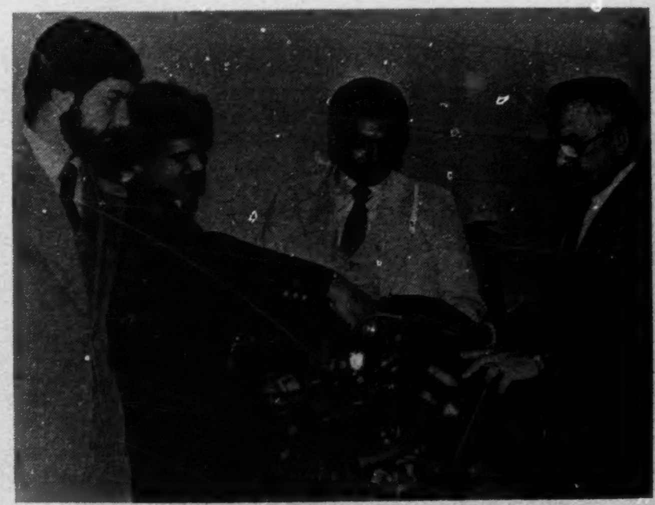
"Dealership customers may enter a second-chance drawing for all of the merchandise prizes that are unclaimed by April 30," Chave said. "About one and a quarter million people entered the second chance drawing in a similar program last year."

Last year's sweepstakes program, which drew approximately 500,000 persons to dealerships, earned the division the Gold Echo Award by the Direct Mail/Marketing Association, Inc. No purchases are necessary to win a prize in the sweepstakes.

Nevin succeeds Riley as Firestone chairman

AKRON.—John J. Nevin, 54, president and chief executive of Firestone Tire & Rubber Co., has been elected to the additional post of board chairman. He succeeds Richard A. Riley, 65, who retires March 31.

Nevin joined Firestone in 1979 as president and chief operating officer and became chief executive in 1980. He came to Firestone from Zenith Radio Corp., where he was chairman. He was marketing vice president for Ford Motor Co. from 1969 to 1971 before joining Zenith. Riley, a 42-year Firestone veteran, has been chairman since 1976.



College donation by Buick

Buick presented six automotive engines to Blue Ridge Mountain Community College, Wayers Cave, Va., for instructional use in its automotive analysis and repair program. From left are Eddie Bumbaugh, sales manager, Bumbaugh Buick, Harrisonburg, Va.; Thomas E. Mayer, assistant professor, BRMCC automotive analysis and repair program; J. C. Hill, Buick district service manager, and Dr. James A. Armstrong, BRMCC president.

Toyota getting a run for its money from Datsun in key areas

L.A., New York, San Francisco top import markets

By Joseph Bohn
Marketing Editor

The metro Los Angeles, New York and San Francisco markets are by far the three most important import sales areas, a survey of top ADI (Area of Dominant Influence) markets for five leading companies shows.

California as a whole contributed four of the top 28 markets, with San Diego ranking 13th among the top 28 and Sacramento/Stockton, 15th.

Imports, while strong in Florida, really haven't penetrated the South to any great degree. Nashville, Memphis and New Orleans brought up the rear of the 28-city ranking, for example.

Automotive News' survey was based on ADI sales figures for calendar 1980 for combined cars and trucks, supplied by leading importers. The exception is Honda, which supplied model-year sales, based on a special ADI Polk registration report which similarly takes in metro markets.

Although Toyota has traditionally been pre-eminent in top markets, it is getting a run for its money from Datsun which has narrowed the gap in a number of key areas.

Datsun, for example, outsold Toyota last year in San Francisco, Philadelphia and Seattle/Tacoma.

Partially, this resulted from its strong truck sales.

A separate table, showing a breakdown of Datsun truck and car sales in top markets, indicates that Datsun retailed 4,120 trucks in San Francisco, its second-highest market.

Again, it sold 3,349 trucks in Seattle/Tacoma against 9,665 cars, its third-strongest truck market.

By contrast, Seattle/Tacoma ranks only 11th largest when total vehicle sales for Datsun are considered.

Other particularly strong truck markets are Portland, Dallas and the metro New York (part of New Jersey) area.

A third table indicates the month-by-month sales of Toyota.

Here, the numbers reveal that imports such as Toyota tend to have fairly strong month-by-month and season-by-season sales, in contrast with Detroit's car firms which are particularly strong in fall, dropping sharply in winter, and so forth.

January, February and March actually represented three of Toyota's strongest months last year, with sales of 36,722; 39,330 and 37,657, respectively.

Only July, with 38,359 sales, managed to rank with the winter period.

Imports as a rule are more tuned to availability than to the hoop-la of a routine yearly introductory period for successful sales.

Canceled VW leases facilities to Toyota deal

TRENTON, N. J. — Autobahn Motors, Inc., which lost its Volkswagen franchise, has decided to go out of business and has leased its facilities in suburban Lawrenceville to Johnny Pann's Toyota.

Autobahn voluntarily relinquished its Mercedes-Benz and BMW franchises after losing the VW franchise following a lengthy court action (Automotive News, Feb. 9).

Deep trouble brewing for U.S. parts suppliers

Their employment may drop 400,000

By Francis J. Gawronski
Service Editor

The U. S. automotive parts suppliers are in deep trouble.

This is the conclusion reached in a new study of the automotive industry conducted jointly by the Michigan Manufacturers Assn. (MMA), and Arthur Andersen & Co., Detroit, the international accounting firm.

Based on the projection of accelerated competition from foreign parts manufacturers and the reluctance of financial institutions to provide the money needed by the auto makers and parts suppliers to build new plants and install the equipment needed to build smaller cars, the study predicted "an employment drop of up to 400,000 workers is likely to occur among U. S. auto parts suppliers, who employ two persons for each vehicle manufacturer employe."

The study, entitled Worldwide Competitiveness of the U. S. Automotive Industry and Its Parts Suppliers During the 1980s, indicated that increased competition in the parts industry, coupled with the movement of more parts manufacturers into other fields, will result in the doubling of imported parts in American-built cars by 1990.

The study used the Delphi forecasting process, which generates a consensus from a group of experts regarding future events. Top-level personnel from parts supplier companies, banks and investment banking firms, federal, state and local governments and capital equipment suppliers participated in the study.

"The survey predictions identify a need for industry, government, labor and financial community cooperation in developing solutions to auto industry problems," said John Thodis, MMA president. "The forecasts also indicate that the declining ability of the [illegible] industry to compete with foreign manufacturers may be symptomatic of other major U. S. manufacturing industry as well."

Peter Van Hull, the Arthur Andersen partner who organized the study, said the findings point up the severity of problems within U. S. auto supplier companies, which employ twice as many workers as the auto manufacturers.

"Much debate has focused on the U. S. vehicle manufacturers' problems and potential solutions, while the importance of U. S. parts suppliers has gone almost unnoticed," Van Hull said.

Like the vehicle manufacturers, parts suppliers face intensifying foreign competition, the study indicated. The competition is partially initiated by U. S. auto manufacturers who import foreign parts and establish major assembly and parts production operations in foreign facilities in order to fulfill foreign trade agreements and content laws, or produce in a less expensive business climate.

Van Hull also said solving the industry's problems will require the cooperation of labor, government, parts makers and bankers. However, he said financial institutions are very interested in providing the money.

"In light of the slow market growth, nearly half of the financial panelists do not believe the required U. S. auto industry investment to be economically feasible," Van Hull said.

Key points from the forecast

177 selections for 27 makes

Importers increase number of models

By John K. Teahen Jr.
Managing Editor

In the world of imported cars, the sales boom has been accompanied by an increase in the number of models offered to U.S. customers.

The annual AUTOMOTIVE NEWS check found that the leading imported makes had 177 selections on March 1, compared with a revised count of 156 a year earlier.

Two years ago, there were 158, and at this time in 1978 there were 150.

The current 177 selections are listed by 27 makes. Twenty-five of them were included in last year's tabulation. The newcomers are Isuzu from Japan and Rover from Great Britain. The 25 carryover marques accounted for virtually all of the imported cars sold in this country in 1980.

One of those counted last year has dropped out of the car market. Arrow, the Japanese line imported for Plymouth by Chrysler Corp., now offers only pickup trucks. Trucks are not included in this compilation.

Some of the 177 cars are 1980 models, which are still on sale. In some cases, there will be no '81; in others, the '81 hadn't been priced as of March 1.

Two-doors dominant

Two-door models (sedans, coupes, hatchbacks) dominate the import ranks, just as they dominate the domestic field. More than half of the foreign offerings are two-doors — 96 of 177. Four-door sedans are a distant second with 50.

Some of the importers call their hatchbacks three-door or five-door models. They're counted as two-doors or four-doors here because that's the number of side doors they have.

As in past years, the imports have one segment of the market all to themselves—convertibles. The domestic makers haven't offered this body style in several years, and the leading imports currently list 10.

Triumph has three of them; Fiat has two, and there is one each for Volkswagen, Alfa Romeo, MG, Mercedes-Benz and Porsche. The total includes the Fiat X 1/9, the Porsche 911-SC Targa and the Mercedes-Benz 380-SL, which are coupe/roadster units with removable hard tops.

As of March 1, the leading imports had 50 four-door sedans, 96 two-doors, 10 convertibles and 21 station wagons.

A year ago, the breakdown was 37 four-door sedans, 90 two-doors, 9 convertibles and 20 wagons.

By country of origin, Japan is the leader by an overwhelming margin. The 10 Japanese makes offer 99 models in the U. S., three times as many as the 33 listed for the West German lines.

Totals for other countries are: Sweden, 15; France, 11; Italy, 10, and Great Britain, 9.

Toyota is the individual kingpin in the model count, just as it is in the sales standings. Toyota has 27. Datsun is second with 20, followed by Subaru with 16 and Mazda with 15. Also in double figures are Honda, Mercedes-Benz and Volvo with 10 apiece.

Totals for other leading import sellers are: Fiat, 7; Volkswagen, 7; Audi, 6; Renault, 6; Peugeot, 5; Porsche, 5; Saab, 5; Triumph, 5; BMW, 4; Champ, 3; Colt, 3; Isuzu, 3; Jaguar, 2; Lancia, 2; Alfa Romeo, 1; Challenger, 1; Fiesta, 1; MG, 1; Rover, 1, and Sapporo, 1.

The Volkswagen figure omits the Rabbits made in the U. S. They are included in the domestic count. There currently are six U.S.-built Rabbit choices.

The Toyota total is higher than that of any domestic make except Ford, which has 37.

Chevrolet has 27, the same as Toyota, but its total will rise when the J-car is introduced. Pontiac, with 25, also will grow with the debut of the J-car and the T-1000.

In counting import models, AUTOMOTIVE NEWS uses the same criteria as in tabulating U. S. cars. A choice of transmissions (4-speed, 5-speed or automatic) or a choice of engines (gasoline or diesel) does not necessarily constitute a separate model.

The import total of 177 models compares with 245 at this time for the domestic makes. The domestic total will climb when the General Motors J-cars and the Pontiac T-1000 arrive and when Ford Motor's EXP and LN7 go on sale.

For the imports, 28 percent of the models offered are four-door sedans, compared with 33 percent for the domestics. The imports have a higher percentage of two-doors — 54 percent vs. 49 percent for the U. S. lines.

Wagons make up 12 percent of the import offerings and 18 percent of the domestic choices. The other 6 percent of the imports are convertibles.

All station wagons are four-door models for both the imports and the domestics. The U. S. makes had five two-door wagons a year ago (Ford Pinto and Mercury Bobcat), but they're gone now.

Here's how the 27 leading imports compare with the domestics in number of models offered:

	Imports	Domestics
4-door cars	50	80
2-door cars	96	121
Convertibles	10	0
Station wagons	21	44
Totals	177	245

Model totals for other imported makes include Rolls-Royce, 5; Lotus, 5; Bentley, 3; Aston Martin, 3; Ferrari, 3, and Maserati, 2.

Prices scoot upward in last 12 months

The average increase was $812.60, biggest increase in 12 years

By John K. Teahen Jr.
Managing Editor

Imported-car prices scooted up by sizeable amounts during the past 12 months, the annual AUTOMOTIVE NEWS analysis discloses.

The best-selling models show an average increase of $812.60, or 15.78 percent, for the year ended March 1. This is more than four times as much as the hike of $187.89 the previous year, and it also topped the boost of $690 found in the 1979 survey.

It was the greatest increase in the 12 years that AUTOMOTIVE NEWS has been making this annual industrywide check.

Inflation was a major culprit as import prices went up and up. Inflation is not an American phenomenon; it's worldwide, and the imports are affected on both sides of the pond. There are higher manufacturing costs at home, higher ocean-freight fees and higher distribution costs and other business expenses in this country.

The average increase of $812.60 was based on a comparison of 68 models offered by 13 makes. Cutoff point was $7,500. Cars in this group accounted for 71.5 percent of the imported autos sold in the U. S. last year.

Each year in reporting on the price check, it's necessary to say a word about the cutoff point for the so-called "popular-priced" models. It's now up to $7,500. That's high, but as any customer knows, the under-$4,000 new car is gone, and the under-$5,000 car is fast disappearing. This applies to both domestic and imported models.

Only 8 below $5,000

Among the imports, there are only eight models priced below $5,000, and several of them will move over that figure in the next price increase. The import price leader is the Subaru standard hatchback at $4,399.

A year ago, incidentally, there were five imports below $4,000. Now there are none.

The 68 models in the under-$7,500 comparison are offered by Toyota, Datsun, Honda, Subaru, Mazda, Fiesta, Champ, Colt, Renault, Fiat, Sapporo, Challenger and Triumph.

Eight of the 13 makes show increases above the $812.60 average, with Mazda leading the pack at $1,171. Honda, up $1,071, was next.

(After the survey was made, Mazda raised prices another $200 on the models in this segment.)

Chrysler Corp.'s sporty coupes, the Dodge Challenger and Plymouth Sapporo, rose $895 and $885, respectively. The average hike was $850 for Fiat and $841 for Datsun.

See price list on E-12.

Plymouth Champ and Dodge Colt just about hit the average on the nose with boosts of $814.

Below-average increases were made by Renault, $660; Subaru, $668, and Toyota, $758.

Triumph Spitfire is unchanged since last year, and Ford Fiesta is up $241. However, these are 1980 models. There will be no 1981 Fiesta, and the '81 Triumph had not been priced when the check was made.

These increases apply only to the models priced below $7,500. In the case of makes that also offer more-expensive units, the average for the entire line would generally be higher.

Volkswagen Rabbit hatchbacks were not included in the study because all of them (gasoline and diesel) were made in the U. S. during the period covered. For the record, the Rabbit increase averaged $826, about the same as the average for all the imports checked.

Imported cars in the medium-price range—$7,501 to $15,000—have gone up an average of $1,067.34, or 11.72 percent, in the past 12 months. A year ago, the survey found a boost of $839.20, or 10.49 percent, for this group.

This comparison included 39 models offered by 15 makes. The medium class garnered 24.5 percent of import sales in the U. S. last year.

In the group are all models offered for the entire period by Audi, Alfa Romeo, Lancia, MG, Peugeot, Saab and Volkswagen. (All imported VWs are in this category.) The BMW 320i and Volvos below the GLE series also fall in this segment.

Medium class

The medium class is far-reaching, embracing the more luxurious (and more expensive) series of marques in the popular-price field. Cars like the Datsun 280-ZX, the Fiat Brava, X 1/9 and Spider, the Honda Prelude and top-line Accords, the Mazda RX-7, the Toyota Celica Supra, Corona Luxury Edition and Cressida and the Triumph TR-7 and TR-8.

Nine of the 15 makes in the medium-price comparison have increased prices more than the average of $1,067.34 for the entire group. Biggest boost was $2,480 on the Alfa Romeo Spider Veloce convertible, the only model Alfa is pricing these days.

Elsewhere, average hikes were $1,838 for Saab, $1,528 for Toyota, $1,462 for the single Peugeot compared, $1,381 for Volvo, $1,350 for Mazda, $1,260 for Honda, $1,150 for Datsun and $1,085 for BMW.

(After the survey was made, Mazda raised prices another $400 on its RX-7 models.)

Below-average boosts were registered by Audi, up $405; VW, $699; Lancia, $772, and Fiat, $775. Triumph and MG are unchanged from a year ago, but the figures are for 1980 models. The '81 Triumphs have not been priced, and MG production has ended.

For the luxury class — imports priced at $15,000 and above —the study showed an average increase of $2,235.96, or 8.47 percent. This was less than the year-ago hike of $3,953.92, or 17.65 percent.

The luxury comparison included 23 models offered by Mercedes-Benz, BMW, Porsche, Jaguar and Volvo. The luxury class had 4 percent of the import market in the U. S. last year.

By makes, increases averaged $4,550 for Jaguar, $2,655 for BMW, $2,617 for Mercedes-Benz, $1,970 for Volvo and $457 for Porsche. Some 1981 Porsches had not been priced as of March 1. For Jaguar, one model was a 1981 vs. a 1979 (the '80 hadn't been priced at this time last year), and the other Jaguar was an '80 vs. a '79.

Some other makes now have models in the $15,000-and-up class (Audi, Peugeot, Rover, Saab), but they were not on the market a year ago and thus could not be used in this comparison.

In each of the three classes—popular-priced, medium-priced and luxury—the AUTOMOTIVE NEWS analysis was based on comparable models, those that appear in the current and year-ago lineups of a particular make. In a few cases, models that occupy the same relative position in a maker's lineup were used.

Prices considered were Manufacturer's Suggested Retail Prices or Port of Entry prices. Where prices differ by geographical areas, East Coast prices were used.

Data on changes was based on an arithmetical comparison of prices in effect on March 1 of this year with those in effect a year ago. There was no sales-weighting, and no adjustment was made for year-to-year equipment changes.

Import sales slow up in '80

All Japanese makes but Mitsubishi gain

By Kathleen Hamilton
News Editor

Import-car dealers had more than high floor-planning costs to take the glow off those rosy, record-breaking 1980 sales figures.

Dealers for nearly half the Top 20 import makes averaged fewer sales in '80 than they did in '79. And the import makes that did boost their average sales per outlet didn't make the big leaps that have been common in recent years.

The gainers this year included all the Japanese makes except Dodge's Mitsubishi-built Colt. Dealers whose averages showed the biggest losses sold MGs (now out of production in England), Renaults (as American Motors dealers by the hundreds were added to the network, dragging down the sales average) and Fiats (whose sales nosedived nearly 37 percent from '79 levels.)

Japan's Big 3

Toyota dealers fared best in 1980. Their average sales increased 56 units over last year's record.

In the 22 years that Automotive News has been compiling the average sales of import dealers, there was only one year and one make above the Toyota dealers' 1980 record of 541 sales. The year was 1968. The make was Volkswagen. The record: Only one more sale per outlet, 542.

Toyota took over the No. One spot in the sales-per-dealer list from VW during 1975. It has held onto it ever since, with the exception of 1979, when Honda inched into the lead.

Honda dealers had their sixth consecutive record year in 1980, averaging 496 sales each. That was eight more sales than in '79, but it didn't keep pace with Toyota's increase of 56.

Datsun retained its No. 3 spot as its dealers averaged 30 more sales in '80 than they had in record-breaking 1979.

After the Big Three of the imports closed their books for 1980, their dealers' average sales differed by only 66 units.

European losses

Volkswagen dealers, even when bolstered by Westmoreland Rabbits, averaged 264 sales in '80—211 cars less than the third-ranked Datsun, and 10 units fewer than in '79. Still, VW held onto its No. 4 spot on the list.

Porsche dealers averaged 11 fewer sales than in 1979, and Audi dealers were down only one unit.

The biggest loser on the '80 sales-per-dealer list was MG, off 31 from last year. But the second half of the year brought some good news for those carrying the discontinued model: Sales averaged 25 in the second half, compared with only 15 in the first.

And since the vast majority of MG dealers also handle Triumph, that make's year-to-year increase of eight sales per dealer also helped mitigate the MG loss.

Fiat dealers weren't as well off. Their average sales declined 29, even in a year when the dealer network declined 9 per-

Your Saabs look better, with Bosch

Bosch fog lights offer your customers a degree of safety *and* styling simply not available with conventional headlights. But they won't buy what they can't see. So be sure to install these handsome lights on every car in your showroom.

To help boost sales of this profitable option, Bosch designed a customized showroom display for all the cars listed below. Each attractive display comes with informative brochures to help you close the sale.

Car with Bosch fog lights off. Start of "S" curve visible.

Same car with Bosch fog lights on. Complete "S" curve visible.

Bosch beam 60% wider

Bosch fog lights (legal in all 50 states) improve visibility in every kind of bad weather. A bright beam cuts underneath, skimming the pavement and reducing the dangerous glare of reflected light.

Even in clear weather, visibility can be a problem on narrow twisting roads. The extra-wide Bosch beam sweeps the road for a full 108°. That's 60° wider than conventional headlights.

As for appearance, Bosch designed their lights to give that stylish, factory-installed look that adds so much to a car's appeal.

Tested by manufacturer

Bosch fog lights are approved for dealer installation by all of the following automobile manufacturers: *Alfa Romeo, Audi, BMW, Fiat, Jaguar, Lancia, Mazda, MG, Peugeot, Porsche, Saab, Subaru, Toyota, Triumph, Volkswagen, Volvo.*

Each manufacturer tests Bosch fog lights to assure compliance with their own stringent quality standards. They also review and approve installation instructions in detail.

That's why you and your customer can rely on instructions specifically written to suit the electrical systems of

cent. Like most import makes, Fiat's second-half sales per dealer (26) fell short of its first-half total (35).

The other big loser in 1980 was the Renault network, with sales-per-outlet down 20 from the '79 total. That's the lowest Renault average since 1964.

But the good news is that Renault's year-to-year sales actually increased—by more than 34 percent. They just didn't keep pace with the 78-percent increase in the number of Renault dealers, as AMC and Renault prep their network for the '82½ Renault that is to be built in large numbers at Kenosha, Wis.

Dealers suffering small losses in '80 handled Saab, down an average of two sales per outlet; Ford's German Fiesta, down an average of one sale, and Dodge's Mitsubishi-built Colt, down three.

Top 20

Dodge's other captive import, Challenger, didn't make the Top 20 list.

The list is comprised of the 20 makes with the highest average sales per franchise but excludes those makes selling less than 6,000 units a year. Challenger and Plymouth's captive Saporro sold enough but didn't make the Top 20.

Top 20 sales represented 98.8 percent of all import-car sales in the U. S.

Average sales for the Top 20 were the lowest since 1976.

Even so, there were seven records set: Honda, Toyota and Datsun have already been mentioned.

Subaru's 191 was up 16 from its 1979 record, making 1980 the sixth consecutive record year for its dealers.

Mercedes-Benz, with 132 was up two from its 1979 record; BMW, with 103 was up five from 1979's record high, and Peugeot, with 42, tied its record totals of 1979 and 1975.

Other makes to register gains without setting records were the Plymouth Arrow/Champ, up five from the '79 average, and Volvo, up four.

Mazda and Peugeot registered no changes in sales per outlet from '79.

In the U. S. market including both domestic and import sales per outlet, Toyota was the leader by a wide margin. Imports captured the first three spots in sales per dealer among all cars sold in the U. S. in 1980.

Toyota averaged 541 sales per outlet last year, followed by Honda with 496 and Datsun with 475.

Chevrolet, the domestic pacesetter with 303, was fourth overall. Volkswagen was fifth with 264. The VW total includes U. S.-built and imported models.

Rounding out 1980's Top Ten were Oldsmobile, Buick, Mazda, Ford and Pontiac.

In 1979, Honda was the leader in sales per dealer with Toyota second and Datsun third.

SALES PER OUTLET

Peugeot adds six more dealers

LYNDHURST, N. J.—Peugeot has added six dealers in five states. The newly franchised outlets are:

Bob Marco Buick, Inc., Houston; John Sardis, Houston; Shelby Motors, Inc., Champaign, Ill.; Superb Motors, Nashville; Bart Roach Datsun, Little Rock, and Trice Juron Ford, Saratoga Springs, N. Y.

VW building the world car

Continued from E-8

country-by-country breakdown of where Volkswagenwerk AG vehicles are built:

West Germany—Derby, Polo, Golf, Jetta, Transporter, Transporter Lasten and MAN trucks, Passat, Audi 80 (Audi 4000), Scirocco, Rabbit convertible, Audi 100 (Audi 5000), Audi 200 (Audi Turbo), Audi Avant (a hatchback Audi 5000), Audi Coupe, Audi Quattro, (a powerful rally car) and the Iltis (a four-wheel-drive off-road vehicle).

United States—Rabbit and Rabbit pickup.

Brazil—Beetle, Brasilia (a hybrid) and Beetle, Gol (Rabbit type with an air-cooled, front-drive, front-engine), Passat (Dasher) and Commercial (Type 2).

Mexico—Beetle, Brasilia, Caribe (Rabbit), Safari (Thing) and Commercial.

Argentina—Beetle, Passat, Audi 4000, Audi 5000, Type 2—van, bus, pickup.

South Africa—Golf, Passat, Audi 4000, Audi 5000, Jetta and Commercial.

Nigeria—Beetle, Brasilia, Passat and Audi 100 (Audi 5000).

Belgium—Passat and Golf.

Yugoslavia—Golf and Jetta.

Ford Argentina plans $25 million painting facility

BUENOS AIRES. — Ford Argentina plans to build a $25 million auto paint plant at the Ford facility at General Pacheco, north of here.

The company said the paint plant, due to open in early 1982, will use the same technology employed by Ford in the U. S. and Europe.

The plant brings to $491 million the funds Ford plans to reinvest through 1984 to expand output. A $197 million truck and utility vehicle plant in General Pacheco also will open in 1982.

In late December, Ford Argentina also launched a new car model, the Taunus 81, a local version of the Taunus manufactured by Ford in West Germany and the Italian-made Ghia.

Ford now holds nearly 40 percent of the Argentine vehicle market. The firm produced 104,141 of the 264,376 vehicles manufactured during the first 11 months of 1980, compared with 78,753 of 235,891 during the same period in 1979.

The firm's output is expected to surpass 110,000 units in 1981.

your customers see better
fog lights

Saab

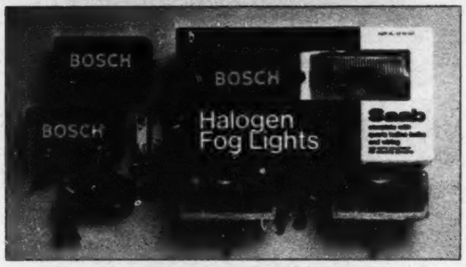
Fog Lights

the cars you sell. Illustrations clearly show where to mount the lights, which wires to connect and where to connect them. You even get directions on aiming lights for maximum performance.

Parts supplied for easy installation

Most other fog lights are sold without the hardware needed to install them. In the Bosch kit you get a pre-wired harness containing relay, fuse holder and toggle switch. You get bulbs, connectors, grommet, washers, screws. For most makes and models this is all the hardware you need for *immediate installation.*

These easy-to-install kits will appeal both to your busy service people and to the customer who enjoys doing it himself.



Handy customized Bosch Fog Light Kit contains hardware needed for immediate installation

How to sell more fog lights

Bertles Imports, of South Bend, Indiana, has sold Bosch fog lights for over 10 years. Here are a few things Bertles sales and service people have found successful in stimulating customer interest.

1. Have every salesman install Bosch fog lights on his own automobile. This will afford personal experience with the product so he can talk with conviction.
2. Have the lights installed on all demonstration models. There may not be many opportunities to use them but they give every car that high performance look.
3. Recognize that prime prospects are rural customers and others who need that extra-wide Bosch beam especially on poorly-lit or winding roads.
4. Sell a customer once and chances are he'll want a set of Bosch fog lights on every car he buys. Repeat sales will be a big part of your business.

Order your free Bosch fog light display

If you sell any of the automobiles listed here, contact your vehicle manufacturer's parts department for Bosch fog lights and your customized showroom display.

The warning: Many parts makers face extinction unless they move to globalize their industry now

By Francis J. Gawronski
Service Editor

DEARBORN. — An alarming picture for the automotive components industry was portrayed here by Henry P. Allessio, senior vice president, Hayes/Hill, Inc., a New York based international management consulting firm.

Speaking to the Automotive Market Research Council, Allessio warned that many of these manufacturers face corporate extinction if "they continue in the same way with their products, businesses and geographic markets of today."

This in part, he said, is the driving force behind the technological, marketing and competitive trends evident in the world auto industry.

Allessio, however, offered a solution to the problem facing the automotive components makers by suggesting that the key to avoiding corporate extinction is — what he terms — "globalizing."

U. S. auto component makers are now pressured by two significant trends which, Allessio said, are symptomatic of a general globalizing of industry: One, the growing corporate investment in America by overseas auto and auto parts makers and, two, concurrently, the increase in imported components by original equipment manufacturers (OEMs).

Foreign trend

Total foreign investment in the U. S. has increased sharply since 1973—from $20.6 billion to $39.7 billion in 1978, he said. The automotive industry has been one of the active segments.

Allesio said a recent Hayes/Hill analysis of more than 70 foreign investments in the U. S. in the auto components industry produced some interesting trends.

He said 75 percent of the investments were European (with 70 percent of this total being German or British), while the remainder of the investments were Japanese.

The majority of the German investments and virtually all Japanese investments were in plant startups or the acquisition of facilities, as opposed to the majority of other European investments, including the United Kingdom, which have been acquisitions or equity joint venture participation.

Allessio said the supporting reasons for corporate foreign investment are many. Some of these, he said, include:

1. Many overseas parts manufacturers are investing in the U. S. because some of their own OEMs such as Volkswagen and Honda have built American plants and they want to service these customers better. This is tactical. There are, however, more and deeper reasons for U. S. investment.

2. Generally, local markets for foreign components suppliers are far more limited in size and growth than the U. S. market.

3. Alternative geographic markets (i.e., countries other than the "home" country of the components suppliers) tend to be either small or parochial in nature relative to the U. S.

4. Detroit's shift to compact cars has increased demand for parts the Japanese and Europeans have long been producing and selling worldwide.

Free enterprise

5. The free enterprise system in the U. S. is more supportive of marketing activities here than in other countries. Market entry is relatively easy. Entry options are broad and include acquisition, joint venture, licensing, construction of new facilities, product sales and distribution.

For example, he said, 50 Japanese parts makers already have some representation in the U. S., according to Japanese Auto Parts Industries Assn. (JAPIA). Eighty percent of their total component sales are to either U. S. or Japanese OEMs.

Also, the Japanese have opted for many means of entry. Of the 1,000 licensing agreements between Japanese auto parts companies and foreign companies, over 600 are with American partners, including Borg-Warner, Eaton and TRW.

Also, key Japanese firms have either built facilities here or are presently contemplating such action. Included are potential competitors of U. S. firms such as NGK Spark Plug, Nippon Oil Seal Industry, Izumi Motor, Nippon Cable Systems, Yuasa Battery and Stanley Electric, he said.

6. Management freedom is greater than in the rest of the industrialized world. This is particularly attractive for German companies, accustomed to co-determination, as domestic companies generally don't have worker participation on boards of directors.

7. The U. S. is perhaps the safest "haven" for investment capital in the world.

8. Ante cost can be relatively low and capital more available.

9. Investment in the U. S. also provides a hedge against the threat of import quotas.

10. Successful acquisition and ventures by foreign companies in the U. S. have fed on themselves and attracted still more interested companies to the arena.

The increase of imported components by U. S. OEMs has become a sensitive issue, according to Allessio.

"The three top American auto OEMs produced nearly nine million cars in 1979," he said. "To do this they spent over $50 billion a year for parts. No one knows exactly what percent is for imports, but all agree it is rising. It could be 10 percent by 1985 and 15 percent by 1990.

"We are talking about a $5 to $7.5-billion market," Allessio said. "Compare the purchases of domestic components by foreign OEMs. They buy in the million, not billions." (Refer to Chart One.)

Imported components

Looking at all forms of imported components, Allessio said there has been a 24 percent yearly growth since 1973. Japan represents nearly half and has grown at 30 percent per year.

Further analysis shows a big share of imports is knockdown units and the vast majority of the remainder is for production or OE use.

U. S. auto OEMs are now thinking in terms of a "world car" which can be assembled and marketed in different geographic areas. The reasons to import parts for a U. S. version, according to Allessio, are many. These include:

1. As with foreign investment, European and Japanese companies are experienced in manufacturing for the new down-scaled U. S. models.

2. Adding to the dilemma for U. S. manufacturers, GM and Ford both make many parts themselves in Europe and undoubtedly will use them for the smaller American cars when possible.

3. A big attraction of imports is low cost foreign suppliers who have often more efficient capacity and lower wage rates which undercut the competitiveness of U. S. suppliers.

4. Adding further to the problem for U. S. components makers is that the Big Three have been weighing huge investments in their own parts plants here and abroad against purchases of pieces. Often the U. S. investment appears more expensive. Many financial analysts see this trend as a short-term survival technique.

Capital drain

Analysis shows that imported production, or OE, components are mostly for Ford and Chrysler, who are trying to minimize capital drain, Allessio said. In only a few instances has GM imported parts for U. S. assembly.

However, in many cases the common ground seems to be technology, e.g., small car componentry, diesel engines and products for autos not trucks, front-wheel-drive configurations and rack-and-pinion steering units, he said.

The American auto industry, including the aftermarket, according to Allessio, is rapidly maturing, complicated by foreign companies which, in a fever pitch, are jockeying for positions in the worldwide lineup.

As the industry shakeout worldwide accelerates, Allessio said companies which do not strive for international positions will be seriously threatened.

Though globalizing is but one environmental force impacting the auto components industry, he urged auto companies to analyze specific issues and make difficult decisions in order to participate successfully in the future market.

Bigger market

"Components suppliers must recognize their market as all world vehicles lest their businesses atrophy to only domestic markets," he said. "This domestic-only position risks being a temporary survival measure.

"A foreign supplier could succeed in globalizing, create a comparative advantage that displaces parochial domestic suppliers. This is essential for OE suppliers.

"If you supply the aftermarket you should, at a minimum, broaden coverage to all world vehicles registered in the U. S.," Allessio said.

He recommended an analysis of future market demand be done with new techniques to defend against new suppliers.

He also stressed the need to invest in product and process development and cautioned the aftermarket supplier "not to fall asleep at the switch" as the OEMs did in the mid-1970s when their retooling efforts were not responsive to the market.

Allessio said analysis of delivered costs is a worthwhile exercise and that marketing, distribution and product development may be more critical than production costs.

Move facilities

He recommended moving facilities to the market as the answer for some products and, for others, the critical issue is adapting to a worldwide marketing function.

"I want to leave you not only with the fact that foreign companies are in your market in force, but also that there is a strategic gravity associated with their presence," he said. "They are not only surrounding us; they are holding our historical trump card — technology. (See Chart Two.)

"I call it the triple whammy. The importer/distributors have $6-700 million in sales. The imports of OE components are growing at 24 percent per year and projected to gain further inroads. Investments — acquisitions, new plants and joint ventures—are growing.

"If you expect history to repeat itself at least in the short term, this trend will continue," he said. "Success means knowing the competition—and your place in it."

Allessio posed questions to the components industry which he said may provide clues to a company's ability to survive.

Answers to these questions, he said, should identify sustainable comparative advantage, the merits of acquisition or internal development of technology, the rationale behind changing from aftermarket to OE, and the requirements for entering a foreign market alone or in partnership with a foreign company.

This, he said, is information companies must analyze to compete in today's global business.

The total only decreased 1.4 percent in '80

Import dealers hang tough

By Kathleen Hamilton
News Editor

The import-dealer networks throughout the U. S. hung tough in 1980, despite huge losses of the domestic-car outlets which carried captive imports.

The import-dealer total was 16,681 on Jan. 1 of this year, compared with 16,919 a year earlier, AUTOMOTIVE NEWS reported.

The total decreased only 1.4 percent in 1980. The numerical loss was 238. In light of skyrocketing floor-planning costs and a mortality rate of 6.9 percent in the domestic-car dealership population, the import dealers had a pretty good year.

According to the annual AUTOMOTIVE NEWS census, domestic dealers handling non-captive imports swelled enough to almost cover the 8.7-percent decline in the number of domestic dealers carrying captive imports.

The captives — Ford Fiesta, Plymouth Arrow/Champ and Sapporo and Dodge Colt and Challenger — are the import makes built by companies owned in part by a domestic maker and whose U. S. distribution is controlled by the U. S. partner.

The AMC-Renault partnership therefore doesn't qualify Renault as a captive.

The domestic dealerships carrying captives declined by 862 during 1980. That compares with a decline of 1,607 among all U. S.-car dealerships during the year.

Fiesta lost the most franchises in 1980 — 507. That was greater than the attrition among the total Ford Division dealership population, which declined 417 last year.

But the Chrysler Corp. dealers who carried captives did better than those without. Colt/Challenger outlets declined 207 during the year, while the total Dodge dealership count was down 293. And Champ/Arrow/Sapporo franchises were down 148, compared with a loss of 311 in the total Plymouth network.

Renault, Rover expand

On the plus side of the ledger, Renault upped its dealer count 573, as AMC dealers signed on. When 1979 closed, Renault's dealer network was the 10th largest among all imports. But at the end of '80, it was No. 4, right behind the captives.

Most of Renault's 1980 additions were AMC outlets, which boosted the total of domestic-import duals.

Another factor also helped offset the losses caused by the extensive closings of U. S.-car stores that carried captives.

This was the increase in the number of single-line import deals. West German makes logged 15 more exclusives in '80 than in '79, bringing their single-line dealership number to 504.

More Japanese exclusives

Japanese-car lines did even better, increasing their exclusive-dealer total 118, to 2,057.

Each of the Japanese noncaptives increased its exclusive-line deals. Toyota now has 699 exclusives, 64 percent of its total network; Datsun has 648, for 60 percent; Honda, 310, for 40 percent; Subaru, 296, for 39 percent, and Mazda, 104, for 14 percent.

Other lines with large numbers of exclusive deals are Volkswagen, 354, for 35 percent of its total, and Fiat, with 117, for 20 percent of its total.

In all, 46 percent of the noncaptive Japanese-car dealerships are exclusives. Only 12 percent of all European-car dealerships are exclusives.

Eight records in '80

Eight makes turned in record numbers in franchise totals. Six of these broke records set in July, 1980: Renault's 1,302 franchises was an increase of 145 from that census; Toyota's 1,085 was an increase of six; Honda's 769 was up 9; Mazda's 764 was up four; Subaru's 750 was up five, and BMW's 370 was up 11.

The other two records were really ties with earlier alltime highs: The Mercedes-Benz total of 409 matched a January, 1980, high, and the Rolls-Royce total of 67 matched the alltime high set in July, 1979.

TVR wasn't included in this year's census; TVR Engineering in England plans to rework its dealer network when its new Tasmin hits the U. S. shores, perhaps yet this year.

The Top 10 import franchise list at the end of 1980 looked like this: Fiesta, Colt/Challenger, Arrow/Champ/Sapporo, Renault, Datsun, Toyota, VW, Honda, Mazda and Subaru.

A year ago the order was Fiesta, Colt/Challenger, Arrow/Champ/Sapporo, Datsun, Toyota, VW, Mazda, Honda, Subaru and Renault.

First signs at Geneva Auto Show

Europeans beginning to fight back

Continued from Page 43

establish BL in the big German market.

That other product of the UK taxpayer, the DeLorean, made its long-awaited European bow. There is no doubt that photos do not do justice to the stainless steel finish, and it is a fine looking car.

• It is Daimler-Benz's intention to offer its world-first air-bag system as an option on all models. Initially, however, it will be offered only on the S-class, starting from July this year.

It will go into all European markets—at a price in the region of $800—but not in the U.S. until it is required by the regulations.

Daimler-Benz carried out some 2,000 dynamic tests in the 10-year period to 1980, and is clearly convinced of the unit's efficiency.

It uses a gas produced by a solid propellant to inflate the bag, which is activated by an electric trigger.

Daimler-Benz considers it only as a complement to the standard inertia reel belt.

• If Daimler-Benz's safety systems were futuristic, so was some of the styling coming out of Ford, and in particular its Ghia design studios in Turin.

There were three examples of the group's work. While none is for production, each showed imagination in tackling some of the problems which auto makers are facing.

Avant Garde was a two-plus-two based on the Escort. It featured enclosed rear wheel arches and deep sides, a side elevation like an upturned bowl and a steeply raked screen.

Alongside was an eye-catching version of the mid-engined AC Cars 3000ME sports car. It has its origins dating back to the 1978 Turin show sports racing car, but updated with the use of the mechanical components of the AC.

Larger wheels and tires were fitted to an otherwise standard car. Then Ghia's Filippo Sapino clothed it with a very sleek all-steel body with wedge shape and high tail.

AC's 3000 dates back to the early '70s. It is in limited production using a Ford Essex V-6 mounted across the middle of the chassis and behind the driver.

Prize for the weirdest of Ghia's creations for Geneva went to the vehicle called Cockpit. It was a three-wheeler (two at the front) with space for two line-astern. It brought back memories of the horrible little Messerschmitt bubble cars of the early postwar years.

But any vehicle with a projected stop-start city driving consumption of 95 MPG has to be taken seriously, and that was what Cockpit was all about.

Power source was a 200cc (12 CID) air-cooled Piaggio gasoline engine which drives the rear wheel. Alternatively, says Ghia, it could be powered by an electric motor or one of the alternative power sources now being researched by Ford.

It had a triangular chassis, an upwards-opening roof/door and weighed 770 pounds.

• The other Ford prototype was Probe, first seen at Frankfurt in 1979 and now transformed to a working prototype. It is based on the mechanical components of the Ford Mustang, The test program in the U. S. was suspended just to show the car at Geneva.

Another Italian stylist created plenty of interest, as ever it does when fine styles are talked of. Pininfarina's gem for the Geneva show was the Quartz, based on the Audi Quattro four-wheel-drive which was the star of the show a year ago.

Pininfarina adopted a whole range of lightweight materials for the Quartz—Kevlar, honeycomb, carbon fibres, metal-plastic laminates and polycarbonates.

Prototypes such as these are often a long way from reality.

But prime example of the way the Italian houses' abstract ideas get turned into reality could be found on the stand of Pininfarina's great rival, Ital Design.

Ital's Ace of Clubs of two years ago turned up as the Isuzu X-car, a fully engineered machine that goes into production in Japan in May. It is known as X because the Jappanese company has yet to announce it officially.

• By any standards it was an impressive - looking production car. It was a sleek coupe that will be powered by 135-HP, 120-HP and 115-HP twin-overhead camshaft engines. Five - speed manual or automatic gearboxes are used.

Isuzu is said to be working on a turbocharged diesel version as well.

Word is that Isuzu will initially start building the car at a rate of 3,000 a month. This will build up to 5,000 monthly within the year, when exports to Europe and the U. S. will begin.

Opel's wagon entry

Opel Voyage station wagon is based on the large Commodore sedan. With Mercedes-Benz, Volkswagen and Ford already in the market, an Opel wagon was considered long overdue.

NUOVA Lamborghini

A glance at the past

Running against the current tide which favors small, economical machines, this Lamborghini Jalpa was displayed at the Geneva Auto Show.

Sign of the times

Zagato, a custom body builder known in the 1950s and 1960s for its ultra-sleek styling, displayed this chunky electric car for in-town use at the Geneva Auto Show.

Rate of decline is lowest since last June

Truck sales sag eases in February

Continued from Page 8

down 12.7 percent, 45,155 versus 51,748.

Big Three dealers retailed 18.4 percent fewer trucks in February than they did a year ago, 146,129 versus 179,112. The two-month total was down 24.6 percent, from 367,443 units a year ago to 277,007.

Ford sales during the month topped Chevrolet"s by more than 5,000 units, but the latter's strong showing in the first month of 1981 kept the GM nameplate in the No. 1 spot through February.

Ford dealers retailed 59,896 vehicles in February, off only 8.3 percent from last year's 65,283. The total included 6,904 Courier compacts, compared with 7,609 in 1980.

The two-month total climbed to 108,742 units, a decline of 22.2 percent below the year-earlier 139,702. Dealers sold 11,563 Couriers through February, down 25 percent from last year's 15,400.

During the month, Chevrolet dealers retailed 54,788 vehicles, a decrease of 23.6 percent from the year-earlier 71,715. Included in the total were 5,342 LUV pickups, off almost 40 percent from last year's 8,722.

Chevrolet"s two-month total stood at 109,368 units, down 25.3 percent from the year-ago 146,476. LUV sales through February were off almost 36 percent, from 18,209 in 1980 to 11,708.

• Dodge and Chrysler - Plymouth dealers sold 18,256 units in February, a drop of 24 percent below last year's 24,029. Sales of both the Ram-50 and Arrow pickups were down from a year ago. The Ram-50 total was 4,031, compared with 4,365 in 1980. The Arrow count was down from 2,101 in 1980 to 1,380.

Two - month sales at the Chrysler outlets were down 31.6 percent, from 44,506 a year ago to 30,457. Included were 6,213 Ram-50 sales, compared with 7,944 in 1980, and 2,129 Arrows, as against 3,809 a year earlier.

February sales at GMC dealerships were off 27.1 percent from a year ago, 13,189 units versus 18,085. The two-month total of 28,440 units was 22.6 percent lower than last year's 36,759.

Sales of Jeep four - wheel-drive vehicles in both February and the two months were down significantly from a year ago.

During the month, dealers retailed only 3,695 units, off 54.8 percent from the year ago 8,168. Through February, the total was 8,132, a decline of 53.1 percent from last year's 17,339.

Mercedes - Benz of North America reported increases for both February and the two months. The February total of 301 units was 6.7 percent higher than the year-ago 282, and the two-month count was up 13.4 percent, from 506 units in 1980 to 574.

• Toyota was the only one of the three non-captive compact-pickup makes to report a decline in sales in February. All three, however, had lower two-month totals than a year ago.

Datsun dealers retailed 10,806 units during the month, an increase of 2.2 percent over the year-ago 10,573. The total through February was 18,056, off 14.3 percent from last year's 21,076.

February sales of Toyota trucks dropped 30.6 percent below last year's mark, from 15,131 units to 10,502. The two-month total of 20,160 vehicles was 28.1 percent lower than the 28,025 retailed in the like period in 1980.

Mazda dealers sold 1,185 units during the month, a gain of 9.8 percent over the year-earlier 1,079, but the two-month count was down 1.4 percent from last year, 1,875 versus 1,902.

From 78½ days to 59 in a month's time

Rebates slash new-car inventories

Continued from Page 1

industry had only a 42-day supply of subcompacts March 1, compared with a 71½-day stockpile a month earlier.

The industry had a 62-day stock of compacts, down from 86 days; a 69-day supply of intermediates, down from 91½ days; a 67-day inventory of standards, off slightly from 68½ days, and a 58-day supply of luxury cars, down from 61 days.

The March 1 inventory was divided this way among market classes: Subcompact, 18.54 percent; compact, 30.03 percent; intermediate, 32.01 percent; standard, 13.71 percent, and luxury, 5.71 percent.

A month earlier, the inventory was divided this way by size class: Subcompact, 20.60 percent; compact, 29.65 percent; intermediate, 32.32 percent; standard, 12.50 percent, and luxury, 4.93 percent.

The March 1 days-supply figures by market class were:

Subcompact—Monza, 26; Sunbird, 26; Bobcat, 31; Chevette, 32; Escort, 41; Pinto, 47; Lynx, 50; Spirit, 52; Horizon, 54; Omni, 55, and Rabbit, 58.

Compact—Skylark, 37; Omega, 47; Volare, 50; Aspen, 50; Zephyr, 52; Concord, 55; Capri, 57; Eagle, 59; Phoenix, 61; Reliant, 66; Citation, 66; Camaro, 67; Mustang, 72; Firebird, 72; Aries, 72½; and Fairmont, 76.

Intermediates—Regal, 48; Supreme, 50; Cutlass, 52; Grand Prix, 64; Thunderbird, 71; XR-7, 75; Monte Carlo, 75; Cougar, 76; Century, 76; Diplomat, 80½; LeBaron, 84; Cordoba, 87; Malibu, 92; LeMans, 94½; Granada, 103, and Mirada, 107.

Standard—Olds 98, 43; Olds 88, 44½; Gran Fury, 54; Mercury, 56; LeSabre, 60; Chrysler, 61; Electra, 63½; St. Regis, 66; Chevrolet, 80½; Ford, 84, and Pontiac, 86.

Luxury—Eldorado, 50; Cadillac, 52½; Toronado, 52½; Riviera, 55½; Mark VI, 56½; Lincoln, 59; Seville, 72; Corvette, 74, and Imperial, 176.

Jones & Sons sets up its own sales network

RIVERSIDE, Calif.—Jones & Sons Coachbuilders, Inc., announced it broke with the sales firm which handled its Cadillac and Lincoln limousines and customized Cadillacs and is now selling its products directly.

Jones & Sons has established several distributorships to handle sales and service of its vehicles.

Reagan budget tags $100 million to replace cars

WASHINGTON. — One line item in the Reagan budget which cuts and cuts and cuts is the retention of $100 million for the government to buy motor vehicles from the beleaguered industry.

"The original proposal, which would have replaced all motor pool vehicles over five years of age, will be changed to include replacing some leased vehicles with new vehicles," it says.

"These purchases of new vehicles will assist the automobile industry during a particularly difficult period."

But output trails year-ago period

Auto production moves up for week

By Patricia Hoffman
Staff Writer

U. S. auto production last week was nearly 10 percent below that of the comparable 1980 week, but the total rose above the previous week's output.

The auto makers slated production last week at 140,039 units, an increase of 4.53 percent from the 133,968 completed in the previous week and down 9.57 percent from the 154,857 cars assembled in the comparable 1980 week.

So far this year, the auto makers have built 1,217,326 units, a 17.18 percent decrease from the 1,469,810 units assembled in the comparable 1980 period.

Breakdown of last week's total by companies was: General Motors, 58.80 percent; Ford Motor Co., 23.41 percent; Chrysler Corp., 13.71 percent; American Motors, 1.07 percent; Volkswagen of America, 2.97 percent, and Checker Motors, 0.04 percent.

General Motors said that production of the company's new J-cars will begin today (March 16) at Lordstown. The first J-car is expected to come off the assembly line one day this week.

Assembly of the J-cars at the GM Southgate point is scheduled to begin at the end of March. However, preparations for production of the cars at Southgate have begun.

Chrysler Corp. announced that all of its U. S. car assembly plants are scheduled to work this week, making it the fifth consecutive week of full production to meet a higher rate of dealer orders.

Chrysler's Belvidere plant scheduled overtime last week for both shifts. Also at Belvidere, today (March 16) will begin the third week of nine-hour shifts Monday through Friday. The plant builds the Dodge Omni, Plymouth Horizon, Dodge 024 and Plymouth TC3.

The company's Jefferson and Newark points (K-cars) will continue at their present combined daily rate of 1,760 units per day on two shifts.

The Chrysler St. Louis and Lynch Road plants will continue at their single-shift rates of 424 cars and 320 cars, respectively.

General Motors' Janesville car point was down last week and will remain idle this week. Also at GM, Saturday overtime is slated this week at Oklahoma City and Tarrytown.

As of March 30, GM will cut one shift of its Corvette line in the St. Louis plant to begin moving operations to the Bowling Green (Ky.) plant which is slated to begin operations sometime in June.

breaking news

Continued from Page 1

the loss in an interview on the local public television station. VW's loss in the first half of the year was earlier reported as $25.6 million.

UAW and URW to discuss merger

DETROIT. — The UAW and the United Rubber Workers are setting up committees to discuss merger plans between the two unions. The merger possibilities surfaced last September when URW President Peter Bommarito and UAW President Douglas A. Fraser had a short discussion on the matter at the auto industry advisory committee meeting here.

The URW has been losing members rapidly over the past few months because of the sagging rubber industry and now has about 128,000 members. The UAW, also hit by heavy layoffs, has about 1.3 million members.

California slaps Model A firm

LOS ANGELES. — The California state commissioner of corporations has ordered Model A & Model T Motor Car Reproduction Corp. "to desist and refrain from the further offer or sale of franchises" in the company. The commissioner said that the order was issued because she believed it is "necessary and in the public interest for the protection of investors consistent with the policy and provisions of the franchise investment law."

Park your Toyota in Tokyo, UAW says

DETROIT.—The UAW won't kick imported cars out of its parking lot at Solidarity House any more, but it will discourage them and might like to export their drivers. A few months ago, the union put up signs banning imported cars from parking in the lot and asking their drivers to park elsewhere. Now, they're recommending a place for them to park. The new signs read "300,000 laid-off UAW members don't like your import. Please park it in Tokyo."

Truck assemblies decline 8 pct. from week ago

U. S. truck production last week fell below the previous week's output, and the total was down considerably from the comparable 1980 week.

Planned production last week was 32,858 units, off 8.39 percent from the 35,869 trucks assembled in the previous week and 30.75 percent below the 47,460 units built in the week ended March 15, 1980.

The year-to-date output for the truck makers is 344,484 units, down 18.22 percent from the 421,250 assembled in the comparable period last year.

General Motors' St. Louis and Lordstown truck lines were down last week, with operations slated to resume today (March 16).

Downtime is scheduled this week at GM's Pontiac point (GMC). Operations are slated to resume March 23.

Chrysler Corp. reported that its Warren truck assembly plant will work this week, making it the fifth consecutive week without downtime. The plant builds 424 trucks per day on a single shift.

Car, truck output in Canada shows gain for week

Canadian auto and truck production improved last week from the previous week's output, however both car and truck totals were below the comparable 1980 week's levels.

Auto production last week was slated at 18,249 units, an increase of 8.36 percent from the 16,840 cars completed in the previous week, but down 0.98 percent from the 18,431 units built the same week last year.

For the year-to-date, auto production is far behind 1980. So far this year, the auto makers have completed 133,551 units, a drop of 23.61 percent from the 174,834 cars built in the comparable period last year.

The Canadian truck makers increased production last week by 0.84 percent with output of 11,765 units, up from the 11,666 trucks assembled the week ended March 7, but down 16.02 percent from the 14,010 units completed in the comparable week last year.

So far this year, the truck makers have completed 112,126 units, down 3.34 percent from the 116,008 assembled in the comparable period last year.

Task Force has a bagful of aids for auto industry

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Import restraints on Japanese cars, reductions in federal regulations, refundable tax credits, faster write-off of capital investments, relief from antitrust laws so auto companies may cooperate on technology and comprehensive programs to improve the economy—just about everything the domestic industry dreams about—have been recommended by the House Auto Task Force.

The recommendations are the result of hearings here and in Detroit by the Task Force headed by Rep. Bud Hillis, Indiana Republican, and Rep. William Brodhead, Michigan Democrat.

Hillis and 15 others have sent a letter to President Reagan, urging him to "slow the flood" of Japanese cars coming into the U. S.

The letter adds, "Should the Japanese refuse to adopt some form of voluntary limits, we are confident that legislation will be forthcoming to place mandatory limits on Japanese imports."

While cognizant of the arguments for free trade, the lawmakers said the "urgency of this situation and the importance of the automobile industry mandate that we act to prevent the industry from being dismantled."

The report came just days before the Reagan Administration is scheduled to release its own recommendations but at a time when the Cabinet still was split between its philosophical bent to let the market operate freely and the temptation to help a sick bellwether industry.

So far, the Secretaries of Labor, Commerce and Transportation veer toward voluntary quotas. The State Department, the Office of Management and Budget and the Council of Economic Advisors at this point argue against market distortion that would favor one industry and invite other requests for special treatment. Ambassador Bill Brock talks on both sides. The President has not spoken.

Hillis and Brodhead met with Transportation Secretary Drew Lewis to urge that their program be adopted so U. S. auto makers can develop "design, quality, fuel efficiency and pricing structures to meet world standards."

They warned these measures need a "coordinated and comprehensive policy developed by

Convertriple

A topless trio from National Coach

Ah, spring . . . and a car buff's fancy turns to convertibles. Here are three new ones—a Chrysler K-car, Honda Prelude and Pontiac Grand Prix—from National Coach Engineering, Ltd., Fort Sanilac, Mich. With tops up, the K-car and Prelude have full rear seats. The Grand Prix, with optional power top, has a fulltime two-passenger rear seat. Dealer price for the conversions is $3,995. The Grand Prix power top costs $700 more.

Debate on curbs on Japanese cars heats up Capital

WASHINGTON.—There were conflicting reports flying through the Capital last week about what the Reagan Administration will do regarding Japanese imports.

It appeared at press time that the Administration is leaning toward jawboning for a short-term voluntary agreement with Japan whereby an informal limit will be imposed by that country on the number of vehicles its auto producers send to the U. S. Japan is believed to be amenable to such a move.

According to knowledgeable sources, the rollback would be for no more than three years with reductions to as low as 1.6 million units being talked about, but no firm decision yet has been made. It's more likely that if the decision is made to go ahead with import limitation the target goal will be transmitted privately to the Japanese government, the sources said.

President Reagan and the Cabinet were to have been briefed on the auto situation late last week and, reflective of the tentativeness of the import restrictions proposal, to hear again the arguments of the two warring camps on the Auto Task Force. One would impose no limits on imports and the other wants limits as low as 1.2 million units per year.

- The former group is headed by Office of Management and Budget Director David Stockman, Council of Economic Advisers Chairman Murray Wiedenbaum and Treasury Secretary Donald Regan.

They argue that import limits would be inflationary and undermine the Administration's economic recovery program.

The best thing for the auto industry would be to implement the Administration's economic plans, get interest rates and unemployment down and personal income up, they say. Further, they argue that giving special consideration to one industry is anathema to the Administration's economic philosophy and would only encourage other troubled industries to seek help from the White House.

Though not in disagreement with that thinking, the pro-import-limit element of the Auto Task Force, Transportation Secretary Drew Lewis, Commerce Secretary Malcolm Baldridge and Labor Secretary Raymond Donovan argue that a rollback of Japanese imports is necessary if the troubled U. S. auto industry, and in particular Ford, is to have a chance of being competitive once again. The industry simply must have some breathing room, they say.

United States Trade Representative Bill Brock is sitting on the fence.

Prior to the President's Cabinet meeting a significant amount of lobbying was being done on the hill with Ford, Chrysler, American Motors, the Motor Vehicle Manufacturers Assn. and the United Auto Workers, meeting here last week, pressing their case for import limits and hoping to have that passed on by Congressmen to the Administration.

Senate Democratic Leader Robert Byrd of West Virginia, meanwhile said at the United Auto Workers Community Action Conference being held here that "a temporary respite from the escalating influx of Japanese imports is needed to give our auto industry time to adjust to

Isuzu begins selling in California

By Jim Plegue
Staff Writer

LOS ANGELES. — American Isuzu Motors, Inc., is off and running.

The company officially becomes the sixth independent importer of Japanese-built vehicles in the U. S. when its I-Mark car and P'up truck lines make their public debut in 21 of 22 sales states on April 1. The cars have already bowed in California.

The introduction seems ill-timed. Isuzu is entering a troubled U. S. marketplace, beseiged by stubborn buyers, a sluggish economy, high interest rates, rising anti-import sentiment and the accompanying threat of some form of curbs on imports.

The timing, according to Jack Reilly, senior vice president and general manager, couldn't be better.

"The economy's in the pits, the political atmosphere is very anti-import," Reilly said at the national press preview. "So, really, all of the major hurdles are right here, right now. We probably won't ever have to face them again.

"We're starting with everything against us and, if we succeed—as we think we're going to—then it is a good time for us to start."

Isuzu has not sold cars in the U. S. since 1979, when the Isuzu-built Opel models was last marketed by Buick dealers.

The Isuzu product line for 1981 consists of 13 models—seven I-Mark coupe and sedan models and six standard and long wheelbase P'up trucks.

I-Mark coupe and sedan models are available in deluxe [illegible] LS trim, with choice of 1.8-liter gas or 1.8-liter diesel engines. A base diesel-powered coupe is also available. Prices range from $5,917 for the deluxe gas-engine coupe to $7,660 for the high-line LS diesel-engine coupe. The lowest-priced diesel model, the base coupe, is priced at $6,699.

The P'up is available in standard wheelbase, long wheelbase and four-wheel-drive (standard wheelbase) models with choice of 1.8-liter gas or 2.2-liter diesel four-cylinder engines. Price for the standard gas model is $6,117. Prices have not yet been set for the diesel trucks.

Reilly said he feels the diesel I-Mark cars fill "a niche in the marketplace that at this point only Volkswagen has entered, and that's the small diesel market."

Isuzu expects 80 percent of the estimated 20,000 I-Mark models sold this year to be diesels. The

GM launches new rebates

DETROIT. — A new General Motors rebate runs from March 20 to April 4. It pays customers $700 on Firebird/Camaro and $500 on all Chevrolet Malibu and Pontiac LeMans models and $500 on Oldsmobile Cutlass and Buick Century four-door sedans and wagons. Customers can buy out of stock or order during the period to get the rebates. Dealers contribute $300 of the $700 and $200 of the $500.

GM, however, will pay the full $500 and $700 on newly rebated units ordered, but not delivered, before March 20. Fleet buyers get only the GM portion of the rebate, $400 or $300. Over 200 newspapers in the top 50 markets introduced the program March 20 with a "Let's Keep America Rolling" theme. Car sales ran 20 percent higher than expected under the old rebate, GM said.

Isuzu raises U. S. car prices

WHITTIER, Calif. — American Isuzu Motors has raised the prices of the cars it is just now placing on sale in the U. S. New prices of the gasoline-engine I-Mark models are: Deluxe coupe, $5,917 (up $237); Deluxe four-door sedan, $6,069 (up $239), and LS coupe, $6,535 (up $365). The LS now has a stereo radio instead of a monaural AM/FM unit. Diesel cars, newly priced, are: Base coupe, $6,699; Deluxe coupe, $7,044; Deluxe four-door sedan, $7,194, and LS coupe, $7,660. Pickup truck prices are unchanged from those announced earlier.

Plans call for fall debut of Countach SV

Lamborghini prepares U.S. re-entry

By Kathleen Hamilton
News Editor

HARBOR CITY, Calif. — The U. S. is to play a key role in the future of the rescued-again Lamborghini auto works, if all goes according to plan at the EPA test track.

If the $100,000, 170-MPH Countach passes the 50,000-mile emissions test as expected, the president of a major U. S. federalizing firm will become sole importer and distributor for Lamborghini.

Jasjit S. Rarewala, president of ACI (Automotive Compliance, Inc), which has brought a dozen Countach units up to U. S. standards since it was founded here in 1977, is to assist Nuova Automobili Lamborghini in meeting the EPA-dictated emissions levels.

DOT standards are already met, he said.

"We have done enough of these one-shot tests to have a very good idea of what must be done," Rarewala said in an interview at the prospective headquarters of Lamborghini North America. Engines are expected to arrive in this Los Angeles suburb this month for design of emission systems by ACI.

• Once the standards are met, the Lamborghini factory in Sant'Agatha, near Bologna, Italy, will produce the U. S.-ready Countach SV.

It will differ from the European Countach S mainly in the reworked and re-geared five-speed transmission.

The new V-12 will be built from the same block as the European 4.0-liter engine, but will probably be 4.8 liters in displacement, Rarewala said. It is to be fuel-injected by the Bosch CIS system.

Horsepower is expected to be reduced to around 300 but this is to be offset by an increase in torque to the 250- to 300-pounds-feet range.

Upgraded leather interior, electronic instrumentation, a roomier cockpit and 240-watt-per-channel sound system are to distinguish the new SV. It is expected to sell in the $98,000 range, as opposed to the $110,000 (including certification deposit) of current ACI-federalized Countach S models.

It is to be marketed initially through five dealers in the U. S. — in Southern California, New York, Florida, Chicago and the Dallas-to-Atlanta region, Rarewala said. It is unlikely that Lamborghini North America will sell the cars to consumers, he said.

In addition, "seven or eight" service-only points are already lined up to be licensed, with that number eventually growing to as many as 40. Training is to be done here, with a factory mechanic scheduled to regularly visit Lamborghini points.

As part of the effort to restore Lamborghini's reputation for fine mechanicals, Rarewala is planning to institute a service plan reminiscent of that instituted by Ferruccio Lamborghini for his first automobiles.

Under the plan, major warranty work and engine rebuilding will be done exclusively at a West Coast facility, under the direction of a factory mechanic. Eventually, a second facility may be added in the East.

If the car is in its 12-month warranty period, Lamborghini North America will pick up the entire freight bill; if it is out of warranty, the buyer will pay half the freight charge. Rarewala said.

Tied to the licensing of service outlets, spokespersons for the fledgling auto importer said plans are in the works to take court action against what they view as widespread unauthorized use of the Lamborghini name and logo in this country.

• Lamborghini has decided to resume exportation to the U. S. after a six-year absence (except for privately imported autos, independently certified) to "try to compete with the large smuggling market and to try and use up the Ferrari market," Rarewala said.

The Lamborghini team hopes to lure customers who would otherwise have to import their own Ferrari 512 Berlinetta Boxers and suffer the delays of individual federalization.

Contacted in Montvale, N. J., Ferrari North America General Manager John Spiech said only that the firm is "examining all its options" on importation of the Boxer.

Rarewala projected 40 Countach SV sales in the first 12 months of importation; after that, he said, no more than 60 a year would be sold in the U. S.

Canadian sales are also a possibility, but Mexico is out for the present because of a 160-percent import tariff, he said.

• By late summer, 1982, Rarewala expects that the redesigned Silhouette, displayed at the Geneva Auto Show as the Jalpa, will be available in the U. S.

It is now in the tooling stage, and a maximum of 200 a year are to be built when at full production. Rarewala is aiming to get 40 percent of that output shipped to the U. S.

Designed to compete against the Ferrari 308, the two-seat, V-8-powered Silhouette / Jalpa will follow essentially the same body lines as its predecessor. The old 3.0-liter Silhouette engine, which Rarewala admitted was fraught with problems, has been redesigned, using the same engine block. Horsepower is expected to be in the 240 area.

The car will be in the $50,000 to $60,000 price range, he said.

Another Geneva Auto Show vehicle, the redesigned four-wheel-drive Cheetah, is expected to go into production this summer at Sant'Agatha. Up to 1,500 will be built as military vehicles before civilian versions of the this ultimate dune buggy are issued.

Priced in the $30,000 to $40,000 range, the Cheetah (or M-01, in military circles) is said to climb a 2-foot-8-inch wall, reach desert speeds of 66 MPH or 105 MPH on the highway and carry four passengers or two passengers and an anti-tank rifle.

Orders are already in hand from Mideast countries, Rarewala said.

The Athon — a Bertone-designed topless spider on the Silhouette chassis — and the Bravo — a downsized 6-cylinder replacement for the Countach — are also on the Lamborghini drawing boards.

• Nuova Automobili Lamborghini is being run by two French brothers, Patrick and Jean Claude Mimran, under the administration of the Bologna bankruptcy court. The court has been in the picture since 1978, when Lamborghini was owned by the Swiss interests headed by Rene Leimer.

The Mimrans took over last September from a German consortium headed by real estate magnate Raimond Neumann and ex-racer and Lamborghini importer Hubert Hahne.

Operating under court-set employment and output levels, the Mimrans hope to own the company outright this fall. Patrick, 25, an avid motoring enthusiast, is president of the auto venture; Jean Claude, 36, is partner.

The family is engaged in African foodstuff and sugar import and export.

In Geneva, Patrick Mimran said the Sant'Agatha factory's 150 workers are now turning out seven to eight Countach models a month.

He took over the frequently insolvent auto works, he said, because "I thought it was a pity that a marque like that should die."

Rarewala's ties to Lamborghini date back to 1974, when he served as a consultant for the U. S. importer on safety requirements for the U. S. market. The job followed on the heels of a U. S. government-funded taxi design project undertaken while he was a student at the Pratt Institute for Industrial Design.

Rarewala, 35, comes from an agricultural family in India. Capital for the Lamborghini venture comes from ACI federalizing projects, not family money, he said.

He expects to be sole owner of Lamborghini North America for at least the first year of its operation, perhaps taking on an employe stockholder, Kurt Dunholter.

Exhibit of exotic cars slated for Miami Beach

MIAMI BEACH.—A collection of exotic automobiles will be on display in the Miami Beach Convention Center March 25-29.

The exhibit will include Maserati, Avanti, Clenet, Golden Spirit, Moselle, Excalibur, Aston Martin, Grandeur, Stallion, Jaguar, Doval Duchess, Berlina, Porsche, Spark, Cord, Auburn and Lamborghini.

New nameplate

Pontiac will introduce the J-2000 J-car to its product lineup early in May. The alpha-numeric name for the FWD subcompact represents a different approach for Pontiac, which wants to project a contemporary image. National press preview date for the J2000 is April 15.

Kathleen Hamilton

Importer to design emission controls

After a six-year absence, Lamborghini plans to re-enter the U. S. market this fall with a winged version of the Countach that will be modified at the Italian factory. Jasjit Rarewala, who has federalized the car for individuals, is to be named importer if efforts to pass emissions tests are successful.

Rebates push new-car sales above year-earlier levels

By Jenny L. King
Staff Writer

The promise of rebates or reduced price tags continued to attract new-car buyers the first 10 days in March, boosting domestic sales 8.72 percent above year-ago levels.

It was the first time since early and mid-September, 1979, that domestic sales had shown a year-to-year increase for two consecutive 10-day periods. (Late-February sales this year climbed 5.83 percent.)

Domestic new-car dealers sold 204,231 units March 1-10 compared with 187,852 for the period in 1980. Based on eight selling days in each year, the daily rate was 25,529, up 8.72 percent from 23,482 a year ago.

Chrysler Corp., reporting a 51.21-percent sales jump, said its front-wheel-drive cars were responsible for the surge. General Motors, which enjoyed its second-best early March selling period and a sales increase of 7.04 percent, said its cash bonus to customers program was improving showroom traffic and retail sales.

GM sales numbered 125,549, up 7.04 percent from 117,296 last year. Ford Motor Co. reported a sales decline of 3.58 percent, to 44,227 from 45,871. Chrysler sales exploded 51.21 percent, to 25,900 from 17,128. Volkswagen of America reported sales of 3,855 U. S.-built Rabbits, up 5.41 percent from 3,657, and estimated sales of AMC cars were 4,700, up 20.51 percent from 3,900.

Chrysler continued to increase its share of the market and remain in the double-digit percentile segment, earning 12.68 percent—best so far this calendar year, and up from 9.12 percent in 1980. GM earned 61.47 percent, down from 62.44 percent. Ford was squeezed back to 21.66 percent from 24.42 percent, VWoA had 1.89 percent compared to 1.94 percent in 1980 and AMC had an estimated 2.30 percent, up from 2.08 percent.

Among the 14 U. S. makes, Plymouth drove away with a 75.42-percent increase in sales for the early March period, to 12,055 from 6,872 last year. Dodge sales jumped 58.09 percent, to 10,546 from 6,671. Oldsmobile was up 26.04 percent to 26,397 from 20,944; Buick sales were up 20.60 percent, to 21,608 from 17,917; Lincoln edged ahead 1.47 percent, to 2,136 from 2,105, and Pontiac was up 0.96 percent to 17,381 from 17,216.

Chrysler dropped 13.42 percent below last year; Ford was down 3.83 percent; Mercury dipped 3.82 percent; Cadillac was down 4.69 percent, and Chevrolet was off 1.41 percent.

Chevrolet Chevette was the number-one selling nameplate in early March at 20,050, far ahead of the competition. Second was Chevrolet Citation at 13,358, followed by Oldsmobile Cutlass Supreme at 10,894, Ford Escort at 8,460 and Buick Regal at 7,719.

Year to-date sales through March 10 totaled 1,217,656, down 10.92 percent from 1,366,848 for the comparable 1980 period.

1.6-liter engine is mis-positioned

WASHINGTON.—A story last week in Automotive News reporting that EPA had granted General Motors a waiver from the 1982 Carbon Monoxide standard for its 1.6-liter engine incorrectly noted this engine would be used in GM's new J-cars.

The 1.6-liter engine, of course, is used in the Chevrolet Chevette and Pontiac T-1000.

The J-car will use GM's new 1.8-liter engine, which previously had been granted a waiver from the 1982 CO standard by EPA. Both engines need meet only a 7 grams per mile CO standard instead of the statutory 3.4 gpm standard.

world news briefs

Revised BMW 5-series in the offing

The Frankfurt Auto Show in September will mark the debut of the new BMW 5-series sedans. The cars are said to look similar to current models but are lower, wider, lighter and more streamlined.

Diesels make gains in Italy

Diesel cars accounted for 12.4 percent of all sales in Italy in January — said to be the highest penetration in Europe. Diesel fuel is only 40 percent of the price of gasoline in Italy.

Perkins reaches a milestone

Perkins' UK factory, currently researching a new generation of diesel car engines, has built its five-millionth diesel engine. It went to International Harvester in Australia.

Ford set to replace its medium trucks

Ford of Europe will reveal details of its new mid-range truck within a few days. The low drag Cargo will replace the best-selling D-series dating from 1966.

Suzuki launches European Alto

Chief attraction at the Amsterdam Auto Show was the Suzuki Alto FX, a miniature five-door hatchback making its European debut. The 130-inch-long car is powered by an 800-cc, three-cylinder engine developing 40 horsepower.

Japanese imports fall

Imported car sales in Japan last year amounted to 1.6 percent (44,900), compared with 2 percent (60,200) the previous year.

Former Aston man joins Lotus

Alan Curtis, the self-confessed non-car enthusiast who recently sold his interest in Aston Martin, has joined the board of Lotus Cars as a non-executive director.

VW launches its diesel Transporter

Volkswagen has begun sales in Europe of its rear-engined Transporter model powered by diesel. The engine is an adaptation of the car unit. In West Germany it costs $760 more than the flat-four gasoline model.

What does he mean?

Honda President Kiyoshi Kawashima has given a broad hint about possible further collaboration between his company and BL. (The UK company is to begin assembly of the Honda Ballade later this year.) Kawashima said, "With increased reliability established between the two companies we will soon proceed to the second step of cooperation." BL says it doesn't know what he means.

Toyota advances in Switzerland

The Volkswagen-Audi group retained its lead in the Swiss new-car market last year despite reduced sales of 40,440. But it lost its lead in light commercial vehicle sales to Toyota, which doubled registrations to 4,645.

Scania buses go west

Scania of Sweden is supplying three BR112 single-deck buses for tests by the city of Norwalk, Conn., this June. The company says it wants to make the evaluations in a city small enough for vehicle differences to be noticed.

A puzzle

At 27,000, sales of cars from Communist countries in the UK last year were down 31 percent—nearly three times the overall trend. But plans are well in hand for the introduction of the Yugoslav Zastava and Romanian Decia to be added to the list of Russian Lada, Polish Polski and Polonez and Czechoslovak Skoda.

First for Ford commercials

Ford of Europe has claimed the No. 1 sales spot in Western Europe for commercial vehicles last year. It sold 179,000 units for a market share of 13.4 percent. Runners-up were Renault Industrial Vehicles and Peugeot SA.

Slow progress on SEAT

Officials of INI, the Spanish holding company that controls SEAT, made little progress in their Tokyo talks aimed at trying to persuade Toyota to take a majority stake in the ailing company. INI has been trying to find partners since Fiat pulled out of take-over nearly a year ago.

Despite a declining market

Auto investment rises in Spain

By Jan P. Norbye
Staff Correspondent

Spain's auto industry must be praised for its progress in restructuring itself, and pitied for the sacrifices it has been forced to make on the altar of the general consumer price index.

The domestic market for Spanish cars has receded by 12 percent, compared with 1979, and 20 percent compared with 1977.

Imports more than doubled in 1980—from 23,058 cars to 51,233.

Despite the dismal climate and poor short-term prospects, several companies have gone ahead with massive investment plans, Renault, Seat, Citroen and General Motors.

Renault has passed SEAT as the nation's top car maker, mainly due to the introduction of the R-18. The range also includes the R-4 in wagon and commercial versions; the R-5, which has become a runaway best-seller with a production figure of 146,807 units last year); the R-6, whose sales are still advancing to the depressed market situation; the R-7, which is a stretched-body notchback on the R-5; the R-12, and the R-14.

- Arrival of the Panda a year ago did much to boost SEAT's fortunes, and the rear-engined 133 has been phased out (except for CKD shipments).

The 127 is the most-produced model, helped in no small measure by SEAT having the four-door hatchback as an exclusive, and selling it all over Europe, through Fiat dealers, but the 124 is still going strong, largely aided by being available with a diesel engine (Talbot ex-Barreiros). SEAT also builds both the 131 and 132 in important numbers, and even assembled 800 Lancia Beta during 1980.

Little indication of coming integration between the Peugeot group's two Spanish subsidiaries—Talbot and Citroen—has been forthcoming, but it's considered inevitable by both local and French observers.

The Citroen organization is the bigger, and has been building the Peugeot 504 since 1977 and the 505 since 1980. An amazing 30,425 Peugeot 505s were built last year, split 50/50 between diesel and gasoline. Most of the diesels were sold in Spain, and most of the gasoline-fuel cars exported.

Citroen makes the 2-CV and Dyane mainly for the domestic market but has a high export percentage for the GSA Palas and Break Club.

The Talbot range is dominated by the Horizon, with a 1980 output of 17,717 cars. Interestingly, they were sold mainly in the home market, like the rest of Talbot production, which includes the old 1200 (originally 1100), the 180, 2-Litros, and Diesel designed by Chrysler in England, and the 150, which is the Spanish version of the 1510/Alpine.

PRODUCTION OVERSEAS

SPAIN

Cars	12 mos., 1980	12 mos., 1979
Citroen	131,393	160,730
FASA-Renault	343,678	275,322
Ford	265,839	232,432
SEAT	297,632	298,859
Talbot	65,756	72,891
Total	1,104,298	1,040,234
Trucks and buses		
CAF	2,315	4,499
Dodge	4,123	4,523
Ebro/Avia	27,106	27,278
Mevosa	10,367	14,182
Pegaso	6,108	6,228
Santana	17,900	17,150
SAVA	9,442	8,824
Total	77,361	82,684
Total Vehicles	1,181,659	1,122,918

The Fiesta is Ford's only locally built car, in Base, Lujo, Gran Lujo, Sport and Ghia versions. The Ford plant works mainly for export, and shipped 205,014 cars to destinations outside Spain, while 56,902 were sold domestically.

The truck market can be considered as having held up well in 1980. Motor Iberica, with its trademarks Ebro and Avia, dominates the light-duty end of the market, also playing a supporting role (under 2,000 units) in the market over 9 tonnes GVW, which is disputed between ENASA (Pegaso) and Dodge (part of Talbot in the Peugeot group).

Last year, Pegaso built 5,436 heavy trucks compared with Dodge's 4,066. Pegaso practically owns the domestic bus market, which grew by 23 percent last year to a total of 2,074 units.

The four-wheel-drive market is dominated by the Land-Rover (built by Santana) which also exports 30 percent of its production.

CAF (Construcciones y Ausiliar de Ferrocarriles S.A.) suffered a 49-percent drop in its production of Jeeps during 1980, most of the slack being caused by home-market flexing.

Contrary to general belief, the Spanish truck market is not closed to imports. Sales rose from 4,054 to 6,305 units in 1980.

Slowdown in Sweden

New-car sales in Sweden last year were 192,6000—the lowest figure since 1967.

French city buys diesel-electrics for bus fleet

The Urban District of Nancy, France, has placed an order for 48 buses of a new type with Renault Industrial Vehicles.

The design is an articulated design with dual power trains: Trolleybus getting energy from overhead cable in the inner city, diesel engine and mechanical transmission for suburbs and expressways.

The engine selected is a 225-HP MIDS 06.20.30 turbocharged 8.82-liter six, combined with a four-speed transmission and propeller shafts to two driving axles (one on the front unit, one on the 'trailer').

The electric power train includes a 185-kW Motor and a freon-cooled chopper which permits energy savings up to 20 percent, thanks to low starting requirement and partial recuperation of kinetic energy during deceleration.

Group assembly for limousines

Jaguar Cars has completud a new 40,000-square-foot assembly facility at its Coventry factory for production of the Daimler Limousine. Group assembly techniques are being used for the first time in the company's history, as it would have been impossible to produce the car on the same lines as the sedans and XJ-S coupes. Daimler limousines previous were made at the Vanden Plas coachworks, now closed. More than 2,800 limousines have been built since introduction in 1968.

New models previewed in Morocco

Talbot exhibits style, falls down on image

Continued from Page 10

and power steering as standard.

Next month (April) the turbocharged diesel and V6 gasoline versions are to go into production.

The 2.3-liter (140.5 CID) diesel is the unit from the 505/604 Peugeots and produces 80 HP.

The SX top model uses the Peugeot - Renault - Volvo V-6 of 2.6 liters (162.5 CID). But in keeping with Talbot's declared aim of projecting a sporting image—it is fielding a Formula 1 Grand Prix team this season—it is the most powerful application yet for the engine.

The output is 165 HP on three two-barrel carburetors compared with 144 for the Peugeot 604-Ti, 142 for the Renault 30TX and 155 for the Volvo 264-GLE.

Talbot is planning production of 3,200 per month, making a 12-month output of more than 38,000. Half will be the GL and GLS models, 30 percent will be diesels and the remainder the V-6.

The car is manufactured at the large Poissy factory near Paris. There is clearly the capacity to increase Tagora volume, but Talbot's projections are based on what it believes it can sell.

At present the 180/2-liter will continue in production at Talbot's Villaverde factory near Madrid, but company sources say the model could be replaced by the Tagora within a couple of years.

Talbot recently introduced the Horizon hatchback into its Spanish factory, to complement the 150 (known in the rest of Europe as 1510 and in the UK as the Alpine). It is likely to do the same with the Horizon in the UK at Ryton following the announced withdrawal from Linwood.

• But it is a tough time to launch any luxury car in Europe, especially one from a company not known for its strengths in that sector. Talbot cheerfully says that there are 1.3 million customers in Europe for such cars.

Until now, Talbot has not even been able to sniff a market in which all its competitors are now well established.

Skeptics point to the recent fortunes of companies like Opel, Ford, Renault, Audi, Peugeot and Rover. They offer some pretty competitive autos in the top European sector, but their business there has been exceptionally hard hit by the swing away from large cars.

But Talbot was putting the finishing touches to an even more important new model even while Tagora was being launched.

This is the car code-numbered C15, an economy hatchback in the Ford Fiesta/Renault 5/Fiat 127/VW Polo category.

C15 will be shown later this year, and go into production at Poissy early next year.

What is not known at the moment is whether it will be a Talbot or Peugeot. While it began life as a Talbot project, since the decision to amalgamate the two companies it seems it could emerge as a replacement for the aging Peugeot 104.

Prices for the Tagora in its country or origin range from $11,400 for the cheapest GL to $15,850 for the most expensive SX.

Porsche's 100,000th 924

Dr. Ferry Porsche, chairman of the Stuttgart firm's supervisory board, was on hand to see the 100,000th version of the 924 model off the line. The 2-liter two-seater has been in production for five years.

Talbot's new Murena offers odd seating arrangement

Continued from Page 10

gearboxes are used in each case.

The rounded, wedge-shaped body has a drag co-efficient of 0.328—better, according to its makers than the Fuego (0.347) and Porsche 924 (0.36). Headlights are recessed during day time driving.

Talbot says the smaller-engined model is designed to appeal to former Bagheera owners. It is capable of a surprising 115 MPH, and has dynamic qualities well up to standards established by any of its European rivals.

The larger model, boasting a top speed of 125 MPH, will be pitched at vehicles like the Porsche 924 and Alfetta GT.

Already in production, the 1.6 carries a selling price in France of approximately $12,300. It is not known when the 2.2 models will start rolling, but a price in the region of $14,000 is forecast.

At present Romorantin is producing some 80 vehicles a week, 30 Murenas and 50 of the special station wagons built on 1510 components and known as Ranchos. But there is a great deal of spare capacity.

• Automobiles Matra is a company which is owned 45 percent by Automobiles Peugeot and 55 percent by Matra. The giant French conglomerate whose interests range from aerospace to publishing. The car-making business employs some 1,500 people.

A sports car such as the Murena—the name of an aggressive fish—is a natural choice for a company that is trying hard to establish a firm identity.

It is being backed in the form of promotion by official entries in Grand Prix motor racing featuring the Ligier team, Matra V-12 engines and Talbot money.

Fiat imported into Italy

To replace the recently discontinued Fiat 127 Panorama, Fiat is introducing the Brazilian-made Fiat 127 Panorama into the Italian market. It is powered by the 1,050-cc engine from Brazil's Fiat 147, with gearbox and final drive from the Fiat 128.

U. S.-owned companies lead the way down

German industry feels the pinch

Publication of the official year-end production statistics for West Germany's vehicle industry illustrate clearly just how badly the two U. S.-owned companies did there last year.

They show that between them Opel and Ford contributed most to the 10.5 percent fall in car output (to 3.52 million) in 1980 compared with the previous year.

In Opel's case, volume was down 18.1 percent at 786,663 and at Ford it was down a massive 23.3 percent (419,517 units). Of the other domestic manufacturers, only the small specialist Porsche concern (down by a fifth) was in the same league.

Monthly statistics made public by the country's motor industry association, the VDA, reveal only production details broken down by engine capacity or weight categories. There is thus no official indication of how one company is doing against another—other than in the monthly registrations for Germany compiled by the Kraftfahrt Bundesamtes.

Interesting as they are, they do not get over the fact that 54 percent of West Germany's vehicle output is exported — a figure, incidentally, exactly the same as Japan's.

So, the VDA's annual tome about Europe's largest vehicle-making country is eagerly awaited. In the words of the president, "The past year did not continue in the same successful vein as those preceding it."

Hand in hand with the general world sales recession has come increased competition from Japan's auto makers. Initially, German executives took comfort in what they saw as a technological advantage over Japanese products.

Opinions have been revised, in the light of the Japanese advances in Germany's traditionally strong export markets and in Germany itself. It could hardly be otherwise, when the German new-car market dropped 8.5 percent and Japanese registrations expanded 67 percent, which is what happened last year.

Horst Backsmann, president of VDA, reports, "At the end of 1980 790,000 people were employed in road vehicle construction, 10,000 or one percent fewer than 12 months previously."

But he adds, "Declining demand has led to short-time working on a fairly large scale; 68,000 people in the road vehicle construction industry were affected in December, 1980."

• Nowhere has this been felt more than in the Opel and Ford factories which make the large capacity models. In the 2-to-3-liter class, production of Ford's Granada sedan and Capri coupe models fell away by 54 percent.

At Opel, Commodore and Senator sedan and Monza coupe volume fell by 59 percent.

Yet, in the same engine capacity classes, BMW's production was down 12 percent and Daimler-Benz's a mere one percent.

Looking to the future, Backsmann says, "The reduction of purchasing power as a result of the heavier than expected increase in the price of oil has curbed demand to a greater extent than expected.

"The new year thus begins with an economic situation which clearly fails to come up to the more favorable expectations of last autumn. The drop in the Gross National Product, coupled with higher unemployment and still less room for financial maneuver as a result of reduced tax revenue, do not bode well for 1981," he warns.

Nevertheless, the country's vehicle makers are investing the equivalent of $4.65 billion this year, higher than the average figure for the past.

Clearly, though, the country's makers see Japan as the biggest threat to their continued strength.

"German vehicle manufacturers cannot keep pace in the long run with competitors whose labor costs are 40 percent lower than those in Germany and whose labor force works for 20 percent longer than that in our factories," predicts Backsmann.

MacKenzie outlines Detroit's strategy

Advertising part of anti-import war

By John A. Russell
New York Staff Writer

NEW YORK. — Detroit's war with the imports not only is one of product, but also advertising those products, according to Gordon B. MacKenzie, general manager of Lincoln-Mercury.

"The last several years have been a valley a despair not only in the business of American automobiles . . . but in the advertising of them," he said, adding that the reverse was true for the imports.

Speaking at the Sales Executives Club of New York, MacKenzie said the import auto makers were "the only ones doing contemporary, enjoyable advertising" while the domestic auto makers had "given way to defensiveness, legalese, numbers, comparisons, protestations and even desperation. And on top of it all most of it looked the same no matter what the source."

But, he declared, with the introduction of the 1981 models at Lincoln-Mercury those days were over for the division. It started, he said, with a two-minute film, to be shown in first-run movie theaters, on the Capri. Theaters were selected to match the demographics and lifestyles of the Capri buyer and the concepts developed are carried through in the television and print advertising for the entire lineup, including the Mercury Lynx.

The commercials depend heavily on visuals, special effects and some humor.

MacKenzie said one of the first hurdles the company and its agency had to overcome was one of concepts.

"The same old things, the pretty cars with pretty people on pretty American streets or in pretty American driveways are just not going to be noticed," he said, "nor are they going to be seen as particularly indicative of the dramatic change that's taking place in the quality of American automobiles."

For the Lynx commercials, the agency, Young and Rubicam, built a production company from the ground up including special effects experts from Star Wars, the biggest sound stage in the U. S. and other essentials.

MacKenzie would not reveal the production costs for the venture but did add that "we took a world view and found that automotive advertising in other countries had discovered ways to go beyond the conventions of Detroit, particularly in the visual dimension."

Consequently, for Lynx, "Starting today the world belongs to an American car" became a theme.

- Another element, he said, that has been a strength of the import advertising is consistency and they have done this for almost a generation. MacKenzie maintained this approach has had "quite a bit to do with the overall quality reputation that had accrued to them."

For the LN7, the company has extended its advertising to include such lines as "something beyond the fuel efficient automobile," and other tag lines. But MacKenzie said the key would be the inclusion of excitement into the advertising, advertising that "doesn't use one Detroit cliche."

But the general manager made it plain that the major issue in the years to come will not be one of fuel efficiency, size and space. Instead, it will be one of quality. The real quality of the automobiles will be the battleground, he said.

Jury says Nissan discriminated in firing manager

CONCORD, N. H. — Nissan Motor Corp. in U.S.A. has been found guilty of "willful" age discrimination for discharging a district sales manager.

A jury in U. S. District Court here ruled in favor of William Hoffmann, now 58, of Keene, who was discharged as a district sales manager in May, 1976. He had been with the firm since 1965.

Hoffmann, presently self-employed, had performed inadequately, according to Nissan.

Hoffmann's attorney, Randall Reis, of Manchester, contended that the average age of Nissan employes is lower than the average age of the U. S. labor force.

A Nissan spokesman said the verdict is "totally unjustifiable" and that the Datsun importer is "very seriously considering an appeal."

A meeting of attorneys and Judge Martin Loughlin is pending. The award will be determined at that time. Because the jury found the discrimination "willful," Hoffmann's back pay of $79,600 could be doubled; Nissan could be ordered to pay attorney and court costs, as well.

For the first time in 1981

Auto output tops year-ago week

By Patricia Hoffman
Staff Writer

For the first time in 1981, weekly domestic auto production has topped the comparable 1980 week's output. The last time the week's total rose above the year-ago levels was the week ended Nov. 22, 1980.

Last week's total was also the highest of this year.

U. S. auto production last week was slated at 145,422 units, an increase of 2.33 percent from the 142,112 units completed the previous week, and up 0.04 percent from the 145,369 cars assembled in the comparable 1980 week.

Breakdown for last week by company was: General Motors, 59.10 percent of the week's total; Ford Motor, 23.06 percent; Chrysler Corp., 13.22 percent; Volkswagen of America, 2.86 percent; American Motors, 1.72 percent, and Checker Motors, 0.04 percent.

So far this year, the auto makers have completed 1,364,821 units, a drop of 15.58 percent from the 1,616,700 cars assembled in the comparable period last year.

Downtime was slated last week, for the second week in a row, at General Motors' Janesville point.

Also at GM, Saturday overtime was scheduled last week at Tarrytown, Oklahoma City, Linden and Lansing.

At Lansing, the line rate of the Oldsmobile Cutlass was increased from 55 cars per hour to 60 cars per hour. A second shift will be added to the Cutlass assembly line at Lansing effective April 6.

Buick built its 23-millionth car (a Regal coupe) in Flint on March 18. Buick has been building cars since 1903.

Last week, GM completed its first full week of assembly of the new Pontiac T1000 subcompact.

Ford has slated downtime for one week beginning today (March 23) at its Lorain point for a line-speed change from 57 cars hourly to 40 hourly. The plant assembles XR-7 and Thunderbird.

Chrysler Corp. this week is in its sixth consecutive week of auto production without downtime.

The Chrysler Belvidere and St. Louis plants have scheduled nine-hour daily shifts this week. Belvidere, which has been operating on overtime schedules since March 2, has two shifts. The St. Louis point is a single-shift operation.

breaking news

Continued from Page 1

Isuzu sports car due in '83

LOS ANGELES.—The Isuzu "Piazza" sporty coupe, which debuts in Japan this summer, will be sold in the U. S. in the spring of 1983. It will be equipped with a fuel-injected 2.0-liter engine. A version fitted with an Isuzu-built 2.0-liter turbocharged diesel, currently being tested in Japan, will bow a year later.

$300-$700 rebates offered on LUV

DETROIT.—From March 9 to May 8, Chevrolet is giving direct customer rebates of $700 on all 1980 Series 10 LUV pickups invoiced to dealers after Sept. 15, 1980. During the same period, it is also giving $350 customer rebates on 1981 Series 11 LUVs invoiced prior to March 9. For units invoiced after March 9, there is a permanent reduction of $330 in the destination charge, which is being dropped to $315 from $645. A customer cannot receive both the rebate and the destination-charge reduction.

GM Canada buys Firestone plant

OSHAWA, Ont.—General Motors of Canada has purchased the Firestone Canada plant in nearby Whitby and will move its export operations there late this summer. The plant has 372,800 square feet and is located on a 62-acre site. Firestone ceased operations there last July. GM Canada's export operation prepares car and truck components for shipment to assembly plants in Venezuela, Colombia, Ecuador, Chile and Zaire. It ships 432 vehicle sets a day, up from 240 a day last year.

Truck production tops 1980 week by 21 percent

A silver lining peeked through the dark cloud of recession for the U. S. truck makers last week as production jumped considerably over the comparable 1980 week and the previous week's levels.

Truck production last week was slated at 39,643 units, an increase of 19.02 percent from the 33,309 trucks assembled in the previous week and up 21.44 percent from the 32,644 units completed in the week ended March 22, 1980.

The Chrysler Warren truck assembly point will mark its sixth consecutive week of production this week. The plant, which is a single-shift operation, has scheduled nine-hour daily shifts beginning today.

Downtime was scheduled last week at General Motors' Janesville truck and Pontiac heavy-duty truck points, with operations resuming today.

Also down last week was line No. 3 at Ford Motor's Kentucky truck point.

Year-to-date, the truck makers have completed 384,578 units, down 15.29 percent from the 453,975 assembled in the comparable period last year.

Canadian output climbs for week to 21,425 cars

Canadian auto production last week showed improvement over the previous week's output, however the total was down from the comparable 1980 week.

Production last week for the auto makers was slated at 21,425 units, an increase of 13.63 percent from the 18,855 cars completed the previous week, but down 6.12 percent from the 22,821 units assembled in the comparable week last year.

Canadian truck production last week also showed a slight increase over the previous week's output, but was down from the comparable 1980 week's total.

Planned production last week for the truck makers was 11,927 units, up 2.34 percent from the 11,654 trucks assembled in the previous week but down 13.15 percent from the 13,733 units completed in the week ended March 22, 1980.

So far this year, the auto makers have assembled 155,582 units, a drop of 21.44 percent from 198,036 at this time last year.

Year-to-date output for the truck makers is 123,942 units, down 4.30 percent from the 129,513 trucks assembled in the comparable 1980 period.

Chrysler Corp. has slated downtime at its Windsor car plant beginning today (March 23). The point will remain idle for three weeks due to inventory adjustments and retooling.

It features a manually operated convertible top of sailcloth, structural reinforcement, choice of rear seat or parcel shelf and 24/24 warranty. Suggested dealer retail price is $14,000.

Extended talks bring no decision on imports

U.S., Japan keep waltzing

By Jake Kelderman
Washington Staff Writer

WASHINGTON.—The Reagan Administration, trying to come to grips with what to do about the Japanese auto import situation, decided to talk about it some more last week but include the Japanese this time.

The decision came following two days of meetings between President Reagan, high Administration officials and Japanese Foreign Minister Masayoshi Ito.

Administration sources said the content of those meetings centered mainly on the U. S. briefing the Japanese on the domestic auto situation and what the Reagan Administration planned to do about it and not on "jawboning the Japanese to limit their exports here."

President Reagan did not press the Japanese foreign minister to adopt specific "voluntary" limits on Japanese auto exports to the U. S., they said. Rather, they said, he made Ito aware of the current political situation here and warned that if there were no movement by Japan on this issue, Congressionally mandated import quotas might become a reality. He told Ito it would be difficult for him to veto such legislation, they said.

Both parties agreed after the meetings that it is their "major objective to preserve the principle of free trade." To that end they said further talks would go on in both Washington and Tokyo on the subject, with the hope of resolving the issue before Japanese Prime Minister Suzuki visits Washington early in May.

- According to Foreign Ministry Spokesman Taizo Watanabe, the areas to be discussed are "the extent of the public opinion situation in both countries, what the U. S. plans to do domestically in response to the situation and the legal considerations which exist on both sides."

Expected to lead the talks for the U. S. is Robert Hormats, assistant secretary of state-designate for economic affairs, reflecting the recent move by the State Department into the auto import problem. Transportation Secretary Drew Lewis, heading up the Reagan Administration Auto Task Force, also will participate.

On the Japanese side, the minister of external trade, Saburu Okita, will lead negotiations.

Though the Reagan Administration has not indicated publicly what it expects of the Japanese by way of concrete reductions in the number of cars being sent here, there was at least one report last week that a target of 1.6 million units will be set.

In return, however, the Japanese are expected to demand that the Administration make it publicly clear it does not hold the Japanese responsible for the decline of the U. S. auto industry and that the future of the industry lies in the auto workers and auto companies putting their own houses in order.

"It is unfair to blame Japan for this situation," Watanabe said. "Japanese imports are not the cause of the American industry's problems, but the result of consumer preference for better-quality cars at a reasonable price."

Japanese auto exports to the U. S. ran at approximately 1.9 million last year, but this year will be pared to 1.8 million, according to the projection of the Japanese manufacturers.

Nonetheless, large factions in Congress are pressing for a rollback to as low as 1.4 million units for up to five years to give the domestic industry "breathing room" to come up with suitable competitors to the Japanese models.

The Administration until recently had been sharply divided on the import restrictions issue but then coalesced on the present position of urging the Japanese to take prudent action in light of the present situation.

Ito told reporters at a luncheon that it would be hard for him to order his companies to hold back shipments to the U. S. in light of the International Trade Commission's 3-to-2 ruling that imports were not the primary cause of the U. S. industry's problems.

That does not sit well with Senator John Danforth, the Missouri Republican and author of legislation limiting Japanese imports to 1.6 million units an-

After two years of drifting

Rebates push car sales to record

By Jenny L. King
Staff Writer

Two years of almost uninterrupted domestic auto sales declines were abated this month with strong early-March returns followed by a surprise record total for the middle 10 days.

U. S. auto makers opened their showroom doors and their rebate books to a flood of customers and retailed a record 326,093 new cars March 11-20.

Sales leaped 30.33 percent both on a year-to-year and daily rate basis. It was the biggest gain in exactly three years: The mid-March, 1978, increase was 36.29 percent. Sales a year ago for the period numbered 250,198.

It was also a time for records —for make sales, for nameplate sales, for corporate sales. General Motors enjoyed a record 219,467 total passenger-car sales, up an astounding 52.01 percent over 144,376 a year ago. Buick and Oldsmobile set period records, and Buick established an any-period high as well.

GM's "Let's Keep America Rolling" corporate-wide rebate program pushed Pontiac's Phoenix and Grand Prix nameplates to record period sales, and Chevrolet reported record sales for Citation and Chevette for the combined first and second March periods.

Chrysler Corp. sales climbed a healthy 18.08 percent, while its combined K-car sales set a period record. Chrysler reported total sales of 32,618, up from 27,624 last year.

Ford Motor Co. failed to reach its year-ago level, dropping 8.07 percent to 61,140 from 66,504. Ford, like its U. S. competitors, offered rebates on new models, ranging from a few hundred dollars to over a thousand dollars this year, but it wasn't incentive enough to bring in the number of customers Ford's rebate program did for the period a year ago.

Volkswagen of America reported sales of 5,468 Rabbit sedans, down 17.34 percent from 6,494 last year. American Motors estimated sales for mid-March numbered 7,500, up 44.23 percent over 5,200.

- General Motors, with its 52,-percent sales increase, helped itself to 67.30 percent of the domestic new-car market, the largest piece it has had so far this year. That was up from 57.70 percent in 1980.

Ford Motor's share diminished to 18.75 percent from 26.58 percent in 1980. Chrysler Corp. dropped to 10.00 percent from 11.04 percent. AMC's estimated share was 2.30 percent, up from 2.08 percent, and VWoA earned 1.65 percent, down from 2.60 percent.

Seven Big Three makes lined up on the plus side in sales, while four were down from year-ago levels. Buick topped the winners with a 100-percent sales jump, to an any-period high of 42,091 from 21,044 last year. Chevrolet was up 58.88 percent, to 97,929 from 61,638. Plymouth climbed 46.99 percent, to 15,069 from 10,252; Oldsmobile

Miller plea: Hold line on prices, keep rebates

RENO. — NADA President Wendell H. Miller pleaded with U. S. vehicle makers to hold the line on prices through the 1981 model year and, at the same time, to continue rebate programs but on a non-participating basis.

Miller launched his appeal in the wake of a 10-day period which saw new-car sales zoom to record heights, interrupting months of dreary doldrums. Industry analysts generally credited widespread rebate programs for the surprising retail totals.

In effect, the sales results proved that price concessions move cars. Whether Miller will be successful in his appeal should become evident in short order.

Three years ago, General Motors began boosting new-car prices regularly every 90 days. A new round of GM hikes is due this week, in keeping with that schedule. However, if GM does raise prices it may wait until the current rebate program ends April 4.

Miller, in a speech prepared for delivery at the American Truck Dealers convention today, said dealers are deeply concerned that the removal of the temporary price reduction and the apparent slower - than - expected improvement in the national economy will drop auto sales back to previously low levels.

In his remarks to the ATD audience, Miller recalled that in February NADA directors had notified the domestic manufacturers that "a primary reason for the stagnant new-car and truck market" was that prices were simply too high.

Dealers did not get the per-

breaking news

Sales record at GM costs $85 million

DETROIT.—General Motors set a sales record for mid-March, but it was a costly one. AUTOMOTIVE NEWS estimates the corporation paid about $50 million in rebates on cars sold during the period. In addition, it cost GM dealers about $35 million for their share of the rebates. Some 65 to 70 percent of the 219,467 GM cars sold from March 11-20 were covered by rebates of $500 and $700. GM paid $300 of the $500 and $400 of the $700, with the dealers paying the rest.

Honda eyes Australian assembly

SYDNEY, Australia. — Honda reportedly has held talks with Leyland Australia with the aim of assembling Honda cars at the Leyland truck plant here. Honda wants to raise sales above the present level, dictated by quota. The Australian Government reportedly is opposed to any Honda-Leyland deal.

Farrar leaves American Warranty

Volvo trucks staying in U.S., importer says

By Jack Walsh
Truck Editor

ROCKLEIGH, N. J.—Daimler-Benz' bid to acquire Freightliner Corp. in no way means that Volvo will be abandoning the big-truck market in the U. S., it was emphasized here by Bjorn Ahlstrom, president, Volvo of America.

"We were surprised to hear of the Daimler-Benz move, but we do not intend to let it interfere with our truck business in the U. S.," he said.

"There isn't much that we can say about what we will do until a Daimler-Benz deal for Freightliner is finalized," Ahlstrom added. "However, Volvo still is the 'importer of record' and we plan on staying in the U. S."

He said the company has assured Volvo dealers and users that it will continue to provide vehicles and service and parts support.

Ahlstrom indicated that his "emphatic" statement that Volvo will remain in the U. S. truck market was in response to reports that another truck importer has said or implied that Volvo trucks may be available at "fire-sale" prices on the assumption that the Volvo line will be discontinued in the U. S.

"We want to reassure anyone who is apprehensive about our future intentions," he said.

Volvo trucks were re-introduced in the U. S. in the mid-70s and marketed by a division of Volvo of America until 1979, when Freightliner took over the distribution through its dealer network.

There have been reports that Volvo will follow the lead of Mercedes-Benz of North America in assembling the trucks in the U. S., importing the semi-knocked-down components from Sweden and competing production in a plant it owns in Chesapeake, Va.

Since last spring, Mercedes-Benz has been importing SKD units from Brazil and assembling them in a facility in Hampton, Va.

Commenting on this report, a

Joseph C. Gentile Sr., second from left, of Superior GMC Trucks, Inc., Orlando, Fla., is presented with a plaque commemorating 25 years of sales and service by John Tipton, GMC district manager for the Atlanta zone. Also attending were Hugh Surratt, left, GMC Southern regional manager, and Fred Tobias, right, GMC's Atlanta zone manager.

Air-disk brake offered by Eaton for heavies

GALESBURG, Mich.—A new air-disk brake for heavy trucks and trailers has been introduced by the Brake Division of Eaton's Truck Components Group.

Featuring internal self-adjustment, the new brake can be relined in less than two minutes and offers weight savings of up to 45 pounds per wheel end, according to Jim Pruneski, division general manager.

"Time and weight are two very valuable commodities to the truck user of the '80s," he said. "This brake offers savings in both."

The compact design of the new brake, he noted, allows relining without removing or repositioning the caliper or the disk.

"We wanted to minimize maintenance time for this brake and made this a key goal in our design approach," he said.

The brake has a ventilated disk which is designed to help it run cooler. As a result, Pruneski said, Eaton air-disk brake linings will last up to 39 percent longer than comparable drum-brake linings.

"The increased lining life is another way we're helping to keep the truck on the road," he said.

"As fuel prices continue to rise, the truck user must respond by increasing payload and saving fuel," Pruneski observed. "With weight savings of 45 pounds per wheel end, up to 180 pounds can be saved on a tandem axle.

"This weight is especially important for those users who operate at maximum gross weights, and can only carry more cargo by decreasing the weight of the truck. For others, the weight savings can contribute to fuel conservation. Eaton's new air-disk brake can be used in drive and trailer axle applications," Pruneski explained.

Low cabover is introduced by International

CHICAGO. — International Harvester has announced a new model of its COF-5370 LFE (low front entry) heavy diesel truck which it said combines the maneuverability, visibility, and easy-driver entry/exit of a cabover body with the ruggedness of an on/off highway construction truck chassis.

The 6x4 truck was introduced in 1977 and has become a workhorse in such severe service applications as refuse and liquid bulk hauling.

"We are offering this new model to provide severe service users with the most comfortable and attractive unit possible, while giving them the proven strength and dependability of the basic truck design," said J. H. Coonen, marketing planning manager for the Heavy Truck Division.

Features of the new model include:

Relocation of the air reservoir to accommodate virtually all packer bodies and lift mechanisms.

Adjustable cap steps that are two inches wider, providing an increase of 32 inches in step area. These steps also are closer to the ground—from 21.5 inches to 27.75 inches, depending on tire size and suspension capacity—and feature an open grating to minimize snow and ice buildup.

Interior and exterior grab handles, and a 90-degree opening door further enhance ease of entry.

An attractively-styled exterior, which features a new low-

Continued on Page 46, Col. 1

IH workhorse is updated

A new version of International's low cabover heavy truck for refuse and other severe service applications features redesigned cab steps, right side visibility window, an electrical system that uses circuit breakers rather than fuses and a driver's convenience console.

Chevrolet regains lead in truck registrations

Chevrolet has regained leadership over Ford in new-truck registrations for the first time since November, 1978, but the margin for the first month of the new year was less than 150 units.

According to R. L. Polk & Co. statistics, Chevrolet's January registrations totaled 52,625 units, compared with 52,479 for Ford. It marked the first time since 1977 that Chevrolet has started the year in the No. 1 spot.

During the month, industry tallies totaled 161,508 units, a decline of 30.8 percent from last year's 233,277. There were no figures this year from Oklahoma, as usual, Maine, New Hampshire and Hawaii. A year ago, only the Oklahoma count was missing. •

Table on Page 46

Registrations in January were down from a year ago in all three market segments, with the heavies showing the biggest setback from a percentage standpoint. Group 3 was the only one of the eight with a total higher than last year.

Heavies dropped 31.9 percent, from 17,206 units in the first month of 1980 to 11,720. The Group 8 tally of 6,584 units was 37 percent lower than the year-ago 10,443, while Group 7 was off 24.1 percent, from 6,763 in 1980 to 5,136.

In January, 145,073 light trucks were registered, a decline of 30.8 percent from the year-ago 209,744 units.

The Group 3 count was up 62.6 percent, from 794 units a year ago to 1,291. Chevrolet accounted for 1,257 of the total, and Dodge had the remaining 34.

Group 2 registrations plunged

HD leadership again achieved by International

For the first time since the first month of 1980, International again is atop the field in registrations of heavy trucks.

In January, 1981, according to R. L. Polk & Co. statistics, 3,046 new Groups 7 and 8 International trucks were registered in the U. S., compared with 2,507 for Ford, which had been No. 1 from February through December last year.

International, which had lost its perennial leadership in heavy-truck tallies because of a six-month strike which did not end until April, 1980, accounted for almost 26 percent of the industry's 11,720 registrations in the first month of the new year.

An improvement of 4.41 per-

Better day ahead, industry bosses say, despite current problems

Big-truck sales gains expected in second half

By Jack Walsh
Truck Editor

Modest gains in big-truck sales, mediums and heavier, are anticipated by truck-industry executives in 1981, but the turnaround in the downturn isn't likely until the second half.

Even greater increases are predicted for 1982 and the remainder of the decade in spite of the fact that the industry is facing challenges greater than it has faced in recent history.

Martin D. (Skip) Walker, president, Rockwell International's Automotive Operations, noted that the industry is facing major challenges on every side.

"Government regulation, competitive pressure, higher equipment and operating costs and deregulation will drive technological change and will dominate the industry over the next few years," he said.

Walker said Rockwell research indicates that North American factory sales of Class 8 trucks in 1981 should increase by about 25 percent over 1980 to 163,000 units, with an 11 percent gain for Class 6 and 7 units to 185,000 units.

"However," he added, "should the March retail sales numbers again prove disappointing, we may have to revise our forecast down. Our worst-case forecast for 1981 is still 15 percent over 1980 in Class 8 trucks."

An upturn in the final six months of the year also is anticipated by James T. Riley, general sales manager, GMC Truck & Coach Division.

"We believe industry sales of medium and heavy trucks during the 1981 calendar year will approximate the 270,000 units sold in 1980, as the economy improves, particularly in the third and fourth quarters," he said.

Raymond S. Reardon Jr., president, IVECO Trucks of North America, Inc., importer of Magirus mid-range and IVECO light diesel trucks, noted that "if the projected cuts in government spending are fact by August, the prime rate may fall somewhat, but not below 14.5 or 15 percent by year-end."

On this basis, medium truck sales will total almost 120,000 units in 1981, he said, a slight improvement from last year's 112,000. Key to the

Continued from Page E-1

increase, he added, will be growing interest in diesel power.

"The switch to fuel-and-maintenance-saving mid-range diesels is sure to gain momentum this year," Reardon said, "especially if the recent decontrol of oil prices and other measures push gasoline close to $2 a gallon.

"More than 65,000 mid-range diesel trucks will be sold in the U. S. in 1981, up from almost 55,000 in 1980 and only 15,000 in 1974," he added.

Reardon also sees the diesel trend spreading into the lower weight groups in 1981. IVECO currently markets a Class 2 diesel chassis in the U. S., and he sees a "considerable diesel market" developing in Classes 3, 4 and 5.

"But it will be two or three years before this (Classes 3-5) market develops meaningful unit volume," he said. "As it grows, however, the trend to diesel power will emerge quickly.

"The ability of dealers to provide light-duty diesel trucks will be a significant factor in their ability to survive the prolonged sales slowdown the industry now faces," he added.

Walter Bodack, commercial vehicles vice president, Mercedes-Benz of North America, said fuel prices and diesels are key factors in the outlook for trucks in the Class 6 and 7 market during the 1980s.

"There has been a slackening of Class 6 truck sales during the past year due to high interest rates," Bodack said. "But this is generating a pent-up demand by businesses which need trucks for their pickup-and-delivery operations."

Bodack said he expects the Class 6 and 7 diesel market to increase by approximately 10 percent in 1981.

"As a group," he added, "these trucks exceeded 30 percent diesel penetration last year and we expect, due to economic pressures, this trend to further dieselization to continue during 1981."

He said a sharp increase in Mercedes retail sales in the first two months is "evidence that there is increased interest in diesels in this weight range."

Chevrolet will be ready for the diesel surge in light trucks predicted by IVECO's Reardon. Its new 6.2-liter diesel will be available this fall in most of its light trucks, and, according to J. C. (Jim) Perkins, Chevrolet truck sales manager, also could be offered in medium trucks up to the low end of Class 6.

He said the fastest-growing segment of the industry during the next five years will be the diesel-powered medium truck, and added that Chevrolet is making service a reason to buy in the diesel market.

"Chevrolet is planning for continued diesel popularity by making sure there is qualified dealer sales and service availability," he said. "Chevrolet has introduced a number of training programs designed to train diesel salesmen and service technicians."

White Motor Corp., according to Mark J. Obert, Truck Operations marketing vice president, "is forecasting increases in U. S. registrations and retail sales of Class 8 trucks in the neighborhood of 8 percent in 1981. Further improvement should be seen in 1982."

One of the greatest challenges facing the industry, he said, is the maintenance of a strong distribution system in the face of a changing and currently soft market and high interest costs.

"At White," he continued, "we see our dealers as the critical link in our distribution channel and we are working very hard to be responsive to their needs and to enable them to identify and serve all segments of the heavy-truck market with a broad product line."

GMC's Riley said the 1980s will be a decade of worldwide truck growth, and added that "overseas markets for big trucks will expand during the next 10 years, particularly among developing nations and the sales opportunities for American truck manufacturers will be abundant."

He said there will be continued emphasis on fuel efficiency and driver environment, and that manufacturers will strive for more efficient vehicle aerodynamics and look for more and better ways to reduce vehicle weight while maintaining optimum payload capacity.

Riley called the recent one-year postponement of the 80-decibel noise standard "perhaps a signal from Washington that a closer look will be given to pending and future federal regulations in the years ahead with respect to their cost effectiveness and if so, it will be a welcome relief to the industry."

With deregulation, said Rockwell's Walker, the trend is to large truck lines, but he added that this will probably increase demand for feeder lines to key traffic centers.

"This feeder-line business is a potential market for medium trucks," he noted. "Furthermore, the dieselization of the Class 6 market also will persuade some users to re-equip earlier than they otherwise might."

Walker said he also expects a slowdown in the trend in which the trucking industry has been increasing its share of freight hauling at the expense of railroads for the past few decades.

"Trucking is maturing and there simply isn't much railroad freight left that is suitable for trucks," he added. "Also, some railroads are becoming more competitive in pricing and service."

Mercedes-Benz' Bodack said he is watching for possible congressional action which could change the depreciation schedules on capital goods and provide a more generous investment-tax credit.

"Either or both of these actions could be a major stimulus for the entire truck market," he said. "Such action would use free-enterprise incentives to give the truck market a significant push."

The revolutionary Chief Truck E·Z-Liner.® There's nothing else like it.

Now, the technology that revolutionized automobile repair brings you the fastest, easiest and most profitable truck body squaring and chassis alignment system ever developed. The Chief Truck E•Z-Liner.

The Chief Truck E•Z-Liner is designed to handle virtually every truck on the road today, plus buses, motor homes, and trailers.

You have finger-tip control over more than 100 tons of "Simultaneous/Multiple Pulling" power. That means you can plan up to 14 simultaneous pulls, 360° around the vehicle to pull the damage out just as it went in. It's fast, easy and accurate.

The Chief Truck E•Z-Liner gives you four 25-ton hydraulic rams, six 10-ton rams, four portable rams and more than 200 accessories.

The Chief Truck E•Z-Liner is more than the most advanced alignment system. It includes our factory school and the Chief Truck Masters Association®. As a CTMA member, you'll share information unavailable elsewhere.

There's even more to the Chief Truck E•Z-Liner program. To find out how it can work for you, write for our free brochure. Or call toll-free 800/445-9263. (In Nebraska 308/384-9747.)

1980 new-car total

Import registrations hit record 2.4 million

By Richard A. Wright
Assistant Managing Editor

Registrations of new imported cars in December were only the second best in history for that month, but it was more than enough to push the 1980 total to the highest level ever, according to figures compiled by R. L. Polk & Co.

New import registrations in 1980 totaled 2,469,180, up 5.02 percent from the previous record of 2,351,053 set in 1979.

Total import registrations in December were 187,745, down 5.67 percent from the record 199,026 December tally a year earlier. Record monthly totals were posted in six months of 1980—January, February, March, August, September and November. The other six months were second best.

Imports accounted for 28.18 percent of total U. S. registrations in 1980, compared with 22.70 percent the preceding year.

In December, imports accounted for 26.41 percent of the market, up from 23.81 percent a year earlier.

- Compared with the preceding year, four of the five leading Japanese makes improved their import market shares.

Toyota took 22.68 percent of 1980 import registrations, up 2.81 percentage points, while second-place Datsun accounted for 20.49 percent, up 1.58 points.

Mazda garnered 6.47 percent of the import market, up 0.20 of a point, and Subaru took 5.10 percent, up 0.92 of a point. Only Honda among the Japanese top five was down, dipping 0.18 of a point to 14.23 percent.

Volkswagen accounted for 10.34 percent of import registrations, down 1.89 points. Fiesta was down 0.52 of a point to 2.75 percent and Volvo dipped 0.08 of a point to 2.21 percent.

The top 10 imports in 1980 accounted for 88.58 percent of import registrations, up 2.12 percentage points from the preceding year. In December, the top 10 accounted for 89.99 percent, up 2.60 points.

- By country of origin, the Japanese makes accounted for 74.10 percent of import registrations in 1980, up from 69.90 percent in 1979.

Registrations by country of origin in 1980 compared with 1979 were:

	12 Mos., 1980	12 Mos., 1979
Japan	1,829,631	1,643,430
West Germany	462,394	503,367
Sweden	67,506	69,000
Italy	41,928	63,719
France	35,934	29,255
United Kingdom	31,779	42,281
Other	8	1

Registrations of imported cars by country of origin in December, compared with the year-earlier month, were:

	Dec., 1980	Dec., 1979
Japan	139,316	148,010
West Germany	35,701	37,462
Sweden	5,598	5,461
France	3,238	2,376
Italy	2,055	3,696
United Kingdom	1,837	2,021

New imported-car registrations in 1980 were divided this way by country of origin: Japan, 74.10 percent, up 4.20 points; West Germany, 18.73 percent, down 2.68 points; Sweden, 2.73 percent, down 0.21 points; Italy, 1.70 percent, off 1.01 points; France, 1.45 percent, up 0.21 of a point, and UK, 1.29 percent, down 0.51 of a point.

- Registrations of imported trucks in 1980 totaled 523,366, up 8.56 percent from 482,089 in 1979.

Registrations of imported trucks in 1980, compared with 1979, were:

	12 Mos., 1980	12 Mos., 1979
Toyota	132,969	129,949
Datsun	108,384	99,427
Chevrolet LUV	86,227	97,233
Ford Courier	74,196	75,822
Others	121,610	79,658

The truck import total for December was 33,650, down 18.63 percent from 41,355 a year earlier. Registrations of imported trucks in December, compared with a month earlier, were:

	Dec., 1980	Dec., 1979
Toyota	7,610	11,391
Datsun	7,062	8,414
Chevrolet LUV	5,231	8,350
Ford Courier	74,196	75,822
Others	9,040	6,415

EPA to ease certification for low-volume auto makers

WASHINGTON. — The EPA has decided to substantially ease certification requirements for small-volume manufacturers of cars and light trucks, possibly opening the way for reintroduction of certain exotic automobiles long gone from the American scene and certainly easing the way for others already reaching these shores.

EPA's current practice is to require all makers to run full certification programs for all engine families as a way of insuring they meet relevant emission standards. The rigorous procedures involve numerous vehicles, substantial dynamometer time and voluminous amounts of paperwork and hours.

Small-volume manufacturers (those with fewer than 10,000 engine or vehicle sales in the U. S. per year) have found the $50,000 per vehicle certification a severe burden on their resources. In many instances, it has been enough to cause them to cease operations in the U. S.

EPA said its new certification procedures, voluntary in 1982 and official in 1983, will reduce the number of test vehicles the small manufacturers will need to run, the associated test mileage and the paperwork.

Makers will need to submit only one vehicle, representative of their highest-selling model line or the one likely to be the highest emitter.

This vehicle will need to be run no more than 4,000 miles to stabilize its emissions. EPA will assign a deterioration factor for the engine, obviating the need for the maker to run a durability vehicle. A small-volume maker may still run a durability vehicle if it thinks it can get a lower deterioration factor in this manner.

EPA will not require small-volume makers to test vehicles at high-altitude conditions, but it will require them to submit a description of any vehicle adjustments or modifications necessary to assure that vehicles conform to emission standards at high altitudes.

Also required will be a statement that the vehicles described in the application comply with high-altitude emission regulations.

EPA will not require low-volume manufacturers to inform the agency when they make running changes on their vehicles. Neither will it require the voluminous descriptions of model lines, as it requires from larger manufacturers.

All told, EPA says the changes it is instituting will save the small-volume manufacturers approximately $1 million per year in compliance costs.

Eifert appointed

AKRON.—Ralph D. Eifert has been named division vice president of employe relations for the North American tire group at Firestone Tire & Rubber Co.

Put Mr. Goodwrench to work for your GM dealership.

Mr. Goodwrench works here

Because when Mr. Goodwrench talks, GM customers listen.

It's a fact that 86% of all people who own General Motors cars are aware of Mr. Goodwrench. And no wonder. The Mr. Goodwrench advertising campaign is one of the most effective automotive service campaigns you'll see. It works. Many ways.

It gives GM Dealer Service Technicians a strong sense of professionalism... professionalism that reflects itself in improved customer service.

It sells genuine GM parts.

It helps build the kind of customer traffic that means good, profitable business.

So if you are a General Motors Dealer and have not signed up to participate in the Mr. Goodwrench Program, see how you can qualify today.

Call your General Motors Parts District Manager. And keep that great GM feeling—with Mr. Goodwrench... and genuine GM parts.

GENERAL MOTORS PARTS

To finance showroom-shop for Toyota line

St. Louis deal seeks tax-free bonds

ST. LOUIS. — The St. Louis County Industrial Development Authority is reviewing a request from an automobile dealer for a $865,000 tax-free bond issue to build a separate 20,000-square-foot facility for a second franchise.

Jim Lynch, owner of Jim Lynch Cadillac-Toyota, said he is seeking help lest he lose the Toyota franchise. He has one year to complete the separate building under the terms of his Toyota franchise.

Lynch cited the growing number of dealers going out of business and said that it is vital to diversify.

"I think we've got to accept the fact in this area that we're going to have 40 car dealers rather than 110, and those 40 dealers are going to have to carry two or three lines," he told the board.

Lynch has until February, 1982, to build the Toyota facility, having received an extension of the franchise proviso for a separate showroom and service area.

Selling agreements with Toyota usually run six years.

He told board members his Cadillac business is declining and that he needs an additional line. Lynch said his Cadillac sales dropped from 850 autos in 1978 to 750 in 1979 and 330 in 1980.

Lynch tried to use the usual financial channels to borrow money for expansion but four banks rejected his application.

If the Industrial Development Authority approves his request, Lynch could get about 13-percent bond financing, which would be bought by high-bracket investors seeking tax-free benefits.

This is an unusual route for an auto dealer to take. Many have opted for Small Business Administration loans running 1 percentage point above the prime rate in amounts of $200,000 or $300,000.

"That's no bargain," an industry leader told AUTOMOTIVE NEWS of the SBA loans. But several dealers in the St. Louis area have sought such help. There is between $4 million and $5 million outstanding in SBA loans to dealers in Missouri.

An SBA loan wouldn't help him, Lynch said, because firms doing more than $4 million worth of business are excluded.

Lynch became a top Toyota dealer in a short period of time, and is a heavy advertiser. One of his ads has attracted attention. It is titled, "Amazing Discovery," and it reads in part:

"My good friend, a Pontiac dealer in St. Petersburg, Fla., obtained a quality Japanese car line to sell in his dealership with Pontiac. The Japanese car sales absorbed much of his overhead expenses, and he was able to sell Pontiacs at a greatly reduced price, and Pontiac sales volume actually increased.

"I'm always looking for ways to sell my Cadillacs for less money without cutting the quality of the service provided, and his amazing discovery looked like the answer.

"I obtained Toyota, a small, efficient, low-priced motor car with an outstanding reputation for quality and reliability. Toyota is a product that is consistent with my philosophy of selling the finest value in a motor car.

"Now, with Toyota and Cadillac sharing the expenses of one complex, we are able to offer outstanding price concessions. In a 10-month period we became the largest volume Toyota dealer in nine states. We earned this honor with low price and superb service.

"Now we are offering all new Cadillacs at a price that barely covers the sales commission — actually less than lease companies like Avis and Hertz pay. For example . . . you can buy any Cadillac 3 percent over invoice."

Laser assembled and ready to debut

The new Laser, Ford Australia's first passenger car developed in conjunction with the Japanese, is virtually a locally assembled Mazda 323 FWD hatchback, featuring a standard 1.3-liter alloy head overhead-cam engine on L and GL models and a 1.5-liter engine option for the GL. Three gearboxes and four levels of trim are available.

Laser is twin of Mazda 323

Ford Australia goes Japanese

By Pedr Davis
Staff Correspondent

GEELONG, Australia. — "Do we call you Inglis-san?"

The first question directed at Sir Brian Inglis at the national Laser launch caused a long round of laughs, the loudest coming from Sir Brian himself. He is head of Ford Australia.

Not only has Ford become the fifth company to build a Japanese car in Australia, but the Laser is a replacement for the European Escort.

At the Escort introduction in 1970, William O. Bourke, then managing director, told the press: "I live for the day when there will be no more Japanese cars in RSL (a war veterans association) car parks."

The present managing director, Inglis, has other views. Introducing the Laser, he said: "This is a new era for Ford. Our future is with Japan, which is dominating the world's motor industry."

The Laser is virtually a locally assembled Mazda 323 front-drive hatchback. Its engine is made by Ford in Taiwan but all other components and sheet metal parts are imported in CKD form from Mazda. Ford Motor Co. owns 25 percent of Toyo Kogyo, which manufactures Mazda vehicles.

The pricing structure brings the Laser very close to 323 models throughout the range, even though a fully imported Mazda carries a 57.5-percent import duty.

Ford Australia was the last of the local manufacturers to hold out against the Japanese. In recent times, the company has been importing Mazda light commercial vehicles and giving them Ford nameplates.

The decision to locally assemble the 323 brings Ford into line with General Motors Holden's, Mitsubishi (formerly Chrysler), Nissan and Datsun, all of which assemble or manufacture Japanese-designed vehicles.

Inglis told the press launch that the company had the choice of sourcing the new car from Japan, Europe or the U. S., but chose Japan because it was the "best solution." He lavished praise on the ease with which the Laser can be assembled and the high quality of the components.

He admitted that introducing the Laser six months after the 323 went on sale is a "marketing nightmare" and said it was the first of a new generation of front-drive cars to be assembled by Ford Australia.

He declined to comment on reports that the Cortina replacement will be a front-drive Mazda 626.

Mazda Australia already has long waiting lists for the 323, supplies being restricted by quota to around 15,000 units a year. Ford expects to produce up to 100 Lasers a day.

Few mechanical changes have been made but Ford has installed additional soundproofing and its choice of trim.

The Laser offers 1.3 and 1.5-liter engines, a choice of three or five doors, three gearboxes and four levels of trim. The ten-model range is priced from $5,846 to $7,677 Australian dollars.

Network ad billings hold firm despite troubled '80 for TV

By Joseph Bohn
Marketing Editor

Auto advertisers held fairly firm in network TV billings last year, despite the general recession and an actors' strike which disrupted programming in the fall.

The networks did lose ground with one major auto advertiser — Chrysler — and a number of smaller ones, including Volkswagen, Datsun, American Motors, Honda and Jaguar Rover Triumph.

But they gained ground — or dollars — from two of their biggest car advertisers, Ford Motor and General Motors, along with Toyota, Mazda and Subaru.

Compared with other major ad media, the networks could be considered holding their own, although the state of the car industry has not benefitted the advertising community in general too much this past year.

Ford's budget on network TV was way up, a whopping 29.6 percent, due largely to its heavier corporate advertising under Wells Rich Greene.

Adjusting for inflation, GM was not really up, although it spent 5.3 percent more money in network TV last year.

Toyota Motor was up a respectable 8.8 percent in network TV, despite having had to cancel its planned heavy sponsorship participation in the Moscow summer Olympics.

Mazda was the biggest gainer with a 35.7 percent ad increase in network TV.

Right behind was Subaru, which chalked up a 33.5 percent increase.

Subaru, which began life as a regional marketer, has been pushing countrywide sales more heavily and is putting more emphasis into metro markets where it hasn't been all that strong in the past.

Daimler - Benz, whose Mercedes line is geared to a very upscale, high income buying group, has and continues to use more specialized media. However, it did make it onto the network list of automotive sponsors in 1980.

Overall, there are some indications that car firms are doing more regional type marketing, and the decline in network TV may be due at least in part to greater use of spot advertising to beef up support in key pockets of the country.

NETWORK TV ADVERTISERS, 1980 VS. 1979

Grayson spells out program to improve U.S. productivity

By Edward Lapham
Financial Editor

DETROIT. — Some U. S. auto makers are among the industrial companies that have contacted the American Productivity Center in Houston as part of an effort to improve industry productivity, the center's head told the Economic Club of Detroit.

C. Jackson Grayson, APC chairman and former head of the Nixon Administration's wage and price control commission in 1971-73, said the auto makers and other companies are making his phones "ring off the hook."

"The auto makers are looking for ways to improve productivity just like the other companies," Grayson said.

He told AUTOMOTIVE NEWS the auto companies are "probably" being truthful when they claim they can't accurately measure their own productivity gains.

"The auto makers can do a far better job of monitoring and measuring productivity than they have been, but really, there is no perfect measure," Grayson said.

Grayson, who founded the American Productivity Center in 1977 after soliciting corporate contributions, said he believes there are several public-sector changes needed for a nationwide effort to improve productivity.

He told the Economic Club there should be a "focal point" in the Executive branch of government that would make productivity an important consideration "at the highest levels of economic policy-making."

Grayson said there also should be a council on productivity, including members from business, labor and academia "whose sole function would be to regularly examine and report on areas where government policies, procedures and laws are positively and negatively impacting productivity."

A third requirement, Grayson said, is to fund and direct the Departments of Labor and Commerce to improve the methods of reporting national and international productivity statistics.

The final requirement, he said, is for an executive order to direct every government agency "to initiate programs to improve the productivity of that agency."

In the private sector Grayson said there should be a formal program at every company to involve all of the employes in productivity - raising activities, "a planned, specific program in writing, with multi-year goals, timetables, assigned responsibilities, measures, training programs, incentives and most of all employe involvement."

Grayson said that while corporate long - term productivity planning might seem to conflict with short-term profit goals, ultimately, the company with the highest productivity will have the highest profits.

Brazilian 127 headed for Europe

Fiat building smallest diesel car

TURIN, Italy. — Fiat now makes the smallest mass-produced four-cylinder diesel-powered car in the world.

There are vehicles like the Duport Caddy and Parco, using single-cylinder engines and produced on a non-industrial scale, that are smaller, but for the established auto industry, Fiat is the smallest, lightest and lowest-priced diesel car.

The Fiat 127 diesel is made in Brazil, and is being sold in Italy at approximately $1,000 above the price of the domestic, carburetor-engine 127.

Fiat intends to bring 50,000 diesel cars to Europe this year. It has no direct competition—and won't have, unless Volkswagen brings out a Diesel Polo or Ford gets a diesel engine for the Fiesta.

The decision to make it in Brazil stems from a combination of factors: Fiat Automoveis is under obligation to export cars or parts to a certain minimum value each year; it builds the 147, a heavy-duty version of the 127, which is inherently more suitable for diesel operation than the Italian model, and the engine plant had surplus capacity.

The new diesel engine is not experimental. Launched in the spring of 1971, 127 production is now approaching the 5-million mark (including units made by Seat in Spain and by Fiat in Brazil).

- The 127 Diesel has a range in excess of 500 miles on a tankful of fuel, and rates better than 46 MPG at a steady 56 MPH. In the urban driving cycle, it is 21 percent more economical than the gasoline-driven version (36.15 MPG vs. 28.3).

The engine is light (254 pounds complete), and despite the use of cast iron for the cylinder block, lighter than the all-aluminum Peugeot XID engine of slightly greater displacement.

The decision to develop this engine was taken late in 1977—far too early for the direct-injection diesel to come into serious consideration. Still, it breaks new ground, in departing from the Ricardo Comet swirl chamber used in the Sofim and Ritmo diesel engines.

Instead, it has a low-turbulence pre-chamber, not spherical in shape but almost cylindrical, with an off-center passage leading to the cylinder. The injector nozzles deliver fuel in a conical spray, not in parallel-pencil formation, and the piston crown was shaped for turbulence control.

The gearbox is taken from the 147, but has different ratios. In addition, the final drive ratio has been changed from 4.07 to 3.765:1 to take advantage of the higher low-range torque and to reduce noise levels.

Top speed is 75-80 MPH, and 0-60 acceleration takes 23.5 seconds. It's essentially a top-gear car, for it can pull fourth gear from 25 MPH upwards, and will climb a 10-percent gradient at 37 MPH with a normal load in top gear.

In Fiat's aggressive new-product planning, the 127 Diesel is only an interim model. The direct-injection diesel with three valves per cylinder is being developed for production.

It will be combined with the Van Doorne stepless drive to make a power train of extraordinary versatility for the next generation of Fiat mass-market cars.

Diesel-powered Fiat 127 bows

Production of the world's smallest mass-produced diesel, the Fiat 127 Diesel, has begun in Brazil. Plans are to sell 50,000 in Europe this year. With a 1.3-liter (79.4-CID) engine, the 127 Diesel rates 36.15 MPG in the European urban cycle and has a top speed of 75-80 MPH.

Niskanen named by White House

WASHINGTON. — William A. Niskanen, who used to be chief economist for Ford Motor Co., has been chosen by the Reagan White House to fill one of the vacancies on the Council of Economic Advisers.

Niskanen was dismissed by Ford because he opposed the company's position on auto import restraints, arguing that imports accounted for only a small fraction of the decline in domestic car sales.

At the council, Niskanen, 48, will be responsible for issues relating to trade, labor policy, regulation and subsidies.

Boom for Japanese exports continues in January

By John Hartley
Staff Correspondent

TOKYO.—Despite all the talk about restraint, and the adverse effect of the value of the yen, Japanese auto exports continued to boom in January.

A total of 531,539 units were exported, 33.2 percent more than the same month of last year, which was when the boom was in full swing.

Included in these were 209,205 units to the U.S.A. (+16.4 percent), which is remarkable in view of the fact that following the big increase in tariffs, small trucks are much less in demand than a year ago.

Exports to Canada were up a massive 68 percent to 16,567 units, while other major targets were: Germany 29,597 (+105 percent), Holland 11,507 (+61 percent), Denmark 2,360 (+80 percent) and Belgium 10,470 (+53 percent). Exports to Britain, in line with the agreement with British manufacturers, were down 7.28 percent at 8,146 units.

Sales in Japan continued their slow downward spiral, down 2.4 percent over a year ago, at 141,575 passenger cars and 131,647 commercial vehicles. For the first month for a considerable time, though, Toyota managed to sell more cars than in the corresponding month of 1980.

Toyo Kogyo increased sales by about 8 percent, but the gain was more than wiped out by falling truck sales.

Daihatsu also increased sales of passenger cars.

GM chief expects exports to U. S. to be cut soon

Smith sees a Japanese rollback

FLINT.—Roger B. Smith, General Motors chairman, continues to believe the Japanese will "voluntarily limit exports of autos to the U. S. for a short period."

"I believe it will happen and happen soon," Smith told the Industrial Management Assn. last week. "The pressure of unemployed Americans and red ink is too great for Congress. Therefore, the Japanese, to avoid legislation, will restrict exports to the U. S. voluntarily."

Smith also said GM continues to be interested in renegotiating its current labor contract with the UAW, declaring it all boils down to the issue of jobs. The union said earlier that it will not reopen talks at this time with either GM or Ford Motor. The present contract expires in September, 1982.

Smith made another prediction. "The voluntary restraint of exports to this country by the Japanese will not solve our competitive problem," he said. "In fact, it will make it worse unless, during the period of restraint, we use that time to get competitive" in products, facilities and costs.

"The bottom line is jobs here in the United States," he continued, "not only in the domestic auto companies — but also jobs in steel, rubber, copper, aluminum and other supplier industries.

"An estimated 720,000 employes all over the country are out of work today because of depressed sales of domestic cars. The crisis is hitting hardest in the heartland of America — in the Flints, Clevelands, Detroits and other major industrial towns."

These are the cities, he said, which helped to build the nation's industrial might but which "now are suffering the most severe penalties for lost industry sales."

Smith said this situation poses a critical problem for both management and unions — which "share a common interest in the economic well-being of General Motors employes."

"We ask for the UAW to join now with GM in launching a new era of enlightened industrial leadership in America to save jobs," he said. "We will come to the discussion table with an open mind, and we hope the union will, too."

Smith said the "first thing to do in solving a problem is to recognize that you have a problem and attack it."

"I say let's face it squarely—together before all the jobs are gone," he continued. "It is totally unrealistic to think that good management alone can overcome labor costs which are 73 percent higher than our (Japanese) competitor—at least not in the near future."

• Currently, he said, the cost of an hour of labor for GM employes is about $19, including benefits. In comparison, he said, the Japanese labor costs are under $11 an hour, including all benefits and allowances peculiar to Japan.

"This is a difference of about $8 per hour—and that obviously translates into a huge difference in the costs of our products," he added.

Smith said there are a number of areas which offer potential for improving GM's competitive cost position.

He said the Quality of Work Life program launched in cooperation with the UAW is "achieving significant results in over 95 GM locations — and these efforts will be strengthened in the future."

He also pointed to "unwarranted absenteeism" as an "expensive bad habit."

"In North America alone," he said, "absenteeism cost GM more than $1 billion last year — and that's a conservative figure . . . I might add that absenteeism in Japanese industry is negligible."

Smith said he believes the competitive issue will come into sharp focus in discussions with the union on the basic wage and benefit package.

"The UAW said last week that we need new approaches to collective bargaining," he continued. "I couldn't agree more."

He said the "time may be right" for the profit-sharing concept in the auto industry."

"It could result in a competitive wage that would assure jobs and, at the same time, permit the worker through the profit-sharing plan to have a higher income as the fruits of his labors bring additional profits," he said.

"There are many other ways of achieving competitive labor costs without extreme sacrifices on the part of our workforce. Pay for time not worked has certainly grown excessively and, in comparison with Japanese labor costs, is a glaring example of a non-competitive cost."

But time, he said, is of the essence. "In the terms of the auto industry," he concluded, "today is already past and tomorrow is rushing at us like the wind."

Bank buys Ford site

QUINCY, Mass.—The former Quincy Motors (Ford) property has been acquired by the Quincy Co-operative Bank for a reported $750,000. The bank plans to convert the building into a new banking operation.

Safety group seeks method to detect worn ball joints

WASHINGTON. — A better way to detect potentially hazardous worn ball-joint assemblies in the steering mechanisms of large trucks and buses is being sought by the National Transportation Safety Board.

The board, in a recent investigation of a fatal bus accident in Virginia, did not pinpoint the cause of the accident but did find a ball joint so worn that it may have caused steering linkage separation.

The board is warning truck and bus makers and drivers because the unsafe condition was not found despite recent inspections and proper maintenance and because the type in question is standard for many vehicles and the driver apparently had no indication of failure.

The current NHTSA inspection standard is the basis for most steering tests done by federal, state and local inspectors as well as the maintenance checks made by truck and bus owners.

It measured the amount of play for mechanical systems, but the board notes that the design of the power steering mechanism on many trucks and buses "is such that a worn ball-joint or end assembly will not be detected using the procedures described by the NHTSA standard."

The board suggests a visual inspection for excessive relative motion while the freeplay test is made, and if relative movement is found between the ball and socket or the end assembly, then it should be disassembled and checked for wear.

The board is also urging NHTSA to develop with manufacturers a new inspection test for power steering mechanisms and urging the Bureau of Motor Carrier Safety to work with NHTSA and to issue safety notices to alert interstate and intrastate bus and truck operators.

Rebates fire up mid-March sales to record level

Continued from Page 1

was up 34.99 percent to a record 44,781 from 33,173; Pontiac was up 32.45 percent, to 28,575 from 21,574; Lincoln was up 30.30 percent, to 3,496 from 2,683, and Dodge was up 23.86 percent, to 13,315 from 10,750.

Chrysler sales dropped 39.25 percent, to 4,023 from 6,622 last year; Cadillac was down 12.32 percent, to 6,091 from 6,947; Ford was down 11.47 percent, to 43,752 from 49,423, and Mercury missed by 3.51 percent, dipping to 13,892 from 14,398.

The daily selling rate was a healthy 36,233, up 30.33 percent over 27,800 last year. There were nine selling days this year and last. It was the highest daily rate so far this year, surpassing 34,001 notched Feb. 21-28.

Chevrolet Chevette sales numbered a record 31,524 during the period, making the subcompact the best-selling nameplate. Chevrolet Citation was second with a record 26,580, followed by Oldsmobile Cutlass Supreme at 20,058, Buick Regal at 15,676 and Buick Skylark at 14,914. All five were among GM's rebate cars in mid-March.

The gap between year-to-date sales, 1981 and 1980 narrowed to a negative difference of 4.53 percent; 1,543,749 this year compared with 1,617,046 a year ago.

EXPs arrive in Detroit

The first shipment of 1982-model EXPs, Ford Division's new two-seater version of the Escort, arrives in the Detroit area for public introduction at Ford dealerships April 9. The EXP features as standard a 1.6-liter four with manual transmission and four-speed overdrive.

U. S., Japan keep waltzing, reach no import decision

Continued from Page 1

nually. The issue, he told reporters after meeting with President Reagan, "is very simple: Will we see restraint by the Japanese, over what period of time, and what will be the number?"

• Senate Majority Leader Howard Baker, the Tennessee Republican, told reporters: "I think the President must surely understand that there is a building pressure in the Congress to do something by statute if the Japanese do not do something voluntarily . . . I don't want that, but that's going to happen if the Japanese don't understand that the situation's out of hand."

According to congressional sources, there now exist enough votes in the Senate to pass an import restriction bill.

Just what the Japanese will do in response to the situation remains a mystery but it is known that among the options being considered, according to knowledgeable sources, are an open ended limit on exports with the rollback decreasing as U. S. sales increased and/or quarterly limits.

In any case, Watanabe said whatever Japan does on the auto export situation it will do it unilaterally so as to avoid any problems with U. S. antitrust laws.

He noted that there was precedence for such action, citing previous agreements by Japan to limit steel and color television exports. He also noted that the Japanese government has already asked its auto makers to exercise "prudence" in their shipments to the U. S.

• Though the decision to hold further "talks" with the Japanese on the auto import situation delays any decisive action on this aspect of the auto situation for at least two weeks, the Administration plans to go ahead with its regulatory relief package for the industry as early as this week.

As previously reported, this could save the industry from $2 billion to $5 billion over the next five years and will include a rollback of the 5-MPH bumper standard, a withdrawal or further delay in the passive restraint standard, modifications to the fuel economy standards, a rollback of the carbon monoxide standard, modification of the heavy-duty truck-emission standards, modification of the 1985 diesel particulate standards, modification of the 1983 diesel NOx standard, modification of the 1984 high altitude emission standard (nearly $500 million by itself) and possibly a delay in the post-1983 light-duty truck-emission standards.

Japanese exports already pared, Nissan aide says

DETROIT. — Japanese auto companies already have voluntarily started limiting shipments to the U. S., a Nissan Motor Co., Ltd., official told a press conference here last week.

Mitsuya Goto, public affairs general manager of Nissan's International Division, said the Japanese manufacturers began reducing shipments to the U. S. in the fourth quarter of 1980. He also said total 1981 shipments "would not exceed" 1980 levels.

"Each company in the industry is exercising its own judgment about limiting exports to the U. S.," Goto said. "Some of us feel that Japan is being used as a very convenient scapegoat by U. S. industry."

Goto, who was at Wayne State University as part of the Japanese Caravan '81 group touring the U. S. to promote understanding between the two countries, said he believes the imposition of car import restrictions in the U. S. could spark a worldwide trade war.

He said Nissan is not shipping as many cars to the U. S. as it thinks it can sell here and that the company has not built a car plant here because the company believes there will be small-car over-capacity by the mid-1980s.

White ads Isuzu

HOUSTON. — Sam White, an Oldsmobile dealer here for 30 years, has added the Isuzu line of cars and pickup trucks. He is building a separate display facility for the Japanese model.

Chevrolet Cavalier joins the parade

Car production up slightly for week

By Patricia Hoffman
Staff Writer

U. S. auto production rose slightly last week as the first Chevrolet Cavalier J-cars were produced. The total, however, was below the year-ago level.

The first-week output of Cavalier was 617 units.

Planned production last week was 146,351 cars, an increase of 0.90 percent from the 145,046 units assembled in the previous week, but down 3.05 percent from the 150,963 units completed in the comparable week last year.

Breakdown for last week by company was: General Motors, 60.65 percent; Ford Motor, 19.75 percent; Chrysler Corp., 15.00 percent; Volkswagen of America, 2.84 percent; American Motors, 1.71 percent, and Checker Motors, 0.05 percent.

So far this year, the auto makers have completed 1,510,796 units, down 14.58 percent from the 1,768,632 cars completed in the comparable period last year.

Saturday overtime was scheduled last week at Chrysler's Belvidere and St. Louis assembly points.

Chrysler said it will increase the daily straight-time rate at Belvidere from the current 1,072 units per day to 1,152 units per day effective today (March 30).

GM said it has scheduled production adjustments to balance production with current market conditions.

On April 6, assembly at GM's Fremont plant (Buick Century and Regal and Chevrolet Malibu and Monte Carlo) will be increased from one shift at 45 per hour to two shifts at 45 per hour.

At GM's Van Nuys point, effective May 4, production of the Chevrolet Camaro, and Pontiac Firebird will be increased from one shift at 60 per hour to two shifts at 60 per hour.

Downtime was slated last week at two plants. GM's Janesville point and Ford's Lorain plant were both idle for one week.

There is no downtime slated at Chrysler Corp. or GM this week.

Truck production again exceeds year-ago week

U. S. truck production, for the second week in a row, has topped year-ago figures. The output last week also was up a few units from the previous week's total.

Truck production last week was slated at 40,132 units, a slight increase of 0.06 percent from the 40,106 trucks completed in the previous week, and up 18.26 percent from the 33,936 units built in the comparable week last year.

Although the weekly output is showing improvement, the truck makers continue to trail 1980 on a year-to-date basis. This year's total of 425,173 trucks is 12.81 percent below the 487,655 assembled in the comparable period last year.

Chrysler Corp.'s Warren truck point, working its seventh consecutive week without downtime, scheduled Saturday overtime last week.

General Motors plans production schedule adjustments at its Flint plant to balance production with current market conditions.

The Flint point, which assembles light-duty Chevrolet and GMC trucks, will reduce production from two shifts at 50 trucks per hour, to one shift at 50 per hour on April 20.

GM has scheduled a week of downtime at three truck points. Flint, Baltimore and Fremont will be idle this week.

Canadian output dips as Chrysler plant is down

Due to downtime of all operations at the Chrysler Windsor car plant last week, Canadian auto production fell from the previous week's output and the comparable year-ago week's levels. The plant will remain idle until April 13.

The auto makers slated production last week at 20,033 units, a decline of 6.01 percent from the 21,315 units completed in the previous week and down 12.58 percent from the 22.917 cars assembled in the comparable period last year.

So far this year, the auto makers have completed 175,505 units, a drop of 20.69 percent from the 221,291 in the comparable period last year.

Canadian truck production rose slightly last week from the previous week, but it continues to trail year-ago levels.

Truck production was slated at 12,331 units last week, an increase of 1.31 percent from the 12,171 in the previous week, but down 11.10 percent from the 13,872 trucks assembled in the week ended March 29, 1980.

Year-to-date, the truck makers have assembled 136,517 units, a decrease of 4.91 percent from the 143,574 trucks completed through March 29 last year.

American Motors, Ford Motor, and General Motors have no downtime scheduled this week.

Chrysler Corp.'s Pillette Rd. point in Windsor will increase line speed from 320 trucks a day to 360 on two eight-hour shifts effective April 20.

breaking news

Continued from Page 1

tinental Warranty Corp. in Marina Del Rey, Calif. Farrar said he projects industrywide service contract business will total $2.5 to $3 billion annually by 1985. Farrar's new firm will offer extensive finance and insurance training.

GM recalling 105,000 X-cars

DETROIT. — General Motors is recalling 105,000 early-production-1981 X-cars (Chevrolet Citation, Pontiac Phoenix, Oldsmobile Omega and Buick Skylark) to replace an engine electrical ground cable which could break and reduce the performance of the car's electrical system. GM said a cable breakage would result in dimming of the headlights and slowing of windshield wiper blade action.

Volvo reports slim sales gain

STOCKHOLM. — Volvo reported group sales of $5,425 million for 1980, up one percent over the preceding year. Group earnings before allocations and taxes corresponded to 4.0 percent of sales, compared with 5.3 percent the year before.

Europeans to get sampling of LN7

LONDON.—Ford of Europe will sell "a few hundred" examples of the new Lynx LN7 from Lincoln-Mercury in Europe, this September. Main markets will be Austria, Belgium, Holland, Germany and Switzerland.

Rebates gone; industry hopes for no letdown

By Marjorie Sorge and Joseph Bohn

There's an upbeat feeling among dealers and factory executives that the wealth of sales experienced during the rebate period will continue into the spring and summer months, although some dealers are holding their breath as the cash incentives disappear.

Rebates at General Motors, Ford Motor Co. and Chrysler Corp. were scheduled to end last week but many dealers, especially those at Ford and Chrysler—expressed a desire to have them continue.

American Motors' 10 percent rollback continues until May 15.

Chevrolet and Chrysler dealers added that sales of Omni/Horizon, K-cars, X-cars and Chevettes have been brisk, even though these cars were not included in the rebate extensions which ended last week.

Ford's Escort/Lynx has been doing well right along, even though they were not part of any special price-reduction program.

What rebates accomplished was to reduce inventories and move out older cars which "allows us to get fresh, new merchandise in there," observed Bernie Crumpton, Ford division general sales manager.

"There's nothing to stimulate the market like new merchandise," he added.

The "new merchandise" includes, of course, cars like the Ford EXP and Mercury LN7 which go on sale April 9, as the first of the '82s. General Motors will introduce its traffic-and-sales-building '82 J-cars in mid May.

"New merchandise" also includes special-value-package models, aimed directly at the price-conscious market. Ford, Chrysler and GM all have discounted optional equipment packages for many models, offering consumers savings of several hundred dollars.

- Effective April 1, Ford Motor also boosted its special UAW-employe rebate program to put more cars into workers hands.

Hourly workers now get a base $250 on smaller cars, up $15 from before, and $400 on larger cars and light trucks, up $40 from before. The employe rebate has been in effect for some time and will continue through '81.

Hourly workers also get additional rebates on selected models, boosting them to $400 on Granada/Cougar and Thunder-

breaking news

Datsun hikes prices an average of $248

CARSON, Calif.—Datsun last week raised U. S. prices an average of $248, or 3.3 percent, on cars and trucks. It is Datsun's third increase on 1981 models, totaling an average of $779 since the end of the 1980 model year. Last week's range on cars was $150 to $596. The 210 standard two-door sedan rose $150 to $4,599, and the 310 Deluxe two-door hatchback went up $150 to $5,489. Top increase of $596 was applied to the 280-ZX 2 plus 2 coupe, now $14,949. The new 280-ZX Turbo is priced at $16,999. Pickup truck increases ranged from $140 on the standard short bed model (now $5,999) to $200 on four-wheel-drive units.

McWilliams to head DeLorean marketing

NEW YORK.—J. Bruce McWilliams has been appointed vice president—marketing for DeLorean Motor Co. McWilliams has extensive experience in the import-car field. He was instrumental in the start of Saab's marketing program in the U. S., later served as sales vice president of Mercedes-Benz, president of Rover Motor Car Co., and vice president of Leyland Motors and its successors, British Leyland Motors and Jaguar Rover Triumph Inc.

New exhaust rules styled after CAFE proposed by GM

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — A "mobile bubble" for emission control has been floated by General Motors. It is too early to say whether it will stay aloft or be shot down.

It was first addressed by GM Chairman Roger B. Smith in a speech to the National Petroleum Refiners Assn. Next, the Washington press was briefed by Craig Marks, head of GM's internal task force on ways to change the Clean Air Act when it comes up for reauthorization by this Congress.

GM wants to average emissions for all its cars and save money, hassle and paperwork at no cost to air quality.

The GM "bubble" is a cousin to the CAFE used in the fuel-economy law.

While Ford Motor Co. was the leader in designing CAFE, GM has become the leader in what may be called the CAEC—Corporate Average Emission Control. CAEC, like CAFE, would enable a company to trade-off winners with losers and be judged on the average of emissions rather than engine family by engine family.

Like the energy and safety laws administered by NHTSA, it would place the burden on the manufacturers to self-certify and reduce the government role to one of monitoring, enforcing and possibly "brokering" among the companies.

GM said averaging and allowing the kind of offsets available under "bubbles" now allowed for plant emissions would mean a savings of about $50 million a year otherwise spent on certification at the Ann Arbor EPA lab. It would also save 15 feet of documentation for each engine family and the hassle that occurs every time a running change is made, GM said.

It would also wipe out many layers of compliance procedures: EPA assembly-line testing known as selective enforcement audit; in-plant audits done by EPA enforcers; extensive reporting of emission data and product defects; data for investigative procedures; overlapping warranty (retaining the simple defect warranty but eliminating the performance warranty); the short emission test used in local inspection/maintenance pro-

Car production highest of year

By Patricia Hoffman
Staff Writer

U. S. auto production last week reached its highest point for 1981, and output was the best since the week ended Nov. 22, 1980.

Planned production last week was 152,333 units, up 7.42 percent from the 141,806 completed in the previous week and an increase of 15.21 percent from the 132,222 cars assembled in the comparable 1980 week. The total was the highest since the 157,249 units built the week ended last Nov. 22.

The total for March is estimated at 715,265 cars, up 11.20 percent from the 643,178 completed in the comparable month in 1980, and the highest output

FDA leader rips Ford leadership, product, planning

Mullane's 'better idea:' Merge Chrysler, Ford

By John A. Russell
New York Staff Writer

HACKENSACK, N. J.—Claiming that the management of Ford Motor Co. is out of touch with the marketplace, Ed Mullane, president of the Ford Dealer Alliance, called for the replacement of top Ford management, including Ford Chairman Phillip Caldwell.

He also demanded that the company start merger talks, preferably with Chrysler Corp. Mullane said that, in his opinion, Chrysler has the management and the product that Ford desperately needs.

In an interview with AUTOMOTIVE NEWS, the FDA president charged that Ford's plight is one of product and leadership and that the company's current plans for product introduction will be too late to save the company and the dealer body.

Mullane said the company must acquire more front-wheel-drive capacity before the current target dates of 1983 and 1985. While the major competitors, General Motors and Chrysler, will be working on their second-generation FWD cars, he said, Ford will be developing its first generation.

Mullane charged that staggering losses incurred by Ford in the past year are the fault of Ford management.

The company "wouldn't be in this position if we had competent professionals," he said, adding that the managers at Ford "don't know what's going on in the marketplace."

Mullane predicted that if there are not more FWD models by 1982½, then "the dealer body will be broke by 1983."

- Mullane further said that if the company's product planning isn't pushed up by at least a year, the industry would "see the first dealer rebellion in the history of the franchise system."

Mullane stressed that a leadership gap exists at Ford. While company executives have been in the forefront in calling for restraints to be imposed on Japanese imports, he said, even if this were to come to pass, Ford would not gain from it.

"Chrysler and General Motors will benefit because they have the products," he said.

- FDA recently sent a pamphlet to all dealers and the Ford board of directors outlining the crisis at Ford as Mullane sees it. This was a first for the FDA, but Mullane said the pamphlet was necessary to bring the issues of product and leadership to the forefront.

He cited several examples of what he termed the lack of leadership at Ford in the product area and those include the abandoned PROCO engine project, which was pushed in lieu of diesel development, as well as tardy development of front-wheel-drive cars.

Mullane said he had been told by upper management at Ford that any form of price reduction would be devastating. Public statements by Ford executives made it apparent that Ford regarded this as a short term solution and would not attempt it, because it would be too costly.

But Ford follows GM leads, he

Continued on Page 49, Col. 2

NEWSPAPER

Few changes required in law, he says

Update pollution rules, Smith urges

SAN ANTONIO. — The chairman of General Motors suggested last week that government programs to control pollution from automobiles "can be streamlined and updated to do the job more effectively — at lower cost and with less regulatory involvement."

Speaking to the National Petroleum Refiners Assn., Roger B. Smith said that for the most part, the suggested changes could be implemented administratively.

"Only a few changes would be required in the Clean Air Act itself," he said.

"We need to draw on our experience of the past decade to make our air pollution control efforts simpler, less costly and in better balance with other high priority national goals."

Much of the language in the Clean Air legislation, which is up for reauthorization by Congress this year, was written in 1970. Among the other goals listed by Smith as requiring high-priority attention were reducing inflation, restoring economic growth, creating more jobs, producing and conserving energy and improving national productivity.

• Smith said the changes in the so-called mobile source provisions of the Clean Air Act would have no significant impact on air quality. But he said the changes would have several important benefits:

1. Reduce the need for the U. S. to import such large quantities of noble metals for use in catalytic converters. Adequate quantities of the metals are available only from the Soviet Union and South Africa.

2. Permit auto manufacturers to use more cost efficient emissions control technology, thereby reducing the cost of those control systems to new-car buyers.

3. Allow potentially greater mileage improvements on all cars.

4. Allow the continued use of fuel-efficient diesel engines.

At the very minimum, Smith told the refiners, Congress should slightly ease the tailpipe emission standards for two regulated pollutants, carbon monoxide and oxides of nitrogen.

In both cases, he said, the federal standard in effect for the 1980 model year was adequate to meet the nation's commitment to air quality in most regions, and the more stringent 1981-model year standards were not necessary for those two pollutants.

"Just because we can meet them doesn't mean it makes sense to meet them," he said.

Beyond recommending slight easings of the carbon monoxide and oxides of nitrogen standards, Smith outlined a different conceptual approach to controlling automotive emissions, which he said deserved careful consideration when the legislation is reconsidered.

• Smith said the different concept for controlling automotive pollution laws developed by a GM task force which has been reviewing the Clean Air legislation for several months. He added the concept is made up of three key elements:

1.—Introduce the idea of the "mobile bubble"—that is allow manufacturers to average their emissions in the same way they now average fuel economy.

"It is total vehicular emissions that impact air quality—either nationally or in any given location," Smith said. "The contribution of any single vehicle is not important."

2.—Eliminate overlapping and expensive enforcement programs, such as pre-production certification, production line testing and in-plant audits.

"A manufacturer still would be responsible for designing, developing and producing a fleet of vehicles that stays within compliance on an average basis for a period required by law," Smith said. "Since the air we breathe is what we want to protect, it makes sense to us to measure our efforts there. What's important is that our cars and trucks do the job required to meet our national commitment to air quality—not whether we pass some pre-production certification test, an in-plant audit, or assembly plant test."

3.—Allow adequate lead time before new emissions standards take effect. As a corollary to that, he suggested that any set of standards be given time to work before more stringent ones are adopted.

"Given more time for development and testing, we are sure we can produce control systems that perform better in the field — where it really counts," he said.

A world of trust...for buyers and sellers.

If you're like most dealers, you're looking for a single source of quality cars and qualified buyers—a source for inventory regulation you can trust, time after time.

You're looking for the world of Manheim Auctions.

Knowledgeable dealers from coast to coast have already found it. They trust the Manheim system of service to give them an unrivaled selection of cars. And they count on its program of comprehensive support services, backed by unquestioned professionalism, to make balancing their inventories easier, quicker and more pleasant.

But most of all, they have confidence in Manheim's ironclad policy of *fair and equal treatment* to help them get the cars they need to stay competitive—at competitive prices.

They know there's a world of trust at a Manheim Auction. And you will, too, the first time you visit.

Week's yield is 152.333

Car output reaches peak for 1981

Continued from Page 1

for any month since the 783,843 units assembled in October, 1979.

The auto makers built an estimated 1,659,623 units the first three months of 1981, a decline of 7.75 percent from the 1,799,108 units completed in the first quarter of 1980.

For April, production is planned at 660,472 units, up 13.70 percent from the 580,855 cars completed in April, 1980.

The second quarter forecast for the makers is 2,008,464 units, up 22.29 percent from the 1,642,293 units completed in the second three months of 1980.

Breakdown by company for the April forecast is: General Motors, 420,000, up 14.07 percent from the 368,185 units completed in the comparable 1980 month; Ford Motor, 139,000, up 11.00 percent from 125,216; Chrysler Corp., 70,000, up 40.14 percent from 49,947; Volkswagen of America, 17,472, down 17.64 percent from 21,215 and American Motors, 14,000, down 12.39 percent from 15,981.

- Checker Motors has scheduled downtime beginning today with operations not resuming until May 4. Checker will remain in operation until June 8 and then go back down until July 10. The extended downtime is due to slow sales. Checker built 311 cars in April, 1980.

Breakdown by company for the second quarter forecast is: GM, 1,290,000, up 23.85 percent from the 1,041,557 units completed in the second three months of 1980; Ford, 414,000, up 21.56 percent from 340,562; Chrysler, 210,112, up 32.17 percent from 158,964; VWoA, 57,824, down 0.02 percent from 57,836; AMC, 36,000, down 15.42 percent from 42,566, and Checker, 528, down 34.65 percent from 808.

So far this year, the makers have completed 1,658,584 units, a drop of 12.55 percent from the 1,896,651 assembled in the comparable period in 1980.

Breakdown for last week by company is: GM, 62.00 percent; Ford, 20.78 percent; Chrysler, 12.80 percent; VWoA, 2.73 percent; AMC, 1.64 percent, and Checker, 0.05 percent.

Chrysler Corp. has scheduled overtime this week at two plants. The Belvidere assembly plant is scheduled to work two nine-hour shifts this week and the St. Louis point is scheduled to work a nine-hour shift.

Truck production for March tops last year by 18 pct.

U. S. truck production last week pulled ahead of the 1980 week's level, but the total was below the previous week's output.

Planned output last week for the truck makers was 34,995 units, up 11.26 percent from the 31,452 trucks assembled in the comparable week last year, but the total showed a decline of 10.56 percent from the 39,127 trucks completed in the previous week.

Truck production was an estimated 183,406 units in March, up 18.11 percent from the 155,283 units completed in the comparable 1980 month. It was the highest output for any month since the 185,001 trucks assembled in November, 1979.

Estimated first-quarter output is 460,611 units, a decline of 7.38 percent from the 498,362 trucks completed in the first three months of 1980.

Although the first quarter was gloomy, the April and second-quarter forecasts are much brighter.

In April, truck production is planned at 157,628 units, a 21.50 percent increase from the 129,728 trucks assembled in April of 1980.

The projection for second quarter is 499,756, up a substantial 47.65 percent from the 338,454 units assembled in the second three months in 1980.

Chrysler closes Lynch Rd. plant

DETROIT. — Chrysler Corp. closed its Lynch Rd. assembly plant April 3 after almost a year of efforts by both the company and the UAW to keep the full-size-car operation going. There is some speculation it will only be mothballed, but Chrysler officially says the plant is permanently closed. It built Newport, New Yorker, St. Regis and Gran Fury.

White to sell Australian subsidiary

FARMINGTON HILLS, Mich.—White Motor Corp. has signed an agreement to sell White Motor Corp. (Australia) Pty., Ltd., to Silchester Holdings Pty., Ltd., Brisbane. The agreement is subject to approval by White directors, review by its U. S. creditors and approval by the U. S. Bankruptcy Court, Cleveland, where White is in Chapter 11 proceedings. White Australia operates a heavy-duty truck assembly plant near Brisbane.

Auto production in Canada rises to 21,343 for week

Despite the second week of downtime at the Chrysler Windsor car plant, Canadian auto production last week rose above the previous week's level and that of the comparable year ago week.

Planned output last week for the auto makers was 21,343 units, up 4.99 percent from the 20,328 units completed in the previous week and up 18.61 percent from the 17,993 cars assembled in the comparable 1980 week.

Although the weekly output shows improvement, the year-to-date total is down 17.76 percent from 239,722 cars in 1980 to 197,143.

The March estimate for the auto makers is 98,681 units, an increase of 5.32 percent from the 93,691 units completed in the comparable month last year. The total is the highest for any month since May, 1979, when the makers built 99,878 units.

The Canadian truck makers took a huge jump above the year-ago level last week, but the total for the week fell below the previous week's output.

Planned truck production last week was 12,065 units, up 31.12 percent from the 9,201 units completed in the comparable 1980 week, but down 4.31 percent from the 12,609 trucks assembled in the previous week.

The Canadian truck makers produced an estimated 60,165 units in March, an increase of 8.45 percent from the 55,477 trucks assembled in March, 1980, and the highest output for any month since June, 1979, when the figure was 61,335.

So far this year, the truck makers have completed 148,860 units, a drop of 2.48 percent from the 152,653 trucks produced in the comparable period last year.

All operations at the Chrysler Windsor car point down since March 23, will remain idle until April 13.

'82½ Chrysler

Topless LeBaron just a year away

Chrysler Corp. will market this topless LeBaron as an '82½ model. It will be built on a stretched K-body platform, like the two-door and four-door versions which will bow this fall. The last Chrysler ragtop was a '71 Plymouth Barracuda model. Chrysler calls the LeBaron convertible an "all-new, high-mileage, front-wheel-drive, luxury compact." Industry sources estimate the convertible will carry a $14,000 sticker. Cars & Concepts will be doing the conversions for Chrysler.

Rebate sales surge slashes new-car stock to 44 days

By Richard A. Wright
Assistant Managing Editor

In a startling reversal, the domestic auto industry moved into April with a lean new-car inventory marked by shortages in some lines.

It was no April Fool's joke. It was the result of continued rebates, price reductions and — the industry fervently hopes as it ends the rebates and prepares to raise prices on top of that— the stirrings of a good, old-fashioned spring selling surge.

The industry had 1,216,068 new cars in stock April 1, a trim 44-day supply, compared with 1,334,919 new cars in inventory a month earlier, a 59-day supply.

The April 1 inventory was the leanest month-opening stockpile since Aug. 1, 1976, when the industry had a 42-day supply. And to find a unit count lower than the April 1 level, one has to go back to Nov. 1, 1972, when the industry had 1,212,711 cars in stock, a 36-day supply.

All the domestic manufacturers except Volkswagen of America—which did not offer rebates —opened April with leaner inventories, both in unit count and days supplies, than they had a month earlier.

- General Motors had a 39-day supply April 1, down from 56 days a month earlier. The GM stockpile was riddled with shortages in the compact and intermediate lines and dealers were virtually out of subcompact Chevette, Monza and Sunbird models. Chevette's 15-day supply was the lowest for any make in the industry.

Ford Motor Co. opened April with a 49-day supply, down from 63 days a month earlier. Ford's stock appeared well-balanced, with no shortages severe enough to hamper sales.

Chrysler Corp. slashed its inventory from 66 to 45 days during the month. Both its K-car and Omni/Horizon lines were lean and the giant stockpiles it had been carrying in its intermediate and standard lines were reined in.

American Motors had a 49-day supply April 1, down from 55 days a month earlier. Only VWoA entered April with a larger inventory than it had a month earlier, a 64-day supply compared with 58 on March 1.

The April 1 domestic new-car inventory was divided this way:

Greenwald, Sperlich elected to high-level Chrysler posts

NEW YORK.—Chrysler Corp. last week announced a top management realignment that included electing Gerald Greenwald vice chairman and Harold K. Sperlich president — North American Automotive Operations.

Greenwald replaces E. F. (Gar) Laux who will retire May 31. Greenwald will report directly to Chairman Lee Iacocca.

Sperlich will report to Greenwald. His promotion coincides with the retirement of President J. Paul Bergmoser on May 23. Bergmoser will remain a board member. Laux will not.

The new management arrangement is similar to one used by Ford Motor Co. in the 1960s. Iacocca, Greenwald and Sperlich are all former Ford employes.

The Chrysler board also elected John W. Day executive vice president—Defense and International. He will report to Greenwald. Robert S. (Steve) Miller was elected executive vice president—finance and treasurer.

Thomas G. Denomme, strategic planning director, was elected a vice president, as was Christopher J. Steffen, the corporate controller.

The realignment creates a finance - product - marketing triumvirate at Chrysler which Iacocca seems to believe is what the company needs to reach its corporate goals of producing high-quality cars with maximum parts interchangeability that can be known as "best in class" and capture from 10 to 11 percent of the U. S. market.

Sperlich, the product expert, and Greenwald, the financial expert, both have personal and corporate styles which interface with Iacocca's personality, his marketing skills and his view that a "leaner" Chrysler Corp. cannot only survive and be marginally profitable this year but earn $1 billion a year by 1984.

Although there is the appearance of a triumvirate, it is clear that the new alignment maintains, perhaps enhances, Iacocca's complete authority, with clear definition of responsibility.

As part of this, Bergmoser's "chief operations officer" title disappears, and Sperlich gets only a piece of the presidency. He will be chairman of the Corporate Operations Committee, but Greenwald, who will be chairman of the Corporate Policy Committee, "will have responsibility for the major operations of the company."

Gerald Greenwald

Harold K. Sperlich

While the realignment did not install Greenwald and Sperlich in absolute authority, it did make it virtually certain that they are the next-generation chairman/president team at Chrysler.

All they need to do is to move another half-step in tandem.

Sperlich, 51, was one of the first of several former ranking Ford executives to join Chrysler, coming to Highland Park as a vice president in March, 1977.

He left Ford after a reported "falling out" with then Ford Chairman Henry Ford II. It was the same internal product strategy disagreement which eventually lead to Iacocca's firing from the Ford presidency in July, 1978.

After his old boss joined him at Chrysler, Sperlich's star rose quickly. He was elected group vice president for product planning in November, 1978.

Greenwald, 45, was elected finance executive vice president and a board member in September, 1979. He came to Chrysler as vice president and controller after 22 years in various financial positions at Ford.

His last position at Ford was as president of Ford de Venezuela. Greenwald also spent time in a number of other Ford overseas operations.

Greenwald gained high visibility in Chrysler's protracted quest for federal loan guarantees.

Bergmoser, 65, was elected Chrysler president in September, 1979. He joined Chrysler in January, 1979. He retired as Ford purchasing vice president in 1976 after 30 years of service.

Laux, 62, also came out of retirement from Ford to join Chrysler in February, 1979. Last November he was elected vice chairman.

Chrysler merger rejected by Ford

DEARBORN. — In a formal statement issued Friday, Philip Caldwell, chairman and chief executive officer of Ford Motor Co., said:

"As a result of an approach to Ford by intermediaries acting on behalf of Chrysler, Ford Motor Co.'s board of directors yesterday considered a possible merger or other similar arrangement with Chrysler.

"The advantages or disadvantages of such an arrangement were extensively discussed including the result of management's evaluation. It was unanimously determined that a merger or other similar arrangement with Chrysler should be rejected as clearly not being in the best interest of Ford or its stockholders."

They'll be dumped, modified or delayed

34 auto regulations shot down

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Deregulation of the auto industry has started with a bang.

The Reagan Administration said last week it plans to dump, modify or delay 34 environmental and safety regulations for cars and trucks. Most are from EPA, with a few from NHTSA.

It has been estimated that the revisions would save the industry $1.4 billion and hold down consumer costs by about $150 a car, or $9.3 billlion over the next five years.

But special tax treatment for the industry is not in the works and the Administration is still on the record as favoring free trade with Japan.

The only final regulatory action effective immediately is to delay for one year the effective date for passive restraints on large cars. This affects only a few models.

Other announcements dealing with delays, terminations or new and more modest proposals will be spread out over the next four months or so and a few will require an act of Congress.

Vice President George Bush—standing in for the President — stressed decisions on how to make the auto industry competitive worldwide, especially with the Japanese, is something management and labor work out themselves.

This is in sharp contrast with the former Administration under President Carter, which advocated a tripartite arrangement among government, industry and labor to revitalize the auto industry.

- Also announced was vacating the "smog conspiracy" consent decree which is now in the Ninth Circuit Court.

A "speedup" to the tune of $100 million in purchases of government cars was also announced.

Auto makers were elated by the announcements.

General Motors Chairman Roger B. Smith called it "a sensible step toward making regulation more cost-effective."

Along with the government move, he said, GM is committed to a $40-billion investment program. He said he hoped that the UAW "will soon join in making this an allout, full cooperative effort to meet our global competition and restore the competitive vigor of the U. S. auto industry."

Philip Caldwell, chairman of Ford Motor Co., said, "It is very encouraging to have the beginning of a significant program from the new Administration after only 76 days in office."

Said Caldwell, "We at Ford believe that the changes can be implemented without in any

Regulatory rollback applauded by dealers

By Kathleen Hamilton
News Editor

Dealers across the nation applauded the regulatory rollback proposed by the Reagan Administration, more for its symbolism than for any tangible benefits.

Dealers surveyed by AUTOMOTIVE NEWS echoed the sentiment of Michael Bisesi, president of Hilltop Lincoln - Mercury, St. Louis, that "anything is going to help."

The help—$150 on average, according to DOT Secretary Drew Lewis—won't be enough to turn sales around, most domestic dealer surveyed agreed. For that, they suggested significant price cuts, lower interest rates and better quality.

But they did see the proposed regulation cuts as hopeful signs that the price spiral will abate and that free-marketers will seize power from the Ralph Nader-types.

NADA president Wendell Miller said in a prepared statement that he was "generally encouraged" by the proposed regulatory relief, but he criticized the proposal to maintain high-altitude standards rather than institute a single nationwide emission standard in 1984.

High-altitude rules have resulted in "serious model avail-

Year-to-year sales gain is credited to rebates

By Jenny L. King
Staff Writer

March was a good month for U. S. new-car dealers. Encouraged by generous rebates, consumers bought more domestic passenger cars than they did during the month a year ago. It was the first monthly increase since February, 1979.

And imports enjoyed a surprising spin-off, their sales up likewise, despite the absence of major incentive programs. The big question was: Will it last?

Tables on Page 51.

Domestic new-car sales climbed 7.30 percent in March, to 719,044 from 670,146 last year, while imports were up 8.37 percent to 243,361 from 224,560. Industry total for March was 962,405, up 7.57 percent over 894,706 in 1980.

But there was a disquieting note on the domestic side in the final 10 days of the month: Sales dropped below the 1980 level after gains in the first two periods.

First-quarter sales for the U.S. industry reached 1,732,469, down 6.31 percent from the 1,849,117 new cars sold during the first three months of 1980. First-quarter import sales numbered 641,798, down 3.80 percent from 667,119. Grand total for the period was 2,374,267, down 5.64 percent from 2,516,236.

Both General Motors and Chrysler Corp. were pleased with their March sales results. GM, up 12.17 percent to 437,884 from 390,371 last year, said that was its best month since May of 1979. Chrysler sales jumped 20.77 percent, to 92,952 from 76,969, spurred by the corporation's best late-March period in two years and record K-car sales in March.

Ford Motor Co. reported sales of 158,487, down 5.30 percent from 167,362 a year ago. Volkswagen of America sales totaled 15,997, down 15.70 percent from 18,977, and American Motors was down 16.66 percent, to 13,724 from 16,467.

- In its share of the March domestic market, GM grew to 60.90 percent from 58.25 percent last year. Ford slipped to 22.04 percent from 24.97 percent. Chrysler earned 12.93 percent, up from 11.49 percent. VWoA cornered 2.22 percent, down from 2.83 percent, and AMC had 1.91 percent, down from 2.46 percent.

Of the 13 U. S. makes reporting sales for both years, seven notched increases for the month.

Packs and poles

A combination luggage rack ($80.70) and ski carrier ($38.15) are now available for the Renault 18i sedan through the American Motors Parts Division. The ski carrier is designed as an integral part of the rack, but is a separate purchase.

GM increases prices; average car is $10,200

By John K. Teahen Jr.
Managing Editor

Without any fanfare whatsoever, General Motors reached a milestone today (April 13). The lack of hoopla is understandable. It's an accomplishment the corporation undoubtedly wishes had not happened.

GM's latest price increase takes effect today, and it pushes the average price of the average-equipped GM car above ten thousand dollars. It's now about $10,200.

It's still possible to buy a GM for less than that, of course, but $10,200 is the average.

Today's boost averages $351, or 3.5 percent. It consists of $255 on the base car and $96 on optional equipment.

The term "average-equipped" refers to the sticker price of the base vehicle plus the optional items usually ordered by the customer. It is figured on a sales-weighted basis.

This is GM's fourth price hike on its 1981 cars. The four boosts add up to an average of $914 over the prices in effect at the end of the 1980 model year.

An increase in destination charges also is effective today. It averages $25 on GM cars and trucks.

Every GM car goes up today. There are no exceptions as there were in January when Chevettes were reduced $100 and X-cars were unchanged. Today's increases range from $105 on the Chevette four-door sedan (now $5,399) to $890 on the Cadillac Seville four-door sedan (now $23,000).

GM announced its latest price hike just as its extended round of customer rebates ended. The timing and the increase itself did not set too well in many quarters. NADA blasted the company for its action (see accompanying story).

- High prices have been cited as a major reason for the domestic industry's current sales problems. There was a definite improvement in mid-March, when rebates were in full swing throughout the industry. GM set a record for that period. Sales tailed off in late March when rebates were not as widespread.

The combination of no rebates and higher prices could strangle the mini-recovery and send sales plunging. So GM's action is open to serious questions (as would be price hikes by other domestic makers).

On GM's side, the company obviously feels the increase was necessary — simply because it needs the money. The fact that GM needs money is another commentary on the sad state of the domestic auto industry.

GM lost $763 million last year, and analysts believe that if there was a profit in the first quarter of 1981, it was marginal.

In announcing its price hike, GM said it "continues to feel the impact of inflation on its material and labor costs."

"For example," GM said, "the Consumer Price Index and GM's labor costs have both increased approximately 11 percent during the last year. This price increase still falls short of recovering

Maker ignores market forces, Miller says

NADA denounces GM for hikes

WASHINGTON. — NADA jumped on General Motors with both feet last week, denouncing the auto maker for the price increase which is scheduled to become effective today (April 13). The hike averages $351 or 3.5 percent.

NADA said it was "shocked" at GM's action. Its statement was issued by Wendell H. Miller, president, and Frank E. McCarthy, executive vice president, on behalf of NADA's 20,000 car-and-truck-dealer members.

NADA probably was particularly incensed because GM's move was directly contrary to what Miller had urged a few days earlier in a speech at the convention of NADA's American Truck Dealers unit.

Miller had asked U. S. vehicle makers to hold the line on prices throughout the 1981 model year and to continue the rebate programs, but on a non-participating basis.

Rebates have ended at GM, Ford Motor Co. and Chrysler Corp. They continue until May 15 at American Motors.

- In their statement, Miller and McCarthy declared that the success of the recent rebate programs is proof of the need to keep prices down.

They noted that GM's sales in the second 10 days of March, the final sales period of GM's most aggressive rebates, were up 52 percent over 1980, but GM sales dropped 28 percent from 1980 during the final 10 days of the month after most of the rebates were discontinued.

"Lower prices will release the pent-up demand which developed during the recent stagnant auto market," Miller and McCarthy said.

They continued, "This untimely price increase, coupled with the end of rebates, will extinguish the first flicker of serious sales activity which the new-car-and-truck market has seen in many months.

"Such action is particularly ill-timed as the industry requests massive assistance from the Reagan Administration in the form of regulatory and tax benefits.

"GM seems to have ignored the forces of the marketplace in this decision," Miller and McCarthy said. "This price increase will work to the detriment of consumers as well as dealers."

Chrysler to follow 'Japanese strategy'

European K-car launch prepared

By Eugene Bacot
Crain News Service

LONDON. — Kenyon & Eckhardt is opening a majority-owned Brussels office April 16 to handle the test launch of Chrysler's K-cars in Europe next month.

The Chrysler rollout—aimed to sell 3,550 medium-priced models in Belgium, Holland and Northern France by the end of 1981—marks the first return of the troubled U. S. car company to Europe since the sale of its operations there to France's Peugeot-Citroen in 1978.

Chrysler is actively rebuilding its continental distributor and dealer network, aiming for 500 to 750 dealers from Finland to Italy by the end of 1982. Advertising in that period will rise from around $800,000 this year to $10 million by the end of 1982—split 50/50 with the dealer network.

Chrysler will be following a softly "Japanese strategy" in reestablishing itself in the fiercely competitive European market. According to Bob Colgan, K&E senior vice president and group supervisor for Chrysler International: "We looked at the way the Japanese rolled out their models in Europe, with success first in one country then another. We want to follow that."

• Belgium was chosen as the principal launch country because it is "traditionally a good market for U. S. autos," says Colgan.

A 60-strong dealer network has been set up with a first-year sales target (through December, 1981) of 1,600 Dodge and Chrysler models and 700 Dodge trucks and station wagons.

The target for Holland is 1,500 cars and 40 trucks, and for France, concentrating on the Paris region, 450 cars and 50 trucks. The French network will be extended next year.

Long-term target for 1985 is 450,000 models a year in every European country.

Meanwhile, the second stage of the planned rollout this year is to line up distributors and dealers in Sweden, Norway, Finland and Switzerland, followed by Germany, Austria, Italy and Spain in 1982.

Chrysler does not plan to launch the K-car in the UK because it has not produced any right-hand-drive models. The Portuguese launch has been delayed by homologation problems.

Dealers will be handling the "competitively priced" Dodge Aries, Dodge Omni and Chrysler Le Baron in five, four and two-door versions. They will also sell the Dodge Mirada station wagon, Chrysler Cordoba, the Rangecharger and Dodge vans.

Prices will range from $9,500 to $16,500, competing directly with top-of-the-middle-range European models, such as the Peugeot 504, Ford Granada, Audi 100 and Renault 20.

Colgan says that extensive market research has shown that the K-car body design is very acceptable in the European small-car market and received a favorable reception at the Amsterdam auto show in February. The series was advertised for the first time in European editions of Time magazine in February with an eight-page color insert. Featuring former astronaut Neil Armstrong.

K&K has created a detailed transnational advertising campaign from Detroit which it will place in every European country through its agency network. The network will be progressively strengthened through merger or association agreements to handle the business.

"We made a commitment to Lee Ioccoca to service Chrysler worldwide," says Colgan.

Rebates reduce new-car inventory to 44-day supply

Continued from Page 1

GM, 57.54 percent; Ford Motor Co., 24.27 percent; Chrysler Corp., 12.91 percent; VWoA, 3.18 percent, and AMC, 2.10 percent.

A month earlier, the new-car inventory was divided as follows: GM, 58.12 percent; Ford Motor Co., 23.82 percent; Chrysler Corp., 13.05 percent; VWoA, 2.81 percent, and AMC, 2.20 percent.

By size class, the biggest slashes came among smaller cars. The industry had a 37-day supply of subcompacts April 1, down from 42 days a month earlier, and a 30-day stock of compacts, a sharp decline from 62 days March 1.

In addition, intermediates were also down sharply to a 46½-day supply, compared with 69 days a month earlier. Standards were unchanged at 67 days and the supply of cars grew from 58 to 60 days.

The April 1 inventory was divided this way among market classes: Subcompact, 17.52 percent; compact, 28.82 percent; intermediate, 31.15 percent; standard 15.71 percent, and luxury, 6.80 percent.

A month earlier, the inventory was divided this way by size class: Subcompact, 18.54 percent; compact, 30.03 percent; intermediate, 32.01 percent; standard, 13.71 percent, and luxury, 5.71 percent.

• The April 1 days-supply figures by market class were:

Subcompact — Chevette, 15; Sunbird, 19; Monza, 25½; Horizon, 41; Pinto, 42; Omni, 45; Escort, 47; Spirit, 51; Lynx, 57, and Rabbit, 64.

Compact — Skylark, 26; Omega, 30; Reliant, 35; Aries, 36; Capri, 36; Mustang, 37; Camaro, 37½; Zephyr, 38; Citation, 40; Phoenix, 40; Concord, 41½; Fairmont, 42; Firebird, 42; Volare, 47; Aspen, 51, and Eagle, 59.

Intermediate — Supreme, 28; Regal, 35; Thunderbird, 40; Cutlass, 41; Grand Prix, 42½; Monte Carlo, 44½; Cougar, 45; XR-7, 46; Granada, 55; LeBaron, 57; LeMans, 64; Diplomat, 65; Malibu, 65; Century, 68; Cordoba, 71, and Mirada, 91.

Standard—Chrysler, 36; Olds 98, 44; Olds 88, 50; LeSabre, 53; Mercury, 64; Electra, 65; St. Regis, 70; Pontiac, 71; Ford, 76 Gran Fury, 83; and Chevrolet, 87.

Luxury — Lincoln, 32; Mark VI, 39; Toronado, 57; Corvette, 60; Eldorado, 63; Riviera, 65; Cadillac, 68; Seville, 90½, and Imperial, 95.

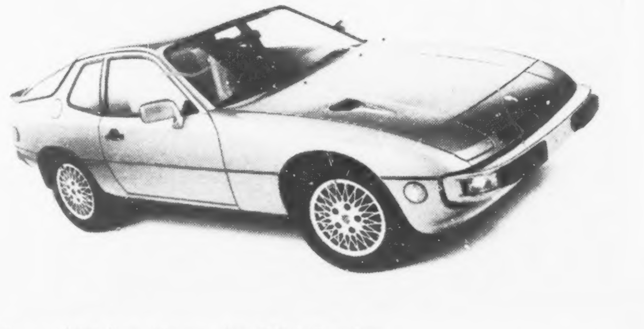
Pontiac T1000 debuts at $5,252 –but not for long

DETROIT.—Pontiac introduced its subcompact T1000 models last week with prices of $5,252 for the two-door hatchback and $5,398 for the four-door hatchback.

But those prices didn't last very long. They are scheduled to rise today (April 13) as part of the overall General Motors price hike.

The T1000 is Pontiac's version of the Chevrolet Chevette and is priced about $100 more than corresponding Chevettes. Chevette also offers a lower-priced stripped model, the Scooter. Today's price hike on the Chevette four-door is $105, and the boost on the T1000 is expected to be about the same.

The T1000, like the Chevette, has a two-tier pricing structure. Prices (except Chevette Scooter) are $121 lower in nine Western states.



More HP for Porsche 924 Turbo

The Porsche 924 Turbo builds up its horsepower figure from 143 to 154 for 1981, while boasting improved gas mileage as well. The power increase is partly due to a new fully electronic ignition system which allowed Porsche engineers to fine-tune peak turbo boost and engine compression ratio. The 924 Turbo claims 20 MPG city, 33 MPG highway.

Anything will help, they say

Dealers cheer regulation rollback

Continued from Page 2

ability and distribution problems," Miller said.

Like many dealers, he called for further regulatory relief specifically urging that the proposed Used Car Rule be squashed.

Many dealers called for wage restraints to match the government's proposed reduction in regulations. Indeed, the Administration has said it expects wage and price concessions in return for its relief package.

• Dealers emphasized that quarterly price increases on domestics need to be halted—some said for as long as several years—to regain lost territory.

They pointed to sales generated by the latest round of rebates as proof of the market's quick response to price cuts.

In the long run, they said, reduction in regulation should result in less expensive, more sensible cars and, as Roy Jackson, Jackson Motor Co. (Ford-Mercury), Antlers, Okla., put it, "We'll be back in the ball game."

But Jackson was quick to diagnose what he views as the bigger problem facing the industry: High interest rates.

"I don't think there's anything wrong with the economy that a 10-percent interest rate wouldn't cure," Jackson said.

Others agreed with John Hulbert, new-car sales manager at Courtesy Chevrolet Center, San Diego, who saw prices as the major sales depressant.

"The only thing that's going to help us is if they roll prices back," he said.

The $150 — probably less in pollution-conscious California — will likely have little effect on his sales, he said.

• But if a cyclical business has done anything to shape the average dealer's character, it has made him look for better times ahead.

Some cited the savings in store for their big-car customers who won't be forced to pay for passive restraints on '82 models.

Others saw advantages in letting the free market operate. Let the few customers who want seat belts buy them, suggested Hilltop's Bisesi and others.

Richard Mynatt, sales manager at the rural point of Edwards Chevrolet Co., cited what he called a prime example of regulatory overkill in Whitewright, Tex. Farmers in that smog-free community have far more to fear from catalytic converters that could set their wheat fields on fire than from emissions-induced smog, he said.

"A lot of things the federal government doesn't use their heads on," he said. The "spirit" of the Reagan Administration was applauded by Mynart and again and again by survey respondents.

• Many were enthused by the long-term possibilities of a regulatory rollback.

"This is going to make me go ahead and invest further in the automobile business," volunteered Billy Scott, Scott Motor Co. (Buick-GMC and Mercedes-Benz), Goldsboro, N. C.

"This says the government sees me as what I am, a creator of jobs and a generator of capital."

Care were safe before Nader, and there were recalls long before the government ordered them, he said.

Now there are seat belts that few wear and literature by the dumpsterful that the government requires him to stock but no customers want to read.

"We used to go to our dealer meetings and it was jubilation"—even in hard times, Scott said. "Since 1965 it's been gloom, gloom, gloom."

Like most others surveyed, Scott saw national sentiment turning.

• But there were plenty of skeptics in the crowd. Some saw the economy and interest rates stifling sales. Ray Thomas, new-car sales manager at Queen City Chevrolet Co., Cincinnati, reported something more sinister: A strong anti-domestic current.

"I've taken surveys here and there are very few people in the marketplace that can afford a new car," Thomas said. "Those that can are rebelling."

They are angry about the quality-per-dollar domestics offer and they're angry—even in his Detroit-dependent town — with auto industry wages, he said.

Japanese styling, prices and quality and the status-symbol factor are other reasons young buyers in particular have abandoned the domestics, according to Thomas.

He predicted that high interest rates in combination with the above-invoice prices buyers are paying for imports will wreak havoc at tradein time.

Even if domestic companies can offer high-quality small cars at reasonable prices, buyers won't be able to afford to trade these imports because they will have so little equity built up, he said.

"It's going to be a tough row to hoe the next two to three years," Thomas predicted.

"The dealer needs help today, not four or five years from now," said Doug Didriksen, sales manager, Walker Brothers AMC-Jeep-Renault, Los Angeles.

The regulatory rollback? "Pie in the sky," he said.

Claybrook assails auto-relief plan, calls it a fraud

WASHINGTON.—Joan Claybrook, former head of the NHTSA, does not think much of the Task Force report on the auto industry.

"The Reagan Administration's report on Actions to Help the U. S. Auto Industry is a fraud," she said.

"Eliminating health and environmental standards won't sell cars, but it will increase insurance costs, increase death and injury on the highway and increase the risk of pollution-borne disease."

Claybrook continued, "The dollar amounts are too small to make a difference to Detroit because they are spread over five years with no indication of short-term application. About 30 to 40 percent concern large trucks with a $70,000 price tag.

"In fact, the program is inflationary because it does not eliminate costs but rather multiplies and transfers them.

"Instead of investing in jobs for Detroit for safety and pollution devices, the public will be investing in hospital care, rehabilitation welfare, unemployment, higher insurance and other such things," she said.

Turbine powers Mack conventional

A turbine engine being developed by Industrial Turbines International is being tested in this Mack Class 8 conventional truck, one of three vehicles in which the GT601 turbine is installed. Turbine Engine Co. and Mack Trucks, Inc., both subsidiaries of Signal Co., have joined with Klockner-Humboldt-Deutz of West Germany in ITI, which is headquartered in Phoenix.

Consortium develops HD turbine engines

By Jack Walsh
Truck Editor

DETROIT. — A turbine engine designed to burn a variety of fuels efficiently and at low exhaust and noise-emission levels is being evaluated in on-highway vehicles and off-road military units, and production startup awaits results of these tests.

Industrial Turbine International, a consortium consisting of Mack Trucks, Inc.; Garrett Turbine Engine Co., Phoenix, Ariz., and Klockner-Humboldt-Deutz of West Germany, is hopeful that the power plant will be available for use in long-haul, heavy-truck applications by the end of this decade.

T. W. Quvalle, program manager, industrial and vehicular engines, Garrett Turbine Engine, said the 550-HP turbine has been undergoing on-highway tests in a Mack cabover and a Mack conventional for more than two years.

Called the GT601, the engine has been driven more than 35,000 miles in accumulating several thousand hours of testing, he added, over a route from Phoenix to Flagstaff, Ariz.

Quvalle estimated that the engine could go into production between 1986 and 1990 "depending on the industry's acceptance."

Once the turbine reaches volume production, he said, the price of the unit is expected to come within 10 percent of the cost of today's diesels.

Among the advantages the

Victor E. Salvino, center, Kenworth dealer in Texas, Louisiana and Oklahoma, and a Mercedes-Benz dealer in Dallas, receives the 1981 Truck Dealer of the Year Award from Tom Egan, left, chairman, NADA's American Truck Dealers Division, and Terry Sweeney, automotive manager, Business Week magazine.

But rate of decline is lower than '80's first quarter

3-month sales drop 20.1 percent

For the second consecutive year, first-quarter retail sales of new trucks of all types in the U. S. dropped below the year-earlier level, but this year's rate of decline was smaller than a year ago.

In the first three months of 1981, according to preliminary figures, franchised dealers and factory outlets retailed 566,452 units, down 20.1 percent from last year's 709,034. In 1980, the first-quarter count was down 26.8 percent from the 968,673 units sold in the like period in 1979.

Table on Page 49.

As in 1980, sales this year were down substantially in all three market segments, with the mediums suffering the biggest decline from a percentage standpoint. A March upturn in compact-pickup deliveries softened the downturn in light trucks.

Light-truck sales through March totaled 509,696 units, a decline of 20 percent from the year-earlier 637,310. Mediums were off 23.6 percent, from 25,578 in the first quarter of 1980 to 19,537. Sales of the heavies totaled 37,219, down 19.4 percent from last year's 46,146.

Three-month sales of the compact pickups — Chevrolet LUV, Ford Courier, Dodge Ram 50, Plymouth Arrow, Volkswagen, Datsun, Toyota and Mazda—totaled 128,329 units, down 14.4 percent from last year's record 149,862 deliveries. The increase in the tariff on compacts imported from Japan was mainly responsible for the decline.

- For March, however, sales of the compacts were up 1.3 percent with the help of rebates on some makes. The total for the month was 51,492, compared with 50,840 a year ago. It marked the first time since last September that compact deliveries for the month topped the comparable year-earlier totals.

Sales of the non-captive compacts—Datsun, Toyota and Mazda—showed a gain of 17 percent in March, from 23,299 a year ago to 27,251. The three-month total, however, was down 9.7 percent to 67,342 deliveries, compared with 74,607 in 1980.

In March, domestic and independent truck outlets retailed a total of 215,051 vehicles, a decline of 12.6 percent from last year's 245,997 units. It was the smallest year-to-year decline in

Advanced tandem axle unveiled by Rockwell

ANAHEIM, Calif. — A new 38,000-pound tandem axle, designed to take maximum advantage of energy efficient engines, and capable of operating up to 100,000 miles between lubrication change and up to 500,000 miles before overhaul, was unveiled by the Rockwell International's Automotive Operations at the International Trucking Show here.

Arthur P. Ronan, Automotive Operations executive vice president, described the axle—called the SQ-100—as the "most technologically advanced energy-saving 38,000-pound truck axle offered today.

"It became apparent to us several years ago," Ronan said, "that what the truck industry needed was a more durable tandem axle able to withstand the increased stress placed on the drivetrain by the then emerging fuel-efficient engines."

The new tandem, he added, has a GAWR of 38,000 pounds and a turnpike GCW of 130,000 pounds, and that it will be in great demand as the transportation industry continues the trend to the more fuel-efficient engines with accompanying lower profile tires and the resulting need for longer life, faster axle ratios.

The SQ-100 tandem, according to Ronan, eventually will replace the company's SQHD, a long-time fixture in the 38,000-pound class.

"The SQ-100 has widened the application base for this size axle," he said.

Under development for more than two years, the new drive tandem is a single-reduction, through-drive type unit with a power divider, and a two-gear helical drop gear set.

It incorporates a number of distinctive engineering features which provide design simplicity,

Buyers offered Volvo rebates as high as $4,500

PORTLAND, Ore. — Freightliner Corp. is offering direct-to-customer cash rebates of up to $4,500 on selected Volvo diesel truck models purchased through participating Volvo trucks dealers.

The rebates range from $1,500 for Volvo F611 and F613 Low COE 4x2 model trucks (24,500 and 29,000 pounds GVW) to $4,500 for the N1016 4x2 conventional tractor (80,000 pounds GCW).

Buyers can earn a $2,500 rebate on the N1023 6x4 conventional tractor (80,000 pounds GCW); $3,000 on the F716T Low COE 4x2 tractor (72,000 pounds GCW); or $3,500 on either the F720 4x2 or F724 6x4 truck (41,880 and 52,300 pounds GVW).

Rebates will be paid directly to the retail purchaser by Freightliner, a spokesman said, and will apply to vehicles ordered prior to June 1 for delivery before July 1.

"New" SQ-100 Tandem Axle

Rockwell executive checks show model

Arthur P. Ronan, executive vice president, Rockwell International's Automotive Operations, checks out the show model of the Rockwell 38,000-pound SQ-100 tandem axle, introduced at the recent International Trucking Show, Anaheim, Calif. Rockwell said the axle is designed to take maximum advantage of energy-efficient engines, and can operate 100,000 miles between lube changes and up to 500,000 miles before overhaul.

shop talk

Continued from Page 20

and painters out of the technicians but to instruct them in the various adjustments," he said.

"Because the J2000 is using new construction techniques at assembly," Benson said, "there will be changes in the way doors and windows will have to be adjusted."

The prep-trak film cartridge reviews the items to be inspected on the car, while the pre-delivery chart graphically shows which items should be inspected and acts as a reference source for the technician.

- Upon completing the proper inspection procedures, the technician fills out a new-vehicle inspection procedure form and leaves the customer copy in the glove compartment.

Next, he attaches the customer satisfaction survey card to the rear-view mirror after signing it and filling in the dealership's identification portion.

The technician signs the VIP self-adhesive labels and places one inside the glove compartment and another under the hood.

At delivery, the customer is shown the survey card and asked to evaluate the condition of the car. This pre-addressed, postage-paid reply card furnishes data for determining the point position of technicians in the Pontiac zone progress report.

During the six-month program period, bi-monthly award points are determined by dividing the gross rating points from the customer satisfaction survey cards by the number of surveys received. This determines the technician's average rating by dealership within the zone.

In the first two weeks after the program was announced and offered, some 627 dealers enrolled in the program, according to Benson Some 2,000 Pontiac dealers are expected to be in the VIP program before it is launched in May.

- Benson said the VIP program will run through October on a test basis.

"If it is as successful as we think it will be," he said, "It will be used on succeeding newly designed cars.

"We are finding through various surveys that customer expectations are increasing at all levels as the prices of the cars increase," he said.

"Things that cause most of the problems with customers are not the major ones," Benson said. "They are things like a door not fitting right, a hood that doesn't close properly, wind noise, molding that is not straight or a car that stalls.

"These are the things we are trying to get dealers to take care of with the VIP program before they deliver the car to the customer," Benson said.

Benson said Pontiac also will launch a new service and technically oriented program on May 11 that is aimed at the dealership retail sales staff.

The object of the program is to provide sales people with training and background information about the various major components of the cars that are being offered in the showroom.

Called Certified Product Specialist (CPS), Benson said the program is designed to meet a need that has reached the critical stage.

"Consumers today are demanding that sales people be professionally trained," he said. "It has been years since some consumers have purchased a new car. A lot of changes have occurred in cars in that time.

"Retail people should be up on the latest technology to help advise a customer with his purchase," he said. "He should be able to advise the customer as to what car and equipment would be best suited for him and his needs."

The CPS program will include a one-day training session that will cover engines, transmissions and drivetrains, brakes and suspension systems, electrical systems and accessories and body design and construction.

The session will include six tests on comprehension and understanding of the material presented, according to Benson. A salesman will have to average 85 percent or better on the tests in order to be certified. No salesman will be certified if he scores below 70 on any test. Salesmen will be asked to recertify each year by updating their information about the new cars as they are introduced each model year.

Methanol
S-EA 1580

Mercedes-Benz runs on methanol

The pure methanol version of the Mercedes-Benz 280-SE is fitted with a cold-start unit developed by Daimler-Benz, a larger tank and a catalyst in the exhaust assembly. The vehicle is taking part in the large-scale test under the direction of the Federal Ministry of Research and Technology in Berlin.

Cox auto auctions report best year

ATLANTA. — Cox Broadcasting Corp. reported that its 12 auto auctions had their most profitable year in 1980.

Nearly 500,000 cars were registered at the auctions and 263,000 were sold, a 14 percent increase over 1979, Cox said. The selling ratio was 59 percent of cars registered, up 5 percent over the previous year, Cox said.

3-month sales drop 20.1 percent

Continued from Page 8

deliveries since September, 1979, when the total dropped about 7 percent below the previous year's count.

In a preliminary report, the Motor Vehicle Manufacturers Assn. reported that domestic dealers and factory outlets retailed 187,800 units in March, including the captive compacts, down 15.7 percent from the year-earlier 222,698 units.

There was a decline of 25.3 percent in the number of unsold trucks in retailers' hands at the end of the month, with decreases in all three market segments.

Going into April, there were 581,671 new trucks of all types in inventory, compared with 778,883 at the same time in 1980.

- Light-truck stocks, exclusive of the non-captive imports, at the end of the quarter totaled 513,727 units, down 26.2 percent from last year's 696,285.

There were 23,481 unsold mediums, off 21.5 percent from the year-earlier 29,898, while the number of heavies in stock dropped from 52,700 a year ago to 44,463, a dip of 15.6 percent.

At the end of the quarter, No. 1 Ford had a lead of slightly more than 6,000 units over Chevrolet, which started off the year in first place and which was No. 1 at the end of the first quarter in 1980.

Through March, Ford outlets had retailed 180,077 units, off 16.4 percent from last year's 215,293. The total included 18,797 Couriers, compared with 22,682 in the first three months of 1980.

Ford's March total was 71,335 units, including 7,234 Couriers, down only 5.6 percent from last year's 75,591. In March, 1980, dealers retailed 7,282 Couriers.

Chevrolet dealers sold 173,869 trucks in the January-March period, a decline of 22.2 percent from the year-ago 223,604. LUV deliveries were down from 27,698 in the first quarter of 1980 to 21,303.

Sales of Dodge and Plymouth trucks were off 37 percent in the first three months, from 75,870 units to 47,825. The total included 9,108 Ram 50 and 3,067 Arrow compact pickups, compared with 13,055 and 6,317, respectively, in 1980.

For the month, sales totaled 17,368 units, off 44.4 percent from the year-earlier 31,364. There were 2,895 Ram 50 and 938 Arrow sales in March, compared with 5,111 and 2,508 a year ago.

GMC Truck & Coach reported 15,286 sales during the month, a drop of 15.4 percent from the year-ago 18,059. The three-month count was down 20.2 percent, from 54,818 in 1980 to 43,726.

Jeep sales were off 47 percent in the first quarter and 31.1 percent in March. The three-month total was 12,748 units, compared with 24,039 a year ago. March sales dropped from 6,700 units in 1980 to 4,616.

Volkswagen sales showed a dramatic increase for both the month and the first quarter, which was not unexpected since the compact pickup did not get into volume production until the first quarter of 1980.

The three-month total hit 8,712 units, up 58.3 percent from last year's 5,505, and sales in March were 25.8 percent higher, from 2,846 a year ago to 3,579.

- Datsun sales were up 46.6 percent in March to a record 13,885 units, compared with 9,472 a year ago. The surge lifted the three-month total to 31,941 units, an increase of 4.6 percent over last year's 30,548.

Sizable percentage gains were reported for Mazda for both the month and the first quarter. During the month, dealers retailed 1,525 trucks, up 83 percent over last year's 833. The three-month count was up 24.3 percent, from 2,735 a year ago to 3,400.

Toyota's truck sales, on the other hand, were down from a year ago for both the month and the quarter. The March total of 11,841 sales was 11 percent lower than last year's 13,299, and the three-month count was down 22.6 percent, from 41,324 in 1980 to 32,001.

Toyota Corolla claims 'most popular' title

TORRANCE, Calif. — More Toyota Corollas were built in 1980 than any other model, according to Toyota Motor Sales U.S.A., Inc.

Toyota said this made it the world's most popular car for the second consecutive year. A record 771,720 Corollas were produced in 1980, Toyota said, pushing it 250,000 above its nearest rival.

Levin 'keenly disappointed' by auto Task Force report

WASHINGTON. — Senator Carl Levin, Michigan Democrat, said he was "keenly disappointed" by the Task Force report.

"Their decision to 'monitor' the effect of imports on the domestic industry is really nothing more than nothing," he said. "Surely we have enough studies and surely we have done enough monitoring.

"Now we have to start negotiating or start legislating. At the rate we are going we will have a complete understanding of why the domestic industry failed.

"I'd rather a less scholarly but more effective policy and I think that has to begin with immediate restraint on Japanese imports. If the Administration can't do that through negotiations—and do it soon—then I hope the Congress is going to do it through legislation.

"I am also concerned by the Administration's pledge that they will restructure aid to unemployed auto workers. Having seen their proposals for doing away with TRA and gutting the unemployment program, I shudder to think of what additional assistance they have in store for the 500,000 unemployed who want nothing more than a chance to go back to work in the future and live with some dignity for the present.

"Of course, I'm pleased by the Task Force recommendations in the area of regulatory relief and accelerated government purchase of motor vehicles. But I see no real action on the immediate and pressing fundamental problems of the industry and its workers."

Rep. William M. Brodhead, Michigan Democrat, said, "I believe that the Task Force report is a step in the right direction, but it provides little or no immediate relief, and that is what the auto industry needs desperately at this time . . .

"Whether or not one agrees that (the Task Force) proposals will aid the industry, their effects will be delayed for two to three years. That delay could be fatal to major segments of the industry."

Wide range of deregulation in store for auto industry

Continued from Page 2

way checking progress toward cleaner air and safer vehicles."

A Chrysler Corp. spokesman said, "The Task Force report is a big step in the right direction."

James W. McLernon, president of Volkswagen of America, said, "The Administration has taken a giant step toward restoring the long-term health of the American automotive industry . . .

"The Administration's recommendations should eventually remove the government from the business of designing and building cars and return that responsibility to the automotive engineers, where it belongs."

- The $100-million allocation for vehicle purchase would go to purchase about 11,600 units, a GSA spokesman said, including 7,500 light trucks, 2,600 sedans and station wagons, and 1,500 "special vehicles," including vans, ambulances and medium and heavy-duty trucks.

The spokesman said he did not know which auto makers would get the contracts — GSA always makes solicitations for bids on contracts—but last fiscal year all contracts were divided between the Big Four Detroit manufacturers, with Chrysler getting the lion's share of the dollar volume.

"Foreign manufacturers are open to make bids on our contracts," the spokesman added. "Given the Fair Trade Act, all 'Buy American' policies have had to fall by the wayside. But last year, apparently, no foreign manufacturer was interested in bidding on the contracts we made."

Thrust of the Administration's overall strategy is to ease regulation, allow greater cooperation in research and technology, buy more to spur sales but not to give special treatment. This means not sheltering the industry from Japanese competition and not interfering with wage and price decisions.

Stressed throughout was the belief that the major benefits to the auto industry come through passage of the President's economic recovery plan—lowering personal taxes, accelerating depreciation in general and reducing the federal budget outlays. As the economy improves, so will the fortunes of the auto and auto-related industries.

The projected five-year savings from the regulatory steps planned in the near future totals $1.4 billion in capital for the industry — $800 million for EPA and $600 million for NHTSA.

While this is not an amount to be sneezed at (since the industry got some consideration for virtually every auto regulation it asked for), it is still small potatoes to an industry that needs some $70 billion to spend for retooling and plant modernization in the same period.

Projected savings for consumers are far more — $4.3 billion from relaxed EPA regulations and $5 billion from eased NHTSA rules for a grand total of $9.3 billion. It was explained this would probably not mean a price cut but only less of a price hike.

The Task Force report puts the emphasis on the Reagan economic recovery program. It shows that if Congress acts to cut taxes, improve depreciation and restrain government spending, total auto sales will rise from the 1980 level of 9 million units to 11 million by calendar 1982 and to 12 million by 1983, with trucks showing a similar growth.

These higher sales would in turn generate nearly $1 billion in additional net operating income and by 1983 should amount to an extra $6 billion per year (before taxes) for the auto industry.

Transportation Secretary Drew Lewis said he had talked over the weekend to heads of GM, Ford, Chrysler and VWoA —all of whom were interested in returning benefits from changed regualtions to consumers. He said GM Chairman Smith actually promised such a return.

When it was pointed out by the press that GM had just finished raising prices for more than an average of $350 per car, Murray Weidenbaum, head of the Council of Economic Advisers, said it was not surprising to have price rises in a period of double digit inflation, the point was to reduce cost pressures on the companies.

Lewis stressed that firms are

Continued on Page 50, Col. 1

First year-to-year monthly increase since February, 1979

March sales gain laid to rebates

Continued from Page 2

Buick sales were up 32.31 percent to a record 79,427 from 60,029. Plymouth was up 48.09 percent, Dodge was up 27.81 percent, Lincoln was up 15.57 percent, Oldsmobile was up 27.31 percent, Pontiac was up 5.02 percent and Chevrolet was up 2.95 percent. Declines ranged from Cadillac's 0.70-percent dip to Chrysler's 40.20-percent plunge.

Import sales in March suffered no ill effects from the domestics' successes. Top-seller Toyota was up 3.59 percent to a dizzying 60,626 from 58,525, and second-place Datsun pushed ahead 1.27 percent to 48,933 from 48,320.

Honda was up 18.39 percent, Mazda soared 43.38 percent and Subaru was up 43.36 percent. Mazda, Subaru and Renault set records for the month, while Peugeot enjoyed an any-month sales high (1,555). Isuzu joined the imports in March with more than 800 retail sales.

Import sales accounted for 25.29 percent of the total March market.

Top-selling U. S. nameplates for the month were: Chevrolet Chevette, 57,656; Chevrolet Citation, 45,041; Oldsmobile Cutlass Supreme, 35,335; Ford Escort, 29,499 (a record month for the new nameplate), and Buick Regal, 26,399.

- Daily selling rate for the domestics averaged 27,656 this March compared with 25,775 a year ago. It was an increase of 7.30 percent. There were 26 selling days both years.

The March market-class breakdown showed imports with 25.29 percent of the total, U. S. subcompacts had 16.08 percent, compatcs had 24.63 percent, intermediates had 22.38 percent, standard size had 7.83 percent and luxury models had 3.79 percent.

Third-period domestic new-car sales dropped 16.57 percent to 191,496 from 229,529 last year. With most rebate programs less extensive for the March 21-31 period, GM was down 27.84 percent, Ford was down 3.40 percent, Chrysler was up 6.88 percent, AMC was down an estimated 10.42 percent and VWoA was down 23.25 percent.

The last-period market showed a once-upon-a-time and long-ago breakdown: GM earned 48.50 percent, Ford had 27.74 percent, Chrysler earned 17.98 percent, VWoA had 3.53 percent and AMC had 2.25 percent.

Daily-selling rate for the period was 21,277, down 16.57 percent from 25,503. There were 9 selling days this year and last.

- During the first quarter, General Motors sold 1,062,060 new cars, down 7.09 percent from 1,143,052 in 1980. Ford sales numbered 377,628, down 11.84 percent from 428,361. Chrysler first-quarter sales were 211,629, up 12.13 percent from 188,737. VWoA was down 8.47 percent to 43,966 from 48,034, and AMC dropped 9.15 percent to 37,186 from 40,933.

GM earned 61.30 percent of the first-quarter domestic market, down from 61.81 percent. Ford sales accounted for 21.80 percent, down from 23.17 percent. Chrysler gained two percentage points, rising to 12.21 percent from 10.21 percent. AMC had 2.15 percent, down from 2.21 percent, while VWoA cornered 2.54 percent down from 2.60 percent.

Average price of a GM car rises to $10,200

Continued from Page 2

economic cost increases which GM is continuing to experience."

That, despite the fact that the current $351 boost is considerably larger than GM's usual quarterly price hike.

Will the higher prices eventually bring more consumer rebates? GM is known to oppose rebates, but drastic measures will again be called for if cars pile up on dealers' lots. When dealers are overstocked, they don't order cars from the factory, and when dealers don't order cars, the factories don't make any money.

If rebates do come back, GM (and other makers that raise prices) will be in better shape than their dealers.

The makers will be getting more money for their products, and that will cover some—or maybe all—of the new rebate expense.

The dealers, on the other hand, will be paying more for their cars and they will have the additional expense of their share of the rebates, assuming that any new rebates will require dealer participation as the last ones did.

GM's rebates were $700 and $500 on various models. Dealers contributed $300 and $200 of that total.

- As noted, GM's April increases apply to all cars and all market classes. The subcompact Chevrolet Chevette went up $105 to $5,399, and the compact Citation four-door sedan rose $119 to $6,523. Pontiac Firebird, also a compact, climbed $207 to $7,155.

There was a $123 hike on the Chevrolet Malibu Classic four-door (now $7,196), while the Pontiac Grand LeMans four-door rose $237 (to $7,555).

Increases were greater on the sporty intermediate coupes, GM's A-Special cars. Oldsmobile Cutlass Supreme went up $310 and Buick Regal, $312. The Cutlass Supreme is $8,025, and the Regal is $8,099.

In the standard-size class, four-door sedan increases included $159 on Chevrolet Caprice Classic, $323 on Oldsmobile Delta Royale and $429 on Buick Electra Limited. New prices are $7,890 for Caprice, $8,341 for Delta Royale and $11,102 for Electra.

The Cadillac Eldorado climbed $679 to $17,550, and the Cadillac Seville was increased $890 to $23,000.

Equipment prices for the A-Special intermediates showed boosts of $40 on air conditioning, $12 on power windows, $8 on electric rear-window defogger, $7 on tilt steering wheel and $6 on power door locks.

No standard equipment was removed from the GM cars, but some models received additional standard features. Air conditioning now is standard on the Buick LeSabre station wagon, and the base Pontiac Phoenix has bright roof drip moldings.

Power steering was made standard on all Buick Skylark models but, strangely, not on any other X-cars.

Makers build 150,553 for week

Auto output again tops year-ago

By Patricia Hoffman
Staff Writer

For the second week in a row, U. S. auto production rose above the year-ago level, although the output last week fell below the previous week's total.

Planned output last week was 150,553 units, down 2.90 percent from the 155,051 assembled in the previous week, but up 27.40 percent from the 118,166 units completed in the comparable period last year.

Although weekly output is faring better than the comparable 1980 week, the auto makers continue to trail year-ago levels on a year-to-date basis.

So far this year, the makers have completed 1,811,855 units, a decrease of 9.96 percent from the 2,012,285 built in the comparable period last year.

The actual production totals for March and the first quarter were the lowest for those periods since 1975.

In March, the makers completed 625,620 cars, down 2.73 percent from the 643,200 in the comparable 1980 month, and the lowest total for that month since the 490,476 units built in 1975.

In the first three months this year, auto production was 1,569,978 units, a drop of 12.74 percent from the 1,799,171 units completed in the first quarter last year, and the lowest for that quarter since 1,300,972 in 1975.

- Chrysler Corp. was the only manufacturer to build more cars this March than it did last year.

Chrysler's output was 86,512 units, up 37.73 percent from the 62,813 completed in the comparable 1980 month.

March totals for the other companies were: General Motors, 380,866, down 3.53 percent from 394,791 last year; Ford Motor, 130,070, down 13.30 percent from 150,027; Volkswagen of America, 18,350, down 7.88 percent from 19,920; American Motors, 9,613, down 37.50 percent from 15,381, and Checker Motors, 209, down 22.01 percent from 268.

Breakdown for last week by companies is: GM, 60.98 percent; Ford, 21.61 percent; Chrysler, 13.09 percent; VWoA, 2.76 percent; AMC, 1.53 percent; and Checker, 0.03 percent.

Chrysler will increase its daily production rate today (April 13) at one of its K-car points.

The Jefferson assembly point will increase its daily straight-time production rate during April from 800 units to 960 units per day. The Newark assembly plant will continue to operate on its normal two-shift schedule.

Also at Chrysler, the Belvidere plant is scheduled to work nine-hour daily schedules beginning today.

Downtime was slated for one week last week at GM's Janesville point and Ford's San Jose point.

Saturday overtime was scheduled last week at five plants—GM Lakewood, Wilmington, Tarrytown and Oklahoma City and Chrysler Belvidere. Belvidere worked two-eight-hour shifts on Saturday.

Ford reported that all of its assembly points are scheduled to work this week.

Truck production for quarter dips to 14-year low

Although U. S. truck production in March rose above the comparable 1980's month total, the output for the first three months of 1981 was the lowest total for that period in 14 years.

In March, the makers completed 163,869 units, an increase of 7.12 percent from the 152,966 trucks assembled in the comparable period last year.

The total for first quarter was 441,074 units, a drop of 9.52 percent from the 487,507 trucks completed in the comparable three months in 1980, and the lowest for the period since 1967 when the makers built only 440,386 units.

Planned truck output last week was 40,795, an increase of 21.04 percent from the 33,703 trucks assembled in the previous week, and up nearly 100 percent from the 20,416 trucks built in the comparable period last year.

So far this year, the truck makers have completed 498,666 units, a drop of 7.03 percent from the 536,378 trucks assembled through April 12, 1980.

At the Chrysler Warren truck assembly point last week, daily output was increased from 320 units to 424 units per day.

Canada boosts car output, but trucks decline

Although Canadian auto production last week was higher than that of the previous week and the comparable 1980 week, Canadian truck production was anything but favorable.

Planned output last week for the auto makers was 21,062 units, up 2.75 percent from the 20,498 completed in the previous week, and an increase of 49.88 percent over the comparable 1980 week's total of 14,052.

So far this year, the auto makers have built 217,360 units, a drop of 14.27 percent from the 253,566 cars assembled in the comparable period last year.

The Canadian truck makers last week planned an output of 9,061 units, a 25.57 percent drop from the 12,174 trucks completed in the previous week and down 17.63 percent from the 11,001 built in the week ended April 12, 1980.

Year-to-date, the truck makers have produced 158,030 units, a drop of 4.13 percent from the 164,851 trucks built in the comparable period last year.

In March, the auto makers turned out 72,649 units, an 18.25 percent decline from the 88,874 cars assembled in the comparable 1980 month, and the lowest for that month since 1968 when 51,193 were built.

In the first three months of 1981, auto production was 183,292 units, down 19.58 percent from the 227,927 cars built in the first quarter of 1980. It was the lowest first-quarter total since 174,445 in 1968.

The truck makers finished 44,663 units in March, a decline of 20.78 percent from the 56,380 trucks completed in the comparable month in 1980, and the lowest output for that month since 1975 when 31,383 trucks were assembled.

The first-quarter total for truck production was 133,048, down 8.74 percent from the 145,791 trucks built in the comparable 1980 quarter, and the lowest for that period since the 127,319 units completed in the first three months of 1976.

Chrysler's Windsor car point resumes operations today April 13) after three weeks of downtime.

No Ford price hike this month

DEARBORN. — Ford Motor Co. is not going to join General Motors in raising prices—at least not this month. Harold A. Poling, Ford executive vice president, North American Automotive Operations, said last week that the company is advising its dealers that it will not change car and light-truck prices through the end of April. The current prices also apply to all retail and fleet orders through April 30, Poling said. Ford's last price increase was in January. The General Motors price hike, which takes effect today (April 13), averages $351, or 3.5 percent, on 1981 cars. (Story on Page 2.)

Ford EXP and LN7 draw big; Pontiac T1000 finds buyers

By Kathleen Hamilton and Joseph Bohn

Ford Motor Co.'s new two-seaters, the Ford EXP and Mercury LN7, are pulling a lot of traffic, but some dealers reported lower than expected sales, an AUTOMOTIVE NEWS survey reveals.

They attribute that more to the overall car market, however, than to the cars themselves which are drawing praise from dealers and consumers alike.

Most dealers are ordering heavily for late spring and summer, and they feel they'll sell all the EXPs and LN7s they can get.

Meanwhile, Pontiac dealers are generally short of their new subcompact T1000s and would like to get more cars as well as more factory advertising to support them.

Pontiac dealers going out of their way to promote this car are having good success with it, however.

"Response has been super," said Ron Rane, sales manager for Sachs Lincoln-Mercury, Downey, Calif., about the new LN7.

"It's pulled an awful lot of traffic," added Wayne Whiles, sales manager of O'Connor Lincoln-Mercury, Los Angeles.

"I think it will be a 1965 Mustang-type deal," enthused Stan Wilk, of Star Lincoln-Mercury, Southfield, Mich.

"We've had good traffic on it, but sales have been a little slow," added John Fee, sales manager for Koons Ford, Falls Church, Va., about the EXP.

Like other dealers, he observed the EXP (or LN7, depending on the dealer) "is not setting the world on fire" with its sales. "We've sold five since introduction," he said. "But I think it will catch on."

Similarly, Dan Miller, Avis Ford, Southfield, Mich., observed, "It's not delivering the (sales) numbers I thought it would. But I'm not too concerned. Ford has brought out other new cars, and it takes a while" for them to chalk up buyers.

"With the way the economy is, a lot of people are taking a wait-and-see attitude," Miller said.

• Most Ford and L-M dealers surveyed had delivered half a dozen or fewer of the cars since introduction, though Wilk, of Star L-M, reported orders for 40.

Still, dealers are ordering heavily for late spring and summer.

Koons Ford, for example, ordered 92 EXPs through May and placed a supplementary order for 40 more in May—a total 132 cars for a little over a two-month period.

"So far, we've been told we'll receive 12 of the additional 40," said Koons Sales Manager Fee.

Similarly, Avis Ford expects to receive about 20 to 25 EXPs a month, but would "like to have about 35 or 40 a month," said Miller. And Star Lincoln-Mercury, which expected to get 50 LN7s, "won't get as many as I can sell," said Curt Knapp, general manager.

Dealers were generally delivering the cars with a mid-$8,000 price tag, noting that with base prices of $7,253 for EXP and $7,750 for LN7, they come pretty well equipped.

Although some shoppers wowed on price, it's not being re-

U.S. drops idea of import limits

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Though it has not and will not for some time to come say so publicly, the Reagan Administration has abandoned the notion of import restraints on Japanese cars as unworkable and a severe drain on the U. S. economy.

According to information pieced together from sources within the Administration's Auto Task Force, the decision was made on the basis of Council of Economic Advisers studies. These indicated an import limit of 1.6 million Japanese vehicles would lead to a loss of over $1 billion per year to the U. S. economy while boosting inflation, as measured by the Consumer Price Index, by as much as 0.4 of a percentage point.

Even restrictions as low as one million units would not result in a net benefit to the U. S., the CEA studies say.

The 1.6-million import level represents a 20-percent reduction from current levels of Japanese imports and is also the number to which Senator John Danforth, the Missouri Republican, would limit Japanese ve-

Mazda to assemble in Iran

HIROSHIMA, Japan.—Toyo Kogyo said it will resume shipping parts to Iran for the assembly of Mazda pickups there. Assembly had been suspended early in 1980 as a result of the U. S. hostage crisis. TK has been assembling trucks in Iran since 1972 and, in 1978, reached a rate of 1,400 a month. It is shipping 600 kits this month to resume assembly.

American Warranty sues former president

LOS ANGELES. — American Warranty Corp. has filed a lawsuit against its former president, Jerry R. Farrar, charging that Farrar drained an undisclosed amount of money from American Warranty and that he illegally took possession of top-secret actuarial reports, "which go to the heart of the extended vehicle service contract business and have a value of millions of dollars if exposed to any competitor."

D'Arcy drops Bendix account

BLOOMFIELD HILLS, Mich.—D'Arcy-MacManus & Masius has resigned the Bendix Corp. account after 37 years, citing Bendix's low level of advertising and its diversification, which kept D'Arcy from seeking various competitive accounts. The account was not profitable, D'Arcy said. Bendix will name a new agency by May 1.

Edsel Ford named to marketing post

DEARBORN.—Edsel B. Ford II has been appointed marketing plans manager - Ford Division. Ford served as assistant managing director, Ford Motor Co. of Australia, Ltd., from February, 1978, until December, 1980. Since returning to the U. S., he has been attending Harvard University.

Service Index declines after 2-month rally

By Francis J. Gawronski
Service Editor

New-car dealers' hopes for a sustained rally in service and parts business ended after only two months when shop volume in February failed to top the amount recorded in the corresponding month a year ago.

After showing advances in the two previous months, shop business, according to the Automotive News Service Index, declined in February to 96.5 percent of the volume done in February, 1980.

Service and parts business in December and January registered increases of 108.6 percent and 101.8 percent, respectively.

Only two of the five indicators used in the Service Index managed to record gains in February, and those gains were small.

Gross profit on labor, parts and P&A sales—the most important indicator from the dealers' viewpoint—was up a minute 0.5 percent from a year ago, while sales of all parts and accessories advanced 0.3 percent over the year-ago figure.

Repair orders written registered the sharpest decline—14.1 percent—followed by total labor sales (both customer-paid and warranty) which dipped 4.3 percent below the year-ago figure. Shop parts sales (those used in customer-paid and warranty repairs) were down 0.2 percent.

Figures used in the Service Index are compiled from monthly reports on service and parts business from dealers in all sections of the country.

For the first two months of the year, dealers' shop business amounted to 99.4 percent of the volume for the corresponding period a year ago.

Three of the five indicators showed gains from a year ago. Gross profit was up 6.2 percent, followed by sales of all parts and accessories, up 4.8 percent, and shop parts sales, up 1.9 percent.

Repair orders written were down 14.2 percent, and labor sales declined 3.6 percent.

SERVICE INDEX
96.5*

	Feb., '81 vs. Feb., '80	2 mos., '81 vs. 2 mos., '80
Gross Profit on All Labor and P&A Sales	+ 0.5%	+ 6.2%
Repair Orders Written	−14.1%	−14.2%
Total Labor Sales (Customer & Warranty)	− 4.3%	− 3.6%
Shop Parts Sales (Customer & Warranty)	− 0.2%	+ 1.9%
Sales of All P&A	+ 0.3%	+ 4.8%

*—Survey by Automotive News shows that dealers' service and parts business in Feb., 1981, was 96.5 percent of business in Feb., 1980. Service business in the two months of 1981 was 99.4 percent of business in the corresponding period in 1980.

Dealers promise renewed fight

Revised used-car rule gets tentative approval

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — The FTC made a U-turn on its way to a used-car rule last week.

First, it rejected its controversial proposal for optional inspection of used cars by dealers and then tentatively accepted a proposal that would require used-car dealers to disclose warranties on 14 major systems of used vehicles and whether any defective components exist in the vehicle.

The major dealer bodies immediately labeled the change as still too intrusive and said they would also fight this latest twist in the controversy that has occupied the FTC for nearly eight years now.

Commissioner Michael Pertschuk, who favored the inspection approach, labeled the action "an acceleration in reverse," but others viewed it more as a bending to the political realities.

FTC regulations are now subject to veto by the Senate and what with the more conservative nature of that body it was only natural that an alternative to the controversial optional inspection plan be found, they said.

The latest proposal comes from Commissioner Patricia Bailey, an opponent of the optional inspection plan, but a proponent of doing something about a "history of deception and consumer injury in the sale of used cars."

• Her plan calls for a window sticker similar to that proposed under the optional inspection proposal, but instead of indicating whether certain items are "OK" or "NOT OK," it calls only for the dealer to say whether and for how long the major systems of the car are warranted.

The major systems are: Frame and body, engine, transmission and driveshaft, differential, cooling, electrical, fuel, accessories, brakes, steering, suspension, tires, wheels and exhaust.

Though the auto dealers might object to this approach, there is really very little they could do to stop it because such disclosures are already required under the Magnuson-Moss Warranty Act. Still, the dealers don't like the idea of a window sticker, any window sticker, on a used car and said they could take the matter to Congress.

Wendell Miller, president of NADA, said that is exactly what his organization would do if the FTC does not eliminate that portion of the revised proposal that calls on the dealer to disclose known defective components.

"Keeping that requirement could make handling older cars an impossibility for dealers," he said.

National Independent Automobile Dealers Assn. Executive Director Dan Ray echoed that sentiment and argued that retention of it would put his 7,000 dealers at a competitive disadvantage.

"We would never be able to do the kind of inspection this requirement would demand," he said.

• The dealers were not the only ones troubled by the "known defects disclosure" requirement, however.

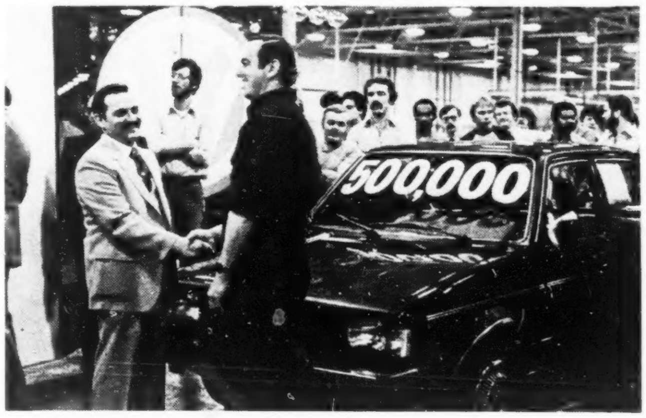
FTC Acting Chairman David Clanton and Commissioner Robert Pitofsky both said they were "not enthusiastic" about the disclosure requirement and particularly the proposed listing on the back of the sticker of an expanded list of defects that could exist in the major components of the vehicle.

Both men wanted the back page of the proposed sticker eliminated, but in the spirit of compromise agreed to have the FTC staff try to come up with a "narrowed" list of possible defects within a week and then to have the sticker consumer-tested for 30 days before taking final action on the whole proposal.

"I would like to keep this simple," Clanton said, "a one-page sticker requiring warranty disclosure and any known serious defects."

Should the FTC agree on this latest proposal, which could occur no sooner than 45 days from now, it is expected that stickers would be required on used cars by early 1982.

Dealers would be required to keep records for only two instead of three years, however, and the FTC would review the workings of the used-car rule within three years.



Multiplying just like Rabbits

Ray Lash, left, production supervisor for VW Westmoreland, congratulates the driver of the plant's 500,000th Rabbit, Russell Walters, after he drove the four-door hatchback off the final assembly line.

No hint of a spring boom

Sales retreat as rebates wind up

By Jenny L. King
Staff Writer

With most rebate and other customer incentive programs having concluded by April 4-5, domestic new-car sales for the early April period slipped back into the old recession-level rut with no hint of a spring selling boom.

April 1-10 new-car sales numbered 162,001, down 12.33 percent from 184,788 in 1980, and lowest for the period since the 128,865 sold in 1961. The daily selling rate averaged 18,000 down 12.33 percent from 20,532 in 1980. There were nine days in the period both this year and last. The best sales ever recorded for April 1-10 were 261,673 in 1971.

Chrysler Corp. reported another in its series of sales increases. It was joined by Ford Motor Co. which was up for the first time in two months. General Motors, Volkswagen of America and American Motors were all down.

Chrysler sales jumped 32.89 percent in early April, to 20,444 from 15,384 last year. Ford reported sales of 40,621 new cars, up 4.81 percent from 38,755. General Motors sales plunged 22.88 percent, to 94,023 from 121,921. VWoA was down 9.59 percent, to 3,913 from 4,328, and estimated sales of AMC cars were 3,000, down 31.82 percent from the previous year's estimated 4,400.

• GM slipped back to 58.04 percent of the domestic market from 65.98 percent last year. Ford increased its share to 25.07 percent from 20.97 percent. Chrysler captured 12.62 percent, up from 8.33 percent. VWoA edged ahead to 2.42 percent from 2.34 percent, and AMC dropped to 1.85 percent from 2.38 percent.

In the U. S. makes breakdown, Plymouth sales were up 69.24 percent from last year, Dodge sales climbed 33.11 percent, Cadillac was up 24.63 percent, Mercury was up 12.64 percent, Ford was up 4.39 percent and Buick was up 3.37 percent.

Chevrolet reported the greatest sales decline for the period, down 40.94 percent from 1980. Pontiac was down 27.32 percent, Lincoln was down 26.74 percent, Chrysler was down 24.69 percent, and Oldsmobile was down 7.83 percent.

The best-selling nameplate for the period was Chevrolet Malibu, at 9,883, followed by Ford Escort at 8,396, Oldsmobile Cutlass at 7,004, Buick Century at 6,510 and Chevrolet Chevette at 6,151. The year-ago top five were: Chevette, Citation, Malibu, Fairmont and Cutlass Supreme.

Year-to-date sales totaled 1,894,470, down 6.86 percent from 2,033,938 in 1980.

Congress gets 3 bills on passive restraints

WASHINGTON.—Capitol Hill, apparently not content with the Reagan Administration's one-year delay in the passive-restraint standard, has decided to strike out on its own with no less than three measures.

The proposals would either eliminate the requirement altogether, require all cars to meet the standard by the 1984 model year or require small cars to meet the requirement first.

Respectively, the measures were introduced by Reps. James Collins, Texas Republican; John Dingell, Michigan Democrat, and Elwood Hillis, Indiana Republican, and by Tim Wirth, Colorado Democrat.

Collins thinks the passive-restraint standard "is just another example of the government trying to provide individuals with more protection than they really need or want," and that the technology is both unproven and too expensive.

"I'd rather the government spent more money on getting people to buckle up, fix roadways and bridges, improve driver training and increase enforcement of drunken driving laws then enforce this 'nonsensical' regulation," he said.

Dingell and Hillis and 14 others think the current standard and the one-year delay proposed by the Administration is inherently unfair to the U.S. producers because they are the only makers building the larger cars that must meet the requirements first.

"By delaying the compliance date until the 1984 model, we put everyone on the same competitive ladder," they said. "We would also be saving the U. S. makers considerably more than the $31 to $43 million the Administration has estimated they will save by delaying the standard for one year.

• "We believe this measure will lay to rest once and for all the controversy over the passive-restraint standard," Dingell and Hillis said.

"It continues to mandate the increased safety provided by passive restraints while addressing the concerns and needs of domestic manufacturers. This legislation is the most sensible and reasonable approach to problems of passive restraints yet introduced."

Wirth, taking a different tack, thinks the government "owes it to consumers to act as quickly as possible to provide them the protection they are entitled to."

Citing government cost-benefit analysis indicating a $10 billion benefit to consumers over the 1982-85 time frame from passive-restraint standards, he argued that the smaller, more dangerous cars should have the devices installed first.

Similar to last year's proposal

Flaunting of the Green

This flower-festooned 1941 Cadillac was provided by Highams Cadillac, Houston, as the Shamrock Hilton Hotel's entry in the 19th annual St. Patrick's Day Parade in Houston. The green car, which has some 61,000 miles on the odometer, was refurbished several years ago when Highams purchased it as a trade-in from its original owner.

GM to transfer Hawaii dealers to U. S. divisions

DETROIT.—Effective June 1, the marketing responsibility for General Motors dealers in Hawaii will be transferred from GM Overseas Distribution Corp. to the Chevrolet, Pontiac, Oldsmobile, Buick, Cadillac and GMC Truck & Coach divisions.

GM President F. James McDonald said, "The new organizational structure will increase the effectiveness of day-to-day sales and service operations of Hawaii dealers by placing them in closer and more direct contact with the vehicle divisions which supply their products."

The new arrangement will enable GM dealers in Hawaii to operate on the same basis as GM dealers in the other 49 states, McDonald added.

But it's still a problem at Big 3

Absenteeism declines as jobs become dearer

By Marjorie Sorge
Labor Editor

Absenteeism rates at the Big Three are falling as the workforce diminishes, but absenteeism still remains a thorn in the side of both the UAW and the auto makers.

Both union and company officials say the decrease in unexcused absences is due to the heavy layoffs in the industry. Cutting the workforce leaves employes with high seniority, and many observers feel they are more conscientious.

According to one Ford spokesman, the highest absenteeism rate was in 1977 when employment was high and many workers with only one or two years' seniority were on the job.

"Many of these young people were making more than they ever had in their lives," he said. "They wanted to spend it and took the days off to do it."

Today, the economic situation in the auto industry is shaky and workers are afraid of losing their jobs if they spend too much unexcused time away.

At General Motors, the unexcused absenteeism rate for 1980 dropped 1.5 percentage points from 5.7 in 1979 to 4.2. GM, however, keeps track of combined contractual and unexcused time off and a spokesman said that rose from 9.4 percent in 1979 to 9.6 percent in 1980.

During the 1979 contract negotiations, the workers were given 26 paid personal holidays over the three years of the agreement, compared with 12 during the previous contract. This increase would boost the total absenteeism rate.

Former GM chairman Thomas Murphy has said total absenteeism costs the company $1 billion a year. A company spokesman said that is based on 20 percent of the 400,000 - member workforce being off the job on any given day.

"That's 80,000 people we really don't need but we must have them to take the place of those that are off," he said. "If you take benefit costs of about $7.25 an hour per person and multiply it by 2,000 hours a year, you'll get a little over $1 billion."

He said that figure doesn't take scrappage rate, quality loss or absences in the salaried workforce into account. Also, workers get time off for holidays and sick days.

• During the 1979 negotiations, George Morris, now-retired vice-president of industrial relations for GM, said the company was paying nearly $2,900 a year for the 39½ working days each employe spent off the job in the 1976-1979 contract.

At Ford unexcused absences dropped one percentage point from 5.8 percent in 1979 to 4.8 percent in 1980.

While the company could not attach a dollar amount to its absenteeism rate, a Ford spokesman said the 1980 figure is a reduction of about 20 percent from the company's high of 6.0 percent in 1977 when the economy was flush and car sales were good.

Ford workers also get 26 PPH days during the current contract.

Chrysler also reported a decline in unexcused absences of 1.4 percentage points from 7.4

Continued on Page 35, Col. 1

BIG THREE ABSENTEEISM PERCENTAGES

	1970	1971	1972	1973	1974	1975	1976	1977	1978	1979	1980
Chrysler	6.1	6.1	6.6	8.1	7.7	6.8	7.4	8.0	7.8	7.4	6.0
Ford	5.3	5.2	5.2	5.7	5.5	5.1	5.0	6.0	5.9	5.8	4.8
General Motors*	6.3	5.9	5.8	6.4	6.4	6.0	6.4	7.9	9.8	5.7	4.2

*—General Motors absenteeism rates for 1977 and 1978 reflect paid personal holidays, five for the period. 1979 and 1980 are unexcused absences only.

Comparisons among the companies is not valid since each uses a different method of computing absenteeism.

American Motors would not release its absenteeism figures.

Executive from Talbot

Executive is a new model from Talbot in its 1510 series. It features an 88-HP 1.6-liter engine, plus power steering, electric door locks and a trip computer. The Executive goes from 0 to 60 MPH in 13.7 seconds and has a top speed over 100 MPH. Pontiac used the Executive name on a full-sized car from 1963 to 1968.

Ford and Chrysler refuse to follow GM increase

Big Three split on price issue

By John K. Teahen Jr.
Managing Editor

General Motors gave a price party and nobody came.

So GM has decided not to give any more such parties—at least not for a while.

In other words, GM has announced that it will not raise prices of its cars again during the balance of the 1981 model year. It will forego its usual July increase.

GM's statement was the latest move in a wacky 10-day period of price one-upmanship in the domestic auto industry.

It started when GM said it would boost car prices a towering average of $351 per car (3.5 percent) effective April 13. The increase was expected, but the amount was a shocker. Price analysts were startled, and NADA issued a sharp criticism of GM.

NADA called it "particularly ill-timed" and said, "This untimely price increase, coupled with the end of rebates, will extinguish the first flicker of serious sales activity which the new-car-and-truck market has seen in many months."

But the increase stayed. After all, GM has said, it needs the money. The accountants are still in control of the corporation, and accountants don't always consider the marketplace in their financial decisions.

GM undoubtedly felt that Ford and Chrysler would follow, so at least the criticism would be shared.

But Ford and Chrysler broke ranks. They didn't follow GM's lead as they usually do in pricing matters. Ford was first, announcing that it would not raise car and light-truck prices through the end of April.

Chrysler went a bit farther in its hold - the - line - for - now statement. It mentioned no date. Chrysler said that because of rising costs it would "obviously continue to consider the need for price relief. However, there will be no increase until absolutely necessary."

• So OK, GM, it's your move. Chairman Roger B. Smith made the move at a regional stockholders' forum in San Francisco last week.

He mentioned the success of the rebates in reducing dealer inventories, said that orders for future delivery continue to accelerate and added ". . . and I tell you today that General Motors will not increase prices again on 1981 models."

The next episode belongs to Ford and Chrysler. They'll probably make their next increases large enough so they can join GM in holding the line until the end of the model year.

In the 1981 model year, GM has had four price increases, adding up to an average of $914. The average price of the average-equipped GM car now is $10,200.

Ford has boosted stickers three times for a total of $563, and American Motors has had four hikes for a total of $670.

Chrysler is way behind with $274. It raised prices $295 at introduction time last fall. In January, Chrysler boosted some models, reduced others and added a lot of equipment, some of it at less than option prices. The net result, the company said, was an overall reduction of $21.

Volkswagen of America has stuck to its introductory prices on U. S.-built '81 Rabbits. The base model went up $500 last fall and others rose $615 to $630.

The imports, incidentally, haven't been immune to the '81 price fever. Toyota and Datsun, the two sales leaders, are up $738 and $779, respectively, since the end of the 1980 model year.

Shell chief says high stocks won't stop gas price hikes

DETROIT. — U. S. gasoline prices should rise "moderately" for the rest of the year due to a "glut" of oil stocks, Shell Oil Co. President John F. Bookout told a press conference last week.

The Shell chief executive officer told the press conference prior to a speech at the Economic Club of Detroit that a cost-price squeeze has caused oil industry profits for the first quarter of the year to continue the slide started in the fourth quarter last year.

"The cost of a barrel of crude has increased between $5.50 and $6 since December, and we have not been able to recover that in pricing," he said.

Bookout stopped short of predicting that gasoline prices would remain below $2 per gallon for the remainder of the year.

"Let's just say price increases should be moderate over the year," he said. "We don't see any shortages."

In his speech, Bookout called for more - cost - effective energy development programs, including the development and use of coal and nuclear energy sources.

He said that despite a forecast of real Gross National Product annual growth rate of 2.5 percent until 1990, he believes real energy reserves will need to grow at only about a one percent rate to support that economic growth because of the increases in conservation.

Bookout said a cost-effective program could keep energy costs at about 10 percent of GNP right into the 1990s and reduce total energy imports to about 10 percent of the total energy used.

He also said he believes energy capital spending must increase about 5 percent in real terms annually from the $80 billion which will be spent industry-wide this year.

VWoA opens addition to parts depot

ENGLEWOOD CLIFFS, N. J. —Volkswagen of America marked the third anniversary of its first American assembly plant this month by opening a $10 million addition to its Central Parts Depot in Valley Forge, Pa.

The depot expansion includes parts warehousing and paint priming facilities. It opened three years to the day after the opening of Volkswagen Westmoreland.

Ulrich Fahrun, vice president, Corporate Parts Division, said the new facility "will provide the storage area and distribution efficiency necessary to assure supply continuity of parts for the U. S. Rabbit to our dealers and customers."

The Valley Forge Central Depot receives spare parts from more than 470 domestic and several overseas suppliers and channels them through 10 distributors and depots to VWoA franchised dealers in the U. S.

Additionally, it receives bare sheet metal stampings from the Volkswagen South Charleston (W. Va.) plant, Volkswagen de Mexico and VW Westmoreland for priming, packing and redistribution. The depot is also responsible for the supply of U.S. Rabbit parts to VW Canada and the Caribbean Islands and will shortly supply parts to VW Mexico.

The facility stores about 7,200 parts, representing an inventory value of $42 million. The paint operations will process about 240,000 parts yearly.

Congress gets three measures on restraints

Continued from Page 3

to reverse the passive-restraint order of compliance but without the requirement that certain makers tool for air bags, the Wirth proposal also would put the U. S. and foreign makers on equal competitive footing when it comes to passive restraints.

"I am concerned that a delay in the standard will only exacerbate the economic troubles of the American auto industry by encouraging them to defer safety improvements while their foreign competitors gain the edge once again by offering increased safety features," Wirth said.

Wirth, who heads the House Telecommunications and Consumer Protection subcommittee, said he will hold hearings beginning April 27 on all three passive-restraint bills introduced in the House.

Rolls-Royce sees record U.S. sales

WASHINGTON.—Record sales of 1,300 Rolls-Royce and Bentley cars are projected for the U. S. this year, according to George R. Fenn, chief executive of Rolls-Royce Motors.

Fenn was in Washington for a preview of the new Rolls-Royce models, the $109,000 Silver Spirit and the $117,000 Silver Spur. He noted that the U. S. is his company's most important export market and said the response from dealers and customers to the new models has been all the more remarkable in light of the condition of the auto industry.

Rebates, incentives sweetened for dealers, buyers

Chrysler is paying big on Imperial

By Joseph Bohn
Marketing Editor

Chrysler Corp. is continuing to push its flagship Imperial line, with additional rebates, direct-mail and advertising support.

As previously reported, from April 5 to May 31, Chrysler is giving $1,800 rebates to buyers of '81 Imperials. It is also giving $300 cash incentives to salespersons during the same period for each retail sale or lease (fleet excluded).

Chrysler has sweetened this offer with a special demonstrator purchase allowance program. Dealers may order up to four Imperials during April 10 May 10 for demonstration purchases, and these cars will have $1,000 deducted from the dealer's invoice.

If the dealer sells the demo, it also qualifies for the $1,800 rebate. Units must be ordered fresh, however. They cannot be taken out of stock.

There is also an Imperial VIP direct-mail program, starting May 1, whereby 400,000 prospects are invited to visit an Imperial showroom. They receive a choice one of three prestigious Cartier crystal gifts for doing so.

In this direct-mail piece, there is a certificate good for $1,800 off the purchase price of an Imperial until June 30, 1981. Essentially, the mail piece extends the $1,800 rebate for one month longer than the normal rebate to these prospects.

Prizes and rebates are fully funded by the factory.

- Included in the direct-mail piece—and providing the focus for Chrysler advertising in the Wall Street Journal and selected newspapers in major metro markets—is Imperial's win over Eldorado and Mark VI in a Consumer Testing Institute comparison study.

Chrysler also has an Imperial referral program, effective May 1, 1981, whereby all retail purchasers or lessees of Imperials receive an "appreciation certificate." They receive $1,000, if they refer a friend, relative or acquaintance to a dealership and the referral results in a sale or lease.

If the referred person buys a car, he could receive $1,800. If he bought a demo, it would still give the dealer $1,000 and Chrysler woud also pay the referral premium of $1,000.

Chrysler is also pushing the notion of having non-Imperial Chrysler - Plymouth and Dodge dealers drive an Imperial as their personal car to add to its exposure.

The company is giving non-Imperial C-P and Dodge dealers who take delivery of an Imperial from April 5 to May 31 an $1,800 purchase allowance.

Chrysler's ad campaign on Imperial runs from April 15 to May 31.

The company is holding dealer and zone meetings this week to go over its program with groups around the country.

Kenyon & Eckhardt is the agency.

Cases reported near paint and vinyl complex

Ford denies cancer tie near plants

By Kathleen Hamilton
News Editor

DETROIT.—Six incidences of cancer, including three cancer-related deaths, and two incidences of birth defects during a period of nine years have been reported in six households near the Ford Motor Co. vinyl-and-paint-plants complex in the Detroit suburb of Mt. Clemens.

The cancers were reported in a copyrighted article in the Detroit News. A Ford spokesman said the company is examining the documentation, but believes the company is not responsible and questioned whether the cancer rate was indeed high.

Residents have complained of the fumes and particulates from the plant.

A spokesman from the state's Air Quality Division of the Department of Natural Resources (DNR) said there have been no citations against the Ford plant's emissions for at least the last five years. It plans no studies at this time on the Ford plants.

The DNR does have on file five toxic chemical spills since 1968 originating at the plant.

These included PCB (a carcinogen), tetrahydrofuran, butyl alcohol, methyl-ethyl ketone and, most recently, in 1979, cathodic e-coat resin.

A DNR spokesman said Ford funded the DNR - supervised cleanups of the spills.

But in an August, 1980, DNR study, high levels of lead and PCB — both carcinogenic — were found in the sediment of a drain immediately downstream of the Ford plants. The drain is north of the Ford plant; the reported cancer victims were south of the plant.

A DNR spokesman said recommendations cited in the study of the drain were "not too high."

Both state and Ford officials said the pollutants may date back a number of years. The plants have been in operation since 1958.

Alberti signs with Cadillac

John Alberti, right center, signs his franchise agreement to become a Cadillac/Oldsmobile dealer in Falmouth, Me. Present at the occasion are, from left: Joe Fetzer, Boston zone manager for Cadillac; Mark Rosenstock, Oldsmobile dealer and investor in the Falmouth dealership; Alberti, and Roger Forbush, Northeast regional manager.

Absenteeism falls in plants as jobs become dearer

Continued from Page 7

percent in 1979 to 6.0 percent in 1980.

Chrysler workers here negotiated away their PPH days in the two rounds of contract bargaining which gave Chrysler over $1 billion in concessions. U. S. workers lost all but three of the original 20 PPH days negotiated in the 1979 contract. When the federal Loan Guarantee Board told the union and the company to make more cuts earlier this year, the workers lost those three days and the Canadian workers forfeited all 19 of theirs. It was estimated that eliminating the PPH days in this year's bargaining session saved Chrysler $52 million.

It must be remembered that the reported absenteeism figures of the Big Three cannot be compared because each company computes its figures in a different way.

The average worker at Ford and GM gets 13 holidays, 9 PPH, one week paid absence allowances (PAA) and one to four weeks vacation, depending on seniority. Chrysler workers get the same, except for the PPH days.

Mitsubishi eyes joint U. S. output with Chrysler

Continued from Page 2

convertible and a sports car. The front-drive convertible, to be fabricated by an outside firm, is expected to appear as an '82½ model.

The sports car is slated for '83½ introduction. For 1982, the company intends to introduce a new luxury mid-sized car which is smaller and will have an estimated fuel efficiency of 25 MPG city and 41 highway.

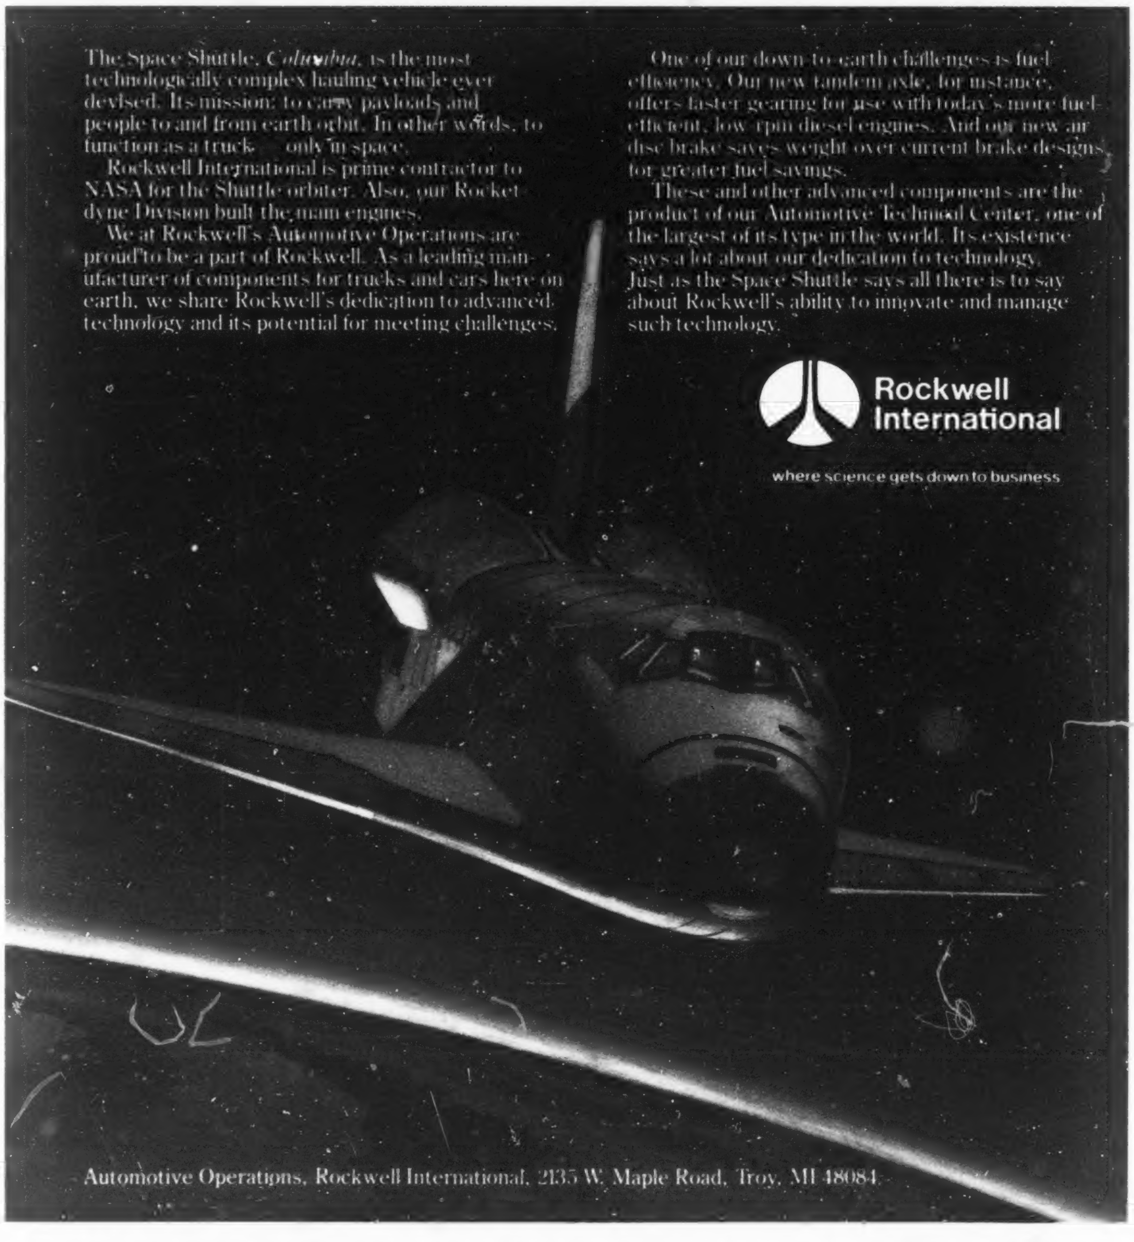
A new pickup will be introduced based on the Omni/Horizon chassis, and there will also be a new Chrysler Town and Country wagon.

As for powerplants, Chrysler is concentrating on four-cylinder gasoline engines, as well as four and five-cylinder diesels and turbo diesels. In a few years, Pyle said, there will be no eight cylinder offerings and no six-cylinder offerings. By 1984, the entire lineup will be front-wheel drive.

As for the five-cylinder diesels, Pyle said these were being supplied by PSA Peugeot, the French auto maker that bought out Chrysler's European operations two years ago.

Dealership to move

BANGOR, Pa. — Slate Belt Buick, established here in 1952, plans to move to nearby Wind Gap, Pa., in May.



Ride the Rockwell Line.
It's a direct line to the company that built the Space Shuttle.

The Space Shuttle, *Columbia*, is the most technologically complex hauling vehicle ever devised. Its mission: to carry payloads and people to and from earth orbit. In other words, to function as a truck — only in space.

Rockwell International is prime contractor to NASA for the Shuttle orbiter. Also, our Rocketdyne Division built the main engines.

We at Rockwell's Automotive Operations are proud to be a part of Rockwell. As a leading manufacturer of components for trucks and cars here on earth, we share Rockwell's dedication to advanced technology and its potential for meeting challenges.

One of our down-to-earth challenges is fuel efficiency. Our new tandem axle, for instance, offers faster gearing for use with today's more fuel-efficient, low-rpm diesel engines. And our new air disc brake saves weight over current brake designs for greater fuel savings.

These and other advanced components are the product of our Automotive Technical Center, one of the largest of its type in the world. Its existence says a lot about our dedication to technology. Just as the Space Shuttle says all there is to say about Rockwell's ability to innovate and manage such technology.

122,485 cars scheduled in 4-day week

Auto production feels holiday pinch

By Patricia Hoffman
Staff Writer

Due to the shortened work week because of the Good Friday holiday, U. S. auto production last week fell below the previous week's output and the comparable 1980 week's total.

Auto production last week was slated at 122,485 units, a drop of 17.45 percent from the 148,375 cars completed in the previous week, and down 9.22 percent from 134,932 assembled in the comparable week last year.

So far this year the auto makers have completed 1,932,162 units, down 10.11 percent from the 2,149,547 cars built through April 19 last year.

Breakdown for last week by company is: General Motors, 61.35 percent; Ford Motor, 22.18 percent; Chrysler, 11.88 percent; Volkswagen of America, 2.72 percent, and American Motors, 1.87 percent.

As previously reported, Checker Motors will be closed until May 4.

Operations resumed last week at GM Cadillac assembly plant in Detroit after a fire in the painting facility halted production of the full-sized Cadillac on Tuesday, April 7.

Only one of the plant's two shifts was scheduled to work that week due to inventory adjustments. The single shift had completed a full day of assembly on Monday, April 6, but worked only one hour on Tuesday before the fire broke out at 7 a.m. Both shifts resumed operations last Monday (April 13).

Due to lagging sales of Cadillacs, there was no overtime scheduled last week to make up for loss in output because of the fire.

Assembly of the Cadillac Cimarron, scheduled to begin the week of April 6, was postponed until April 13. Thirty-nine units were scheduled last week.

There was no Saturday overtime in the industry last week due to the holiday.

Overtime is slated this week at Chrysler's Newark, Belvidere and St. Louis assembly plants which will operate nine-hour shifts beginning today (April 20).

Also at Chrysler, the Jefferson assembly point will increase its daily output of K-cars by 20 percent by the end of April.

All Ford and Chrysler assembly points will be operating this week.

General Motors has scheduled downtime this week at two plants.

GM's Janesville assembly point and one shift at GM's Cadillac plant will be down for one week beginning today.

Truck production reduced but it exceeds last year

Despite the shortened holiday week, U. S. truck production last week jumped 82.52 percent over the comparable 1980 week's total. The low total last year was due to downtime at three truck plants and production cuts at two General Motors facilities.

Planned truck output for the four-day week last week was 35,259 units, down 16.50 percent from the 42,228 trucks completed in the previous week, but up from the 19,318 assembled in the comparable 1980 week.

GM's Flint assembly plant (light-duty Chevrolet and GMC trucks) will reduce production from two shifts at 50 trucks per hour to one shift at 50 per hour beginning today (April 20). An estimated 1,500 people are being placed on indefinite layoff.

GM said its new Shreveport (La.) truck point has been completed and training for the plant's assembly workers has begun. However, production will not begin until the '82 model year. No exact date has been set.

General Motors has scheduled downtime this week at three truck plants.

The Chevrolet Flint point, Lines One and Two, will be down starting today. Line Two will remain idle the week of April 27.

GMAD's St. Louis point will be down for one week, and the Lordstown van point will be down for two weeks.

Renault buys half of Peugeot Truck

PARIS.—Renault Industrial Vehicles has bought a half-share in the commercial vehicle operations of its rival Peugeot group. The surprise move stems from French Government pressure. It will concentrate the country's truck-making business in one group. Peugeot's Dodge Truck interests were acquired when it took over Chrysler-Europe in 1978.

First DeLoreans enroute

BELFAST. — The first boatload of about 400 gull-wing DeLorean sports cars was loaded and ready to sail with the tide Easter Sunday for the port of Long Beach, Calif. Travel time is expected to be four weeks. A second ship is due to sail in two weeks for DeLorean Motor Co.'s east coast port at Wilmington, Del., timed to arrive at about the same time as the West Coast ship.

Canadian output of cars slips in holiday week

Canadian auto production declined last week due to the shortened holiday work week, but Canadian truck assembly pulled ahead of the previous week's total as a result of the reopening of General Motors' Oshawa truck facility.

The four days of auto production last week was planned at 17,965 units, a drop of 14.64 percent from the 21,047 cars completed during five days of assembly the previous week, but output stayed above the comparable 1980 week's total of 17,807.

So far this year, the auto makers have completed 235,310 units, a drop of 13.22 percent from the 271,165 cars assembled in the comparable period last year.

Truck production last week was slated at 10,349 units, up 21.52 percent from the 8,516 trucks completed in the previous week but down 2.27 percent from the 10,589 units built in the comparable week last year.

Year-to-date, the truck makers have completed 167,834 trucks, a drop of 4.18 percent from 175,160 at this point in 1980.

The GM Oshawa truck point resumed operations April 13, after one week of downtime.

Also at GM, the Scarborough (Ont.) van plant will decrease its line speed, beginning today (April 20) from 26 vans an hour on two shifts to 23 vans an hour also on two shifts.

Chrysler's Windsor Pillette truck point will increase its line speed from 368 per day to 400 per day on two eight-hour shifts, effective today. This will be maximum production for that facility.

All the Canadian car and truck plants scheduled no downtime for the shortened holiday week last week, and there is no downtime slated for this week.

British fliptop

Forte offers instant Rapport with the sun

Custom-built British convertible, the Rapport Forte, features a steel-and-aluminum roof that disappears into the trunk at the push of a button. The headlight arrangement has an airfoil section which conceals the upper portion of the four headlamps and is electronically raised to allow full beam. Power is by a Jaguar V-12, mated to a GM automatic transmission. Turbocharged engine and manual transmission are optional. Price? $89,000.

breaking news

GM eyes five-speed transmission

DETROIT.—Chevrolet is said to be studying a five-speed overdrive version of the Muncie four-speed transaxle that is used in the J-cars and X-cars. Production is not likely to begin before 1983, at the earliest.

Corvette winding down in St. Louis

ST. LOUIS.—Corvette operations are scheduled to wind up here by the end of July as part of the shift of production to Bowling Green, Ky. Output is slated to get under way in Kentucky in June at a single-shift rate of 15 units per hour.

Peugeot moves against Japanese

PARIS.—Peugeot has signed an agreement with the Economics Ministry of Tunisia to develop the French group's interests there in cooperation with a locally based manufacturing concern. About 11,000 vehicles are assembled annually in Tunisia, with Peugeot and Citroen accounting for some 7,000. The plan is to increase this to 10,000 while blunting penetration of Japanese makes in the market.

Toyota to expand in Australia

TOKYO.—Toyota said it plans to build a second body plant in Australia in an attempt to strengthen its competitive position against General Motors and Ford. The new plant, slated to begin output early in 1983, will have a capacity of 3,000 bodies monthly.

Global gab, but no action on Japanese import issue

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—The more it changes, the more it's the same. That's the best description of what was happening last week in Washington, Tokyo and Detroit on the question of Japanese cars in the U. S.

The number of signals, hints and suggestions increased but no real progress — much less hard news—was evident.

Nonetheless, as the time of Japanese Prime Minister Zenko Suzuki's visit to Washington comes closer, there is some hope that the Japanese "voluntarily" and "in their own best interest" may come forth with a modest proposal to curb their exports. Whether it will satisfy all parties remains to be seen.

Now, however, the parties are at an impasse—with the Japanese through Commerce Secretary Malcolm Baldrige and the press as intermediaries.

The Japanese have been saying their success in the marketplace did not cause Detroit's woes—and they have last fall's International Trade Commission decision as support. Further, they say, cutting back on imports will not settle Detroit's problems—and they have support for that from studies made by the Council of Economic Advisers.

When members of the Japanese Diet took that argument to members of Congress, they found agreement but no real help. Senator John Danforth, Missouri Republican — whose views were typical of several leaders — said he never maintained that "imports deserve the blame for the current crisis," but they are part of the problem and just as the U. S. government, U. S. auto makers and workers must do their share, so must Japan.

Besides, May 12 is the day set to start markup of his measure to lower Japanese auto imports to 1.6 million a year for three years.

The Japanese got the message. They told Secretary Baldrige of their sorrow and compassion for the mess the auto companies got themselves into and said they want to help. But, they asked, what are the companies and the UAW doing?

As Baldrige explained, the Japanese have apparently got the message from the Reagan Administration.

It goes like this: The President would like to see "voluntary" restraints from the Japanese car companies. He has no numbers to suggest. He would like to see wage and price restraints from the U. S. companies and the UAW, but he believes in the free enterprise system and will not make any suggestions to them, no orders, no jawboning.

Congress is its own boss the message goes on, and it could very well pass mandatory quotas, which the President does not like, but he does not yet know whether he would accept such a law or whether he would veto it. Every man, woman and child—here and abroad—should do whatever he can to save the auto industry, and the President will be happy.

Baldrige went on to add that the Japanese do things by consensus and they are working at it. But their problems are similar to those that now exist in the U. S. government. The government wants restraints without upsetting other crucial areas

Administration floats two-car emissions plan

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — The Reagan Administration, as part of its developing Clean Air Act revision strategy, is considering a "two-car" scenario.

In it, uncontrolled vehicles would be allowed to operate in areas of the country that meet ambient air quality standards, and only cars meeting 1981 emission standards would be allowed to operate in areas not meeting the ambient standards.

According to a confidential memorandum from the White House's executive secretary of the Cabinet Council on Natural Resources and the Environment, Danny J. Boggs, to the Administration's Clean Air Working Group, this drastic alteration of the current auto emissions control program could save "in automobile purchase price and operating costs, several billion dollars per year, especially if as many as 60 percent of the vehicles could meet less-stringent standards."

Most of the savings would come through the elimination of the catalytic converter ($300 to $900 million per year) and the return to less expensive leaded fuel ($1.5 billion per year), the memorandum says.

The proposal is to allow each state to decide which of two sets of standards—1981 or 1974—its cars would meet (consistent with its obligations to achieve federal ambient air quality standards), or have the federal government decide, particularly if long-range automotive pollution is a problem.

Based on analytical work done in 1974 and 1975, Boggs estimated that "as few as 44 metropolitan areas with approximately 36 percent of the nation's automobiles would require autos that meet the 1981 standards and the remaining 64 percent of the automobiles could follow the 1974 standards without causing significant violations of the national ambient air quality standards."

He added, though, that if, for administrative reasons, it would be necessary to require that all cars in states with heavily pol-

They term it dangerous and unreliable

Critics attack Cadillac V-8-6-4

By Marjorie Sorge

General Motors may have a time bomb on its hands with its new Cadillac V-8-6-4. Many customers and some dealers are ready to explode because they say the car just doesn't run properly.

Of the numerous customers interviewed by AUTOMOTIVE NEWS, most said the car can die on the road without warning. Others said the car slows down as if to stall and then jerks forward unexpectedly. Still others reported engine fires.

The V-8-6-4 digital fuel injection engine is an electromechanical system, controlled by a microprocessor, which calls up eight, six or four cylinders depending on driving requirements. It is designed to improve the gas mileage of the vehicles, but many of the customers interviewed said their mileage was no better than it had been on earlier models with the regular V-8.

The system is standard on the 1981 deVille, Fleetwood Brougham, limousine and Eldorado models and an option on the Seville.

There is currently one class-action lawsuit pending in New Jersey charging that the device is "experimental" and that the engine stops "without prior warning" and "ceased to function at varying speeds" which caused "abrupt and marked deceleration" exposing the occupants to safety hazards, especially rear-end collisions.

Because of the lawsuit, a Cadillac spokesman said the company could not comment on any of the charges or on the number of complaints GM has received.

There are indications that dealers are in effect buying back the cars equipped with the V-8-6-4 from very dissatisfied customers. Other dealers are either disconnecting or showing

Truck outlets in U. S. down 1,371 in year

The number of places where anyone can buy a truck in the U. S. today is down slightly from a year ago, but with market conditions such as they are, no one will have to look far for a place to buy.

On Jan. 1, 1981, according to the annual AUTOMOTIVE NEWS truck-outlet census, there was a net total of 21,870 truck outlets, a decline of almost 5 percent from the 23,241 in business at the start of 1980, a difference of 1,371.

The Big Three's four truck-manufacturing operations, which account for about 85 percent of the total outlets, suffered the biggest losses in the number of outlets, reflecting the drastic slump in both new-car and light-truck sales in the last year.

At the start of this year. there were 18,505 Big Three truck outlets, a decline of 1,384 from the 19,889 in service at the same time the previous year.

Ford's total was down 415, from 5,577 a year ago to 5,162, with practically all of the loss represented by dealers which sold only cars and light trucks. Ford's heavy-truck outlets totaled 270 on Jan. 1, 1981, compared with 275 a year ago.

Dodge had 404 fewer outlets at the start of the year, and

Mercedes van being tested in U. S.

This is a prototype of a forward-control type van being tested by Mercedes-Benz of North America in the U. S. market. Five units are being tested by operators in such applications as bakery, parcel and newspaper delivery. The all-aluminum bodies are by Olson.

Mercedes may offer medium diesel P/D van

By Jack Walsh
Truck Editor

For the last 10 years, Mercedes-Benz of North America has concentrated its truck-marketing efforts in the mid-range diesel segment, originally with Class 6 vehicles and currently with both Classes 6 and 7 units.

Now, the company is taking a serious look at what could be another fast-growing diesel market—the forward-control pick-up-and-delivery van used in such applications as laundry, bakery and newspaper delivery with a broad range in GVW requirements.

Mercedes-Benz currently has five prototype vans in the U.S. for evaluation by interested fleets, according to Walter Bodack, the company's commercial vehicles vice president.

"The response by fleets which have tested the vans, operators and their drivers alike, has been excellent," he said. "We have discussed the addition of such a vehicle with many of our dealers, and they are anxious to have it."

Bodack did not say when a decision will be made as to whether the unit will be offered in the U. S. None of the five vehicles now in the test program have been certified for use in the U. S., and Bodack indicated that it would take 6 to 9 months to certify the van.

- The prototype van features the L613 chassis built by Daimler-Benz in Dusseldorf, West Germany, and a 15-foot Kurbmaster aluminum cargo body by Olson.

"The chassis isn't new, so it doesn't require any extensive testing in the U. S.," Bodack said.

The van is powered by an in-line six-cylinder Mercedes naturally aspirated diesel with a displacement of 346 cubic inches and rated at 130 HP at 2,800 RPM. It has a five-speed fully synchronized Mercedes transmission.

Preliminary specifications call for a gross vehicle weight of 14,965 pounds, which positions the vehicle at the top end of Class 4.

At this time, there are no production diesel-powered delivery

Mazda adds items, boosts truck prices

LOS ANGELES. — Mazda has added steel-belted radial tires and AM/FM radios as standard equipment on mid-year production models of the 1981 B2000 pickup trucks.

Prices for the new models will be up between $150 and $300. Existing inventories of B2000s without the new items still will list at the suggested retail prices effective since October, a Mazda spokesman said.

Slack adjuster is introduced by Kelsey-Hayes

DETROIT.—Kelsey-Hayes Co. has introduced an all-new automatic slack adjuster designed for use on tractors, trucks and trailers with up to a Type 30 brake chamber.

Larry E. Pulkownik, sales and marketing manager for the firm's Heavy Duty Systems Division, said the new unit "automatically adjusts cam brakes during normal operation. While eliminating periodic adjustments, use of the adjuster provides more uniform wear and longer lining life.

"The result is better brake performance, better brake balance and lower maintenance costs," he added.

The adjuster, which was in development for more than four years, is available in three lengths—5½, six and 6½ inches

truck industry news

Reign lasted only one month

Ford spurt ousts Chevy from registrations lead

Chevrolet's lead over Ford in registrations of new trucks of all types in the U. S. was short-lived. It lasted only a month.

Going into February, Chevrolet led by a margin of only 146 units. By the end of the month, the lead had evaporated and Ford was back in the top spot with an edge of almost 2,400 units.

Table on Page 35

For the first two months of the year, according to R. L. Polk & Co. statistics, Ford registrations totaled 105,562 units, compared with 103,188 for Chevrolet. Ford's February count was 53,083, while Chevrolet had dipped to 50,563.

January marked the first time since November, 1978; that Chevrolet had been No. 1 in truck registrations.

The industry total through February was 324,703 units, a decline of 26.7 percent from the year earlier 443,071 tallies. The February count was down 22.2 percent, from 209,794 units in 1980 to 163,195.

Two-month registrations continued on the downside in all three market segments and in seven of the eight weight classifications.

While the medium-truck market is by far the smallest segment, it suffered the least from a percentage standpoint in the first two months of the year.

Through February, 9,002 medium trucks were registered, down 8.7 percent from the year-ago 9,861. The Group 6 total of 8,766 units was off 7.3 percent from last year's 9,459, and the Group 5 declined 40.2 percent, from 391 vehicles a year ago to 234. Only two Group 4 trucks were registered in the first two months, both in February, compared with 11 in the same time in 1980.

A slowdown in registrations

Continued on Page 24, Col. 1

Lead over Ford in tallies of HDs is padded by IH

International increased its lead in heavy-truck registrations in February, accounted for almost 26 percent of the two-month total and improved its market share over the previous year by 6.27 percentage points.

Through February, according to R. L. Polk & Co. statistics, 6,144 new Groups 7 and 8 International trucks were registered in the U. S., almost 1,000 units more than Ford's 5,229.

The International tallies for the two months accounted for 25.98 percent of the industry total of 23,648. A year ago, when International had dropped into second place because of a strike

New range has 27 models

Ford unveils Cargo, outlines tough goals

Continued from Page 16

ed to rise by 8 percent to 90,500 by the end of the decade.

O'Sullivan adds, "Mercedes has a formidable operation in Germany, as one would expect. It takes 25 percent of the European heavy-truck market, absolutely dominates it. And a big piece of that domination is by getting such a large share of the biggest market within the market.

"It's from that base that Mercedes gains the economies of scale with which to be so successful a manufacturer in Europe and export markets around the world."

• Ford was the leading brand in the UK last year, taking 23.7 percent. By 1990 it is forecasting 27.5 percent of a market totalling 74,000.

"We're assuming a stable, high performance in the UK throughout the decade," O'Sullivan said.

Five years ago Ford was pretty level pegging with Leyland and Bedford in the UK. Since then, Leyland and Bedford have dropped around 6 percentage points each, and imports like Mercedes-Benz, Volvo, Daf, IVECO and Scania have made ground.

Of the French market, O'Sullivan says, "As far as trucks are concerned, the French are probably the least chauvinistic in Europe. Imports do awfully well, which is perhaps a comment on Renault Industrial Vehicles. . ."

Nevertheless, RVI had 43 percent of a market worth 47,100 last year, while Ford had 3.5 percent. Ford expects this to grow to 7.5 percent by the end of the decade, when sales will amount to 53,500.

Mercedes-Benz enjoyed a very healthy 19 percent last year. IVECO did 13 percent and Volvo, 8 percent.

• In Italy, Ford sold 3.3 percent of last year's market, but is after at least 6.5 percent of 1990's forecast 38,400 market. IVECO's performance last year gave it 65 percent, well down from the 85 percent it enjoyed five years earlier.

The large inroads in Italy over the past half-decade were made by Renault (12 percent last year), Mercedes-Benz (9 percent), Scania) 4.6 percent) and Volvo (4.2 percent).

Commenting on the market, O'Sullivan says, "The Italian customer is the one who shied away from what he sees as cheap, utility cabs. Once you get into city delivery, he doesn't want anything old or tatty. And the D-series—and the Bedford TK—are seen as a bit past it now."

At the other end of the Italian market, he believes, "It's segmented towards line-haul trucks, which have not been a Fiat specialty. Customers have tended to go for the big, macho Volvos, Scanias, Mercedes and so on. That's cost Fiat one big bundle of lire."

Ford believes it can achieve these wide-scale targets on account of its European sales organization. It has fully owned concessionaires in each of its 15 European markets, whereas most rivals rely on independent distributors in many markets.

• O'Sullivan states, "If you control your distribution you're in a stronger position to reach the customers, who do not feel they are remote from the manufacturer. The customer also feels he can influence design through direct feed-back."

He describes Ford's dealer network—633—as "about right" to achieve the targets. RVI has nearly 900 and Mercedes-Benz and IVECO have more than 1,000 each.

Ford rejects the suggestion that creating a sophisticated truck for Europe will cut it off from Third World and other deep-sea markets. To this extent it has created Cargo in four levels of trim, from level one for poor markets such as India and North Africa, up to level four for Europe.

Cargo comprises 14 truck weights from 6 to 24.4 tonnes gross, seven tipper weight categories from 7.5 to 24.4 tonnes and six artic weight categories spanning 17 to 28.5 tonnes.

The 27 basic models are powered by six different engines, four Fords, one Cummins and one Perkins.

Each Cargo carries a four-digit number in the deep side window. For example, a 1314 is a 13 tonne GVW truck powered by a 144-HP Ford Turbo II engine.

Citroen enlists

Citroen anticipates an order from the French army of 5,000 units for its military version of the Mehari 4x4. This follows 20 months and 170,000 miles of testing with 10 prototypes of the four-wheel-drive machine. It is powered by a 34-HP version of the 40-CID two-cylinder engine.

Decision on Nissan UK plant due to be made in June

A decision is expected within a few weeks on where—or, indeed, if—Nissan plans to locate its $660-million auto factory in the UK.

Company officials and their McKinsey & Co. advisers have been engaged on what is known as a "feasibility study" since the shock announcement at the end of January that Nissan was interested in establishing a major European base.

Representatives from many of the country's depressed areas—and there are plenty—have been lobbying hard for the 200,000-unit factory which would create 5,000 jobs directly and plenty of others in spin-off industries.

A tentative decision day has been set in June for the eight hopefuls.

Nissan's aim is to have 60-percent local content at start-up, rising to 80 percent when fully established. But skeptics say that if targets and quality are not met with domestic components the new factory could amount to little more than an assembly operation.

Britain's European partners, particularly the French and Italians are less keen on the whole idea. They believe it would give Nissan a substantial bridge for its other products within the Common Market, at a time when pressures are growing for local import restrictions.

There is no mistaking the importance of Nissan's declared intentions. If the factory goes ahead it will be Nissan's largest venture outside Japan and Japan's single investment in Europe.

It would also put the company's other links with Alfa Romeo, Motor Iberica and Volkswagen into perspective.

In Europe, only Honda, with its kits operation with BL due to begin in October, has made any obvious progress towards European partnerships. But with ever-increasing resentment at Japanese import successes, few believe this is the end of the story, especially for Japan's leading auto maker, Toyota.

Further erosion of Vauxhall's name seen in UK

The decision by General Motors to combine its Vauxhall and Opel marketing in the UK is being regarded as a further weakening of the Vauxhall brand name.

Already, responsibility for passenger-car design and development has passed to Opel, and Vauxhall's products all but withdrawn from mainland Europe. (A few UK-made Chevettes are sold in West Germany.)

But until now GM had marketed its parallel Opel and Vauxhall products separately in the UK. Details of the plan were revealed to the 579 Vauxhall and 224 Opel dealers by John G. Bagshaw, newly appointed director of marketing for UK passenger cars.

Bagshaw, an Australian, was previously Western area sales manager for Pontiac in the U.S.

GM's combined penetration of the UK market to the end of March was 8.6 percent (36,229), compared with 9.6 percent (48,393) last year. It has been a long-time aim to hit 10 percent on a regular basis, compared with Ford's 30 percent and BL's 20 percent.

An additional change at Vauxhall Motors is the appointment to chairman of Managing Director Ferdinand Beickler. He replaces the retiring Geoffrey Moore.

And now: The Escort submarine

Garage owner Peter Keegan demonstrated a new water-repellant spray for vehicle electrical systems by driving under water. Donning wet suit and aqualung, Keegan drove under London's River Thames in a new Ford Escort prepared for the occasion by fitting snorkels to intake and exhaust, removing doors and windows and adding ballast. The stunt was judged successful.

Part of decline laid to new taxes

No rosy glow on the Dutch horizon

By Richard Feast
European Editor

Tiny Holland, tucked away in a corner of Europe and almost forgotten, has been driving a bumpy highway in recent months.

Its very future as a vehicle building country is under the spotlight and it has endured a withering collapse in new-car sales.

Attention is focused on talks between Volvo Car Corp. and the Dutch government over the future of the small, loss-making car plant at Born in the country's depressed Limburg area.

While there has been no official announcement, there is widespread expectation that Ford will pull out of Amsterdam, where it makes the low-volume Transcontinental premium truck.

Which leaves Daf, the truck maker which came late to Europe but has gained an excellent reputation for quality and performance. However, it is a sprat in a world of increasingly hungry sharks, and the puzzle is whether it can survive as an independent.

A fact-finding mission to Holland provided some of the answers but it became clear that there is no rosy glow on the horizon.

Holland's new-car market is the fifth largest in the Common Market behind West Germany, France, Italy and the UK. For a country with a population of 14.3 million, demand each year is healthy

Since 1976 it has consistently topped half-million units a year, finishing 1979 with 575,000. Then came last year's collapse — almost 22 percent to 450,000.

Only tiny Denmark (73,800 sales) of all the European countries saw a larger fall. In neighboring Belgium, it was 7 percent to 428,000; in Germany, it was 7.5 percent to 2.43 million, and in France, 5 percent to 1.87 million.

The reasons, according to the trade and industry organization, R.A.I., stem from the economic situation and a number of government-imposed taxes on motoring.

Secretary Erik H. Glasius says, "At the end of 1979 the government said it would introduce a heavier tax on new cars, as of Jan. 1, 1980.

"On cars of 22,000 guilders ($9,200) and more it rose from 17 percent to 21.5 percent. This is a special car purchase tax. On top of that is VAT at 18 percent."

Customers knew the tax was coming, so a lot decided to buy before the end of the year. A peculiarity in the Dutch system allows customers to register cars in the month following purchase, so January, 1980, looked like the boom was continuing.

It was not, and the slow realization that the economic climate really was bad drove away the buyers.

"Suddenly they realized it was true, and they became more prudent in buying things, especially cars," explains Glasius.

Further price rises for gasoline and road tax did not help retailers, and the slump resounded home.

Glasius also describes recent high annual sales as a little artificial when seen from an historical point of view.

General Motors retained its market lead with 15.3 percent, gained on the basis of the Opel models it sells. Ford (9.1 percent), Volkswagen - Audi (8.8 percent) and Renault (8.7 percent) were the next most successful retailers.

But each lost market share. There are no prizes for guessing to whom.

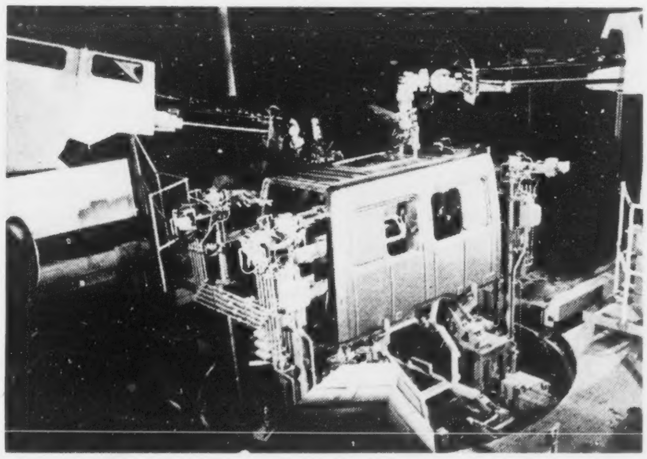
After stabilizing around 16 percent for the previous four years, Japanese sales leaped to 26.4 percent last year. Toyota, with 6 percent, jumped from ninth to fifth place among the top brands.

Total truck sales during the same period fell by just over 2 percent to 45,851. Panel vans and pickups up to 3½ tonnes held up well (32,500), the decline coming essentially from medium and heavy trucks (down nearly 8 percent at 13,400).

Among the optimists and pessimists, R.A.I. expects auto demand this year to remain level with last year's. Commercial vehicle sales are estimated to fall between 10 and 15 percent, especially at the heavier tractor end. Light-truck and van sales will remain at levels similar to those achieved in the past couple of years.

One peculiarity of the Dutch market is demand for cars converted to run on LPG (Liquified Petroleum Gas). It accounted for over 100,000 sales last year.

The reason stems from its (currently) tax-free price of the equivalent of $1.10 a gallon. But there is a proposal that it will be taxed at the same rate as diesel fuel, which would make it $1.65—still a long way from petrol (gasoline) at $2.45.



Robots on the job at Ford

Ford truck plant in Langley, England, is using Unimate robots for the first time. The plant currently builds 80 to 90 vehicles daily, although its capacity is 192.

Truck market in Europe cracks record at 1.3 million

Continued from Page 16

4.4 percent, Scania to 4.2 percent and Daf to 3.4 percent.

The losers were General Motors (mainly Bedford), which sank to 4.2 percent and Leyland, which went down to 3.4 percent, mainly on account of their performances in the UK.

The comparisons between last year and 1976 are particularly appropriate because of the similarity in size of the two markets —a mere 600 units between the two.

- Volkswagen led the medium-weight sector, which amounted to approximately 679,100 units. It had 19.8 percent to Ford's 18.1 percent, both having declined over the past five years.

The big gains were made by the Japanese, up from a mere 3.1 percent in 1976 to 12.5 percent last year. Peugeot (10.8 percent last year), Daimler-Benz (8.8 percent) and Fiat (8.0 percent) all fell as well.

Sales of light commercials last year amounted to 335,000, with Renault (36.4 percent) and Peugeot (26.6 percent) taking the lion's share. Ford was third with 9.9 percent, followed by BL (8.3 percent) and Fiat/Seat (7.2 percent).

Japan's share was not particularly significant (4 percent), representing a small rise from five years earlier. It was the same for the Japanese in the heavy end, where their 2.8 percent was largely on account of assembly operations in Portugal and the Republic of Ireland.

The largest single market, purely on account of its lightweight sales, was France, with 322,700 units. West Germany (237,400) was next on account of its healthy demand for medium and heavy trucks.

The UK (226,700), Italy (132,200) and Spain (99,600) were the next largest national markets. And among them, these five countries account for three-quarters of all European commercial vehicle demand.

Reward scheme cuts Renault absenteeism

One thousand workers per day more than a year ago now report for work at Renault plants throughout France.

That represents a drop in the average absenteeism rate from 10 to 9 percent.

A large part of the credit for this is attributed to a plan introduced in 1978 that gives cash rewards to workers having completed 220 working days in a year (a wage hike equivalent to $16.50 a week).

On the test stand

A Dutch-built Volvo 343 undergoes dynamometer test at the factory. Discussions have been taking place which are expected to lead to increased financial help from the Dutch government.

Does Volvo have a future as a Dutch manufacturer?

Continued from Page 16

two-thirds in 1974, to a quarter in 1975, then rise to the current 45 percent in 1978.

This is where it becomes a political affair. One Dutch observer commented, "Volvo needs a small car, but does it need a small factory?"

Volvo Car Corp. has already forged links with Renault, one of the world's leaders when it comes to building small cars. Volvo could probably just as easily obtain a new model from a shelf in Renault's future models cupboard.

But a new sense of realism abounds in the Dutch division, a perennial money-loser. Just how much the losses have been is hidden within Volvo Car Corp. accounts.

- Volvo Car BV's first move was to draw up a list of some 1,000 redundancies from its 6,250 workforce. Even before government officials would agree to talks with the Swedish group it needed an indication from the workforce that the cuts would go through.

"With this new structure, and with 1,000 fewer people, we expect to cut our losses by 85 million guilders (around $35 million). Our aim is to break even in four to five years, with diminishing losses until then," reports a company executive.

The company has never been in sound footing, as Erik Glasius, of the R.A.I., reports. "It's a sad history, starting with the genius of Hub van Doorne. He made one mistake, the desire to make a car.

"Basically, he was a truck man, making good trucks and with a prospering business. But then in 1958 he had the idea of making a car. It was too late," says Glasius, going on to cite the instances of similar failures around the same time: Glas and Borgward.

Van Doorne was persuaded by the government to locate the car factory in the depressed former mining area of the Limburg in the southern part of the country instead of around Eindhoven, where the company's truck factory had grown.

- It is this historical quirk which may persuade the government to come to the rescue. It remains an area of high unemployment despite the Born factory—can any political party slam the door again on a group of people which had already been hit by the closure of the mines?

Volvo AB president Pehr Gyllenhammar is leading the talks, which are being attended by J.A.M. Molkenboer, a government observer from the Ministry of Economic Affairs.

Volvo Car BV made 80,548 vehicles last year and expects to do a similar amount this year. Its sales graph shows just how badly it is hit at each energy crisis (post-1973 and post-1980). Its peak year was 1973, when 98,756 vehicles were made.

The main production center at Born can produce 100,000 units a year, apart from a small bottleneck in the press shop. With comparatively low investment, that can be upped to 120,000, says the company.

The biggest buyers of the 340 series last year were in the UK, where sales increased by 53 percent to 16,700. It even overtook sales in its domestic market (14,000 in 1980) and Sweden (10,400).

The 340 competes with the best that big boys like VW, Renault and Fiat can throw at it. It is a chunky model with the engine at the front and rear drive. The gearbox is rear-mounted with the differential, and it uses a de Dion rear suspension system. Power units are Renault or Volvo.

Reign lasted only one month

Ford spurt ousts Chevy from registrations lead

Continued from Page 10

of Group 7 trucks, which grew dramatically in 1980 largely because of vehicle reclassifications and the switch from gasoline to diesel power, caused a significant decline in heavy-truck tallies.

The two-month total was 23,648, off 27.7 percent from last year's 32,722. Group 7 was down 19.9 percent, from 13,004 in 1980 to 10,422 units. There were 13,226 Group 8 tallies this year, a drop of 32.9 percent from the year-ago 19,718.

Light-truck registrations for the two-month period totaled 292,053 units, a decline of 27.1 percent from last year's 400,488.

There were 2,135 tallies in Group 3, the only weight classification to show a gain over 1980. The total was 60.4 percent higher than the year-earlier 1,331 units. Chevrolet accounted for 2,048 of the tallies, and Dodge the remaining 87.

The sag in the sales of the imported compact pickup trucks since the increase in tariff continues to erode Group 1 registrations.

In the first two months, the Group 1 count was down 17.1 percent, from 188,854 a year ago to 156,489. At the time that sales of the imports took a noticeable drop early last fall, Group 1 registrations had been running about 10 percent below the year-earlier total.

Group 2 registrations through February showed a decrease of 36.6 percent from the previous year. The count was 133,429 units, compared with 210,303 in 1980.

25 with Olds

Harold B. Wells, left, president, Wells Oldsmobile, Inc., Whiteville, N. C., receives his 25-year award plaque from Gary W. Sigman, Charlotte zone manager, in the company of a shiny 1956 Olds with wraparound windshield, similar to those Wells sold his first year as a dealer.

IH increases its lead over Ford in HD tallies

Continued from Page 10

shutdown, its 6,441 registrations accounted for 19.71 percent of the January-February total of 32,722 units.

Ford's share of the two-month total was up slightly from the first month of 1981 and 2.08 points higher than for the first two months of 1980, when it was in first place.

Its 5,229 tallies through February accounted for 22.11 percent of the total. At the same time a year ago, there were 6,545 Ford registrations good for 20.03 percent of the total.

- The biggest losers in penetration were GMC, down 3.61 points from a year ago; Chevrolet, off 2.76 points, and Freightliner, 1.26 points lower.

The two-month registrations of heavy trucks were down 27.7 percent from a year ago, while the February total of 11,928 tallies was 23.3 percent below the 15,501 units registered in the same month of 1980.

Registrations of Group 7 trucks through February totaled 10,422, off almost 20 percent from the year-earlier 13,004. In 1980, on the other hand, the Group 7 total was almost double the 6,814 units tallied in the first two months of 1979.

The Group 8 count through February was 13,226, a decline of 33 percent from the 19,718 registered a year ago.

Industrial boilers seen as answer to disposal of PCBs

WASHINGTON. — EPA has verified that polychlorinated biphenyls (PCBs) can be destroyed safely by burning them in high-efficiency industrial boilers.

Findings were based on tests conducted at General Motors' Chevrolet plant in Bay City, Mich.

Using the most sophisticated sampling equipment and methods available, EPA said, it discovered no PCBs or other toxic materials in gases released into the air through the boiler's stack.

PCBs are used as electrical transformer and capacitor cooling and dielectric fluids; heat transfer and hydraulic fluids; plasticizers in paints, adhesives and caulking compounds; dust control agents; sealants and coatings on roads; filters in investment casting wax, and dye carriers in carbonless copy paper.

Tests on laboratory animals have shown PCBs can cause reproductive failures, gastric disorders, skin lesions, tumors and other serious health problems.

Goodyear was in the news last August for discovering a process that essentially strips chlorine from PCBs, leaving common table salt.

The company intends to transfer the patents for the method to the public domain, allowing all manufacturers to benefit.

Your Subarus look better, with Bosch

Bosch fog lights offer your customers a degree of safety *and* styling simply not available with conventional headlights. But they won't buy what they can't see. So be sure to install these handsome lights on every car in your showroom.

To help boost sales of this profitable option, Bosch designed a customized showroom display for all the cars listed below. Each attractive display comes with informative brochures to help you close the sale.

Car with Bosch fog lights off. Start of "S" curve visible.

Same car with Bosch fog lights on. Complete "S" curve visible.

Bosch beam 60% wider

Bosch fog lights (legal in all 50 states) improve visibility in every kind of bad weather. A bright beam cuts underneath, skimming the pavement and reducing the dangerous glare of reflected light.

Even in clear weather, visibility can be a problem on narrow twisting roads. The extra-wide Bosch beam sweeps the road for a full 108°. That's 60° wider than conventional headlights.

As for appearance, Bosch designed their lights to give that stylish, factory-installed look that adds so much to a car's appeal.

Tested by manufacturer

Bosch fog lights are approved for dealer installation by all of the following manufacturers: ***Alfa Romeo, Audi, BMW, Datsun, Fiat, Jaguar, Lancia, Mazda, MG, Peugeot, Porsche, Saab, Subaru, Triumph, Volkswagen, Volvo.***

Each manufacturer tests Bosch fog lights to assure compliance with their own stringent quality standards. They also review and approve installation instructions in detail.

That's why you and your customer can rely on instructions specifically written to suit the electrical systems of

Why do customers shun dealership shop?

Service is subject of Volvo survey

By John A. Russell
New York Staff Writer

ROCKLEIGH, N. J.—By the middle of May, the Volvo Dealer Image Survey will be underway throughout North America as the company and its dealers attempt to discover what consumers realy think about the organization.

It will go farther than the usual broadbrush treatment, focusing on what each participating dealer's customers think about the individual dealership. And dealers will receive the results on their operation.

According to John Theis, vice president and general manager of Volvo of America's service division, the project had its inception several years ago and was triggered by concern over the service retention rate at dealerships.

"The new-car dealer is losing business to others," Theis said, and national statistics concurred. Volvo wanted to discover whether the same thing was happening to its dealers so a market profile analysis was made in 1979 spanning model years 1974 to 1978.

Theis said it was soon apparent that customers, after the third year of ownership, went to independent service operations, either chain stores or local garages, at a "fast rate."

"After five years, Volvo dealers were losing 50 percent of their service business," he said.

• This national type of information was not enough, according to Theis. While it gave some indications as to why customers were going to other sources for service, including price, convenience and quality, it still did not turn the data into a meaningful tool for the individual dealer.

That was the beginning of the concept to develop an image survey that the dealer could use in his operation.

"Before, we didn't make an attempt to find out the expectations at the individual dealer level," Theis said.

The key to the survey is a questionnaire sent to the dealer's customers. The dealer provides a list of 300 of his customers, and the questionnaires are eventually returned to him.

A pilot program was conducted in 1980 with 91 dealers in the U. S. and 32 dealers in Canada.

These 123 dealers represented 24 percent of the dealer network in North America and 48 percent of Volvo sales, Theis said. Questionnaires were mailed to 27,300 persons in the U. S. and 9,600 in Canada. Volvo had a response rate of 32 percent in the U. S. and 31 percent in Canada.

In these questionnaires, Theis said, 15 key questions addressing specific issued were asked.

These areas included availability of service, diagnosis and repair which included the competence of the technicians; reception and delivery including the attitudes of the staff; estimates and accuracy of those estimates, and whether the car was finished on time.

The survey also asked where the customer went for repairs on the engine, fuel system, exhaust and brakes once the warranty expired on the car.

Theis said that when the pilot information came in, it was found that the statistics between the U. S. and Canada were almost identical. Dealers are losing the tire business. Body and paint business is another area where money can be made and is being lost, and so is the exhaust and lubrication business.

He said the exhaust business is not surprising considering advertising done by the national chains, but the dealer can do something to increase his volume.

The customer is asked about the importance of a certain task to him and whether his dealership performed satisfactorily.

Once tabulated, the survey forms plus the statistical data are returned to the dealer by Volvo. Information about his particular dealership and the questionnaires referring to his dealership are held in confidence. The actual questionnaires are returned to him as well.

The compilation of data is made so the dealer can compare himself from a district to a national level on all areas surveyed.

Another interesting twist to the survey is the dealer also is asked to complete the same form to see if his impressions of his operations are the same as those of his customers.

Theis said the company hoped to have the surveys completed by September or October in conjunction with the new-model introductions and the company representatives can discuss the results in conjunction with the dealer action plans for the following year.

Truck outlets in U.S. decline 1,371 in year

Continued from Page 10

Plymouth was down 331. The Dodge total this year was 2,565, compared with 2,969 in 1980, while Plymouth dipped from 2,793 to 2,482. Dodge and Plymouth dealers retail light trucks only.

The Plymouth Arrow compact pickup truck, which is imported from Japan, is available at only 1,172 of the Plymouth outlets, compared with 1,211 at the start of 1980.

Chevrolet had 170 fewer truck outlets going into 1981 with a total of 5,700, compared with 5,870 a year ago. Chevrolet no longer markets Class 8 line-haul heavy trucks, and about 60 outlets which did handle this type of vehicle have switched to the GMC big-truck line.

GMC, which specializes in the development, manufacture and marketing of big trucks for General Motors, had the smallest loss in outlets among the Big Three. Its total was down 84, from 2,680 to 2,596, and most of the loss was represented by light-truck duals with car dealerships.

Among the independents, International Harvester was the big loser. Its total was 252 fewer than at the start of 1980, dropping from 1,590 to 1,338. Again, most of the loss involved car outlets which had handled the Scout light-truck line, which was discontinued late in 1980.

There was a decline during the year in the number of franchises awarded by the various manufacturers, and an increase in the number of outlets which market more than one make.

On Jan. 1, 1981, there were 23,709 franchised truck dealerships, a decline of 1,766 from the year-earlier 25,475. The number of duals, on the other hand, was 605 higher, from 2,234 a year ago to 2,839.

Handy customized Bosch Fog Light Kit contains hardware needed for immediate installation

Parts supplied for easy installation

Most other fog lights are sold without the hardware needed to install them. In the Bosch kit you get a prewired harness containing relay, fuse holder and custom switch. You get bulbs, connectors, grommet, washers, screws. For most makes and models this is all the hardware you need for *immediate installation.*

These easy-to-install kits will appeal both to your busy service people and to the customer who enjoys doing it himself.

How to sell more fog lights

Bertles Imports, of South Bend, Indiana, has sold Bosch fog lights for over 10 years. Here are a few things Bertles sales and service people have found successful in stimulating customer interest.

1. Have every salesman install Bosch fog lights on his own automobile. This will afford personal experience with the product so he can talk with conviction.
2. Have the lights installed on all demonstration models. There may not be many opportunities to use them but they give every car that high performance look.
3. Recognize that prime prospects are rural customers and others who need that extra-wide Bosch beam especially on poorly-lit or winding roads.
4. Sell a customer once and chances are he'll want a set of Bosch fog lights on every car he buys. Repeat sales will be a big part of your business.

Order your free Bosch fog light display

If you sell any of the automobiles listed here, contact your vehicle manufacturer's parts department for Bosch fog lights and your customized showroom display.

Nest of gulls

Dozens of finished DeLorean sports cars, gullwing doors open, await final inspection at the assembly plant in Dunmurry, Northern Ireland. The company has been retrofitting some items on early production models, as engineering or manufacturing changes are made.

United Technologies claims MPG hike with diesel system

DEARBORN. — United Technologies Automotive Group said it has developed an electronically controlled diesel fuel injection system said to increase fuel economy up to 7 percent on cars.

The new system, designated ADECS—an acronym for automotive diesel electronic control system—will also reduce particulate emissions, smoke and noise, and improve overall engine operating efficiency, according to United Technologies.

Full production could start as early as 1983, said Edward J. Rapetti, Automotive Group vice president.

The newly designed fuel injection pump portion of the system, designated Model 75, is being laboratory tested and is available in production prototype form. It is applicable to three- to eight-cylinder diesel engines used for cars, light trucks and other vehicles in the 50- to 150-HP range.

The electronic control, including its microprocessor, sensors, software and other elements, is currently under development.

It is a more sophisticated design of an electronic control introduced late last year by United Technologies' American Bosch unit for use on trucks, farm tractors, construction equipment and other medium- and heavy-duty vehicles, Rapetti said.

Production prototypes of that control are already in the field being tested.

The ADECS system can be used for both indirect-injection and direct-injection engines. The more fuel-efficient direct-injection engines are being developed for the future.

The ADECS unit features sensors to monitor a diesel engine while it is running. Actual engine performance is compared to preprogrammed specifications in the system's memory.

Timing, quantity and duration of fuel injected into an engine's combustion chamber is then automatically adjusted for maximum performance and fuel efficiency, United Technologies said.

The system can be programmed to provide the driver with fuel-usage information and engine-service requirements displayed on the instrument panel.

It has a self-diagnostic capability to minimize the need for sophisticated service equipment and maintenance. It also can be modified to control various optional devices such as electronic injectors, turbochargers and exhaust gas recirculation units.

Only for Honda

SIMSBURY, Conn. — Scott Oldsmobile - Rolls-Royce-BMW-Honda-Alfa Romeo has opened a new showroom on its Avon-Simsbury property exclusively for Honda sales.

Sales dip 10 pct. for N. American cars in Canada

Sales in Canada of North American - built passenger cars dipped 10.38 percent during March, the third consecutive month of sales decline this year, but an improvement over the 19.53-percent plunge of February.

March car sales numbered 67,878, down from 75,737 a year ago but up substantially from 50,335 in February, 1981. Truck sales (including captive imports) were down 9.48 percent in March, to 26,123 from 28,859 last year.

General Motors passenger-car sales were off 6.39 percent, to 40,031 from 42,819 in 1980. Ford sales dropped 14.61 percent, to 14,681 from 17,193. Chrysler sales numbered 10,133, down 19.16 percent from 12,534. American Motors sold 2,181 new cars, down 9.31 percent from 2,405, while Volvo sales totaled 802, up 2.04 percent from 786.

GM's share of the market climbed to 59.05 percent from its year-ago 56.54 percent. Ford sales accounted for 21.63 percent, down from 22.70 percent. Chrysler had 14.93 percent, down from 16.55 percent. AMC earned 3.21 percent, up slightly from 3.18 percent, and Volvo cornered 1.18 percent, up from 1.03 percent.

Year-to-date car sales totaled 164,045 through March 31, down 13.31 percent from 189,230 a year ago.

GM truck sales in March numbered 13,009, down 13.38 percent from 15,018 last year. Ford sales were down 2.72 percent, to 9,427 from 9,691. Chrysler sold 3,378 new trucks, down 6.27 from 3,604, while AMC sold 309 Jeep vehicles, down 43.41 percent from 546.

Year-to-date truck sales totaled 62,301, down 17.96 percent from 75,941 last year.

★—No registrations for Oklahoma, 1981 and 1980.

#—Memo units are trucks which are part of the total listed above each entry. Chevrolet memo units are Chevy-Van, El Camino, Blazer and LUV; Dodge and Plymouth compact trucks; Ford, Econoline, Bronco and Courier; GMC, Vandura, Jimmy and Caballero; International Scout, Jeep, CJ-5 and CJ-7. *—Miscellaneous includes imports, Mercedes-Benz, Hendrickson, Oshkosh, etc.

During late 1980s

Researchers see big-car trend

IRVINE, Calif. — The demise of the six-passenger car has been greatly exaggerated, according to researchers at the University of California—Irvine.

Demographics and buying trends indicate, in fact, that the market share of six-passenger cars is likely to increase during the decade, according to an article published in Transportation Research by Hugh Gladwin, Charles Lave and Michael Murtaugh.

Higher fuel prices and smaller families do not necessarily mean more small-car sales, they said.

They pointed out that even for large cars, fuel costs amount to only 15 percent of ownership costs.

And today's demographically average family may have two adults and two toddlers, but later in the decade there will be an increase in the relative proportion of older children.

A pair of teen-agers will need more room than the backseat of a compact for themselves or their friends, the researchers said.

Households are not resigned to ending up with only small cars in the driveway, the researchers found. Car size was the major early decision made by the buyers studied.

"In almost all cases buyers quickly rejected cars which they considered to be too large or too small for their needs," the researchers said.

"Once established, this desired size was rarely traded off for other desirable features such as fuel economy, performance or a good price."

Buyers chose their car's size by the number and ages of their children and the size and ages of the cars they already owned.

Recessions have always produced a market shift toward more economical cars, the University of California team found.

They found families still want at least one family-sized car.

"The simplest interpretation of current market share trends is that replacement of the household's large car is being postponed until uncertainties about fuel prices and the economy are resolved," they said.

They predicted 28 percent of the 1990 sales will be six-passenger autos.

GM hike trims Ford incentives

DETROIT.—Ford Motor dropped several incentives it was considering, including one on trucks, because of General Motors' price increase.

Both Ford and Chrysler dealers have a price advantage over GM dealers, because neither company elected to go along with GM's April price hike at this time.

"Our incentive is the amount of GM's price increase," said a Ford spokesperson, who added that customers save about $350 per car by buying Ford (or Chrysler) as opposed to GM products.

Signals, hints and suggestions increase

Japanese issue mired in impasse

Continued from Page 1

of trade or their European partners but the industries are at loggerheads. All companies want to sell as many cars as they can.

Baldrige's talk to auto company officials — Ford's Philip Caldwell, Chrysler's Gerald Greenwald, Volkswagen's James McLernon, American Motors' Gerald Myers, and General Motors' Roger B. Smith — did not sit well with them. But neither did his talk with the UAW—or at least Baldrige gave that impression when he said that nothing could be expected from the union until after its local elections.

The message from the Japanese was reinforced at a Baldrige press breakfast. The situation is in "very delicate balance," said the secretary, and there's no telling what the Japanese will do unless the U. S. industry and the UAW take some firm action.

Baldrige also released for the first time an assessment made by his department that the domestic industry faces a $12 billion cash flow shortfall over the next three years—money needed to modernize.

• Meanwhile, news from Tokyo is that the Japanese Ministry of Industry and Trade started talking with individual companies to see if it could soften their position. The hope is now to hold imports for one year at 1.7 million cars plus 100,000 light trucks. This amounts to a 7 percent lower figure for cars, compared with 1980. Further meetings were set for the weekend.

By mid-week, GM, Ford and the UAW had responded to Secretary Baldrige.

GM's statement by Chairman Roger B. Smith was short and simple: By the end of 1984, GM plans to spend $40 billion—$32 billion of which would be spent in North America. GM has cut costs in every facet of its operations including reductions in salaried payrolls and employment.

GM has lowered its quarterly dividends from $1.15 to 60 cents a share and has shown price "restraint" and will do so in the future, Smith said. GM is doing its part. It thanks the government for what it has done in deregulation, and looks forward to cooperating with the UAW, Smith said. There was no mention of Japanese imports.

Ford's response was not so simple. Its "P-6" program covered products, productivity, pruning of overhead, profits, price and pay. But the bottom line is that it is "restraining" prices—not holding or lowering —and needs labor concessions now.

Ford did not say it would not raise prices if the Japanese restrain their imports — only that it "would continue with price restraint" in order to increase its market share and build for the future.

But, said Ford, we're doing all we can by ourselves; in addition we need concessions from the union before the 1982 negotiations and we need relief from Japanese auto exports. In short, thanks, Mr. President, for some deregulation and some general recovery hopes, but we still need more in relief from the Clean Air Act and probably special tax treatment, but it's not enough. Ball back in Japan's court.

• The UAW also sent the ball back to Japan. The union said the most crucial problem needing immediate attention is reduction in Japanese imports — hopefully a "binding restraint commitment that can be monitored and enforced," temporary but for a three-year period. The long term solution, however, is Japanese plants in the U. S. where their market is and where U. S. jobs can be created.

The UAW also repeated its requests for a tax credit to buyers of domestically produced cars and a scrappage bounty to speed the shift to more-fuel-efficient cars and spur car sales. (The UAW did not mention a U. S. - content proposal it has made in the past).

The UAW also repeated its willingness to support new technology and automation as one way to increase productivity. It stressed its efforts to reduce absenteeism and efforts to improve "fits and finishes."

But while the union is prepared for a "wider role and greater responsibility" — presumably seats on boards of directors and profit sharing — it gave no hope for wage concessions. It added, however, that it will—as it always has—bargain within the framework of "economic reality."

Two weeks earlier, Vice President George Bush, in announcing the results of the Auto Task Force study, made it clear that the President wanted talks, information and better understanding between the U. S. and the Japanese — but no negotiations.

Everyone was to do his own thing, Bush said, keeping in mind his own best interest and that of the future of the auto industry.

So far, there's been a lot of communication and perhaps better understanding, but hard and fast results are zero.

Mid-April new-car sales edge ahead of last year

By Edward Lapham
Financial Editor

Mid-April sales of U. S.-built cars were up slightly over year-ago levels but there was little consolation because last year's results were so puny.

Based on a strong-year-to-year gain by Chrysler Corp., the industry total for the April 11-20 period rose 1.4 percent to 148,726 from 146,671 last year. The total for the period was the third worst for the period in the years for which figures are available. The period record is 296,621 in 1978.

The daily rate for the period was 18,591, compared with 18,334 last year. There were eight selling days in the period both years.

Chrysler, which continued a $50 test-drive retail incentive in the period while the other makers discontinued their incentives, reported a 47.7 percent increase to 20,216 from 13,687.

Ford Motor Co. sales nosed up 0.3 percent to 33,953 from 33,851.

General Motors sales fell 3.3 percent to 87,984 from 90,996. Volkswagen of America sales of U. S.-built Rabbits fell 18.6 percent to 3,773 from 4,637.

Estimated AMC sales were off by 20 percent to 2,800 from 3,500.

Sales of the Ford EXP and Mercury LN7 models brought in "an extra margin of sales," Ford officials said, accounting for the year-to-year gain. There were 1,914 EXP and 503 LN7 models sold in the period.

Chrysler's strong performance in the period boosted its share of domestic sales to 13.59 percent in the period, compared with 9.33 percent last year.

Ford's penetration slipped to 22.83 percent from 23.08 percent while GM's share declined to 59.16 percent from 62.04 last year. VWoA's share fell to 2.54 percent from 3.16 percent. AMC's estimated penetration fell below the two percent level to 1.88 percent from 2.39 percent.

Of the individual makes, Plymouth showed the largest year-to-year increase of 70.57 percent. Dodge was second, up 56.2 percent. Pontiac fared the worst, off 29.56 percent, followed by Lincoln which dropped 19.92 percent.

No concessions asked by IH in talks with UAW

CHICAGO. — The UAW and International Harvester Co. have held meetings to "open the lines of communication" but the company, while faced with a $4.7 billion debt reconstruction effort, did not ask the union for contract concessions, according to both IH and the union.

"The word contract never came up; the word concessions never came up," said a company spokesman.

Steve Yokich, UAW vice president and head of the agricultural equipment division, said the meeting served to open the lines of communication.

According to some union representatives, the meeting covered the details of IH's restructuring plan and the company's facilities and products.

Many had thought IH would ask the UAW for concessions, especially because the union's 5½ month strike, which ended last April, contributed heavily to the company's $397 million loss in fiscal 1980 and $96.4 million loss in the first quarter ended Jan. 31.

New role for the Escort

Europe's Ford Escort has been turned into a delivery van. The model, produced at Halewood in the UK, is to be sold in France, Ireland, Italy, Sweden and the UK. It uses 1.1, 1.3 or 1.6-liter engines and is available with either 1,100 or 1,620 pounds payload capability.

Ford and UAW disagree on need to reopen contract

By Edward Lapham and Marjorie Sorge

DETROIT. — Ford Motor Co. needs more competitive labor costs and should not have to wait until the normal contract renegotiations in 1982 to deal with the UAW, Ford Chairman Philip Caldwell said last week.

The Ford executive, who sent a letter to U. S. Commerce Secretary Malcolm Baldrige explaining what his company has done to alleviate its problems, said Ford had a "primary focus" on the "productivity side" rather than looking at simple wage reductions.

Caldwell called a press conference to explain the company's six-point program because he believed "there is a wide lack of understanding" about how much Ford actually has done.

Even as Caldwell spoke to reporters, several hundred employes from UAW Local 600 at Ford's Michigan Casting Center marched in front of the company's world headquarters building protesting the auto maker's supposed plans to cut back operations there, "because four-cylinder engines require less casting tonnage than eight-cylinder engines."

He would not be specific about what levels are needed, although he said the Brodhead bill which calls for a 1.2 million level of imports for three years and the Danforth bill which calls for a 1.6 million unit level for three years put "many clues on the table for the Japanese to read."

Caldwell did say it should be "highly desirable" to have a local-content law for domestic and import car companies which would set a required percentage of U. S.-manufactured parts and components for all vehicles sold here. He said Ford's current local content is 94 percent and that local content of the Escort/Lynx "world cars" is "higher than it ever was on the Pinto."

Caldwell was not specific about what kind or how much of a price restraint the company would be willing to adopt if Japanese imports are limited. He said the company has not raised prices as much as costs have increased and that "the greatest pressure on the company" is to increase volume, not to "tinker" with pricing policy.

• Despite Caldwell's position that returning to the bargaining table is urgent, UAW President Douglas A. Fraser on the other side of town said the union has no intention of reopening negotiations before 1982 when the current contract expires. However, he said the union would take the economic situation of the industry into account then.

Fraser did say the UAW would help Ford in any other way possible, and he said study committees would be formed within the next few months to begin work on the 1982 round of bargaining. This would save both parties time when they return to the table.

According to Fraser, there is no way anyone but the workers could reopen the contract and both the Ford and General Motors councils voted against it at a legislative meeting in Washington March 19.

He reminded Ford that in the 1967 negotiations, the UAW accepted a cap on the cost-of-living-allowance and "we have to live with this agreement until 1970." He indicated Ford will now have to live with the current contract until it expires in September, 1982.

Ford has said it might have to export its jobs because of the high labor costs, but Fraser warned the company not to make any decision now that could greatly affect the future.

Like Caldwell, Fraser also sent a letter to Commerce Secretary Malcolm Baldrige outlining the union's position on the auto industry's problems. He listed first the heavy Japanese influx into the American marketplace and again called for "binding import restraints."

Also listed were the high interest rates, the current economic uncertainty and the rapid shift in consumer demand for smaller vehicles which the U. S. makers are only just beginning to build in greater quantity.

Fraser cited Caldwell's desire to look at productivity-increasing rather than wage-cutting steps and said the union agreed with that approach and would do what it could to help increase productivity.

GM plans to sell New York HQ

NEW YORK. — General Motors announced last week it will sell its 50-story building on Fifth Ave. here.

It would still keep its corporate offices in the building but the company said it would put the capital into new products and manufacturing facilities.

The building is estimated to be worth $500 million

It's 11 days behind last year's pace

2-millionth car of 1981 produced

By Patricia Hoffman
Staff Writer

U. S. auto production reached the two-million mark last Wednesday (April 22), eleven days later than in 1980. Last year, the makers built their two-millionth auto on April 11.

Auto production last week took a jump over the previous holiday week's total, and output was also up from the comparable 1980 week.

Last week, the auto makers slated assembly at 161,794 units, up 32.43 percent from the 122,173 cars completed during the four-days of production the previous week, and also up 8.21 percent from the 149,514 built in the comparable period last year.

So far this year, the makers have completed 2,093,644 units, down 8.94 percent from the 2,299,231 units assembled in the comparable period last year.

Breakdown for last week by company is: General Motors, 61.47 percent; Ford Motor, 21.22 percent; Chrysler, 13.32 percent; Volkswagen of America, 2.57 percent, and American Motors, 1.42 percent.

Overtime was slated last week at Chrysler's Newark and Belvidere points. Both plants began nine-hour daily shift operations on April 20 and will continue the extended shifts this week.

Also at Chrysler, the Jefferson assembly point continues to increase its daily output of K-cars, working toward a 20.0 percent increase in total output by the end of April.

Saturday overtime was scheduled last week at GM's Leeds, Tarrytown, Lansing, Arlington, Doraville, Oklahoma City, Wilmington, Lakewood and Pontiac points.

Also at GM, downtime was slated last week at Janesville, and output was reduced to one shift at the Detroit Cadillac plant.

Chrysler said that its St. Louis assembly plant will end production of the 1981 Dodge Diplomat, Chrysler LeBaron and Plymouth Caravelle on May 1, for changeover to the 1982 model front-wheel-drive, mid-sized Chrysler and Dodge cars. The plant is scheduled to resume operations at the end of August.

It was reported last week that GM plans extended downtime at six U. S. assembly plants for changeover to 1982 models.

The six assembly plants, tentatively to be affected, are: Framingham, down June 19 to Oct. 5; Fremont, June 26 to Oct. 5; Doraville, June 26 to Sept. 28; Norwood, June 26 to Oct. 5; Van Nuys, July 10 to Oct. 5, and Leeds, July 31 to Oct. 12. A seventh plant, in Oshawa, Canada, reportedly would be down from June 26 until Sept. 28. GM has neither denied nor confirmed these reports.

Goodrich increases capacity for Estane TPU

CLEVELAND.—B. F. Goodrich Chemical Group will expand the capacity of its facilities in Avon Lake, O., to meet the rising demand for Estane thermoplastic polyurethane (TPU), the company said. The expansion will be completed in early 1982 and will increase production by over 30 percent. The Estane TPU business segment is part of the Chemical Group's specialty Polymers Unit, whose expected growth over the next decade has promoted plans for major expansions of several product lines. The company said the decision to expand the Estane TPU was made last year when demand increased 15 percent.

Radio a delete option

DETROIT.—As part of a 1979 agreement with the Custom Automotive Sound Assn. (CASA), General Motors will make its radios delete options in the J-cars. This will include the Cadillac Cimarron, making it the only Cadillac nameplate with a delete-option radio. The Cimarron radio is an AM/FM stereo with four speakers. In a 1979 settlement with CASA, GM agreed not to make radios standard on any new models through 1983.

Downtime at GM slices U.S. output of trucks 5.7 pct.

U. S. truck production last week fell below the level of the holiday-shortened previous week due to downtime at three General Motors assembly plants. The total, however, rose above the comparable 1980 week's output.

Planned truck production last week was 32,986 units, down 5.78 percent from the 35,008 trucks assembled in the previous, four-day week. But the total was up 1.08 percent from the 32,632 units completed in the comparable week last year.

So far this year, the truck makers have completed 568,093 units, a drop of 3.65 percent from 589,597 trucks built in the comparable period last year.

Downtime was slated last week at GM's Chevrolet Flint point, (Lines One and Two). Line Two (Blazer and Suburban) will remain idle this week.

GMAD's St. Louis truck point and GM's Lordstown van plant were also down last week and will remain idle this week.

Overtime was slated last week at Ford's Kentucky truck point.

Chrysler's Warren truck assembly plant will operate a nine-hour, single-shift operation this week.

Full work week hikes output in Canadian plants

Last week's Canadian auto production jumped ahead of the previous four-day week's output, and the total again was above that of the comparable 1980 week.

Auto production last week was set at 23,324 units, up 22.86 percent from the 18,984 cars assembled in the previous holiday week, and also up 19.97 percent from 19,441 units completed in the comparable week last year.

So far this year, the auto makers have assembled 259,653 units, down 10.84 percent from the 291,207 completed in the comparable 1980 period.

Canadian truck production also improved last week because of the full work week, however output fell below the comparable 1980 week's total.

Truck assembly last week was slated at 12,586 units, up 30.97 percent from the 9,610 trucks completed in the previous week, but down 5.27 percent from the 13,286 trucks built the week ended April 26, 1980.

Year-to-date, the truck makers have completed 179,681 units, down 5.10 percent from the 189,344 trucks built in the comparable period last year.

There was no downtime or overtime slated last week for the auto or truck makers.

General Motors and Chrysler have reported that all car and truck assembly plants will be operating this week.

1981 Market Data Book Issue

We the People...

. . . of Dana Corporation welcome this chance to tell you a little about our company. There are over 35,000 of us working in plants, offices and warehouses in more than 450 locations around the world. Each year we manufacture and distribute billions of dollars worth of parts and services to the truck, industrial equipment, replacement parts, mobile off-highway, shelter and security markets. Our products include vehicle drivetrain components, engine and chassis parts, fluid power and electronic products, industrial power transmission components and financial services.

We think Dana is unique, a good place to earn a living and to grow. Moving up the ladder is encouraged. Promotions are made from within. Two schools, Dana U and Dana Tech, offer advanced education to employees. At Dana we believe that our company is 90% people and 10% money. Maybe that's why 3 out of 4 of us own a part of the company and most of us make Dana a lifetime career.
Dana Corporation, Toledo, Ohio 43697
